GOOD clothes are always the result of somebody's good judgment: judgment of material, of styles, and especially of what well-dressed men like to wear.

men like to wear.

That is why it is so important that your great clothing house should be young and human and contemporary, rather than merely big and mechanical.

When you select your next suit, if you have an ing clothing house in America,

opportunity to visit a Kuppenheimer dealer, we ask you to note one thing: the number of Kuppenheimer suits in your size that seem to express the way you feel about clothes.

This is one thing that makes success for Kuppenheimer dealers—that attracts good trade to their stores.

Incidentally it has made this the fastest growing clothing house in America.

# MY SON By WILLIAM CARLETON

CK came to me one evening in the early fall and placed his hand on my shoulder.

"Dad," he said, "I've done it.

"Done what?" I said. "Asked Jane to marry

Now I had known since the early summer that barring accidents I was going to hear this, and yet I felt queer.

The boy was ten years older than I was when I married and was many times better off financially. He and his partner had held steady the contracting business which I established and turned over to them, and both had a comfortable reserve fund.

I wanted the boy to marry. I would have been willing to have him marry long before he was as well off as he was now. I realize better than a good many the terrible responsibility a wife and family may be if business goes wrong. I realize that the fight for existence is, in a good many ways, more acute than it has ever been in

the history of the nation. But I realize, too, that the only fight worth while is not for the individual but for the family. Too many young men are dodging that responsibility in as craven a fashion as did those who dodged enlistment during the Civil War. I'd rather have seen the boy shoveling dirt and taking home on Saturday night his twelve dollars to a wife and children than enjoying a million by himself.

I couldn't have chosen for him a sweeter, saner, more lovable girl than Jane. Yet I felt queer. I felt a tug at my heart as though something were being uprooted. We were more like chums than father and son, for I date the vital part of my life from the day I immigrated and the boy bore bravely his share of the struggle.

"Have you told your mother?" I said.

"Bless you, dad, she advised me how to do it," he laughed.

And mother had kept the secret even from me. She came into the room just then, and I believe she was waiting round the corner all the while. She put one arm round the boy and another round me.

"Our son is going to be married, Billy," she said. "Isn't it wonderful!"

"Sit down, mother, and let's talk it over," I said.

And then, who should come stealing into the room but Jane herself, who also had been waiting round the corner.
"You didn't need to hatch up a conspiracy," I said.

Then Jane came over and put her arms round my neck and said:

"Dick scared me bad enough. Now don't you go and scare me some more."

So Dick was engaged, and it brought back very vividly that tennis game where I had met Ruth. I won the game for her before we were introduced. And it brought back the little room of the lodging house where we were married and the house in the suburbs to which I took Ruth afterward. I was drawing thirty dollars a week from the United Woolen Company then, and felt as secure as the president of the company himself. Well, Ruth and I had learned a lot since then; a lot for the boy as well as ourselves. Our struggle now seemed doubly worth while. We thought at the time that we were fighting only our own fight, but now we saw we had been fighting it also for Dick and Jane and possibly for many more to come.

Ruth sat down beside me, and honestly I think we felt as much like lovers as the children. We sensed the thrill of this new beginning as though it were our own. Life had never grown stale to us, but we were beginning to accept it as pretty well established when, presto, along came Dick and Jane to start it going again in the same old adventurous fashion. For Dick was so much a part of us that all his joys were our jovs, all his griefs

"Have the Old Furniture Repaired; if You Can't, Split it Into Kindling Wood"

else to tell you, dad," said the boy. "I've been dickering with Dardoni." "How?" I asked.

"I've got something

"I want his place and I think he'll sell. Those fellows are always willing to move on."

Now this had never occurred to me as a possibility. Dardoni had some forty acres all under a high state of cultivation. He was one of the latter-day pioneers in town, and while in every respect a steady, honest citizen, it is a fact that he remained a source of petty irritation to many of the natives. If Dick could buy that place be would at once acquire a good farm and add to the general peace and happiness of the community. Personally, I both liked and admired Dardoni, but I was from Little Italy myself. To the others be was merely a foreigner.

"How much does he want?" I asked.

"Eight thousand

Ten years ago he had bought the whole place for three thousand, and

every year since then he had made an increasingly good income from it. "Well," I said, "Dardoni's place is worth that if you mean to run it as a farm."
"I certainly do," said Dick. "I don't want the house. He has made that impossible,

but I want to build a house of my own anyway."
"It costs a lot to build," I said.

"Yes. And ten years from now it will cost a lot more. Anyhow it's the old way. Jane and I have been talking it over, and we kind of feel that we want our home to be part of us from the beginning. We know what we want-a little brick house with white, pillars in front and white trimmings. Our scheme is not to build any more than we want now, and arrange it so that we can add to it."

Are we foolish?" said Jane, blushing very red.

"Ask Ruth," I said.

"You are very wise," said Ruth. "Have from the beginning every single thing you can afford. But keep your eyes on the ginger jar, my dears."

Then Jane said this:

"Will you let me tell you right now what I want you to give us for a wedding present?"

"You may choose from anything I have," said Ruth. "Then," said Jane, "I want that little blue ginger jar."

"You'll have to get mother to show you how to use it," said Dick.

"You wait and see," said Jane.

I thought Dick was right myself. Jane was the daughter of the president of the savings bank, and though not extravagant had enjoyed the use of a lot more money than ever Ruth had. Furthermore, in the case of her and Dick there was no such need of a ginger jar as there had been in the life of Ruth and myself. However, it is something to have a good idea even if not much use is made of it. I wasn't worrying about their ever lacking means, but I was worried a little as to just what effect this would have on their attempt to run a farm. Necessity is a great spur to a farmer-especially at the start. If Mathews at the end of the first year had inherited another windfall I don't believe he would ever have been worth his salt as a farmer. However, I didn't tell my doubts to any one except to Ruth, and she never was a great hand to listen to doubts of any kind.

Dick bought the place in October. Up to the last moment I didn't believe Dardoni would sell at any price. I forgot to reckon with two facts-that he wasn't so firmly rooted as the rest of us here, and that he saw plenty of other opportunities. To him America was nothing but a land of opportunities. He didn't care whether he was in Maine or California. Give him forty acres of land anywhere and he was just as sure of

making a good living as though the land represented ten-per-cent gold bonds. A man couldn't help it by his method, which was simply to spend fourteen hours a day cultivating every inch of it, selling the produce to those who didn't believe in working, and living on a tenth of his income. As a matter of fact he bought a worse farm in the next town and was at work on it within ten days. It is curious, when you stop to think about it, that it was left to this Italian peasant to come over here and show us New Englanders how to run a New England farm.

Dick began tearing down the old house at once, using his own men from the city. I suggested that he marry and live with us until his new house was done, but he wouldn't listen to it.

"It's mighty good of you, dad," he said, "but both Jane and I feel that when we start we want to start in the new house."

Dick had his heart set on a brick house. I don't know where he acquired all his notions, but after his

engagement they seemed to come forth fully developed. 
"I don't care how much more the house costs to start with," he said. "I'm going to save in the end on my insurance, my heat and my upkeep. But that isn't all. I like to think that I'm building for two hundred years. I want to feel that I'm here to stay and my children after me. I want to get as far away from the apartment-house idea as it's possible to get. It's time some of us Americans took to building real homes again."

"I don't know but you're right," I said, though I was surprised that the boy had thought this out.

"You bet I'm right!" he said. "The apartment house has done more to destroy the idea of permanency in American life than any other one thing. There ought to be a society for the suppression of apartment houses. You can't make a home in one if you try, and without a home I don't see what you've got to base a family on."

"I suppose the explanation of the apartment house is the fact that it reduces the cost of living."

"I wonder if it does," said Dick. "I'll bet a cent the saving all goes into theaters, hotel dinners and automobiles. Apartment dwellers have to get out or they'd go mad. And it's another significant fact that the first thing you hear when you try to hire an apartment is that children are not allowed. Did you ever figure that this is going to have some sort of an effect on America?"

"I guess you're right, son."

"You don't find many of our friends, the Jews, in houses where children are not allowed. Not on your life! The inmates are all good Americans."

There is some truth in what the boy said. A woman with children who hasn't a home of her own is almost an exile. She is treated worse than a leper. Children and dogs are not allowed, a few possible exceptions being made in the case of lap dogs. It looks like a small thing, but it's just such small things that in the course of years grow into big things. It's down in the tenement district that women and children are made welcome.

I didn't say anything more against the boy's brick house. It stood for a big idea, and as such was worth even to the town ten times what it cost him. It's surprising how a notion like this when expressed in definite form seeps into the minds of people. I suppose that's the good that monuments to great men do. Most persons learn more by seeing than they do by hearing. Dick didn't talk about his brick house outside the family, but I know for a certainty that just seeing it go up brick by brick with the idea of permanency which it suggested had its effect upon the young men of Brewster. That house preached a sermon.

"I'm starting life among you," it said. "I'm here to stay. I represent the idea that this young couple mean to establish a home and make a living among you and live among you for many generations. Their acts are not for today alone, but for all time."

That's the way houses were built in former times, and that's the lesson they preached. It makes for stability.

The house, too, expressed their own individual ideas. It was all one big room downstairs, except for the kitchen. The dining room was merely the end nearest the kitchen. Upstairs there was nothing but bedrooms and baths. It was only a story-and-a-half high, the idea being to erect when necessary a brick ell on one side, and later, if necessary, another ell on the other side, thus completing a sort of courtyard. This was sound economy.

"I don't see why a man should invest any more in his home than he can use," said Dick. "He would not do so in his factory. Idle rooms are idle capital and a drain on the wife besides. What's the use?"

"If You're Going to Raise Milk Which Has to be Sterilized I Don't Want It"

I don't see any argument against the boy, though this isn't the usual way of building.

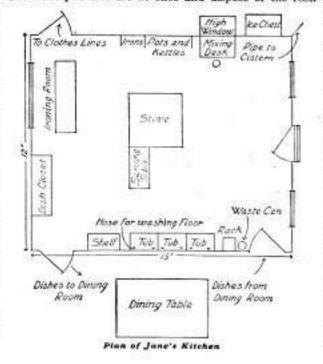

71

THE other day I ran across a paper which Ruth read before the Pioneer Club. The point of view made a good deal of talk at the time, but it had its effect. It had its effect, too, on Jane and Dick when they came to furnish their new house. I'll copy part of it. Ruth doesn't like to talk in public, but her heart was in this; and though it was all she could do that evening to stand on her two feet when she stepped on the platform I suppose I was the only one who knew it. She said:

"I hope you won't think I'm impertinent-even you clder women—and I know you won't because we're all one big family here. I can talk to you as though you were all my sisters and your men folk all my brothers. By the same token you are free to talk to me that way, and when I'm through I hope you will. It's the only kind of talk which does any good-that which is personal and straight from the heart. Then this is what I'd like to do if I had the time and you'd let me-I'd like to start in your attics, go straight down through your houses to the cellars and just take away from you the things you don't need. And I have a notion that the very women among you who feel that they are most in need would have the most things to throw away. I'd take those things and make them over into things you do need, or I'd sell them for what I could get, or I'd give them away, or I'd burn them. It's what I do in

my own house every six months.

"Half the burden of housekeeping comes in doing the things we don't need to do and caring for the things we don't need at all. It isn't the doing of the necessary things that breaks the backs of farmers' wives; it's the doing of unnecessary things. You all know the condition of your attics. It makes you shudder every time you go up there. Once a year, perhaps, you half kill yourselves moving things round and putting them back again. If you'd only move things out instead of moving them round you wouldn't have to break your backs but once anyway. Go through those old trunks and take out every blessed thing. Use what you can use at once and dispose of the rest.

Don't dispose of it into another trunk, but get it out of the house. Yes, even your old wedding dress, because it's only rotting there. Make it over for yourself or your daughters, but do something with it. It's poor sentiment that leaves a thing to rot.

to rot.

"Do the same thing with those broken-down chairs. Have the old furniture repaired and use it if you can; if you can't, split it into kindling wood. Don't leave it up there for next year. You'll never get rid of it that way. You'll just use up good live energy on poor dead things. The only useful attic is an empty attic.

"Then I'd come down a flight to your bedrooms. These rooms ought to be the easiest in the world to care for. They shouldn't contain a single thing that can collect dust. I wouldn't have a stuffed chair or a tidy or any but the simplest bureau-scarfs in any room. Take up your carpets and have them made into rugs if they are good enough. The smaller the rug the better. You want something

you can throw out of the window now and then to lie in the sun. Do away with your tidies and such things. Don't have any pictures on the walls just because you happen to have them. If you enjoy them leave them there, but go round some day and look at them. You'll find some that have hung on your walls twenty years which you haven't seen since you hung them up. Keep only those you like to look at every day.

"I'd like to go to your parlors and pull up the curtains and let in the sunshine. Oh, but my fingers itch to get at some parlors I've seen. I'd like to abolish them all. They don't belong in a house. But if you must have one, have it cheerful and bright and clean. That means doing away with the stuffed furniture and the lace curtains. Those are the things that kill farmers' wives.

"I'd do away with useless dishes in the dining-rooms. I'd have every dish both useful and ornamental or I wouldn't keep it. I'd do away with all the old pots and kettles and pans in the kitchen which I didn't use. Give them to some one who can use them. It's easy enough to keep clean those you really use. You'd be surprised how few you need, even including those you think you might use some time. Do the same in your laundry and your cellar. Get back to the life your great-grandmothers lived.

"Did you ever stop to think that half the energy of modern business men is devoted to creating a demand for new articles? They spend as much money making us women think we want a new thing as they do in supplying that new thing. For years they have been busy creating new demands in us until we are overburdened. Perhaps sometimes these new things do save us work, but in a good many cases they end by making for us still more work. It's a lot easier to decrease the amount of work necessary to be done than it is to find an easier way of doing unnecessary work."

That was the pith of her talk. The way she worked it out in her own house was to simplify every branch of her work. This meant simpler house furnishings, simpler food for the table, simpler things to wear as a means for decreasing the laundry work. This she preached and practiced. It involved no sacrifice of standards, but it meant simpler standards. And don't make the mistake of thinking that Ruth had no artistic standards. She did. But she preferred to decorate her home with living flowers rather than with wax flowers or lithographs of flowers, or for that matter very good water-color flowers. She preferred autumn leaves and green winter branches to tidies. She preferred a clean, simple house to a dirty, "artistic" house.

It is one thing to express your ideas to a group and another to express them as advice to an individual, especially if that individual is a prospective daughter-inlaw. No one could have been any chummier with Ruth than Jane was, but Ruth never made a suggestion to her unless it was asked. I thought it showed on her part a strange lack of interest and said so one night.

"This is their house, not ours, Billy," she said to me.
"We've built our house, and now they must build theirs."

As a matter of fact it wasn't necessary for Ruth to express her ideas to either Dick or Jane. They knew them. Any one could know them, for Ruth lived her ideas. And both the children were in hearty sympathy with them. As soon as the cornerstone was laid, Dick and Jane spent most of their spare time scouring the countryside for solid old pieces of furniture such as were made by hand a hundred years ago. They weren't looking for mahogany. That wasn't used much in our town, even in early days. Most of the pieces were veneered, but they were made upon honor by artisans who took their time. They are as

solid today as when they were made. With a handicap of a hundred years they'll outlast much of the machine-made furniture of today.

Another queer thing is this: Much of the furniture which was made then for common everyday use is beautiful enough today for use in the most elaborate homes. I have a set of chairs that were made for the kitchen. They have wooden seats three inches thick and were put together with wooden pegs instead of nails. They are painted a bright canary yellow and have on the back an odd design that looks like a purple melon. But their lines are so beautiful, they are so solid and so reveal the hand of the careful workman, they are so unhackneyed and sincere, that they would grace a modern drawing room if such a room could be graced by anything. I have a number of little Colonial chairs with ash bottoms that stand as primly upright as Puritan children at church. I don't believe that even Chippendale ever designed anything of simpler beauty. Those old workmen must have had beneath their sturdy exteriors the hearts of artists.

Though antique dealers had skimmed the countryside of much of the best, Jane and Dick hardly entered a home but what they found something. And strangely enough the owners were always willing to part with an heirloom for a price that would supply them with new furniture to take its place. Most farmers have a passion for new things. They laugh at the old hardwood four-posters and are eager enough to swap them for the more ornate spick-and-span products fresh from the factory.

Farmers don't take so kindly to hard-bottomed chairs as their ancestors did. Maybe it's because they don't get so tired. Two-thirds of them will swap any time a hand-made hardwood bureau that sits on the floor like bed rock for a yellow pine thing that's new.

Furnishing Dick's house in this way gave a personal touch to each piece. These things were associated with long rides in the crisp winter air, with new friends made, and sometimes with wonderfully beautiful stories of the past. They didn't represent merely so many dollars and cents and a manufacturing plant. Then, too, when they were in the house they settled it. They brought with them the atmosphere of many homes. There was no newness about Dick's new house.

Dick had been brought up to help his mother. She had taught him to cook when a boy and there wasn't a better cook in Brewster. And there wasn't anything else about a house he couldn't do, even to washing and ironing. Any man with horse sense can do better housework than the average woman. This isn't any reflection on the women. They do their best, and goodness knows many of them put into the task everything they have. But they have fallen into a rut. Mothers have handed down to daughters for generations a routine method which has become antiquated. That's true of many a man's business.

Let a man with executive training, with fuller physical strength, untrammeled, come into a house and use his head, and he'll see things that the average woman can't see. A woman usually can't get any perspective, for she's too much tied down to her home.

Jane insisted from the beginning that she was going to get along without a servant. At first Dick protested, though I think he was pleased at the spirit Jane showed.

"Your mother has done it," said Jane. "After her example I'd be ashamed to have a servant in the house. Besides they're apt to be more bother than they're worth. They are hard to get and hard to keep, and often end by

owning the house if you do succeed in keeping them.

I'm an able-bodied woman and propose to do my
own work as you do yours."

But if she proposed to do the work Dick proposed to simplify the task as much as possible. The house was furnished with this end in view. The bedrooms were kept as simple as possible. He did away with carpets and useless odds and ends. Anything that had to be moved was put on casters that would work. Then he installed a vacuum-cleaning outfit. An invalid could have cleaned his house from top to bottom in half a day.

But the kitchen was where Dick centered his efforts. That's where most women who do their own work spend their energy; and half of it is wasted there. Dick's kitchen was the wonder of the neighborhood.

In the first place Dick proposed to have it easy to keep clean. To this end he had it floored with red tiling with a mop board of white tiling. It was watertight, so that with a hose attached to the faucet the room could be washed clean in less time

got this idea from a hospital kitchen,
"Where they do things on a big
scale," he said, "you can always get
ideas for doing the same thing on a
small scale."

than it takes to wring out a mop. He

Then he proceeded to simplify the dish washing. The dishes passed to the kitchen through a door directly back of the dining table, were scraped out into the waste can and then placed on a wooden rack next to a slate tub like a laundry tub. This tub

was filled with boiling hot water from the hot-water faucet and plenty of soap used. Over this there was a pulley with a hook which fastened into the dishrack. The dishes were lowered into this, slid along to a tub next to it for a rinsing and then on to a third tub for a second hot-water rinsing. They were then lifted to a wooden drying shelf, where they were ready for a slight wiping. The dish closet was one step to the left and as fast as wiped the dishes were set upright in racks made for that purpose. The whole operation took but a few minutes, did away with the necessity of putting the hands in water, and left hardly a soiled dishtowel. This is the way dishwashing is done every day in hotels, and why no one ever thought of using this method at home I don't know. It was in my home within a week after I saw it work.

If the kitchen is the heart of the house, the kitchen stove is the heart of the kitchen. And yet it is generally placed not with an idea for convenience, but with the idea of getting it out of the way. Dick figured that it ought to be where Jane could reach it easily from her cooking stand and dishes. He figured it ought to be where she could get at all sides of it. This didn't take a very long head and yet passed for a startling innovation. Instead of tucking it away in one corner, he placed it in the middle of one side; instead of thrusting it back against the wall, he brought it out so that it was almost in the middle of the room. To the right was the mixing desk with the oven doors facing it one step away. The tin and iron cooking dishes hung behind the stove on hooks where they kept dry. They were still within reach of the mixing desk. Running from the left of the stove and joined to it was a serving table, so that Jane

"I'd Like to Go Through Your Houses and Take Away the Things You Don't Need"

could slide the heavier dishes on to it without lifting them. Incidentally the stove and the serving table were not an arbitrary height. Dick saw to it that they fitted Jane just as a carpenter makes his bench to suit his height. The end of the serving table was again within one step of the washing tubs where the cooking dishes could be washed and within two steps of the slot through which they were passed to the dining table.

The ice chest was in a little shed of its own built just to the right of the mixing desk and so arranged that it could be filled from the outside. All the cooking materials were of course arranged about the mixing desk; the bread and pastry flour in drawers over the desk; baking powder, spices and such things in glass preserve jars on shelves above these, and the less-used articles on a higher tier. A glance at her jars and Jane knew just how much of everything she had on hand. A stool stood in front of the desk so that she could always sit down when she wished. The walls were painted a bright Colonial yellow and there were plenty of windows-one directly over the mixing desk, one next to the dish closet and one over the ironing board, and two on the opposite side of the room where a door led outdoors. The room itself was only twelve by fifteen feet. It was as compact as a laboratory.

This is the way it worked out in practice: It took but one step from the desk to reach the ice chest, where Jane found her milk, butter, lard, and so forth. This done she could sit down and from her stool reach every other article needed in her cooking. Once her things were mixed it was an easy reach to the cooking dishes and only a step to the oven door and wood box. When the meal was cooked she slid her pans and pots from the stove to the serving table. Two steps took the food to the entrance door into the dining room, where one more step brought it to the table. One step from the serving table brought her cooking dishes to the cleaning tubs.

I've given Dick's idea in some detail, because it seems to me worth while. It shows what a man can do by thinking in his home as well as in his office and is significant in showing the way Dick did everything. It also came pretty near solving the servant problem for them and left Jane with energy for other things.

Dick figured it out that he saved her in walking alone several hundred miles a year.

#### II.

IT MAY be thought that for a farmer Dick was putting a good deal of time and money into his house. I'll admit that at first I thought so myself. I was afraid he was drifting toward the gentleman farmer class. There's no bigger nuisance in New England than the gentleman farmer and no more expensive luxury than a gentleman's farm. These farms are bad examples which discourage many real farmers. They are as mischievous in their effect as the false standards of living established at Newport. The gentleman farmer raises prize cattle and prize fruit and prize poultry, but at a cost that makes his effort essentially poor farming. The one test of a good farm is whether or not it pays—not always in a bank surplus, but in furnishing a decent living in proportion to the capital invested.

pays—not always in a bank surplus, but in furnishing a decent living in proportion to the capital invested. But Dick was in a better position than I had been. After all he didn't put an unfair proportion of his capital into (Continued on Page 81)

# MY LADY'S CONSCIENCE

## A Customs Inspector's Story-Told to Frank B. Elser

POR ten years I have been attached to the most unpopular branch of the United States Government Service—unpopular because it deals directly with that irritating obligation of our national life—personal taxation. I aman inspector of customs at the Port of New York.

By the average seagoer I know I am regarded as a pest. Even some of the framers of our tariff laws so regard me. It was my experience once to hold up on the pier a standpat old New England protectionist member of Congress who took a prominent part in drafting the tariff act of 1909.

His declaration was grossly incomplete; and

when we got through with him he had added some two thousand dollars to the value of articles purchased abroad.

More than three hundred and fifty thousand cabin passengers alone now reach New York annually, and it is the duty of the customs inspectors—there are about four hundred of us—to examine their baggage and, if necessary, their persons, in order that the revenue may not be defrauded. This examination is an exasperating ordeal for passenger and inspector alike, made under conditions where only the keenest observation and the broadest understanding of human nature on the part of the inspector prevent a maximum of friction and ill-feeling. To perform his work successfully an inspector must be, among other things, something of a judge, a lawyer, a fashion and jewelry expert, a tea-taster, an ornithologist, a dog fancier—and a gentleman.

Many of us are college graduates—some of us with professional training. Nearly all of us are over thirty years of age. Before taking up the work on the piers we are all put through a course of sprouts at the Custom House. Unique of its kind, this school is the outgrowth of an endeavor to fit men for the perplexing work incident to the enforcement of our intricate and everchanging tariff regulations. I mention this in deprecation of what appears to be the opinion prevalent among travelers—that the United States customs inspector is a uniformed menial, boorish in manner and speech, and selected according to his ability to muss my lady's lingerie when he goes through her trunks.

I want to disabuse you of this idea. There are exceptions, of course; but the majority of inspectors are chosen primarily for their tact, address and judicial temperament. I have known instances where candidates passed their civil-service examinations with credit, only to be rejected because they seemed not to possess these requisites,

#### The Little End of the Funnel

YET criticism and condemnation of American customs methods have become more or less a national habit. Invariably the homing passenger draws unfavorable comparisons between his home officials and those in foreign countries. Here, he complains, his baggage is rummaged as if he were a criminal. To the thousands who make such statements let me say a word in explanation.

In the first place the American tourist is the greatest of all spenders. He reaches Europe with his baggage lean and comes home with it bulging. Moreover, our tariff laws have, since 1897 and up to quite recently, demanded that a resident pay duty on pretty nearly everything he obtained abroad—exempting only strictly personal effects of nominal value.

Another thing: The port of New York in the matter of ocean travel is like the little end of a funnel. Eastbound steamships are likely to distribute their human cargoes at a number of English or Continental ports; but that is not true of westbound ships. The congestion at New York is acute. The arrival of twenty-five hundred cabin passengers in a single day is not unusual.

One day last August nine great liners came up to their piers with a total of three thousand six hundred and

By the Average Seagoer I Know I Am Recarded as a Pest

ninety-six in their first and second cabins. Incidentally there were about nine thousand in the steerage; but as steerage passengers are not required to make declarations I shall not attempt to describe the difficulties we encounter in examining their pitiable belongings.

From the cabins alone come nearly a million pieces of baggage a year. I question whether any other port in the world equals this record.

The examination of this vast consignment is a tremendous job, entailing thorough though stopwatch work by the inspector—the sort of work that so riles the protesting passenger, impatient to be on his way.

With the enactment of the Underwood-Simmons Bill by the Wilson Administration, I am happy to say, there was a decided broadening in the regulations governing the baggage of returning residents. Formerly duty was exacted on everything not coming in the category of personal effects. Even these had to be within the hundred-dollar limit. The new act admits free practically all articles, whether personal effects or not, so long as they do not exceed one hundred dollars in value, or are not barred for cause, or are not intended for sale or for business purposes, or as commissions for others.

By no one more than by the customs officers was this change hailed with satisfaction; its adoption, in fact, was largely brought about by the rank and file of the customs men themselves, who saw in the former provision a species of class legislation probably never intended. Its enforcement prevented the free entry of any household articles, a manifest hardship on many—particularly the frugal ones in the second cabin. It barred table linen and the like in no matter how meager a quantity, though admitting as personal effects such articles as handkerchiefs and silk stockings.

You can imagine the outraged feelings of persons who justly felt the pinch of this distinction. Most passengers labored under the belief that they could bring in free any-

thing not exceeding one hundred dollars in value, regardless of its character. They were nearly always prepared to argue the point and a great deal of confusion resulted.

Until the year 1897 the Federal Government appears to have made no consistent attempt to collect revenue on passengers' haggage. Such a customs net as was spread prior to that time was of a filmsy character, designed to sift out the whales, as it were, in order to hold merchandise in its proper channels.

With the passage of the tariff act of that year, however, a sort of half-hearted system of inspection was begun. Yet the revenue yielded was inconsiderable; it was hard to instill snap into the system after so many years of inactivity. The fathers of the new act had predicted a return of ten million dollars annually. They were sadly disappointed. The meshes in the net were still very wide, though slowly tightening.

New blood was infused into the service in 1901, a year when ocean travel began strongly to appeal to the popular imagination in this country; and, with radical changes in methods and personnel, things began to look up. A few passengers were actually arrested for smuggling. Invariably they were released. A crusade was started against a notorious clique engaged in smug-

gling women's wearing apparel. Their operations were carried on through the medium of passengers' baggage.

The local officers of the service remained ultraconserva-

The legal officers of the service remained ultraconservative, however, working in an old groove of precedents; and it was not until 1908 that it became the regular order to place dishonest passengers in the same class with crooked importers—that is, to press for conviction in the Federal courts.

Then came to the Custom House a man with a determination. He had been secretary to Theodore Roosevelt in the White House. His name was William Loeb, Jr. He assumed the office of collector of the port in 1909, and as if by magic the duties collected on passengers' baggage jumped during his term from four hundred thousand to two million dollars annually. He meant business. The service also was primed for action. Arrests of passengers with moral lesions as regards rendering unto Uncle Sam the things that were his became frequent. Many prominent women had experiences—humiliating, to say the least. Several were stripped by inspectresses and searched. One or two were heavily fined. One was sent to jail for three days. She had brazenly smuggled a valuable fur coat. Her jail sentence, short as it was, was worth to the service—as a deterrent to others—five hundred thousand dollars annually. To date she is the only woman smuggler on whom a jail penalty has been imposed, though women offenders predominate.

COOTES

That is an ungallant remark and I want to couple it with a statement which will take away some of the sting. I am prepared to contradict the belief—widely current, generally accepted, and apparently supported by fact—that women are, as regards the customs, essentially more dishonest than men. Federal judges, in reprimanding and releasing a feminine offender, have declared it to be so; but I stand ready to contradict it.

#### The Tempting Fetish of Fashion

THE truth is, women passengers attempt to smuggle and do smuggle more frequently than men; but I do not think their moral nature is one whit different. If conditions were reversed—that is, if man worshiped finery as woman does; if keeping in style were to him a fetish; if while abroad he exceeded his allowance in a hysteria of buying a wondrous assortment of gowns, lingerie and hats—I am convinced that we should find him just as persistent as his wife in seeking to avoid paying duty.

Back of nearly all the cases in which women are involved is the insinuating foreign shopkeeper. Dealers abroad, notably on the Continent, are irreconcilably bitter against the United States customs. They argue—and logically that our duties seriously reduce the amount of madame's purchases, and they are quick to suggest that outwitting the authorities is quite the proper thing.

One Parisian concern makes a specialty of false-bottom trunks and openly advertises them in the newspapers. Or a

pint may be dropped in a woman's presence that, as a special favor in her case, there can be furnished her a false invoice of articles purchased, stating their value at, say, on-half.

Maiam may indignantly reject any such proposal at the time; but the germ is a fertile one, and subsequently in the quiet of her stateroom, aghast at the extent of her extravagance, she may yield to temptation. Having rejected the false invoice and spurned the trick trunk, she may resort to the popular and often transparent scheme of sewing American labels in her purchases, meantime seeking to impart to them just enough of the appearance of wear to give credence to the statement that they are of domestic origin.

Many a woman has doubtless come in sight of the Statue of Liberty industriously putting the finishing touches to this fraud. The growing similarity of the products of our own modistes to those of the Parisians makes this deception harder and harder to detect. The recurring persistence with which it is attempted by the unscrupulous necessitates painstaking examinations and works a hardship on the innocent.

A good customs inspector must thus necessarily be familiar with the characteristic features of the products of all the prominent foreign dressmakers and milliners. He carries a list of nearly fifty of them in his memory book.

No envious woman, covertly eying another's gown, could be quicker than he to note its make.

The origin of lingerie and hosiery is much harder to detect. Stained dress shields we often find sewn in gowns and waists bought abroad, along with the bogus domestic labels. The owner will look at you in a bored sort of way, as if your stupidity were trying her patience to the breaking point: then she probably will remark, if you continue your inspection: "Oh, that old rag! Don't waste time on that! It's years old really, and purchased in this country."

Frequently, however, it happens that the dress shields alone show signs of wear. If the wrist and waist bands, or the hem of the skirt, as the case may be, are spotless the inspector is instantly alert; and in a preponderance of cases the fraud is detected. Sometimes a double row of tiny needleholes, indicating the sewing in of a different set of labels, will lead to the

detection.

I wish I were word artist enough to describe or psychologist enough to analyze a woman's actions and feelings in the various stages of such an examination. Our directions are: "In case of suspicion proceed quietly, observing and comprehending all surface indications, meantime asking searching and intelligent questions. Do not handle the articles or garments unnecessarily. Remember that they may be the passenger's most sacred possessions."

#### A Miserable Outrage

Not so very long ago an ostensibly outraged and indignant woman was in the midst of a bitter tirade against a quaking young inspector when a weary-looking man stepped up.

"This is a miserable outrage!" the woman was saying.
"Yes, Maria," said the weary-looking man—"an outrage against the Government. Stop it! I don't care how much stuff you've bought abroad—I want to pay the full duty." And he did.

He was her husband. The wife gave him a mighty black look; but her declaration as revised was vastly different from the original.

It is not uncommon for husbands, on landing, to draw us quietly aside and caution us not to pay any attention to what their wives may or may not declare, but to rely on them for the truth. Others, who have remained at home while their wives traveled and acquired foreign wardrobes, sometimes notify us in advance that they—the husbands—will be on hand when the ship docks to see that everything dutiable is properly declared.

On the other hand we encounter many cases where husband and wife conspire together to smuggle. In other

instances wives, ordinarily honest even in the smallest matters, feel that they must defraud the customs as a necessary incident to concealing from their husbands the real extent of their extravagance.

Few passengers are arrested on the piers. We do not purposely seek to humiliate any one. If search of the person is necessary it is always done in a place screened from public view—most likely in the passenger's stateroom. Women, of course, handle such cases when women passengers are involved. In the inspectress' presence the unhappy and mortified offender must remove her clothing piece by piece and hand over each for examination.

Frauds against the revenue may be roughly classed under five heads, in the order of the loss sustained by the Government in their operation, as follows:

1—False claims to non-residence.

articles in the baggage-such as, for in-

2—Concealment of jewelry on the person.

3—False claims that articles are of domestic origin or manufacture.

4—Concealment of articles in trunks with false bottoms or similar devices. 5—Concealment of

Away above all other subterfuges as a sapper of duties come the false claims to non-residence. Non-residents fall into two classes—aliens who at no time have had residence in the United States, and Americans who have adopted bona-fide residence abroad.

When I tell you that practically no limit is placed on the value of personal effects a non-resident may bring in duty free, you will understand the popular though unpatriotic demand thus to be classified. Accurately determining the truth or falsity of such claims is about as easy as swatting a will-o'-the-wisp. No other feature of the tariff act is more difficult to meet with a hard-and-fast rule.

It must be borne in mind that from a customs standpoint citizenship and residence are not necessarily one and the same thing. The Treasury Department tried to determine the length of time one must remain abroad before a claim of non-residence could be sustained. In this it failed, and the regulations under which we now work sidestep the issue, merely specifying persons arriving in the United States and residents of the United States returning from abroad. In the circumstances every case must be considered on its own merits. About the only restriction placed on a non-resident and his personal effects, aside from the formal "not intended for sale or commission," is the proviso that his outfit shall be suitable to his station and appropriate to his journey. Here again is a beautiful little puzzle.

Yet it gives us an opening wedge for investigation. Maids, valets and other persons of inferior station frequently are pressed into service as carriers; and we are quick to note whether articles and garments, as well as their containers, are in keeping with the breeding and demeanor of their ostensible owners.

I regret to say that many an American woman of refinement and unsullied reputation has lent herself to the cheating of our customs by becoming a carrier while traveling under a false or legitimate claim to non-residence. More than one clear-eyed American girl has brought in a batch of Parisian gowns for dishonest dealers, conspiring

here and abroad; and more than once we have caught her at it.

Whenever possible we find and convict the guilty American dealer, and after hearing the girl's tearful confession let her go, with the expressed hope that she is ashamed of herself and will never attempt such a thing again.

I call to mind the case of an American woman, an army officer's widow, who resided in Paris, maintained by a Government pension. It was my bitter experience several years ago to wring from her on the pier a confession that an assortment of gowns in her trunks was intended for a dealer.

She had with her a letter from a gentleman in our diplomatic service attesting that she was a bona-fide non-resi-

dent, and bespeaking for her our courtesy and expedition in passing her baggage in bond to an interior city. For reasons not essential to state here, we felt that a careful examination was necessary.

#### An Indignant Smuggler

"MADAM," I asked, using the stereotyped query required of us, "have you any articles intended as presents, or for sale, or as commissions for others, which have not been mentioned in your declaration?"

"Certainly not!" she said indignantly.
"It will be necessary to open your trunks," I said as courteously as possible.

Her face grew livid.

"They are to go through in bond," she said. "You will open them at your peril."

"Madam, will you be kind enough to give me the keys?"

She turned and made as if to leave the pier.

"Your keys?" I said again.

She froze me. I called a porter. Let me explain here that we are not required to perform the physical act of opening baggage. The department thinks it unwise, on the theory that in the eyes of many it would injure the inspector's efficiency.

Besides it would mean dirty hands—and dirty hands would ruin a dainty wardrobe. Of course, in the absence of a porter or a cooper, we give assistance when needed. "The keys, madam!" I insisted.

Again she ignored me. Her scorn was superb. I spoke to the porter. In a twinkling he had done something we seldom resort to: he neatly cut out the lock of a trunk and threw back the lid. Before us lay a shimmering mass of women's finery.

Appraisal showed three thousand dollars' worth of apparel in those trunks, only a

small part of which belonged to the would-be carrier. Subsequently she turned state's evidence and gave testimony that resulted in the conviction of the dealer. In consideration of a few gowns and transportation to and from the United States she had become his tool. He was sentenced to six months' imprisonment.

A slim young miss from Chicago, we shall say—though Chicago was not the city—essayed a similar performance after establishing residence in Paris. She had gone there to study, with a woman of apparent culture and integrity, retained by the girl's busy father—a widower presumably—as chaperon and traveling companion.

The character of the girl's baggage and the simplicity of her dress were so at variance with a lot of costly model gowns found in her trunks that the intent to defraud was patent. None of the models fitted her.

Gently we questioned the girl. She broke down utterly, weeping. Her chaperon, in league with a dressmaker, had persuaded her to take the chance. This woman was found guilty in the Federal courts; but to our great diagust she was fined only eighty-four dollars. The little girl was allowed to go.

(Continued on Page 33)

# HEN TAKES POSSESSION

EN HINKLEY softly shut the picket gate behind him. Then he looked stealthily around the corner of the house. He drew a long, deep, alcoholic breath - a sigh of satisfaction. Two figures labored in the dim distance. Ma Hinkley must be in the house alone. Things were coming Hen's way.

He tiptoed into the house. When he reached the kitchen he drew himself up to his full height and clomped in.

"Hello, ma!" he said. "Where's Gret and Gretta? They ain't takin' to leavin' you alone? "Tain't right, ma. I'll have to talk politics to 'em.

Hen's voicewas lowered instinctively to a certain pitch. He wanted ma to hear him-and yet he preferred that two other people, working at the fence out there, should not even know he was about.

Ma Hinkley scrutinized his face.

"Hen," she said in quavering tones, "Hen, you're lookin' better. Y'ain't so pale.

Hen nodded. He had been palevery pale. He had spent the winter months in the penitentiary, sent up as the chief offender in a drunken brawl, and he had been out but three short days. For two of the three days he had remained with this deathly pallor on his face. The reason was sufficient: He could not get drink without money or credit, and he had neither.

Only yesterday ma had yielded. Hen had had to buy some tools to start working at his new trade-what it was Hen did not just say-and ma had furnished a reasonable amount of the wherewithal. She had furnished it in secret, behind closed doors. Ma's daughter Gret had not known anything about it.

Hen, having procured this reasonable sum of money, had laid it out in tools that improved his complexion. His face was ruddy. So was his proboscis.

"Y'ain't so pale, Hen," repeated his mother. "Ye'r lookin' better, Hen."

Hen nodded toward her with an affectionate leer assumed for the occasion. He was glad of one thing-old age and many coughs and colds had taken from ma one of

her five senses: she couldn't smell.

"I'm feelin' better, ma," returned Hen. "You know I can't drink no more. They cured me of the habit up there. I've come to hate drink, ma. Look here!"

He rolled over to a little cupboard and opened it. Inside there was a brown bottle, kept for emergencies. He uncorked it. He smelt of it. A beatific expression overspread his countenance. Hen felt the need of a drink. He placed the bottle in close proximity to his lips. Then, remembering suddenly, he thrust it from him in disgust.

"You see, ma!" he went on virtuously. "I hate the stuff now. It ain't not only that I don't want it-I can't take it. I've been cured."

"That's fine!" said ma gratefully. Something in her mouth—her teeth possibly—became disarranged. She paused in her speech to correct the interruption. Finally she mumbled—almost apologetically, as one who would not look a gift horse in the mouth: "Hen, did you get the tools?"

"Ordered 'em," returned Hen, "special. They told me up there where I learnt th' trade to order special; if I didn't I'd get stuck. So I ordered special, ma-f'm New York," he added glibly. "I couldn't order special in this God-forsaken town of Hendershot—now, could I, ma? So I ordered I'm New York. An' ma," he went on confidentially, looking carefully round, "what d'ye think I got? I'm goin' to get a job."

"Come over close," said ma; "I can't hear—on'y don't talk so loud 'at Gret'll hear you. You've got a job, Hen?" Her eyes shone proudly. She wheezed with satisfaction.

Hen lumbered over toward ber, but still stood at a respectful distance. He wasn't sure whether ma's infirmity as to smell was total or merely constructively so. Alcohol is an insidious thing. It searches out the feeblest kind of an olfactory nerve.

"What's yer job?" asked ma.

"You wouldn't understand, ma," returned Hen; "but you've heard tell of concrete, ain't you? Well, ma, it's a job on concrete. An' the tools-there's a dozen of 'em,

## By William Hamilton Osborne

"Hen, Put That Money Back!"

graded—has got to be just so. You see the job is the same as the trade I learnt up there. An' I c'd go to work tomorrer if I had my tools." He looked at the floor. "If I only had my tools," he repeated; "an'—an' somethin' else. An' if I can't get that somethin' else I don't get the job." "What else d'ye need?" asked Ma Hinkley.

Hen scraped the unoffending kitchen floor-it was as clean as wax-with his muddy shoes.

"I hate to tell you, ma," he faltered, his eyes on the floor.

"It ain't—it ain't money, is it, Hen?"

"Money!" returned Hen in despair. "It is money, ma. Money is the only thing that keeps me from that job. If I don't get th' money I don't get th' job; an' if I don't get th' job I'll get discouraged; an' if I get discouraged I'm liable to take to drink."

His eyes wandered toward the cupboard. He wished that he could take to drink at once.

"I-I thought you couldn't drink no more!" said ma. Hen nodded.

"The doc at the—up there," he answered, "says there's only one thing that'd drive me back to drink, an' that's discouragement. That's what he said, ma. So long as I c'n get a job, I can't drink. An'"—he added desperately—

"I got to have money to get it, ma." "How much d'ye need, Hen?" she quavered.

Hen drew a long breath.

"I need ninety dollars, ma," said Hen.

Ma shivered.

"I ain't on'y got ninety-two dollars," she said.

"I know it, ma. The man wanted a hundred—that's what he wanted. An' I told him I c'd on'y raise ninety. So he said all right. But I got to have it, ma-t' keep me from drink."

Ma rose feebly, struggling from her chair. Hen didn't dare to help her-he feared to go too close. Besides, it was not within Hen's code to help anybody else.

Ma turned and lifted up her cushion, and then lifted up the seat. Under the seat was a little square recess and fitting tight within the recess was a battered tin box. This tin box was a thing ma lived with, day and night. She sat on it all day and slept on it all night-and she was a light sleeper and a heavy sitter, was Ma Hinkley-especially of late years. She drew forth the box, replaced her cushion and the seat, and sank once more, wheezing, into her chair,

Hen, forgetting caution, bent over her. Ma fumbled with the bills.

"I've spent all my money on you, Hen," she said.

"You'll get it back, ma-every cent!" said Hen. He held out his hand and ma counted out the bills.

"An' ten is ninety-there y'a.re, Hen!" she finally exclaimed.

Hen's hand closed on the bills. He thrust them into his trousers pock et. He was just in time. An instant la ter a woman in a gray duster and with a disheveled hat on her head swoop ed down on him and on Ma Hinkley.

"Hen," said this woman, "put that

money back!"

Ma glanced up in surprise.
"It ain't Gret!" she exclaimed. "Well, if it ain't Mena Kessler took us by surprise!"

Mena Kessler-she was ma's oldest daughter and she lived "over to Bascom," five miles away—did not answer. With one hand she held Hen's arm; with the other she gripped the tin box.

"Put the money back, Hen!" she exclaimed. "Y'ain't got no right to it." "It's ma's!" returned Hen stoutly.

"She kin do with it what she likes." "She can't!" said Mena. "She's got to leave it to us when she dies. How much did you give him, ma?"

Hen wrenched himself free and attempted to secure the tin box. Mena retained possession of it.

"You b'en drinkin' again, Hen! Shame on you!"

"He ain't b'en drinkin'," protested ma; "he's stopped drinkin'. He can't drink-it disgusts him, Mena. Hen don't drink no more."

"He must wash in it, then," said Mena sniffing.

Hen shook his head.

"What you smell, Mena," he explained, "is a medicine I take to keep me from it. I don't drink, I tell you. I've quit for good an' all."

Mena turned her back on Hen. Hen stole softly toward the door. Mena opened the cover of the tin box. In it there was a collection of odds and ends and a two-dollar

bill—and nothing else.

"Ma Hinkley!" cried Mena, glaring in astonishment—
"Ma Hinkley, what's become of all your money? You had hundreds an' thousands, fer all I know, in this box. What's become of it? I've got a right to know!"

Ma did not answer. The thin blood crept into her face, "You give it to him!" cried Mena. "Is thet so?" Ma did not answer. Mena Kessler stooped over and shook her

mother. "Answer me!" she commanded.

Ma was silent. The full force of the truth broke in on Mena. Ma had permitted Hen to rob her, bit by bit, of almost every dollar she had.

"You ought to go to the penitentiary, ma," said Mena. "You're as bad as Hen-every bit. I got some rights, ain't I? When you was dead I was goin' to set up my boy Herman in business with my share of that money. You're a criminal, ma-that's what you are! You've robbed

honest people of their money—you've robbed me ——"
"Who's robbed you, Mena?" said a voice behind her.
Mena swung about. She knew that voice. An undersized, middle-aged, wiry, well-formed little woman faced Behind this woman was her counterpart-a young girl. The woman was not without traces of beauty-she certainly looked fit. The young girl had all her mother's wiriness and form, and she had all the beauty her mother had lost as years went on.

"Who's robbed you, Mena Kessler?" defiantly queried this woman.

Mena Kessler folded her arms and looked down in contempt and anger at her sister.

"Gret," she cried offensively, "y'ain't fit to manage mother—ye don't know how. Mother's gone an' give all her money to that big drunken sot there!"

She turned to Hen—that is, she thought she did; but Hen was not in sight. With his clutch on ninety dollars in real cash Hen was on his way. His way, he assured himself, led along the primrose path. He humped himself, for he needed a big drink—and then another; then possibly some more.

"For years," cried Mena Kessler, "she's been givin' him her money." She leered suspiciously, "Unless," she added, "she's b'en givin' some to you."

Gret-her name was Gretta Schepp-had married; the young girl was her child. Gret was Ma Hinkley's youngest daughter. Gret shook her head.

"Ma never give rae no money, Mena!" she exclaimed. "What I need, I earn. What Gretta needs, I earn. An' what's more—what ma needs, I earn.

"Ain't you never borrowed?" queried Mena.

"Not from ma," said Gret.

Finding no thoroughfare here, Mena Kessler grew more angry than ever.

"It's all your fault—lettin' ma squander on a drunken

loafer, Gret! Why didn't you watch her close?"
"I did," said Gret quietly. "There ain't nobody can keep nothin' from me. I knew all about it all the time. What's more, many times I seen her give it to him."

"An' you didn't stop her!" screamed Mens.

"I didn't even let her know I saw," said Gret.
"You darned fool!" yelled Mena. "Why not? That
money belongs to us."

"It belonged to ma," said Gret; "an' it was ma's one pleasure—givin' to Hen. She's got a right to pleasure, ain't she, in her old age? You know she always liked Hen. She never had no time for us girls-it was always Hen. Well, she's had her pleasure-an' she had a right to it. I'm satisfied to let my share go for that."

"I ain't satisfied!" cried Mena. "An'-what's more-I'm goin' to see that ma don't get robbed no more."

"She ain't got no more—Hen Hinkley's got it all," said Gret.

"She owns this place, don't she? An' it's worth thousands, ain't it? It's one o' the tidiest places an' one o' the biggest places in Hendershot, ain't it? 'Fore long she'll be givin' it to Hen."

"No, she won't," said Gret. "It'd take a lawyer to do that, an' ma's skeered o' lawyers. And, besides, the lawyer wouldn't let her give it to Hen."

"He would if he was Hen's lawyer."

"Hen can't get no lawyer," answered Gret.

"Ma," said Mena firmly, "you git yourself ready.

You're comin' home with me—to Bascom."

Ma flushed. She flushed with pleasure and excitement. She had often hinted at a visit—had almost asked Mena; and not only Mena, but Sophie Gebhard-her third daughter-to take her for a visit. Hitherto invitations had not

been forthcoming. She brightened visibly.
"You're comin' home with me," went on Mena; "for a while anyhow," she added, hedging a bit, for she wasn't just sure how her man might take this thing; "for a while, till I can get some sense in your head." She turned back

on Gret. "You're no good, Gret!" she yelled. "You ain't got sense. You never ain't had sense. Th' idea! Lookin' on while ma squandered on a drunk! Ha! You never was o' much account. You couldn't keep your man for more'n ten months, c'd you now? An' look what you got-a miserable beast like that man Schepp!"

Gret smiled.

"I don't know," she said reminiscently, "but I'm about as well off as you be, Mena. I got married anyhow. An' I got a child. An' ten months is just about enough for me. Now I ain't got to knuckle down to no man-like others have. It was considerable of a strain f'r Schepp to keep decent for ten months. He was a beast, all right. I know

that now. But that ten months was pretty average, Mena. An' I ain't got no man a-naggin' at me now-like others has."

"Who do you mean by others has?"

Gret laughed tauntingly.

"I was just a-thinkin' o' my sister, Sophie Gebhard," she returned.

"That's different," said Mena.

"Sophie Gebhard-an' others," added Gret dreamily.

That very afternoon Ma Hinkley started for Bascom. Mena took her over in a hired carriage. Gret supplied the horse—Gret had a horse. He was an ice horse in summer and a coal horse in winter. Gret sold ice by the piece and coal by the pail to the surrounding neighborhood. Her storehouse was an old shed next the barn. Her horse was a necessary asset, for every day she went to the canal and bought half a wagonful of ice and half a wagonful of coal.

"He'll get you there, ma," said Gret; "an' he won't get much excited over it. So don't you worry-on'y," she added to Mena, "you get him back termorrer."

"Where's that two dollars, ma?" said Mena. "It costs me that to hire this carriage for a day." Ma passed it over.

"Now," went on Gret, "you treat ma kind and gentle, Mena. That's all I ask o' you." Mena bridled.

"Don't you tell me how to treat ma!" she cried with asperity as they drove off.

As a matter of fact she did treat ma "kind and gentle." So did all the family in Bascom. Even Mena's man was kind and gentle. Ma felt as though she were in a butter tub. There was plenty of heat and lots to eat, and her favorite . dishes were always in evidence. The children bought her gifts and made her aprons, pillows and wash-rags. They played games with her.

Ma began to revise her ideas. Bascom was almost a city, and Mena Kessler and her man were almost city folks. Ma found herself quivering with pleasure and excitement.

Gret would have left her to revel in this Paradise; but not so Mena. Mena brought the morning paper in one day and laid it on ma's lap.

"Ma," she said, pointing out an item, "you might as well know first as last: Hen Hinkley has gone up to the penitentiary-fer a year this time. He's been on a tear ever sence you give him that money that I caught you givin' him-an' he got into another drunken brawl.

"Now, ma," Mena went on, ignoring ma's whimpers "the time's come when your best friends have got to talk to you. Do you believe that I'm your best friend? That's the question now. I'm your oldest, ma, and I'm best calculated to advise you. Ain't I? An' my man an' my children-ain't we your best friends? Don't we know what's best? Don't we treat you right?"

Ma had to acknowledge that they did. This point gained, Mena followed up her advantage. "I'm your best

friend, ma," she went on, "and I'm goin' to give you good advice. You ought to make your will. You got a tidy piece o' property in Hendershot, ma, and you ought to think about it. You ought to make your will."

Ma made her will in fear and trembling. She expected to drop dead immediately thereafter-but she did not. Something else dropped, howeverthe enthusiasm of the Kesslers. Bit by bit they lost interest in ma. They even made overtures to Sophie Gebhard. They invited Sophie-Sophie, remember, was ma's second daughter-over to lunch one day, an unprecedented thing; and told Sophie, much to ma's surprise, that ma was visiting all her daughters before she died.

During the course of the day, Menn, with considerable lack of tact, outlined the history of Hen's iniquity in getting his hands on all ma's tangible assets. From that time forth Sophie took interest; she urged ma to visit

"We Got to Hire a Speaklust, er We'll Die, Both of Us"

her-urged with enthusiasm.

Ma went with her. The Kesslers after her departure sighed with relief. Mena Kessler drew out the will and read it for the hundredth time to her

"She leaves everything to me," said Mena ecstatically. "Now I've got just what I want."

Her man nodded inquiet satisfaction.

"It's all in legal form," he said; "the lawyer said so. They'll never be able to break that will."

"Never!" said Mena.

Ma went to Sophie Gebhard's, where she was treated with eminent distinction. Mena had made the mistake of not keeping up her enthusiastic hospitality until the end. The social air was getting chilly when ma left Mena's. The

warmth of Sophie Gebhard's welcome was delightful. Ma spent some months at Sophie's. At length Sophie had a heart-to-heart talk with ma behind closed doors.

"Ma," she said, "of all your children I'm the one who liked you best. I always liked my ma. Don't you remember, when I was a little kid, how I used to like you? And I like you now. . . . Ma," she said tenderly, "I want you to do something for me-I want you to make a will."

Ma started.

"I-I made one!" she gasped.

It was Sophie's turn to start.

"For Hen?" she cried. "He's a good-for-nothin', ma."

"It—it wasn't for Hen I did it," whimpered ma.

"Gret ain't no right to think she owns you, ma,"
protested Sophie. "We all 've got some rights."

"It was Mena," faltered ma.

Sophie burst forth into vituperation against Mena. Then she went out to see a lawyer. She came back with the lawyer and with a radiant face.

"Here's the lawyer, ma," she said. "You're goin' to make your will."

"I made one," faltered ma. "How can I make another?" "You may make as many as you like," said the lawyer.

It's the last one that counts." He took out his notebook. "What's your pleasure, Mrs. Hinkley?" he inquired.

"I've talked it all over with ma," said Sophie; "and to tell the truth, ma is afraid of all her children but me. She can trust me—can't you, ma?"

"Yes, Sophie," said ma.

"Mena has done a mean thing," went on Sophie: "she's got ma to make a will in her favor, and she intends to keep it for herself. Now I thought that if ma put her estate in the hands of some person she could trust-like me-why, I'd see to it that the estate was rightly divided up. I'd see that all got justice. Ma can trust me to that extent—can't you, ma?"

"Why shouldn't I?" weakly responded ma.

"So ma wants you to make out a will leaving everything

And appointing you executor?" said the lawyer.

"Exactly," said Sophie; "just leaving it outright to me; and I'll treat 'em all right-Hen and Gret and even Mena too. That's right, ain't it, ma?"

Ma said it was. So the lawyer went back to his office and drew up the will and brought a witness back. The second will was signed.

Once more ma found the mercury descending. Finally Sophie sent for Gret. Before doing so, however, she cau-tioned ma not to say a word about the will—and cautioned her against making any other wills. She told ma that under the law a person could make two wills, but no more; and that to make a third was a state's-prison offense. Then she sent for Gret.

Gret came by train.

"We got to go back by train, you an' me, ma," said Gret, "unless Sophie can blow us to a ride."

(Continued on Page 48)

## THE GAY-CAT By Patrick Casey

T WAS a night of fog. Slowly over the sleek, wet ties the two hoboes shuffled. They were a man and a boy. The boy did not walk at an even stride with the man. He followed, like a shrunken shadow, a step behind. It was significant. Both were tattered, blackened by grime and chilled with the fog. They were hunched of shoulder, heavy-legged. They were alike save for that interval of a step. That marked a difference. It was a difference old as the world. It began when first a slave stumbled after the dominator through the bleak dusk of the primeval. It showed

The face of the boy burned with the chill of the fog. They had ridden the brakes from Ogden in cramped proximity to the roadbed and the clacking wheels. Flying pebbles had cut their skin with nasty scratches. Dust and cinders had eaten like acid into the cuts. The damp of the fog loosened those gatherings. Like salt in the wind it made the cuts sting.

that the one served the other.

The boy rubbed his face with a threadbare sleeve, stiff as sandpaper with dirt. He whimpered. The man went on. He heard the boy. He did not turn his head. The boy, had he done so,

would have backed away in fear. He rubbed his face again. Again he whimpered. It was not to arouse sympathy. It was the outpouring of a soul's misery. It was like an animal's. Misery was inside of him. Like an animal he whimpered to rid himself of that misery. All the while, at that interval of a step, hunched of shoulder, shuffling legged, he slouched on after the other through the fog.

Neither the man nor the boy caught the moan of the dog that followed them. It was like an echo of the boy's. It came from behind them, at each whimper of the boy, like sympathy. It echoed, as they reached the hangout, the last whimper of the boy.

The hangout was down from the railroad embankment in a field of rusted car-wheels. The wheels were in immovable twos, a three-inch axle slung between. At the end of the stretch of wheels was the hangout, barricaded on one side by a corrugated iron windshield, roughly thrown up, and on the other by a derelict gondola freight car.

The man and the boy halted at the end of the car-wheels. The hoboes in the hangout had finished eating. They lay on stray ties or on the scattered straw and excelsior with faces to the fire. The light of the fire disclosed the man, and behind him the boy.

"If it ain't Frisco Red!" exclaimed one prone figure. A number of hoboes sat up and greeted the man.

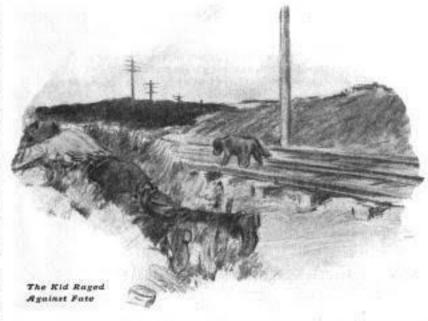

No one spoke to the boy. He made at once for the fire. A stew was cooking there in a smoke-blackened oil can. He sniffed the stew like an animal as he drew near. He peered into the blackened can. There was enough left. It was a mulligan. Everything was in that stew-meat, potatoes, onions, bread-an appetizing hodgepodge. They could eat their fill. What remained of the stew, now that the hoboes had eaten, was any one's that would come and take.

The man had appropriated a tie near the fire. On it on his stomach he basked, his face to the blaze. It was a large face. The red stubble of a week's growth thickened the outline and made it appear more bloated. His nose

was fatly bulbous. He had borrowed the makings from one of the hoboes. He puffed deeply. At long intervals, in thick, complacent streams, he exhaled the smoke.

The boy hunted round for the tin plates. With excelsior he cleaned two. He fished out on a stick potatoes and onions and meat and bread, and heaped them in a smelly, steaming mess upon the plates. To Frisco Red he brought one of the plates. The stew steamed fragrantly about the red shaggy head as with grimy fingers the burly hobo dug for the first mouthfuls among the potatoes and shreds of meat.

"That's some kid yuh got, Red," said one hobo. He watched the boy as the youngster carried his own smoking dish to the

outer rim of the crowd and sat down with it on his knees. Say, how much yuh want fer that kid?"

The boy ateravenously. He did not lift his head. He ate as though he had not heard the offer of purchase. He ate inelegantly, quickly, greedily, with a thorough and wholesome enjoyment of the coarse food. It was his first meal in twelve hours.

"You wanter buy that kid?" Red said. He looked at the boy. The hobo was watching the boy. "Wal, that kid ain't for sale. He's a valyable road-kid, that's what, and he ain't for sale. There ain't a kid like him this side of the Hump—nor t'other side either. He's valyable, I tell yuh. You should have seen him batter the back doors up in Ogden. Handouts every time. Handouts for me. That kid don't want no handouts. He gets setdowns. Yes, siree, bo; every time. Setdowns in the kitchen.

"And State Street, Chicago, bo. He sure mooched that stem. No nickels. Dimes, buddie, and most like a quarter or a half. The women fall for that kid. Them high-waisted farmers' wives most of all—'He's so wis'ful kinder,' one says to me-him bein' that white and thin and scrawny, though yuh see how he sure digs into that stew. But he handles em cute, that kid. He's too valyable. He don't need to batter no back doors. He can beg coin. He don't have to throw his feet. He can beg coin enough to keep me in booze regularlike. He's a valyable prushun, that kid. Yuh can't buy him."

He fell to again on the food. He thrust a dripping, meatcoated bone in his mouth. He sucked at the brown cells greedily with a clucking of licking lips. He gnawed the bone. He looked round like a huge mastiff, bone in mouth, greasy fingers upholding the ends, to view his property. The boy was bowed-head over his food.
"No, bo." He removed the bone and shook his great

shaggy head. "I don't sell that kid, not for no money. I've had him for three years, that kid. He was twelve. He's kept me in grub and rum money for all that time. Three years I've spent a-trainin' of him to be a blowed-inthe-glass stiff. I'll make him that, like you and me, blowed-in-the-glass stiffs. He's not what yuch call attached to me. I'm a wicious man when drunk. But he knows enough, that kid. He knows enough to do what I say and hand me the coin.

"I learned him that, yuh see. One time it was comin' over the Hump under the headligh t. It was cold under them snowsheds and black. That light overhead was without any heat. Its beam 'ud make yuh shiver. It was cold. The kid he was whimperin' like a sick dorg. You know the way. It got my goat-that and the cold and that light in all the dark. I told him I'd showe him off. I did bend him over the irons. I guess he never forgot that. Did yuh, Kid?"

"No, Red," said the boy without raising his eyes from the plate.

The man looked triumphantly round at his

listeners, smudgy faces trembling red in the light

"Three years ago that was. Three years I've spent a-trainin' of him to be a blowed-in-theglass stiff. But he's still enough of a kid to be worth coin to me. Not fur five bones would I

sell him. He's too valyable. No," he added, more to himself than to the tramps, "I won't sell him."

The boy was thin-wristed and slim. His face was

pinched and very pale where it was not streaked with dirty scratches. His eyes were the blue of the gypsying Celt. They were pitifully deep-sunken.

He was a road-kid who begged at back doors and along public streets for the hobo who had appropriated him. There are many such road-kids. Their youth assures success at begging. Therefore they are of value. The hobo with a road-kid lives a life of ease. The kid is his drudge, his slave. It was that way with Frisco Red and the Kid. The Kid's appearance gave him power to attract sympathy. The burly hobo exploited that power. In return there were lessons in the tricks of the hobo trade. Also there were lessons in brutality. By sundry cuffs and kicks the man made the boy's life almost unendurable. At regular intervals there were thorough beatings.

Frisco Red had appropriated the Kid to his own use. Had he not, another hobo would have done so. Three times they had tried to steal the Kid. The boy had clung to him. Kicking, biting, screaming, the boy had clung to the red-headed, unlovely hobo. It was not attachment. He was afraid of the others. He was afraid of the road alone.

The Kid threw the bones and few left-over scraps of the meal upon the ground. He went over to Red to borrow from that borrower the makings of an after-dinner cigarette. He came back deftly rolling it.

In a sort of piteous delight, as it nuzzled the bones the boy had thrown away, the dog was making soft noises. It had been haunting the shadows since it had followed the two along the tracks and into the jungle. The Kid had turned his back. Thereat the smell of meat had lured it in.

The Kid run toward the dog.

"Hello, pup," he said. "How are you, old hobo?"

The dog was a yellow dog. He was a mongrel. There was some strain of terrier in him that made him small. He

backed away, growling. He would not trust the Kid. He was starving. Yet, as the Kid approached to pet and make friends with him, he left the meat and, growling,

backed away.

"Aw, bo," the Kid
pleaded; "let me pat you, will yer? What yer'fraid of? I sin't no gay-cat that 'ud kick you after makin' friends. I'm a blowed-in-the-glass stiff. I am. Come on, oldtimer. Let me pat yer. Aw, will yer?"

He leaned forward. His breath came in gasps. His hands went out. The partially rolled cigarette dropped from his fingers. The fingers moved in soft caresses. They were wasted on the air, but they were pitifully significant; they were significant of how the Kid would treat that dog.

"Aw, Red Shouldn't be Jo Mean. What's Eatin' Red?"

Onlis pale, dirty face was a peculiar expression. Rapture was in the deep-sunk eyes. In his eyes was the look some umarried women have when they see a child.

"Tryin' to scare me, huh?" Step by step he advanced on the slowly backing dog, his body crouched, his hands patting the air with infinite tenderness. "You old Gay-cat, you can't scare me. I'm a-goin' to make chums with you. You see. Aw, yer old Gay-cat, what you 'fraid of?'

The dog turned tail. With the indescribable hunched back of a cur, yellow tail snuggling between his legs, the dog bolted in fear of him into the shadows.

The boy sat down on a tie. He fingered his ears. "Aw," he said, "I wouldn't 'a' hurt him."

The dog was starving. From a different angle he stole into camp. He breathed with fear. The meat drew him on. The boy did not look up. He did not know that the dog had come back. He had lost all faith in that dog. The dog would not trust him. The dog was not a blown-in-the-glass

stiff. He was a cur. He was a gay-cat!
"Not a real gay-cat," qualified the Kid. "No, not a real gay-cat. It's mean treatment that's a-done it. He's horstile to everybody, even boes like me. He's a stiff, all right. But he's 'fraid like a gay-cat. That's all."

A gay-cat is the scorn of hoboes. He is a fake hobo. He lacks altogether the qualities of a blown-in-the-glass stiff. He will "peach" on his mates.

He will turn against a friend when that friend is down to tomato cans. Anything and everything vile and despicable is worthy of a gay-cat. To call a man that is to brand him with the most loathed name a hobo knows. It is the quintessence of contempt.

The dog made the final whimpering plunge. Down on forepaws he went and burrowed his slant muzzle in the straw for the meat. He made soft sounds of self-pity and of joy. The while teeth and forepaws struggled over the bones, the tragic curl of tail, so used to snuggling his back in fright, wagged forlornly in a daze of

happiness. Neither the forlorn tail nor the squeals of joy did the boy see or hear. His elbows were on his rocking knees. His fingers rubbed slowly up and down, with the gentle unconscious motion, under the lobes of his ears. It was not often he thought of home. But now, while his boy's soul was possessed by an utterness of despair, he visualized the little cottage clearly. Whenever he

thought of it it was the samealways as it had been in the morning when the air was sweet and the marguerites near the picket fence had no dust on their whiteness.

It was up in Grass Valley. Before the damp had got him his father had been a workman in the mines. His mother always gave setdowns to hoboes. Year after year she did that. All the hoboes knew the white-faced little woman. "The lady in the shawl," they called her. Always she asked them, in return for her kindness, to look for her baby who was out there among all those lost boys and men.

For him every night she kept a lamp lighted-an oil lamp in the window. That was his room. A hundred roadkids had slept for a night within the pink-papered little cubby. They had told him.

But the Kid did not go back. He felt he never could go back. He knew when the train shrilled high up on the side of the valley and the sounds dropped down he would go as he had gone before. He never could stay on. An urge was in him. That urge had drawn him out of the arms of his graying mother when he was twelve, and after a circus train that had dipped into the little valley to extract its tribute of quarters and the irretrievable tribute of boys. That miserable urge kept him moving-moving to find peace. It was the wanderlust. The wanderlust held him in a ble slavery than did Frisco Reueler and more irrevoca For it he endured Frisco Red. But the urge for always moving on was his real master. The accursed wanderlust!

The dog sought beneath his feet for more scraps. But the Kid did not know. He remembered one morning when the train whistles came clear across the valley and there was no dust on the white marguerites. He had played that morning with a black-and-tan puppy beneath the smelly bushes near the picket fence. The puppy was the gift of a miner. The boy called it Prince. All the time it had struggled in his arms in an ecstasy of affection to lick his face. The round bundle of fat had made him laugh. He remembered he had rolled, shrieking with laughter, over on his back and the puppy had licked his face. He remembered exactly how it had licked his face.

He thought he imagined that wet kiss on his downheld cheek. It was as wet as real. A cold breath fanned the scratched cheek. The Kid's lack of movement had won the dog over. The mongrel that had fled from him was making friends. But it did cringe in a terribly abject way when the Kid leaped to his feet at the kiss.

"Yer not a gay-cat, are you?" he said exultantly. "You

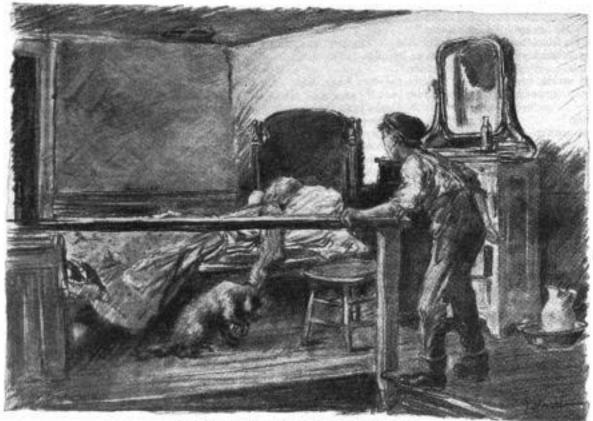

came back like a regular stiff. Now yer did!"

He reached down and quickly lifted up the dog, the while the frightened mongrel struggled and tried to bite. He sat down and began to pet, to reassure the dog. Against his pinched white face he rubbed the cold muzzle. The dog whined piteously. Then the dog squatted down and, cocking its head to the movements of the petting hands, tried to lick them. The little brute whimpered softly. The whimpers came every now and then as if in an excess of gratitude. He climbed up on the boy. Just as the other dog had done he tried to lick the boy's face.
"Like Prince," the Kid glowed. "He tries to lick my

face just like Prince." He put his cheek, in the restfulness of whole-souled affection, against the cold muzzle.

"What yuh got there, Kid?" asked a hobo, sprawling near.

"A dog. Can't yer see?"

The Dog Did Not Leap Up and Upon the Kid

Frisco Red looked round at the proud rejoinder. "A dorg? Wot yuh doin' with a dorg, Kid?"

'Aw, playin'. Jes' playin', Red. But ain't he some dog though?'

The better to show off the mongrel the Kid put him down upon his feet. Frisco Red returned, without another word or a second look at the dog, to his conversation with Pittsburgh Shorty and Cheyenne Joe. Dogs did not interest him at all, and his road-kid but little.

Some time later Frisco Red spoke a short word. The Kid went out into the darkness to gather a few staggering armfuls of wood. It was to keep the fire blazing through the night. He paid with toil for what he and his master had eaten; also for what the dog had eaten. That was a last thought. It made the boy stoop with a certain thrill of pleasure to the task. He ripped off planking from the floor of the derelict flat car. He trotted back and forth with the reighty armfuls. All the while at his heels the dog sniffed.

The hoboes drew nearer the fire and curled up preparatory to going to sleep. The Kid drew up his tie. It was not so near the fire as theirs. He knew his place. He took off coat and vest. He placed the folded vest under him for a pillow. Loosely over him he cast the dirt-stiffened coat.

The dog wriggled and squirmed, pulled with his teeth with his head, until he coat. Snuggling close for warmth he lay on the Kid's chest. So they slept, the Kid and the dog. The lean hairy body was held tightly in the boy's arms. Against his neck lay the warm-breathing muzzle. The Kid waked from time to time with the cold of the night. The dog whimpered each time and ran a wet tongue along the Kid's neck. Then the Kid smiled and hugged the dog the tighter.

The Kid awoke in the brisk of dawn. "Get out, you old Gay-cat," he mumbled to the hairy bundle of warmth on his chest. He called the dog a "gay-cat" and smiledgay-cat, which means all that is despicable and loathed!

It was a species of mock contempt. So a man calls his wife old woman." It was to hide, in masculine fashion, the thrill of love in his voice.

The camp was heaving awake, like so many maggots in the dew. The hoboes crawled out of their floppings like dead souls awakened by some inexorable law in which they had no wish or say. They stood up and stretched grotesquely and shivered in the damp. Frisco Red stood up, raw of beard, ashen of face and seedy. He kicked into cowering life one who was old and who overslept.

"Get up, bo," he said, the before-breakfast husk in his voice. "Got to throw your feet if yuh want scoffin's."

He turned a gray face to the Kid.

"Kid," he said, "you'll have to batter for handouts this mornin'. I'll get my own scoffin's. Gee, I feel like I used to when I'd downed three cups. But you batter for handouts, Kid. The women are horstile to me. I look rough and raw. But you're sure to get'em snivelin' over yuh, a pretty kid like you. We got to walk to the water tank this mornin' and we need handouts."

The boy started to leave the hangout. The Gay-cat stalked into life at his heels.

"Say, Kid," said Frisco Red, "can't have that dorg round. Lose him in the first back yard. Hear me, Kid? The boy turned back beseechingly.

"Aw, Red, can't I keep him? Can't I keep him, Red?"

"The first back yard, Kid. Get me? I don't want no pet dorgs for mine. How yuh goin' to batter back doors with him all the time snoopin' round at yer heels?"

"Aw, say now, Red, he ain't hurtin' yer none. He's only a dog-a hobo dog, Red. He won't a-hurt me beggin'."

Frisco Red looked into the deep-sunk eyes of the Kid.

"The first back yard," he said with monotonous insist-

With shoulders hunched and head drooped miserably forward the Kid led the way. There was the field of rusty brown car-wheels, two by two, forever two by two. Then it was up the rough embankment of gravel where the tracks shot on either way into the lift of distance. Beyond that, after they had mounted it, could be seen a gray flat of marshy land that lay far to a blue suggestion of hills. Hunched of shoulder, shuffling-stepped, the black hulks of the hoboes, at regular intervals along the embankment, punctuated the sky like perverted question marks.

The Kid led the way. The dog ran by his side. His head drooped in sympathy. Every now and then the Kid spoke. "Aw, Red shouldn't be so mean," he would say. "What's eatin' Red? He acts awful mean."

A side-tracked train of disreputably old boxcars bulked ahead. A man was climbing down the ladder of the first bunk car as, with the dog at his heels, the boy shuffled by. The dog barked at him as he leaped to the ground. "That your dog, Kid?" he greeted.

The Kid halted. The other hoboes slumped spinelessly by toward town.

"You've said somethin', bo," he answered quite manfully. "Say, yer couldn't stack us up to some eats, could yer, boss-jes' the dog and me?"

The look of the drooping dog and the pale, thin-wristed and wistful Kid had its effect. It was a picture so boyish and forlorn. The Kid ate with the foreman of the blocksignal installation crew. And the Gay-cat ate also, out of a tin plate of his own. The boss liked dogs. He placed, so he could watch him, the dog and his tin plate upon the oilcloth-covered table.

Smoking a cigarette he had borrowed from the construction boss the Kid went back to the hangout. There in that deserted field of rusted car-wheels he tossed sticks for the Gay-cat to fetch. It was a trick the dog had learned from some one in the past. Proudly he showed it off. All the time the Kid swore in fond raillery at the dog. When the little brute drew near he loved him with petting and as often with gentle cuffs. It was a strengthening of comradeship.

Frisco Red slouched into the jungle. He looked at the quieted dog. Then he looked at the Kid. The Kid cowered. He put out his hand. In it was the handout he had obtained for Red from the foreman.

Frisco Red squatted down on a tie and munched the cold meat and bread. To the constant clicking of his jaws the burly hobo watched steadily the boy and the dog.

When the last mouthful was finished he wiped his fingers on his stubbly lips. He drew from his overalls' pocket the inevitable little white muslin bag and sheaf of brown papers. These he fortunately had forgotten, the night before, to return to their owner. He lighted a cigarette. He drew deeply a few times. Then, half-consumed, he flipped the cigarette away. He got up in his track-worn shoes.

"Goin' to keep the dorg, Kid?"

"Aw, Red," said the Kid with dry lips. "Aw, let me keep him, Red."

"I told yuh to lose him, didn't I? The first back yard it was, wasn't it?"

"I only went as far as the construction train, Red. Let me keep him, will yer, Red? I didn't pass no back yards; honest, I didn't. Aw, Red!"

Frisco Red reached for the cowering Kid. He grasped him by the nape of the neck. He threw him on his face. He kicked him. He kicked more than once. He kicked viciously.

"The first back yard. Yuh was to ditch him. Yuh

The Kid sobbed from the straw and excelsior: "Don't, Red! Aw, Red!"

The dog snapped at that swinging foot. A well-directed kick caught him in the soft hanging part of the neck beneath the bristling ears. Over and over into the crackling litter the dog sprawled.

At last the Kid crawled out of it. He lay on his face behind a tie. By a roundabout path far from that booted foot the dog slunk to him. The dog 'icked his neck and exposed ear.

Frisco Red walked at a sharp stride toward the embankment. At the foot of the embankment he slowed up. He came back.

"Kid," he said, "yuh ditch the dorg."
The huddle behind the tie did not answer. Only in a tumult of sobbing it shook all over.

Frisco Red drew out papers and tobacco. Rolling a cigarette he moved away.

Two hours later, one of a reeling lot of hoboes, he reappeared. All were more or less drunk with cheap whisky. In Sacramento, in an alley behind the Capitol Bar, they had "rolled" a drunken rancher for his pocketbook.

The Gay-cat crouched in fear, at sight of Red, behind the Kid's legs. He whimpered softly in tense nervousness. Frisco Red stood absurdly hesitant on legs askew. He paid no attention to the Kid. He did not see the dog.

There was a consultation among the unsteady men. Then the grotesque squad moved forward. They moved forward in what appeared an exaggeration of their peculiar hobo shuffle. Dully, with heads lolling on necks, they followed the tracks away from town; the while, as occasional accompaniment, they bawled broad songs or the hymns learned in some slum mission where he that would sing might eat.

The endless punctuation of ties led on and on until even the marshes rose and became level with the tracks and were prairie land. Here, behind a barbed-wire fence and beneath soughing eucalyptus trees, a weather-worn farmhouse stood. About the foundations of the farmhouse was a flurry of chickens; but there was no other sign of life.

Along the line of wire fence the water tank upreared on its stilts. Frisco Red and the litter of tramps lay down upon their backs and drowsed in the shade of it. A little apart sat the Kid, the dog between his knees.

It was stinging noontide. The sunlight pelted down upon the drab eucalypti and the drabber men. Everything

was silent and dead with heat as high noon of an Indian summer Sunday.

"I'm hungry," said one youngish hobo some time later. "I'd like ter throw my feet at thet house. I'd batter it myself only-only it's horstile."

All knew it was hostile, On the water tank was plainly written that it was hostile. Beside the monakers or road names of a hundred hoboes were scratched such messages as: "Beware of dog." "Farmer has gun." "Farmhouse horstile." The messages were of a nature to cause the boldest of the hoboes to hesitate ere begging at that particular farmer's

Frisco Red got up. He drank for long minutes the drippings of the water tank. Then he went over to the trough that was an adjunct of the tank. He doused his head at the uncovered end. He came back. The hair, red and sodden, was dripping into his eyes. "Gee, that stuff had a kick to it!" he said. "I'm burnin' up. Burnin' up and hungry."

The dog escaped, at sight of Red, from between the Kid's knees. Backing away into the sunlight, he barked once in fear of the dripping red hair of the man. Frisco Red stared at the dog. A stupid expression of surprise marked itself on his hair-streaked face.

"You here?" he asked the air. "Where's the dorg?" He looked round, his head moving stiffly on his neck. The Kid shrank into the sunlight. Circuitously he made toward the burly hobo.

"Aw, let me keep him, Red," he whined.

That dull apathetic surprise in his eyes, the hobo looked at the boy. He looked at him for a long time. Slowly, as he looked, his eyes narrowed into a certain squint of craftiness.

"The whole push is hungry, Kid," he said. "I'm

hungry." "Yes, Red," said the Kid submissively. His body fell into the conventional hobo slouch. Shoulders hunched, head lowered toward the ruts in the road, he followed in the shade of the trees the line of the fence. He turned back a short space on and whistled for the dog. The Gay-cat trotted out with spirit at that call and commenced the inevitable dogging of his steps.

"Kid," called Frisco Red, "better leave the dorg behind. You can't batter that horstile house with him along."

The Kid steadily kept on. He was suspicious.

"Aw, let him come along, Red," he flung over his shoulder.

"Send the dorg back, Kid," said Frisco Red. "Better send him back.

The Kid gave in to that monotonous repetition of command. He shooed the dog back toward the water tank. Dejectedly, tail snuggling between his legs, the dog walked slowly into the shadows of the tank and stretched out, with only now and then a questioning look after the Kid.

The Kid climbed over the one-hinged, wire-secured gate. He approached the front door of the sundozing farmhouse. He knocked and repeated the knock. The door was opened

by an asthmatic and worn old woman.
"Such as I have I'll be givin' you with the help of God," she said in a remote way. She invited him into the stifling shadows of the kitchen.

When he came out he carried what the gasping old woman had given him for the other tramps—eight egg sandwiches. He himself in the shadowy kitchen had eaten his fill. An anxious frown knuckled his forehead as he came back. His eye was agile for sight of the dog. He handed the sandwiches to Red and the others.

"The little Gay-cat, where is he gone to?" he asked, his breath coming short and hard as though he were the gasp-ing woman. "My dog? He was here a little while ago."

A great to-do of struggle in the trough made him look past the munching Red. The trough was partitioned into halves. One half was open. The other was covered by a stout board. Under the board Frisco Red had shoved the dog. He had slammed the board tight. There was no chance at all for the dog to climb out. Paddling desperately in the water, with that board but a few inches above its head-scant inches of air and life-the dog was struggling for life. It sobbed passionately. As the Kid looked toward the trough the sobbings rose into a long, echoing

The Kid's pale, dirty face was much paler than usual and by contrast much dirtier. "Aw, Red!" he sobbed.

He ran toward the trough! His dog! Quite unconsciously, as he ran, he pulled up his sleeve for the plunge. The whine died away in a choked sob.

"That's all right, old feller. I'll -I'll -

Frisco Red sidled out of the shadows between him and the trough.

"I ditched the dorg, Kid," he said hoarsely. "Now you leave him there. You're not goin' agin me in this. Myself, I'm horstile to him from first sight. The first back yard it was, Kid. The first back yard and yuh didn't.

The burly hobo spread his legs. In the old known gesture he reached out his hand for the Kid's collar. The Kid tried to slip past him for the trough, but Red got his grip. By the collar, as the Kid squirmed, the hobo swung him round into his arms.

"The first back yard, Kid," he muttered.

A certain pride was in his voice. It broke in a scream of pain. Red dropped his hold of the Kid. Frantically he pushed him away. All the while, as he did, he screamed as with pain unendurable.

The Kid had bitten his arm. The Kid had clawed with long fingernails across his temples. The blood was burning into his eyes. The hobo backed away. He screamed with pain. He screamed with fury. He pulled from beneath his overalls apron his miserable weapon. Brushing the blood from his eyes Frisco Red groped forward for the Kid.

Quivering, ghastly white, his eyes aglare with an intensity of outraged feelings, the Kid crouched. To his ears came the shrill walls of his dog. Frisco Red groped toward him. In the hobo's hand was the razor doubled up against the crotch of thumb and forefinger in the regulation hobo manner. It was a glistening, terrible thing. But the Kid did not shrink away. The wail of his dog shrilled on his ears. He was in a madness of revolt. He had bitten Frisco Red's arm. He had scratched Frisco Red's temples. He had aroused in Frisco Red an anger that lusted for blood. The Kid did not shrink away. It would do no good. He had drawn blood. In blood he would have to pay. Always that has been primitive law.

The half-blinded hobo came on. The Kid sprang in. As he sprang he caught that razor-wielding wrist. He turned that wrist. He was half-crazed with a madness of revolt and with fear of that vicious weapon. With strength born of his desperation he turned and turned Red's wrist.

Frisco Red was blinded by blood trickles. To the core of his being he was shocked by the Kid's frenzy of fighting. It was a thing utterly unlooked for. It was an appalling thing to him. It overwhelmed him. The razor fell from his wrenched wrist.

It fell into the gray-yellow dust. In a trice it was stamped out of sight. It was stamped under the feet of the Kid. In that trice the Kid had leaped. Upon the bloodblinded and bewildered hobo, at his bloated stubbly face the Kid leaped. He shrilled curses. He beat upon that face. He scratched. It was a frenzy of fighting.

It was the fight of a wolf and a wounded moose. With the tireless pursuits of his slavery the Kid was strong and healthy. It was a wiry strength, an emaciated healthiness, like that of a lean-flanked wolf. His tissues were not wasted by cheap whisky. He had all that makes for the courage to fight fairly; but his education had run in different channels. He had seen men fight, kicking and clawing and shricking like depraved souls. Always they had been in liquor. Always the fight had been vicious. It was only for him, in the madness of revolt, to fight as he had been taught. He could not take any chances.

The Kid was on the hobo's neck. Like a wolf dragging down a moose he hung to that neck. Beating and scratch-

ing, shrilling curses the while, he worked round. He never released his hold on that neck. He jumped upon the hobo's back.

It was the dreaded "strong-arm" that is the road-kid's standby. Thus upon a man's back, forearms entwined about his neck, a puny boy can exert enough leverage to curl that man, gasping, upon his back. It was that way with the Kid. His thin, bony wrists were knotted about the hobo's throat. He pulled back on them. Frisco Red, as he cursed, swallowed hard for breath. He struggled to heave the Kid off. The Kid pressed his right knee against the joints of the man's backbone at the small of the back. Redshrieked terribly. His back gave. It gave like a fish spine. Drawing for breath, on his back in the dust he collapsed.

He Had Drawn Blood. In Blood He Would Have to Pay

# AN AMERICAN VANDAL

### When the seven a.m. tut-tut leaves for anywhere

Advice at the Top of Their Voices

IN TENDERING sundry hints and observations to such of my fellow countrymen as may be contemplating trips abroad I will, with their kindly permission and the editor's, preface this chapter by setting forth briefly the following principles, which apply generally to railroad travel in the Old World:

First—On the Continent all trains leave at or about seven A. M. and reach their destination at or about eleven P. M. You may be going a long distance or a short one—it makes no difference; you leave at seven and you arrive at eleven. The few exceptions to this rule are of no consequence and do not count.

Second—A trunk is the most costly luxury known to European travel. If I could sell my small, shrinking and flat-chested steamer trunk—original value in New York eighteen dollars and seventy-five cents—for what it cost me over on the other side in registration fees, excess charges, mental wear and tear, freightage, forwarding and warehousing bills, tips, bribes, indulgences, and acts of barratry and piracy, I should be able to laugh in the income tax's face.

In this connection I would suggest to the tourist who is traveling with a trunk that he begin his land itinerary in Southern Italy and work northward; thereby, through the gradual shrinkage in weight, he will save much money on his trunk, owing to the pleasing custom among the Italian trainhands of prying it open and making a judicious selection from its contents for personal use and for gifts to friends and relatives.

Third—For the sake of the experience, travel second class once; after that travel first class—and try to forget the experience. With the exception of two or three special-fare, so-called de-luxe trains, first class over there is about what the service was on an accommodation, mixed-freight-and-passenger train in Arkansas immediately following the close of the Civil War.

Fourth—When buying a ticket for anywhere you will receive a cunning little booklet full of detachable leav s—the whole constituting a volume about the size and thickness of one of those portfolios of views that came into popularity with us at the time of the Philadelphia Centennial. Surrender a sheet out of your book on demand of the uniformed official who will come through the train at from five to seven minute intervals. However, he will collect only a sheet every other trip; on the alternate trips he will merely examine your ticket with the air of never having seen it before, and will fold it over, perforate it with his punching machine and return it to you.

#### Hardships of De-Luxe Travel

BY THE time you reach your destination nothing will be left but the cover; but do not cast this carelessly aside—retain it until you are filing out of the terminal, when it will be taken up by a haughty voluptuary with whiskers. If you have not got it you cannot escape. You will have to go back and live on the train, which is, indeed, a frightfulfate to contemplate.

Fifth—Reach the station half an hour before the train starts and claim your seat; then tip the guard liberally to By Irvin S. Cobb

ILLUSTRATED BY JOHN T. McCUTCHEON

keep other passengers out of your compartment. He has no intention of so doing, but it is customary for Americans to go through this pleasing formality—and it is expected of them. Sixth—Tip everybody on the train who wears

Sixth—Tip everybody on the train who wears a uniform. Be not afraid of hurting some one's feelings by offering a tip to the wrong person there will not be any wrong person. A tip is the one form of insult that anybody in Europe will take.

Seventh—Before entering the train inhale deeply several times. This will be your last chance of getting any fresh air until you reach your destination. For self-defense against the germ life prevailing in the atmosphere of the unventilated compartments, smoke a German cigar. A German cigar keeps off any disease except the cholera; it gives you the cholera.

Eighth—Do not linger on the platform, waiting for the locomotive whistle to blow, or the bell to ring, or somebody to yell All aboard! If you do this you will probably keep on lingering until the following morning at seven. As a starting signal the presiding functionary renders a brief

solo on a tiny tin trumpet. One puny warning blast from this instrument sets the whole train in motion. It makes you think of Gabriel bringing on the Day of Judgment by tootling on a penny whistle. Another interesting point: The engine does not say Choo-choo as in our country—it says Tut-tut.

Ninth—In England, for convenience in claiming your baggage, change your name to Xenophon or Zymology there are always about the baggage such crowds of persons who have the commoner initials, such as T for Thompson, J for Jones, and S for Smith. When next I go to England my name will be Zoroaster—Quintus P. Zoroaster.

Tenth—If possible, avoid patronizing the so-called refreshment wagons or dining cars, which are expensive and uniformly bad. Live off the country. Remember, the country is living off of you.

Except eighty or ninety other things the British Channel was the most disappointing thing we encountered in our travels. All my reading on this subject had led me to expect that the Channel would be very choppy and that we should all be very seasick. Nothing of the sort befell. The channel may have been suetty but it was not choppy. The steamer that ferried us over ran as steadily as a clock and everybody felt as fine as a fiddle.

A friend of mine whom I met six weeks later in Florence had better luck. He crossed on an occasion when a test was being made of a device for preventing seasickness. A Frenchman was the inventor and also the experimenter.

This Frenchman had spent valuable years of his life perfecting his invention. It resembled a hammock swung

between uprights. The supports were to be bolted to the deck of the ship, and when the Channel began to misbehave the squeamish passenger would climb into the hammock and fasten himself in; and then, by a system of reciprocating oscillations, the hammock would counteract the motion of the ship and the occupant would rest in perfect comfort no matter how high she pitched or how deep she rolled. At least that was the theory of the inventor; and to prove it he offered himself as the subject for the first actual demonstration.

The result was unexpected. The sea was only moderately rough; but that patent hammock bucked like a kicking bronco. The poor Frenchman was the only seasick person aboard—but he was sick enough for the whole crowd. He was seasick with a Gallic abandon; he was seasick both ways from the jack, and other ways too. He was strapped down so he could not get out, which added no little to the pleasure of the occasion for everybody except himself. When the steamer landed the captain of the boat told the distressed owner that, in his opinion, the device was not suited for steamer use. He advised him to rent it to a riding academy.

In crossing from Dover to Calais we had thought we should be going merely from one country to another; we found we had gone from one world to another. That narrow strip of rolly water does not separate two countries—it separates two planets.

Gone were the incredible stiffness and the incurable honesty of the race that belonged over yonder on those white chalk cliffs dimly visible along the horizon. Gone were the phlegm and stolidity of those people who manifest emotion only on the occasions when they stand up to sing their national anthem:

#### God save the King! The Queen is doing well!

Gone were the green fields of Sussex, which looked as though they had been taken in every night and brushed and dry-cleaned and then put down again in the morning. Gone were the trees that Maxfield Parrish might have painted, so vivid were they in their burnished greenand-yellow coloring, so spectacular in their grouping. Gone was the five-franc note which I had intrusted to a sandwich vender on the railroad platform in the vain hope that he would come back with the change. After that clincher there was no doubt about it—we were in La Belle France all right, all right!

Everything testified to the change. From the pier where we landed a small boy, in a long black tunic belted in at his waist, was fishing; he hooked a little fingerling. At the first tentative tug on his line he set up a shrill clamor.

#### The French for Sport

AT THAT there came running a fat, kindly looking old priest in a long gown and a shovel hat; and a market woman came, who had arms like a wrestler and skirts that stuck out like a ballet dancer's; and a soldier in baggy red pants came; and thirty or forty others of all ages and sizes came—and they gathered about that small boy and gave him advice at the top of their voices. And when he yanked out the shining little silverfish there could not have been more animation and enthusiasm and excitement if he had landed a full-grown Presbyterian.

They were still congratulating him when we pulled out and went tearing along on our way to Paris, scooting through quaint, stone-walled cities, each one dominated by its crumbly old cathedral; sliding through open country where the fields were all diked and ditched with small canals and bordered with poplars trimmed so that each tree looked like a set of undertaker's whiskers pointing the wrong way.

And in these fields were peasants in sabots at work, looking as though they had just stepped out of one of Millet's pictures. Even the haystacks and the scarecrows were different.

In England the haycocks had been geometrically correct in their dimensions—so square and firm and exact that sections might be sliced off them like cheese, and doors and windows might be carved in them; but these French haystacks were devil-may-care haycocks wearing tufts on their polls like headdresses.

The windmills had a rakish air; and the scarecrows in the truck gardens were debonair and cocky, tilting themselves back on their pins the better to enjoy the view and

fluttering their ragged vestments in a most jaunty fashion. The land though looked poor—it had a driven, overworked look to it.

Presently, above the clacking voice of our train, we heard a whining roar without; and peering forth we beheld almost over our heads a big monoplane racing with us. It seemed a mighty, winged Thunder Lizard that had come back to link the Age of Stone with the Age of Air. On second thought I am inclined to believe the Thunder Lizard did not flourish in the Stone Age; but if you like the simile as much as I like it we will just let it stand.

Three times on that trip we saw from the windows of our train aviators out enjoying the cool of the evening in their airships; and each time the natives among the passengers jammed into the passageway that flanked the compartments and speculated regarding the identity of the aviators and the make of their machines, and argued and shrugged their shoulders, and quarreled and gesticulated. The whole thing was as Frenchy as tripe in

a casserole.

I was wrong, though, a while ago in saying there remained nothing to remind us of the right little, tight little island we had just quit; for we had two Englishmen in our compartment-fit and proper representatives of a certain type of Englishman. They were tall and lean, and had the languid eyes and the long, weary faces and the yellow buck teeth of weary carthorses, and they each wore a fixed expression of intense gloom. You felt sure it was a fixed expression, because any person with such an expression would change it if he could do so by anything short of a surgical operation. And it was quite evident they had come mentally prepared to disapprove of all things and all people in a foreign clime.

#### The Cyclone Sneeze

SILENTLY, but none the less forcibly, they resented the circumstance that others should be sharing the same compartment with them—or sharing the same train, either, for that matter. The compartment was full, too, which made the situation all the more

intolerable—an elderly English lady with a placid face under a mid-Victorian bonnet; a young, pretty woman who was either English or American; the two members of

my party, and these two Englishmen.

And when, just as the train was drawing out of Calais, they discovered that the best two seats, which they had promptly preëmpted, belonged to others, and that the seats for which they held reservations faced rearward, so that they must ride with their backs to the locomotive—why, that irked them sore and more. I imagine they wrote a letter to The London Times about it afterward.

As is the pleasing habit of traveling Englishmen, they had brought with them everything portable they owned. Each one had four or five large handbags, and a carryall, and a hatbox, and his tea-caddy, and his plaid blanket done up in a shawlstrap, and his framed picture of the Death of Nelson—and all the rest of it; and they piled those things in the luggage racks until both the racks were chock-full; so the rest of us had to hold our baggage in our laps or sit on it.

One of them was facing me not more than five or six feet distant. He never saw me though. He just gazed steadily through me, studying the pattern of the upholstery on the seat behind me; and I could tell by his look that he did not care for the upholstering—as very naturally

he would not, it being French.

We had traveled together thus for some hours when one of them began to cloud up for a sneeze. He tried to side-track it, but it would not be sidetracked. The rest of us, looking on, seemed to hear that sneeze coming from a long way off. Personally it reminded me of a musical-sketch team giving an imitation of a brass band marching down Main Street playing the Turkish Patrol—dim and faint at first, you know, and then growing louder and stronger, and gathering volume until it bursts right in your face.

Fascinated we watched his struggles. Would be master it or would it master him? But he lost, and it was probably a good thing he did. If he had swallowed that sneeze it would have drowned him. His nose jibed and went about; his head tilted back farther and farther; his countenance expressed deep agony—and then the log jam at the bend in his nose went out with a roar and he let loose the moistest, loudest kerswoosh! that ever was, I reckon.

He sneezed eight times—the first sneeze unbuttoned his waistcoat, the second unparted his hair, and the third one almost pulled his shoes off; and after that they grew really violent, until the last sneeze shifted his cargo and left him with a list to port and his lee scuppers awash. It made a ruin of him—the Prophet Isaiah could not have remained dignified while wrestling with a sneezing bee of those dimensions—but oh, how it did gladden the rest of us to behold him at the mercy of the elements and to note what a moist, waterlogged wreck they made of him!

It was not long after that before we had another streak of luck. The train joited over something and a hat fell down from the topmost pinnacle of the mountain of luggage above and hit his friend on the nose. We should have felt better satisfied if it had been a coal scuttle; but it was a reasonably hard and heavy hat and it hit him brimfirst on the tenderest part of his nose and made his eyes water, and we were grateful enough for small blessings. One should not expect too much of an already overworked Providence.

The rest of us were still warm and happy in our souls when, without any whistle-tooting or bell-clanging or station-calling, we slid silently, almost surreptitiously, into the Gare du Nord, at Paris. Neither in England nor on the mainland does any one feel called on to notify you that you have reached your destination.

It is like the old formula for determining the sex of a pigeon—you give the suspected bird some corn, and if he eats it he is a he; but if she eats it she is a she. In Europe

if it is your destination you get off, and if it is not your destination you stay on. On this occasion we stayed on, feeling rather forlorn and helpless, until we saw that every one else had piled off. We gathered up our belongings and piled off too.

By that time all the available porters had been engaged; so we took up our luggage and walked. We walked the length of the trainshed—and then we stepped right into the recreation hall of the State Hospital for the Criminal Insane, at Matteawan, New York. I knew the place instantly, though the decorations had been changed since I was there last. It was a joy to come on a home institution so far from home—joysome, but a trifle disconcerting too, because all the keepers had died or gone on strike or something; and the lunatics, some of them being in uniform and some in citizen's dress, were leaping from crag to crag, uttering maniacal shrieks.

Divers lunatics, who had been away and were just getting back, and sundry lunatics who were fixing to go away and apparently did not expect ever to get back, were dashing headlong into the arms of still other lunatics, kissing and hugging them, and exchanging farewells and sacré-bleuing with them in the maddest fashion imaginable. From time to time I laid violent hands on a flying, flitting maniac and detained him against his will, and asked him for some directions; but the persons to whom I spoke could not understand me, and when they answered I could not understand them; so we did not make much headway by that.

I could not get out of that asylum until I had surrendered the covers of our ticket books and claimed our baggage and cleared it through the customs office. I knew that; the trouble was I could not find the place to attend to these details. On a chance I tried a door, but it was distinctly the wrong place; and an elderly female on duty there got me out by employing the universal language known of all people. She shook her skirts at me and said Shoo! So I got out, still toting five or six bags and bundles of assorted sizes and shapes, and tried all the other doors in sight.

Finally, by a process of elimination and deduction, I arrived at the right one. To make it harder for me they had put it round a corner in an elbow-shaped wing of the building and had taken the sign off the door. This place was full of porters and loud cries.

To be on the safe side I tendered retaining fees to three of the porters; and thus by the time I had satisfied the customs officials that I had imported no spirits or playing cards or tobacco or soap, or other contraband goods, and had cleared our baggage and started for the cabstand, we amounted to quite a stately procession and attracted no little attention as we passed along. But the tips I had to hand out before the taxi started would stagger the human imagination if I told you the sum total. There are few finer things than to go into Paris for the first time on a warm, bright Saturday night. At this moment I can think of but one finer thing—and that is when, wearied of being short-changed and bilked and double-charged, and held up for tips or tribute at every step, you are leaving Paris on a Saturday night—or, in fact, any night.

Those first impressions of the life on the boulevards are going to stay in my memory a long, long time—the people, paired off at the tables of the sidewalk cafés, drinking drinks of all colors; a little shopgirl wearing her ne w, cheap, fetching hat in such a way as to center public attention on her head and divert it from her feet, which were shabby; two small errand boys in white aprorus, standing right in the middle of the whirling, swirling traffic, in imminent peril of their lives, while one light—of his cigarette butt from the cigarette butt of his friend; a handful of roistering soldiers, singing as they swept saix

abreast along the wide, rutty sidewalk; the kiosks for advertising, all thickly plastered over with posters, half of which should have been in an art gallery and the other half in a garbage barrel; a well-dressed pair, kissing in the full glare of a street light; an imitation art student, got up to look like an Apache, and-no doubt-plenty of real Apaches, got up to look like human beings; a silk-hatted gentleman, stopping with perfect courtesy to help a bloused workman lift a baby-laden baby carriage over an awkward spot in the curbing, and the workingman returning thanks with the same perfect courtesy; our own driver, careening along in a manner suggestive of what certain East Side friends of mine would call the Chariot Race from Ben Hirsch; and a stout lady of the middle class sitting under a café awning caressing her pet mole.

To the Belgians belongs the credit of domesticating the formerly ferocious Belgian hare, and the East Indian fakir makes a friend and companion of the king cobra; but it remained for those ingenious people, the Parisians, to tame the mole, which other races have always regarded as unbeautiful and

unornamental, and make a cunning little companion of it and spend hours stroking its fleece. This particular mole belonging to the stout middle-aged lady in question was one of the largest moles and one of the curliest I ever saw. It was on the side of her nose.

You see a good deal of mole culture going on here. Later, with the reader's permission, we shall return to Paris and look its inhabitants over at more length; but for the time being I think it well for us to be on our travels. In passing I would merely state that on leaving a Paris hotel you will tip everybody on the premises.

Oh, yes-but you will!

Let us move southward. Let us go to Sunny Italy, which is called Sunny Italy for the same reason that the laughing hyena is called the laughing hyena—not because he laughs so frequently, but because he laughs so seldom. Let us go to Rome, the Eternal City, sitting on her Seven Hills, remembering as we go along that the currency has changed and we no longer compute sums of money in the franc but in the lira. I regret the latter word is not pronounced as spelled—it would give me a chance to say that the common coin of Italy is a lira, and that nearly everybody in Rome is one also.

Ah, Rome—the Roma of the Ancients—the Mistress of the Olden World—the Sacred City! Ah, Rome, if only your stones could speak! It is customary for the tourist, taking his cue from the guidebooks, to carry on like this, forgetting in his enthusiasm that, even if they did speak, they would doubtless speak Italian, which would leave him practically where he was before. And so, having said it myself according to formula, I shall proceed to state the actual facts.

#### The Eternal City at a Glance

IF, COMING out of a huge and dirty terminal, you emerge on a splendid plaza, miserably paved, and see a priest, a soldier and a beggar; a beautiful child wearing nothing at all to speak of, and a hideous old woman with the eves of a Madonna looking out of a tragic mask of a magnificent fountain, and nobody using the water, and a great, overpowering smell—oh, yes, you can see a Roman smell; a cart mule with ten dollars' worth of trappings on him, and a driver with ten cents' worth on him; a palace like a dream of stone, entirely surrounded by nightmare hovels; a new, shiny, modern apartment house, and shouldering up against it a crumbly, cankered rubbish heap that was once the playhouse of a Casar, its walls bearded like a pard's face with tufted laurel and splotched like a brandy drunkard's with red stains; a church that is a dismal ruin without and a glittering Aladdin's Cave of gold and gems and porphyry and onyx within; a wide and handsome avenue starting from one festering stew of slums

and another festering stew of slums; a grimed and archway opening on a lovely hidden courtyard are green and flowers bloom, and in the center minds a statue which is worth its weight in minted and which carries more than its weight in dirt-if in everybody in sight is smiling and good-natured bry, and is trying to sell you something or wheedle and something, or pick your pocket of somethinga ned not, for confirmatory evidence, seek the vast dome e Peter's rising yonder in the distance, or the green ithe cedars and the dusky clumps of the olive groves whilsides beyond—you know you are in Rome.

get the correct likeness of Naples we merely reduce , asts by one-half and increase the beggars by twowe richen the color masses, thicken the dirt, raise mels to the wth degree, and set half the populace to THE We establish in every second doorway a mother of offspring tucked between her knees and forcibly incre while the mother searches the child's head for a a mybow, it is more charitable to say it is a flea; and and a special touch of gorgeousness to the street

Maples a cart is a glory of red tires and blue shafts, at per hubs and pink body and purple tailgate, with a and it that would have suited Sheba's Queen; and that draws the cart is caparisoned in brass and are like a circus pony; and the driver wears a broad and part of a shirt, and half of a pair of pants-usually a that half. With an outfit such as that, you feel he and be peddling aurora borealises-or, at the very an ainbows. It is a distinct shock to find he has only at a cheeses or garbage in stock.

Wales, also, there is, even in the most prosaic thing, tadden your eye if you only hold your nose

variation on it. On the stalls of the games the cauliflowers and the cabnaked up with an artistic effect statement equal if we had roses and na to work with; the fishmonger's cart and the tripe is what ne all a harmonious interior.

#### Plute's Italian Brother

VEARLY all the hotels in Italy are con-. rerted palaces. They may have been sees a palaces, but, with their marble assand their high ceillings, and their dank, ammiders, they distinctly fail to qualify sixes. I should have preferred them mand and sinful. I likewise observed a wallarity common to hotelkeepers in aly-they all look like cats. The propriw of the converted palace where we exped in Naples was the very image of a we used to own, named Plutarch's which was half Maltese and half mon. He was a cat that had a fine with voice-though better adapted for work than parlor singing-and a methert in every port.

It's letelkeeper might have been that cat's own brother the dather on—he had Plute's roving eye and his bristling thorn and his sharp white teeth, and Plute's silent, teathy tread, and his way of purring softly until he had 10 Just confidence and then sticking his claw into you. and difference was, he stuck you with a bill instead

latter interesting idiosyncrasy of the Italian hotelwere is that he invariably swears to you his town is the

only honest town in Italy, but begs you to beware of the next town which, he assures you with his hand on the place where his heart would be if he had a heart, is full of thieves and liars and counterfeit money and pickpockets.

The tourist agencies issue pamphlets telling how you may send money or jewelry by registered mail in Italy, and then append a footnote warning you against sending money or jewelry by registered mail in Italy. Likewise you are constantly being advised against carrying articles of value in your trunk, unless it is most carefully locked, bolted and strapped. It is good advice too.

An American I met on the boat coming home told me he failed to take such precautions while traveling in Italy; and he said that when he reached the Swiss border his trunk was so light he had to sit on it to keep it from blowing

off the bus on the way from the station to the hotel, and so empty that when he opened it at both ends the draft blowing through it gave him a bad cold. However, he may have exaggerated slightly.

If you can forget that you are paying first-class prices for fourth-rate accommodations-forget the dirt in the carriages and the smells in the compartments-a railroad

journey through the Italian Peninsula is a wonderful experience. I know it was a wonderful experience for me.

I shall not forget the old walled towns of stone perched precariously on the sloping withers of razorbacked mountains-towns that were old when the Saviour was born: or the ancient Roman aqueducts, all pocked and pecked with age, looping their arches across the land for miles on miles; or the fields, scored and scarified by three thousand years of unremitting, re-

lentless, everlasting agriculture; or the wide-horned Italian cattle that browsed in those fields; or yet the woman who darted to the door of every signal-house we passed and came to attention, with a long cudgel held flat against her shoulder like a sentry's musket.

I do not know why a woman should exhibit an overgrown broomstick when an Italian train passes a flag station, any more than I know why, when a squad of Paris firemen march out of the engine house for exercise, they

should carry carbines and knapsacks. I only know that these things are done.

In Tuscany the vineyards make a fine show, for the vines are trained to grow up from the ground and then are bound into streamers and draped from one fruit tree or one shade tree to another, until a whole hillside becomes one long, confusing vista of leafy festoons. The thrifty owner gets the benefit of his grapes and of his trees, and of the earth below, too, for there he raises vegetables and grains, and the like. Like everything else in this land, the system is an old one. I judge it was old enough to be hackneyed when Horace wrote of it:

Now each man, basking on his slopes.

Weds to his widowed tree the vine; Then, as he gayly quaffs his

Salutes thee, God of all his hopes.

Classical quotations interspersed here and there are conderful helps to a travel article, don't you think?

In rural Italy there are two other scenic details that strike the American as being most curious-one is the amazing prevalence of family washing, and the other is the amazing scarcity of birdlife. To himself the traveler says:

What becomes of all this intimate and personal display of family apparel I see fluttering from the front windows of every house in this country? Everybody is forever washing clothes, but nobody ever wears it after it is washed. And what has become of all the birds?"

For the first puzzle there is no answer; but the traveler gets the answer to the other when he passes a meatdealer's shop in the town and sees spread on the stalls heaps of pitiably small starlings and sparrows and finches exposed for sale. An Italian will cook and eat anything he can kill that has wings on it, from an ostrich to a katydid.

Thinking this barbarity over, I started to get indignant; but just in time I remembered what we ourselves have done to decimate the canvasback duck and the wild pigeon and the ricebird and the red-worsted pulse-warmer, and other pleasing wild creatures of the earlier days in America, now practically or wholly extinct. And I felt that before I could attend to the tomtits in my Italian brother's eye I must needs pluck a few buffaloes out of my own; so I decided, in view of those things, to collect myself and endeavor to remain perfectly calm.

We came into Venice at the customary hour-to wit, eleven P. M .- and had a real thrill as our train left the mainland and went gliding far out, seemingly right through the placid Adriatic, to where the beaded lights of Venice showed like a necklace about the withered throat of a longabandoned bride, waiting in the rags of her moldered wedding finery for a bridegroom who comes not.

#### The Tactless Tax Gatherer

AND better even than this was the journey by gondola from the terminal through narrow canals and under stone bridges where the water lapped with little mouthing tongues at the walls, and the tall, gloomy buildings almost met overhead, so that only a tiny strip of star-buttoned sky showed between. And from dark windows high up came the tinkle of guitars and the sound of song pouring from throats of silver. And so we came to our hotel, which was another converted palace; but baptism is not regarded as essential to conversion in these parts.

On the whole, Venice did not impress me as it has impressed certain other travelers. You see, I was born and raised in one of those Ohio Valley towns where the river gets emotional and temperamental every year or two. In my youth I had passed through several of these visitations, when the family would take the family plate and the family cow, and other treasures, and retire to the attic floor to wait for the spring rise to abate; and when really the most annoying phase of the situation for a housekeeper, sitting on the top landing of his staircase watching the yellow wavelets lap inch by inch over the keys of the piano, and inch by inch climb up the new dining-room wallpaper, was to hear a knocking at a front window upstairs and go to answer it and find that Moscoe Burnett had come in a john-boat to collect the water tax.

The Grand Canal did not stir me as it has stirred someso far back as '84 I could remember when Jefferson Street at home looked almost exactly like that.

Going through the Austrian Tyrol, between Venice and Vienna, I met two old and dear friends in their native haunts-the plush hat and the hot dog. When such a thing as this happens away over on the other side of the globe it helps us to realize how small a place this world is

(Continued on Page 60)

The Most Ingenious and Wideawake of All the Earlier Rulers of Germany, King Verboten

# KEEPING JOHN BARLEYCORN OFF THE TRAIN—By Rufus Steele

WHY didn't the general manager tell me it was not a boost but a jolt he was dealing when he sent me here?"

The new division superintendent at Omaha drove his right fist into his left palm as he paced the floor of his office in the depot building, his extraordinary legs carrying him across the seven widths of green carpeting in seven strides.

"Why couldn't he tell me the division was shot to pieces?" he pursued, with no listener but himself. "Two freights clean off the right-of-way and four close calls in the three weeks I've been here! And Engineer Dennis Mason and the twenty passenger runners he leads by the nose actually boasting that they never climb into the cab until they've had their bracers! And the G. M. must have known it too!"

The truth of the situation caught the new Old Man with the force of an unseen locomotive pilot and lifted him across the room into his chair. Why had four superintendents succeeded each other at Omaha in three years? Why had he, after showing a little skill at handling men, been assigned suddenly to the job? Of course the G. M. knew! Why, the G. M. was watching right now to see whether he—Galloping Garson—could knock the liquor out of Denny Mason's crowd without knocking the whole gang out of the railroad's employ!

The superintendent hunched down and draped one long arm across the back of his chair and one long leg across his maple desk. He was thinking. In thirty minutes he pulled himself together, like a steel trap that had been sprung, and began to make notes on a yellow pad. His campaign was complete. There was a long chance in it—and he was going to take the chance.

A week later Superintendent Garson pushed the pearl button that summoned his chief clerk and inquired:

"Where is Engineer Dennis Mason?"

"In the engineers' room changing his clothes most likely," the clerk answered. "He's due to take out Number Ten in fifty minutes."

"Tell Mr. Mason to report here immediately. Fill his run with a short-call man—Mason won't be pulling Ten today."

Denny Mason entered with his cap collapsed in his great hands. He wore his cab clothes.

"Sit down," said the superintendent.

"No time for that," sparred the redfaced engineer. "I go out in forty minutes—and I haven't oiled."

"Did the clerk tell you your run would be filled today?"
"He's crazy! This has been my regular run four years."
The superintendent swung round to face his man.

#### What the Pictures Showed

"MASON, why do you allow yourself a drink before taking your locomotive, and why do you lead the enginemen who look up to you to do the same thing, when you know the use of intoxicants is absolutely prohibited by the rules?"

The engineer became as righteously rigid as a Patrick Henry statue.

"I stand on my rights as an American citizen!" he defiantly said.

"What will you stand on when you have piled the flier in the ditch as the monument over a hundred dead passengers?"

"Wait till I do!"

"No; I shall not wait!" Galloping Garson assured him,
"I'm going to prevent it. Mason, you are discharged!"

"What—what do you mean?" groped the unbelieving engineer. "Why, I've pulled that train under four superintendents."

"Yes; and you have been the finish of three of them. Now it is your finish!"

The Secret of an Untold Number of Railroad
Disasters Never Has Been Solved

"I'm a respectable man of family," shouted Denny Mason. "I've got a wife and four kids dependent on me; and—and I know my business!"

"You have the wife and children," admitted the superintendent quietly; "but you don't know your business, and the family isn't able to make you respectable, though they have probably done their best. It will soon be suppertime at your house and your kids will be eating—what? Liver, probably. But Monte Zink's kids will be eating porterhouse. You were in Zink's Sunshine Saloon from eleven until two, day before yesterday, and in those three hours you took ten drinks."

Mason's lips parted in scorn—then began to frame the word "spy." The superintendent opened a drawer and lifted out a stack of enlarged photographs. The pictures were numbered. The first showed Denny Mason in front of a bar. His face was upturned toward the skylight with a small glass held to his mouth.

"You began," said Galloping Garson, "with whisky."
He shuffled the pictures. "The third drink was a cocktail."
The shuffling continued. "Whisky—cocktail—whisky!
In nine and ten you seem to have both eyes glued to a
telescope—that means, of course, you finished on beer.
Look at the photographs!

"That thing in breeches there, always staring at the ceiling through a glass, claims to be a respectable family man and an engineer! Say, Mason, while those pictures were being taken through the wall I saw your second little girl coming from school. She had her hands tucked under her arms to keep them from freezing, and there was a hole in her shoe bigger than the dollar you were dribbling to Monte Zink for the stuff that would help you wreck your train. You are fired for being too big a fool to be trusted with an engine. Get out of here!"

The photographs accompanying the indictment had left Denny Mason temporarily without the power of speech. They had transformed the stiffest bully of the Omaha Yards into cartilage. They did not accuse—they damned! Mason swayed, clutched a corner of the desk and went to his knees.

"For God's sake, Mr. Garson," he at last exploded, "tear up those pictures and let's begin all over! I swear I'll do whatever you say."

"Get up and go home!" said Garson. "Let your wife know that when she is through with the supper things you have something to tell her. If she doesn't fall dead from shock when you speak kindly to her tell her you've lost your job. You have always told her it was none of her business when she asked why you forgot to bring home shoes for the babies; but this time you'll have to let her make your affairs her business, because you are going to need her help more than you ever needed anything in your life. Tell her you are in the ditch for a reason that no decent man could ever mention as an excuse. Get down at her feet and beg her to help you. Get acquainted with the mother of your children. After you and she have talked the situation over for four or five days, if you feel like it come here and talk it over with me—I mean both of you come."

As Denny Mason staggered out the clerk came in with a sheaf of papers requiring his chief's signature. The clerk stood silently until the pen had ceased its scratching. "Excuse me, Mr. Garson," he ventured then, "I wish to ask a question: As a student of railroading I should like to know what kind of a sledgehammer you used to hit that engineer."

In four days Dennis Mason came back. He returned at the heels of a patient-faced woman, who paused awkwardly at the edge of the superintendent's desk but who spoke without timidity.

"We thank you, Mr. Garson," she said. "You've been a friend. I've taught the children to bless your name along with their father's before they tumble into bed at night, Denny and I have come in to tell you that we've had an understanding—we're partners now. It'll be teamwork hereafter. If the railroad doesn't need Denny any longer—why, we haven't any complaint; but I wanted you to know—"

The road needed Denny. It did not need him for the flier—which was now carrying permanently on the righthand side of its engine cab a clear-eyed fellow who was no friend of Monte Zink—but for a freight trick that offered the right man an opportunity to earn a passenger run in two or three years.

#### After a Year on the Wagon

AFTER twelve months the Masons again stood before the superintendent. It was a friendly call. The partner-ship had made good. Man and wife looked about ten years younger. Something was due them and Garson did not withhold it. He told them their example had revolutionized the conduct of twenty men who held the throttles on his limited trains.

"Are the kids enjoying their porterhouse?" kindly inquired Garson.

"It's still liver," smiled Mason; "though the kids will be learning about porterhouse pretty soon, I guess—the home is almost paid for."

Dennis Mason went out of the service a passenger engineer—and a hero. His second daughter, a proud slip of animation, finds no holes in the shoes she wears to school these days, her wardrobe, as one of the details of her college course, having been carefully arranged by a railroad that honors the memory of her father.

Right on the heels of the discovery that the running of trains by steam could be made safe and practical came the discovery that the running of trains by alcohol could not. The secret of an untold number of railroad disasters never has been solved, for the reason that the engineman's stomach was allowed to go to the cemetery instead of to the chemist. Because alcohol became a factor in transportation soon after steam did, and because it has remained a factor, the general public has never learned to distinguish clearly between a hazard consequent on the natural stimulation of an engine and the hazard consequent on the unnatural stimulation of an engineer.

Late in the first half of the last century trains began to do better than fifteen miles an hour, and immediately splintered rolling stock began to litter the right-of-way. A fact apparent at the beginning, which has never altered a hairbreadth with the coming of devices marvelous beyond the early railroaders' wildest dreams, is that the placing of matter in violent motion—when the matter is measured in hundreds or thousands of tons—is safe only when controlled by intelligence alert to its highest capable degree.

For seventy-five years American mechanical genius has found perhaps its farthest expression in locomotive and train development, yet the invention of the airbrake has been as powerless as the invention of the automatic block system to reduce the operating importance of the human factor—the passengers are still at the morey of the man on is irward end, the brass-bound captain, the switchman is now pulls levers in a tower, and the brakeman with is sicred lamps and flags.

the new railroad era of "The people be blessed!" the rome out. It appears that the vital concern of raildicals has always been not the rolling stock but the
For two generations the stuff that could make
wes of the transportation department lapse from
liertness has been a bigger worry than governcommissions. Railroad officers have wrestled—even
with an enemy more dangerous than
switches, washed-out bridges, and train orders that
supped. Also, like Jacob, they wrestled unto reward.
Insight into what has been and is being accomplished by
mireads makes the familiar propaganda of prohibition
childish and vain.

The net results are embraced in the twofold statement a minwrecks are going out of fashion and that every a difference of the United States has subscribed to a rule that sen to leave him no hour in the twenty-four, whether and duty, when he may lift an intoxicant to his lips. It was because two fingers of red liquor can turn a subscribed and as a subscribed of the difference of money that Rule G was framed. The as worded with the maximum of adroitness by inerican Railroad Association and set forth in the article Book of Rules, is in force on every railroad in the cost. It reads thus:

These of intoxicants by employees while on duty is proied. Their use, or the frequenting of places where they wid is sufficient cause for dismissal.

Most employees concur in the opinion that the rule is used publishies—that the loophole one at first seems to be a taking but a deceptive shadow on an unbroken are still. Division superintendents, who are the bookness of the men and directly concerned in enforcing to 6, differ somewhat in construing its clauses—though the supplain that it does not meet their requirements as to any mere rule might do. The weakness of Rule G at the punishment it prescribes for violation.

Like men of the transportation department begin 'ag. For the most part they are the youths who drift

say from the small town and the farm. hey begin at braking or firing on freights. here is no such thing as a permanent fire-tals or brakeman's job. It is strictly a pessive game that is played. Before a sperintendent or the trainmaster strictly the applicant on probation the wag man had passed a physical, moral ad chratical examination more rigorate than he would have to survive to get the tearny. He was made to account is every month of his time since he left tool. He told of his parents and of what a simily hearth was like.

#### The Road's Best Investments

HE WAS admitted finally, not merely because he answered questions well to because it was believed he was a man make of being developed. He does devisoor he vanishes from the service. The brain develops into a freight engineer; not on the proudest day of his life he is direct to pull a passenger train. The latent, after four, five or seven years, because a freight conductor; after as many now build years he may be uniformed and make master of the train that carries [31]. Engineer and conductor are the surface of the fittest of a choice lot.

The milroad regards an engineer as of presisterest commercially than his engine, and a conductor as better property than an elsevation car—the road regards the men is as developed as its chief investments. The penalty for violation of Rule G is factory; and a railroad has no eagerness a discharge its chief investments. The mais have gone at the matter the other by road. In varying degrees and by samilar methods they have undertaken to

Their men to keep Rule G unbroken.

People don't quite understand railraing, because railroading is so different
to anything else," a veteran passenger
touter said. "For instance, the genrai inpression is that a train in motion
toutrolled from division headquarters.
The samistake. A train is controlled
to its front and its middle. We are told
to start and when to stop; the rest
to the hands of the engineer and the
foliator. They put the train in motion

and they land it in the station or in the ditch. Their responsibility is shared by the brakemen and the fireman, by switchmen, signalmen, and the dispatcher who sends the train orders and the operator who scribbles them off the wire and hands them to the conductor; but primarily it is the man on the front end and myself who are responsible.

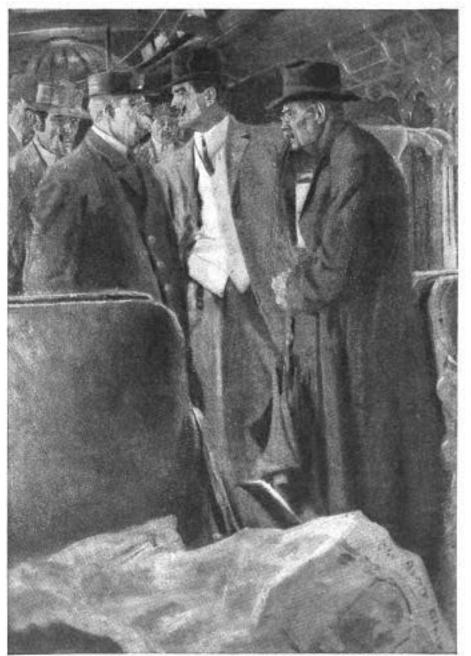

"I need my wits about me sixty seconds in every minute and sixty minutes in every hour. Things have happened to my train sometimes just because all the wits I have were not enough. It is my opinion that one day, when the devil had used all the tricks in his bag to ruin a trainman and had failed in his attempt, he sat down and invented booze."

"One man or one generation didn't make railroading what it is," said an engine runner who has pulled a transcontinental limited over a mountain division for twenty years; "and it is all one man can do to master enough of it to run an engine as it should be run. If there is any industrial job in the world that calls for more complete concentration, sounder judgment and quicker action than the engineer's, or that has more natural distractions, I have never heard its name.

"Giving all my attention while I'm running is not sufficient; I have to prepare my mind for the run before I climb into the cab. I leave things as harmonious as possible at home, kiss the wife and kids and promise to think about them—when I reach the other end of the division. I avoid quarrels or arguments, and never go near the mailbox before starting out—there might be a reprimand or a query there that would creep into my thoughts when I ought to be devoting myself exclusively to the throttle, the steam gauge and the Johnson bar.

"I do my gabbing and my storytelling with the fireman before we start. He never speaks to me when we are in motion except on business—and then he doesn't holler round the boiler; he comes and stands by my side so I won't have to take my eyes off the track and the semaphores that tell me every two or three minutes what about the block ahead. I build a stockade round my mind and then stand at the gate with a gun; I admit no thoughts except those that concern my orders and my train.

"Some enginemen may think they are big enough to carry a drink; I know I'm not. Frankly I had rather take the Limited over the division with a bandanna across my eyes than with two swallows of whisky in my insides!"

Engineer and Conductor are the Jurvivors of the Fittest of a Choice Lot

The railroad's big opportunity to help the men with Rule G grows out of the fact that the beardless husky who comes into the service as fireman or brakeman is not likely to have habits already fixed. The first step in cooperation is along the line of protection. The young railroader has some sort of home at one end of the division. The other end of the run, where he will lay over several nights a week, immediately becomes of interest to his superintendent.

The Old Man makes it his business to foster a stopping place for railroaders in that town which will supply something in the way of a cheerful atmosphere, company and diversion. Many a branch of the Young Men's Christian Association, offering bed, board, athletics, reading room and amusements, thrives in an unpromising place for the reason that that place happens to be the end of a railroad run and the railroad company secretly takes care of the deficit.

One Eastern road is said to contribute substantially to the Y. M. C. A. in no less than a dozen towns. Many a concern, sectarian or secular, with accommodations near the tracks and the ability to keep the railroader from wandering downtown after supper, finds the railroad a sympathetic listener to the story of its financial needs.

A more difficult task than starting the youngster right has been keeping the veteran out of temptation. The railroad has learned to fight King Barleycorn for every individual who slips into the danger zone. The modern superintendent—through his observation, through his trainmasters, through his countless little sources of information—keeps himself as well informed of what his men are doing in their offtime as when they are running the train. He is not spying on them; he is spying for them.

#### The Case of Tlp Bunter

AT THE first appearance of financial or domestic difficulty
the railroader is surrounded with every supporting
influence—so that he will not go looking for solace in the
neck of a bottle. One Western superintendent who is an odd
mixture of iron and benevolence never misses a picnic of
any of the brotherhoods. He swings the offspring and
persuades the wives to tell him the secret of their pies.
Once, when he put off a conference with his general manager to attend an outing of engineers and their families, he

was asked whether he considered his going to the picnic as of more importance to the road.

"I do," he replied. "It is absolutely necessary for me to know how every engineer is standing with his family. I must know whether he is proud of his kids. If I don't find a man caring more for his wife as she grows older I prepare to keep a close watch on that man and his run. The engineer who knows he has an angel at home-or a bunch of angels-is not going to want a drink, is not going to pile up his train. One picnic is of more service to me than a hundred detectives. After every little outing of this kind you'll find my trainmasters busy with a list of names. The men whose names are on that list are going to be studied; then they are going to be wrestled with."

The superintendent knows that men do not drink liquor because they are thirsty. His business is with the fact behind the act. There was the case of Tip Bunter. No better mechanic ever groomed mountainclimbing locomotives in a certain Utah roundhouse. His skill at setting engine valves is attested by the fact that he was twice taken back into the service after knocking holes as big as a boilerhead in Rule G. The skeptics said he would fall again. He did; and the foreman told him to get out of the roundhouse forever. The mechanic went on a two weeks' spree.

The Old Man of the division saw Tip Bunter, after he became sober, leaning against a telegraph pole and looking the outcast he was. The Old Man went over and planted a shoulder against the pole.

"What made you do it, Tip?" he inquired.

"I had a right to get drunk if that suited me." testily muttered the jobless mechanic.

me," testily muttered the jobless mechanic.

"Just as we have a right to let you go hungry because you no longer suit us," assented the Old Man. "But what was the good of doing it?"

"Oh, because nobody cared a rap."
"That isn't true and that isn't the reason.

Why did you do it?"
"You're so darned inquisitive I'll just
tell you, though it doesn't cut any ice one
way or another," snapped Tip Bunter.

(Continued on Page 67)

# The Boy Who Counted a Million

Our town had thrived while the whale was worth hunting and rum worth shipping; then languished for a By HARRY LEON WILSON

couple of decades until the motor car made it a summer haven for the idle rich. It was thus a returned native came upon it, and stayed a bit to ponder its living newness. Three vast new hotels were there, a casino and a bathing beach. Here the moneyed aliens bathed more or less ritually where aforetime the natives had merely "gone in swimming." There were shops that ministered to weird wants, and the long-tranquil waters of the bay were stirred by pleasure craft. Our old general store was now a department store, with no longer a stove in the rear and a pleasant loafing group about it of an evening. Our one-time Lady's & Gents' Enting House was now emblazoned Ye Olde Tea Roome.

It was presently an acceptable game to explore those smartened streets for vestiges of the ancient order, with eyes warily askew for the strange electric car and the playfully murderous motor. Here and there a small shop survived dustily, dusty tradesmen lurking within like bewildered ghosts who had haunted too long and been caught by daylight. One such engaged the eye for its perfect look of the old days. "Silas Balch" spread the name on the glass above the tarnished lettering "Real Estate, Mortgages, Loans," adding in smaller letters, as if an afterthought, "Notary Public."

A glance within revealed the bare floor, the locked safe, the littered desk with its revolving chair, the two straight-backed chairs for clients, the county map on the east wall facing the well-remembered portrait of Daniel Webster caught in a moment of reposeful dignity. On either side of the old frame building were the gay new shops, for this was Main Street. Silas Balch had held his own. But how?

Even in the old days Silas Balch had been far descended into the vale of years—old "Slicky" Balch, the richest man in our town, who lent money at ruinously high rates of interest, who had no foolish and expensive vices, and who permitted himself a smile only when he grimly foreclosed a mortgage.

Hasty computation was revealing old Slicky to be now in his early hundreds when, to the puzzled wanderer's first glance, the veritable ancient one himself seemed to mount the steps, unlock the dingy door and vanish behind the lettered window—the spare, stooping figure, loosely clad in a pepper-and-salt weave from

some antique loom, the pinched gray face under the flabby soft hat of dusty felt, the sharp nose above the shaven upper lip, the wisp of whisker, concealing if not adorning the pointed chin. The wanderer stood aghast. By trick of gait and gesture this was old Slicky, yet younger than he could ever have been. What magic draughts of usury had he quaffed to prolong himself on God's green earth and acquire the title thereto by forced sale? Another glance at the window and a tiny bit of lettering, unnoted before, leaped to the eye and illumined the mystery: "Amos Apple, Successor to . . ."

Slicky Balch must have been moldering beneath his

own specialty these twenty years. But Amos Apple ——
Memory plunged into her sea, where it is thirty odd

Memory plunged into her sea, where it is thirty odd years deep, and brought Amos Apple to the surface. He had dawned on our world as "the new boy that's come to

live on the Stubbs place." Handicapped at once was Amos, for no entirely worthy person had ever lived on the Stubbs place. The house was a battered structure at the edge of town, set in a weedgrown lot that in itself shrieked despair. Usually it was without a tenant. Its transients either progressed to faintly reputable dwellings or slunk off with their scanty belongings. None could long endure the social ignominy of it.

This is not to say that Amos Apple could not by sheer merit have acquired honorable station in our hoyish democracy. We were not snobbish; merely exigent in the matter of gifts, powers,

Daily He Itood in His Doorway to See Amos Go By

achievements or peculiar possessions. But we found Amos a born deficient who rapidly slid down the scale of our requirements. Fighting was the first of these. In swift succession he was licked by enough of our gladiators to demonstrate the utter barrenness of such victories. Amos offered a mere tired submission, with so stolid a lack even of annoyance that the proceeding had no zest.

In our sports he was clumsy. We might let him play at baseball when a ninth man must be had, but only in far right-field. Socially he was slow-witted, lacking enthusiasm, initiative, magnetism. The aggressiveness of his upper front teeth might have brought him distinction of a sort; indeed he was dubbed Gopher Apple on his first appearance at school. The teeth were really noteworthy; but unsupported by talent they came to be overlooked, and he was at length merely called Sour. Such was our witty contempt for him. Who was he to stand beside persons of mark—beside him who had the largest collection of birds' eggs,

or him who could swim farthest under water, or was the most daring tree-climber, or could unjoint his thumbs with a ghastly ease? How could he have hoped to rank with the doctor's son, who carried a scalpel which he asserted had been dipped in a solution of arsenic and would, therefore, bring to instant and horrible death any whose person it might abrade?

Amos had met no test of worth. He was negligible in all his aspects. Dully he haunted the dim outskirts of fellowship, an unnoted wraith of futility, and one would have been a prophet of parts who had foretold his emergence from that obscurity. Yet he was destined to emerge, and memory now identified the moment when the first intimation of his fame stole upon us like a mist-shod dawn.

A group of Amos' ablest scorners played expertly at hop-scotch on a stretch of broad, elm-bordered side-walk. It will be observed that each was a person of glittering consequence when it is said that the least notable contestant was Spit Barclay, who, the previous autumn, had found an egg laid and long since abandoned by a cynical or perhaps too prolific screech-owl. The thing had burst in his mouth as he descended the tree, whence—let us be delicately meager of details—had issued his title, after his masterly analysis of the more than peculiar taste of his prize, together with an exciting estimate of the quantity of sassafras bark, happily obtainable on the spot, which in his agony he had macerated.

It was no group from which Amos Apple could have hoped for cordiality. And Amos seemed to know as much when he skulked into view that day. From the opposite sidewalk he surveyed us in silence, unnoted as ever. But after a moment of this he did, for Amos, a daring thing. He crossed the street and overlooked the game, though still from a safe remove. As his attitude remained one of wholly respectful aloofness he was, in the rigor of the game, permitted to remain unmolested. And presently the players became aware that a novel dignity marked his bearing. His ordinary solemnity of visage was strikingly intensified. He gazed aloft, raptly unconscious of us, and his lips moved as if in silent prayer. Curiosity was at once aroused, though this was for the moment ably dissembled,

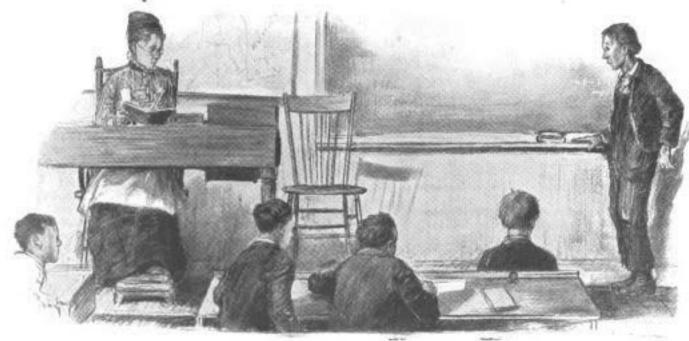

since the laws of caste commonly forbade any recognition of his existence. When, however, his eloquent lips were briefly stilled and he very formally transferred a white bean from the left to the right pocket of his tattered denim overalls, more than one pair of eyes frankly challenged him. There was visible annoyance that this lowly one should thus coerce the attention of his betters. With fine disregard Amos once more fastened his gaze remotely aloft, and again his lips moved swiftly, without sound, yet with a definite effect of rhythm.

One by one the players stood to stare, openly now and in sheer discomfort. There were twistings and writhings among them, lips half parted for insult, threatening steps toward the suddenly mysterious one. Yet he silenced and held them for another interval, until his trancelike absorption broke again and another white bean was solemnly

removed from his left to his right pocket. So impressively performed was this transfer that the person of Amos was for once held sacred. The raging curiosity was now voiced, unattended by the physical indignities that would commonly have lent it authority.

"What you doing, Amos?"

But Amos only lifted his gaze to the heavens and again waggled his upper lip in that maddening mystery. And this, quite naturally, was too much. His questioners broke for him. Amos turned and fled. But when our swiftest runner had caught and held him it was seen that his lips were still in frantic action. Again we

At "Sem Hund' Sem Thous', Sem' Hun' Siz-Two" the Ruler Rang Upon the Desk

stared, piqued but constrained by the something as of a priestly rite. Amos breathed with difficulty, owing to a tightened collar, but his lips were not stilled.

Then he of the poisoned blade fearsomely drew it and with sinister contortions approached the prisoner. This was rightly considered a guarantee of profuse and explicit details. A moment more the ordeal endured.

"Tell!" commanded the inquisitor, and the eyes of Amos were seen to roll in terror while the speed of his lips increased.

"You tell—now!" The blade was brandished alarmingly.
Then the answer came—exploded rather.

"Hunderd! Countin' a million!"

Again a white bean passed from the left pocket to the right, though this time with a sort of timid bravado.

Counting a million! We took it blankly, I think. "What do you mean—counting a million?"

"Countin' a million," persisted Amos, and again his lips took up their silent toil.

"There he goes again; stop him!" cried a watchful one, and the collar of Amos was savagely constricted by his captor. Moreover, the captor shook him in hearty disgust. "I tell you I'm countin' a whole million!" shrieked Amos

when sufficient breath was permitted him.

Then the vastness of the thing, the cosmic minutize of it, flooded our understandings. The dazed captor slowly released his victim and Amos doggedly confronted us, "Countin' a million!" he began, as if it were a chant,

but the scalpel-waver checked him.

"What do you mean by it? Do you think we want you to count a million? Who's making

you do it?"

"No one makin' me do it," declared Amos stoutly. "I thought it up myself. I jest says to myself: 'I'll count a million'—jest like that. I'll count a million. I'll count a million. I'll count a million. I'll count a —"

"Shut up!"

This was harsh but necessary, for Amos was chanting again. But instantly we were paying full tribute to the magnificent inspiration of his genius—not audibly nor openly, to be sure. Magnificent it might be, but it was also intolerable from one so abased and despised.

"You stop it, do you hear? We won't let you count a million." This from one of our quickest

minds.

"You can't hinder me from it. How'd you stop me countin' in the night—countin' all night?" Thus Amos staunchly and at the point of the still imminent scalpel. There was a whitish crust on the slender blade.

"I'll count a million myself," warned the scalpel's owner, plagiarizing shamefully. "I'll count two million!" "Yah, you'd never ketch up!" persisted Amos. "I'm forty-nine thousand seven hunderd a ready. You'd never

forty-nine thousand seven hunderd a'ready. You'd never ketch up. I'd always be ahead, always be ahead, always be ahead." He had become lyrical again.

"Shut up!"

We deliberated uneasily. Amos had us, it seemed. Then we paltered.

"You can't keep count."

"I can too now! I can too!" sputtered Amos with frantic volubility. "I put a lot of these here little white beans in m' left pants pocket, and ever' time I get to a hunderd I put one over into m' right pocket, and ever' time there's a hunderd little white beans I'm gonna hide a lima bean out in the barn, and when they's ten lima beans I'm gonna drive a nail in our maple tree, and when they's ten nails drove in I'll have a million counted."

He ended the deadly recital breathlessly and faced our gloomy stares. The scalpel's owner tamely sheathed it and

desperately resorted to ridicule.

"Well, what do you want to do it for? Ho! Ho! Who'd ever want to count a million!" He jeered, but falsely, lacking power to dissemble the envy that gnawed him. Nor had any of us the spirit to join in his pretense.

"What do you want to count a million for?"

And Amos went accurately to the keystone of his arch.
"No one else ever did—no one else in the whole world,"
he declared with the fine simplicity of greatness. "No one
ever counted a million."

We gasped anew. In the glamour of the bare performance we had not perceived its veritable uniqueness. Amos seemed newly impressed with it himself. He backed off a few paces, with needless caution now, for no one would have laid a hand upon him, and the fanatic light rekindled in his pale-blue eyes.

"Yah! No one ever done it—Alexander the Great never done it, Julius Cæsar never done it, George Wash'n'ton never done it——"

Slowly he faded down the street, calling back to us as he went the names of trumpery world heroes who had never done what the lowly Amos Apple was then doing.

"Napoleon Bonaparte, Abraham Lincoln, Queen Lizabeth, Jesse James, Christopher C'lumbus, Dan'l Webster——" They came back with a note of hideous taunting. We were sickeningly done for. No more games were played that day.

Nor had we divined the true eminence Amos was fated to scale. News of his monstrous ambition spread through the quiet town; rapidly among the young, more slowly among the elders. The latter were at first inclined to take the thing lightly, but as the days of spring went by and Amos drew on to the half-million mark, the slow hypnotism of the idea had its way with more than one grown-up.

Majestically He Staiked to a Nearsby Maple Tree and Into its Aiready Abused Bole He Sternly Drove a Nail

Memory freshly records Amos' daily progress down Main Street. He came into view followed by three or four adoring-and much younger-disciples. He stared raptly ahead and passed with long, flat-footed strides, his restless lips in silent fervor ever weaving the intangible but splendid fabric of his vision. To the wharf he went, where he perched on top of a pile and stared with unseeing eyes out over the blue waters, counting and counting and counting. His disciples sat at a respectful distance, counting also with such concentration as their younger minds permitted. But they were weaker vessels. If, as occurred now and again, one or another of these threatened rivalry by actually achieving ten thousand or so, Amos had only to approach him and hiss out something like "Four hunderd eighty-six thousand and nine hunderd!" His was always heart-breaking to these aspirants.

Of the grown-ups there were those who merely called it a fool trick and reformers who declared that it ought to be stopped. Yet the most radical of these would not be above displaying an interest in the "score," as it came to be called. Quite brazenly, as Amos passed on his mumbling way, one of these would grasp his arm and, with affectations of the jesting spirit, demand to be told the score. It was usually the misfortune of Amos to be at some small remove from the terminating hundred. He would glare at his tormentor with harassed, appealing eyes, counting

hysterically against time, until he could burst into the relieving "hunderd!" concluding resentfully with some such minor explosion as "Six hunderd an' ninety-four thousand eight hunderd—you lemme alone!" It might be suspected that Amos courted these interruptions in the public highway for the advertisement they gave him. But he was, I am sure, above this; the fire of his genius burned pure. He even attended church gladly for the period of unbroken counting it secured him.

Enters here, quite unobtrusively at first, Silas Balch, Real Estate, Mortgages and the rest of it—old Slicky who, it was believed, could tell offhand, without "figgering," the interest at seven and one-half per cent on some such amount as \$219.73 for six years, four months and eighteen

days, compounded semi-annually.

One of the first to learn of Amos' audacious project, old Slicky had in the marketplace openly scoffed. "He'll never do it, mark my words! No boy could in these days. Now in my time—well, I never happened to think of it." And he continued incredulous through the first few hundred thousands of Amos' numbered progress. Then, blending with his unbelief, there showed a grudging but very certain respect for such tenacity in one so young. He came to be one of those who daily demanded the score of Amos, and his eyes widened as the score grew. Moreover, he never made any ill-timed demands for this item, as the other grown-ups constantly did. Always he awaited the end of the hundred, marked by the white bean's transfer. Old

Slicky was so much the artist himself!

After six hundred thousand he succumbed utterly to the fascination of Amos, and was now a fervid partisan of him he had once derided. Daily he stood in his doorway to see Amos go by. Daily his eagerness mounted with the thousands. At seven hundred thousand the magic that lies in immensities had him briefly engaging Amos in talk at their daily meetings. He frankly wished to know how "it felt" to have counted seven hundred thousand, and Amos, divining the delicate comprehension of a brother artist, seriously sought to analyze and impart the sensation.

"It makes you feel big and excited"—after a conscientious search for the right words.

"Does, hey? What else?"

"Well, now—it makes your backbone feel all grand and funny."

Amos was never a word painter, but his effort seemed to suffice. Old Slicky nodded eloquently. He was sharing the exaltation of it. There was now a bond between them. At eight

hundred and fifty thousand, achieved before old Slicky's door and in his breathless presence, he escorted Amos to the town drug store and halted him royally before the soda fountain.

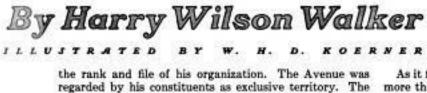

"Take some sodawater," invited Slicky most astoundingly. Amos timidly did so. His infatuated benefactor thereupon, in the presence of excited but veracious witnesses, several of whom had crowded in to behold the spectacle, removed from his most secret pocket a long, flat, well-tied black wallet. Opening this with trembling fingers he took from it a small-change purse with a metal clasp in perfect repair. From this he withdrew a dime and sternly pushed it across the marble slab. Receiving a nickel in change, he thrust it back, even ere Amos had drained his nexter.

"Lickrish drops!" he commanded, and turned to glare at his now gasping audience. As no million had by man ever been counted, so had old Slicky never before spent money with this licentious abandon. It created a sensation in the town that threatened for a week to dim the glory of its provocation.

Amos blushingly accepted the confection in a paper bag and ambled out at the heels of his patron. They were seen to return to the office of old Slicky, and it became known that Amos was to finish his counting in that sanctuary.

# The Trail of the Tammany Tiger

The Most Wonderful Demonstration New York Had Seen

111

MAYOR VAN WYCK'S irritable temper was exhibited from the moment that he took the oath of office as first mayor of Greater New York. The only two Tammany men who were conspicuous by their absence from his inauguration were Richard Croker and John C. Sheehan. Croker had made the rule that he would not visit the city hall, but would issue orders elsewhere; while Sheehan had been left entirely in the cold. Croker had achieved his ambition in having secured a good position for every Tammany leader, with the exception of Sheehan, whom he now regarded as a political enemy.

The new mayor was very abrupt to his predecessor, Colonel William L. Strong, who had prepared a lengthy address of welcome. Van Wyck did not mince words in telling Mayor Strong that he did not want any long-drawnout speech, and after taking the oath of office he declared the ceremonies at an end. I did not see Mayor Van Wyck until next day. I called at his office—a large outside room that was then used by the mayors.

"I do not like this office," he said snappily. "I wanted

"I do not like this office," he said snappily. "I wanted to be on the bench. This work is not at all to my taste. I am going to have a miserable four years."

The mayor then left with the same abruptness that he had used in beginning his conversation and went back to his desk in the outer room. I did not see him again for two or three days, and then he called at my hotel.

#### The King and His Court

"IT IS fortunate that the Democratic party has such a great leader as Croker," said the mayor; "because any mayor that tried to run the political part of his administration and attempted to conduct his other duties would break down. I have been working eighteen hours a day and shall have to continue to do so for months to come. The new charter is full of inconsistencies; besides all the towns and villages in the boroughs of Queens, Brooklyn and Richmond have piled up bonded indebtedness when they became aware that they were to become part of the greater city, with the expectation that the Borough of Manhattan would have to pay the bulk of the debt. It will be a difficult task to keep the tax rate down and weld this greater city together into a workable unit."

During this early period Van Wyck became known only as a hard-working mayor who discouraged publicity. On the other hand, Croker filled considerable space every day in the newspapers. He had established himself in a handsome clubhouse in Fifth Avenue, to the astonishment of

the rank and file of his organization. The Avenue was regarded by his constituents as exclusive territory. The old Democratic Club, which Croker now controlled, was first a Tilden and then a Cleveland organization, the great majority of the club members being known as independent Democrats. The club was almost bankrupt, owing to the withdrawal of members who had decided to support W. J. Bryan in 1896.

The day Croker was induced to visit the club the bar license had expired and the club was too poor to pay for a new one. Croker agreed to build up the club, provided he was given the majority of the board of governors. This was agreed to, because the only alternative was to close the club. Croker at once took rooms in this club; practically made it his residence. Every person who had any kind of job under the Van Wyck administration became a member. and it was necessary for the board of governors to meet every night in order to pass on the large number of applicants for membership. Within two weeks the club had about the largest membership of any in New York, and was in a remarkably short time afterward able to pay off the mortgage and still have a fair-sized surplus in the treasury. Inside of a year it was known to be the richest club in the city.

Croker carried on the management of the club on a most luxurious and elaborate scale. There was no end of entertainments of one kind and another. Ladies' day became a feature of New York life. One of the New York papers made a hit by running on its editorial page a court calendar, such as the London dailies print. Croker was called the king, and other prominent officials of the city government were given titles of nobility. This aroused so much interest that the court calendar was continued for nearly a year. Croker behaved as if he were doing his best to enact the rôle of king. He made such a success that he announced that he was going to make the club national in character, his idea being to follow out the plan of the National Liberal Club in London. He thought that all the leading Democrats who visited New York would make their headquarters there. A great many prominent Democrats did go there out of curiosity; for it was really as good as a play to watch Croker every evening. He had a table near the center of the dining room and only the chosen few were permitted to sit with him. An officeholder receiving ten thousand a year or more might be occasionally invited to dine at the "king's table," but an officeholder receiving less than five thousand a year would never think of approaching. Andrew Freedman, who had become Croker's right-hand man in business matters, had a permanent seat at the

When the mayor dined at the clubhouse he always dined at the "king's table," as did likewise John F. Carroll, who was now the assistant leader of Tammany Hall and looked after the small details relating to patronage. Any one who wanted to stand well with the chief was expected to dine at the club at least once a week. Only one dollar was charged for the dinner, but each dinner cost the club three dollars. No one ever thought of going into the dining room until Croker was seated. I have always believed that Croker regarded the whole thing as a huge joke and was continually laughing in his sleeve at his subservient followers. Frequently he would not go to the dining room until very late, and the hungry members would feel obliged to bear their hunger. Just as soon as Croker entered the

dining room there was a grand rush. The majority of those in the dining room would watch what Croker ordered, and then they would order the same things.

Croker, of course, pretended not to notice this, but he did. Frequently, to carry out his joke, he would order very little, and some of these brawny leaders who had large appetites would suffer because they were afraid to go any further than the chief. Nothing pleased Croker so much as to have Democrats of prominence go to the club. This gave me an opportunity to have my joke as well as Croker. I frequently would invite United States senators who happened to be in the city to dine with me at the club, and on such occasions I always picked out an obscure table in the dining room as far from Croker as possible. Croker felt it incumbent upon himself at the end of the meal to come over to my table in order to meet my distinguished guests. In this way I managed to receive courteous treatment from the leaders far beyond my importance, and it also gave them the impression that I was supposed to look after the national political end of the Democratic party as the representative of Croker.

As it fits in here, I will relate an incident that happened more than a year after Croker had established himself in control of the Democratic Club. William C. Whitney and a number of prominent men among anti-Bryan Democrats had sent a man to Manila to sound Admiral Dewey, and learn if he would agree to become a candidate for the Democratic nomination for president. The night that the man returned from Manila, Croker had a number of prominent Democrats at his table, and among them Colonel Henry Watterson, to hear the message from Admiral Dewey. The message was that Admiral Dewey would not consent to be the Democratic candidate, and this answer had a rather gloomy effect upon all present except Croker.

"I am glad that he won't be a candidate," said Croker, to the astonishment of his guests. "I have a much better candidate—a man who will suit the Southern Democrats."

"Who is it?" asked Colonel Watterson impatiently. "Who is it?"

"General Nelson A. Miles," said Croker with a selfsatisfied air.

"Good heavens!" shouted Watterson. "Man alive, don't you know that Miles is the man that put the shackles on Jefferson Davis?"

#### Van Wyck Takes the Aggressive

AT THIS time Croker was absolutely ignorant of American history or the biography of our leading statesmen. All he knew was that New York state cast so many votes in national conventions, and that no Democrat was likely to be elected president without receiving the electoral vote of the Empire State.

In the meantime Van Wyck was working hard, and he was generally given credit for the good work that he was doing at the city hall, although his frequent manifestations of irritability were telling against him. His nerves were on edge, and no one was quite sure of how they would be received at the mayor's office. He never failed to ask me what people were saying about his administration, and I was brutally frank with him. I continually advised him to assert himself more, and he always insisted that he did wherever the interest of the taxpayer was concerned. Finally early in May Croker set sail for England. There was an immense throng at the docks to see him off, and he announced to the newspaper reporters that during his absence John F. Carroll would act for him. Carroll was the leader of the district in which Van Wyck lived and they were warm friends. I thought at the time that this would be a good thing for Van Wyck, and I was fully convinced of this three weeks after Croker sailed. Van Wyck asserted himself. He removed two Republican police commissioners, and he appointed in their place two Republicans who were pledged to remove Chief of Police McCullagh. William S. Devery was elected chief of police instead.

As it turned out Devery's selection was the worst thing that could have happened to Van Wyck. About the same time Van Wyck removed two of the aqueduct commissioners. As a result of this action the mayor struck terror in the hearts of the other officeholders, and they did not breathe easily until after the first of July, when the mayor's power of removal expired. After that very few of them were loyal to Van Wyck, although he did not realize it until after his term of office had expired. They knew that they had been selected by Croker and were under obligation only to the organization. I could see the change in their demeanor toward the mayor and I told him of it.

"Mr. Mayor," I said, "if you continue in this office you will be a ruined man. Of course you can't resign, and Tammany won't put you on the bench because they want you in the mayor's office. There is only one thing for you to do, and that is to be candidate for governor. You can be elected. I believe you can be nominated and that you can reunite the party up the state. I have already started

in to carry out this plan."

Mayor Van Wyck did not at first give me any encouragement, but on the other hand he did not tell me to stop, so I went ahead. The Jacksonian way in which Van Wyck had gone about the removal of the four commissioners had created a good impression on the up-state Democrats. Just at this time Governor Black had vetoed a two-cent-amile railroad bill, and the commercial travelers had begun organizing against him. I at once took advantage of this situation and set about organizing the Democratic commercial travelers. I got a great many of them to promise that as they traveled through the state they would boom the New York mayor for governor. I felt that Croker would not be altogether pleased with what I was doing, so I lost no time in launching the Van Wyck gubernatorial boom through the newspapers.

#### Tammany Solidly for Bryan

TAM MANY always showed up strong in Saratoga toward the end of July. Prominent Democratic politicians from all over the state usually went there to meet the Tammany men. Croker was to be at Saratoga about the first of August. By the end of July Van Wyck was more talked of for the Democratic nomination for governor than any other man, and if Croker was to kill the boom he would have to come out into the open. After I had got the Van Wyck boom pretty well going Senator Murphy indicated that he favored the nomination of ex-Governor Flower, who had bolted Bryan in 1896. I was afraid on this account that Croker might declare himself for Flower shortly after his return, and I began to work on the national Democratic leaders who were Bryan men. It happened that Governor William J. Stone, of Missouri, who was vice-chairman of the Democratic National Committee, was in New York at the time that Croker returned from England. The Flower boom was making some headway. I induced Governor Stone to give out interviews to the New York papers, saying that the National Democracy would resent the New York Democracy's nominating any one who had bolted Bryan. The interviews caused considerable sensation in political circles, and they were particularly well received by the up-state Democracy. There was no question as to how the rank and file of Tammany stood; they were almost solidly Bryan.

I Induced Governor Stone to Give Out
Interviews to the New York Papers

Croker was always with the rank and file, whether it was for love or fear. As a consequence of this, Croker did not come out for Flower, nor would be say anything about the Van Wyck move.

When I met him at Saratoga his manner to me was not very inviting, but I kept actively at work, and was constantly in company with Van Wyck and his brother, the judge in Brooklyn. One day Croker came up to me and asked me how I was getting on with the Van Wyck boom.

"Van Wyck will be nominated unless you prevent it," I said. Croker said that what he wanted more than anything else was the reflection of Murphy. I told him that I was as strongly in favor of that as anybody could be, but that as ninety per cent of the Democratic voters of the state were with Bryan, the only possible way to win was to nominate a man for governor who had cordially supported Bryan. I could see that this impressed itself upon Croker and I no longer feared any opposition from him. Then he began to question me thoroughly about the commercial travelers. He thought that it was a splendid idea, which he afterward paid great attention to, and in the Bryan campaign in 1900 Croker was a generous contributor to a commercial travelers' organization.

Ex-Governor Flower was at Saratoga at the time and he sent for me. "I hear you are booming Van Wyck for governor," said Mr. Flower. "I thought that on account of our old friendship you would be for me."

"Governor," I answered, "I would not support my own father for an office if he had bolted Bryan as you did."

There were a number of up-state candidates for governor and David B. Hill was encouraging all of them. He was strongly opposed to Van Wyck, saying that his election meant Tammany domination of the state. The fact of Hill's taking this position forced Croker to favor Van Wyck. I arrived at Syracuse where the convention was to be held several days in advance, and induced everybody I could to wear a badge marked "Commercial Traveler," and containing a picture of Van Wyck. I also distributed hundreds of buttons with Van Wyck's picture, and when the bulk of the delegates gathered together in Syracuse it was generally conceded that Van Wyck was well in the lead. Croker arrived a day ahead of the Tammany delegation, and I rushed to his room every delegate I could whom I knew to be favorable to the New York mayor. From the way Croker acted I have always believed that he intended to support the mayor. When the Tammany delegates arrived, to my great astonishment I found they were very lukewarm. They had not realized until they reached Syracuse how strong Van Wyck was up-state. Before they had been there many hours they were in a state of revolt. They said it was Van Wyck's duty to remain as mayor, and that if he became governor Mr. Randolph Guggenheimer, who was chairman of the city council, would become mayor, and that he was not a sufficiently dyed-inthe-wool Tammany man for them to trust. I soon saw that this was having its effect on Croker.

Late the night before the convention was to meet to make a nomination I learned that Croker had fully decided to yield to the wishes of his leaders. A number of the up-state delegates who had been for Mayor Van Wyck, then proposed that Judge Augustus Van Wyck should be nominated instead of his brother. The whole object of my efforts was defeated. I went to bed that night feeling more melancholy than I ever had been before, though personally I was just as fond of the Brooklyn Van Wyck.

Colonel Rossevelt two or three days previous to this had been nominated governor by the Republicans, and he

was regarded by his followers as the real hero of our war with Spain. I became the manager of Judge Van Wyck's campaign tour, and although he was defeated by less than seventeen thousand votes, I think it is conceded that he would have triumphed over Colonel Roosevelt had it not been that during the last two weeks of the campaign the question of Croker's interference with the independence of the judiciary was made an issue, and handled by Roosevelt in a most masterly manner. Once when T. R.'s voice failed, he said: "As long as Croker's voice holds out it makes no difference."

Supreme Court Justice Joseph F. Dailey had been refused a renomination by Croker, although almost every leader in Tammany Hall believed that Dailey as a matter of good politics should have been renominated. When Judge Dailey first went on the bench he refused to appoint a clerk at the request of Croker. Croker then vowed that if he remained in power Dailey would retire from the bench at the end of his term. Thus Croker threw away the governorship and changed history by his stubbornness. Independent Democrats, although not opposing

"Good Heavens!" Shouted Watterson. "Man Allve, Don't You Know That Miles is the Man That Put the Shackles on Jefferson Davis?"

Van Wyck, held meetings denouncing Croker for his action regarding Justice Dailey. At one of the big meetings Bourke Cockran graphically described the situation in Tammany Hall.

"A nominal government is installed at the city hall—the actual government is administered in the Democratic Club," said Cockran. "Officials are sworn and appointed to discharge certain functions, and to a certain extent they do discharge them; but outside the mere routine duties of their departments, every exercise of discretionary power is controlled by, prescribed by, a private individual—Croker—who is not even under the necessity of recording his decrees or of acknowledging them.

"All city appointments are made through favor or the forbearance of the boss, whose nod may make a fortune or destroy a career. Every great interest in this great city courts his favor and dreads his hostility. Considering his power I wonder at his forbearance. Thousands of men are eager to do him any menial service. Croker has not created the boss-ship which he administers. He is the product of a system brought on by existing conditions."

#### Croker Before the Mazet Committee

CROKER laid the defeat of Van Wyck to Senator Hill.

Judge Van Wyck left the supreme court bench when he accepted the nomination for governor, so that he returned to his law practice after his defeat. His brother, the mayor, seemed to be more irritable than ever in his relations with visitors at the city hall, and the newspapers were anything but friendly to him. In view of the hard work that he really was doing he might have received considerable praise, but he did not seem to crave that. I happen to know that it was entirely through Van Wyck's initiative that the present subway system was established. Without consulting any one, Van Wyck arranged to save thirty million dollars to use in the subway construction. He accomplished this by saving so much from the appropriations of each department.

One day he went unannounced to a meeting of the Rapid Transit Commissioners, and astonished them by saying that he had arranged to secure the money in order that they might begin work at once. The commissioners were greatly surprised, for they had expected no such good luck under the Tammany administration. I urged the mayor at the time to give these facts to the newspapers, but he would not hear of it, preferring, if any credit was due, that it should go to Croker and the Tammany organization.

The lid was entirely off the town and gambling was conducted almost openly. There was no question that leading police officials were growing rich from this source of revenue, and that considerable money was finding its way into the hands of Tammany politicians. The newspapers openly charged that Chief Devery was rapidly becoming a rich man.

In the spring of 1899 a committee of the legislature was appointed to investigate conditions in New York City. The committee took the name of Mazet, from its chairman. In April of that year Croker was the star witness. He testified that he was working for his pocket all the time.

The investigation showed how Tammany was commercializing politics. But the probe did not go very deep on account of the bipartisan agreement still existing between Mr. Croker and Senator Platt. Another conspicuous witness at that time was Charles F. Murphy. The investigation drew Murphy more into the limelight than he had ever been before. Murphy was then the head of the dock board and he was closely examined about contracts with

(Continued on Page 68)

## THE STREET OF SEVEN STARS

ETER took the polished horns to the hospital the next morning, and approached Jimmy with his hands behind him and an atmosphere of mystery that enshrouded him like a cloak. Jimmy, having had a good night and having taken the morning's medicine without argument, had been allowed up in a roller chair. It struck Peter with a pang that the boy looked more frail day by

day, more transparent.
"I have brought you," said
Peter gravely, "the cod-liver oil.

"I've had it!"

"Then guess."

"Dad's letter?"

"You've just had one. Don't be a piggy."

'Animal, vegetable or mineral?" "Vegetable," said Peter

shamelessly. "Soft or hard?"

"Soft."

This was plainly a disappointment. A pair of horns might be vegetable; they could hardly be soft.

"A kitten?"

"A kitten is not vegetable, James."

"I know. A bowl of gelatine from Harry!" For by this time Harmony was his very good friend, admitted to

the Jimmy club, which consisted of Nurse Elisabet, the dozent with the red beard, Anna and Peter, and of course the sentry, who did not know that he belonged.

"Gelatine, to be sure," replied Peter, and produced

It was a joyous moment in the long low ward, with its triple row of beds, its barred windows, its clean, uneven old floor. As if to add a touch of completeness the sentry outside, peering in, saw the wheeled chair with its occupant, and celebrated this advance along the road to recovery by placing on the window-ledge a wooden replica of himself,

bayonet and all, carved from a bit of cigar box.
"Everybody is very nice to me," said Jimmy contentedly. "When my father comes back I shall tell him. He is very fond of people who are kind to me. There was a woman on the ship — What is bulging your pocket,

"My handkerchief."

"That is not where you mostly carry your handkerchief." Peter was injured. He scowled ferociously at being doubted and stood up before the wheeled chair to be searched. The ward watched joyously, while from pocket after pocket of Peter's old gray suit came Jimmy's salvage two nuts, a packet of figs, a postcard that represented a stout colonel of hussars on his back on a frozen lake, with a private soldier waiting to go through the various salutations due his rank before assisting him. A gala day, indeed, if one could forget the grave in the little mountain town with only a name on the cross at its head, and if one did not notice that the boy was thinner than ever, that his hands soon tired of playing and lay in his lap, that Nurse Elisabet, who was much inured to death and lived her days with tragedy, caught him to her almost fiercely as she lifted him back from the chair into the smooth white bed.

He fell asleep with Peter's arm under his head and the horns of the deer beside him. On the bedside stand stood the wooden sentry, keeping guard. As Peter drew his arm away he became aware of the Nurse Elisabet beckoning to him from a door at the end of the ward. Peter left the sentinel on guard and tiptoed down the room. Just outside, round a corner, was the dozent's laboratory, and beyond the tiny closet where he slept, where on a stand was the photograph of the lady he would marry when he had become a professor

and required no one's consent.

The dozent was waiting for Peter. In the amiable conspiracy which kept the boy happy he was arch-plotter. His familiarity with Austrian intrigue had made him invaluable. He it was who had originated the idea of making Jimmy responsible for the order of the ward, so that a burly Träger quarreling over his daily tobacco with the nurse in charge, or brawling over his soup with another patient, was likely to be hailed in a thin soprano, and to stand, grinning

ILLUSTRATED

sheepishly, while Jimmy, in mixed English and German, restored the decorum of the ward. They were a quarrelsome lot, the convalescents. Jimmy was so busy some days settling disputes and awarding decisions that he slept almost all night. This was as it should be.

The dozent waited for Peter. His red beard twitched and his white coat, stained from the laboratory table,

looked quite villainous. He held out a letter.

"This has come for the child," he said in quite good English. He was obliged to speak English. Day by day he taught in the clinics Americans who scorned his native tongue, and who brought him the money with which some day he would marry. He liked the English language; he liked Americans because they learned quickly. He held out an envelope with a black border and Peter took it.

"Who in the world -"From Paris!" he said. suppose I'd better open it."

So I thought. It appears a letter of—how you say it? Ah, yes, condolence."

Peter opened the letter and read it. Then without a word he gave it open to the dozent. There was silence in the laboratory while the dozent read it, silence except for his canary, which was chipping at a lump of sugar. Peter's face was very sober.

'So. A mother! You knew nothing of a mother?"

"Something from the papers I found. She left when the boy was a baby-went on the stage, I think. He has no recollection of her, which is a good thing. She seems to have been a bad lot."

"She comes to take him away. That is impossible."

"Of course it is impossible," said Peter savagely. "She's not going to see the child if I can help it. She left becauseshe's the boy's mother, but that's the best you can say of her. This letter — Well, you've read it."

"She is as a stranger to him?"

"Absolutely. She will come in mourning-look at that black border-and tell him his father is dead, and kill him. I know the type."

The canary chipped at his sugar; the red beard of the dozent twitched, as does the heard of one who plots. Peter re-read the gushing letter in his hand and thought flercely.

"She is on her way here," said the dozent. "That is bad. Paris to Wien is two days and a night. She may hourly arrive."

"We might send him away-to another hospital."

The dozent shrugged his shoulders.
"Had I a home ——" he said, and glanced through the "Had I a homedoor to the portrait on the stand. "It would be possible to hide the boy, at least for a time. In the interval the mother might be watched, and if she proved a fit person the boy could be given to her. It is, of course, an affair of police."

This gave Peter pause. He had no money for fines, no time for imprisonment, and he shared the common horror of the great jail. He read the letter again, and tried to read into the lines Jimmy's mother, and failed. He glanced into the ward. Jimmy still slept. A burly convalescent, with a saber cut from temple to ear and the general appearance of an assassin, had stopped beside the bed and was drawing up the blanket round the small shoulders.

"I can give orders that the woman be not admitted today," said the dozent. "That gives us a few hours. She will go to the police, and tomor-row she will be admitted. In the mean time

"In the mean time," Peter replied, "I'll try to think of something. If I thought she could be warned and would leave him here-

"She will not. She will buy him garments and she will travel with him through the Riviera and to Nice. She says Nice. She wishes to be there for carnival, and the boy will die."

Peter took the letter and went home. He rode, that he might read it again in the bus. But no scrap of comfort could be get from it. It spoke

of the dead father coldly, and the father had been the boy's idol. No good woman could have been so heartless. It offered the boy a seat in one of the least reputable of the Paris theaters to hear his mother sing. And in the envelope, overlooked before, Peter found a cutting from a French newspaper, a picture of the music-hall type that made him groan. It was endorsed "Mama."

Harmony had had a busy morning. First she had put her house in order, working deftly, her pretty hair pinned up in a towel-all in order but Peter's room. That was to have a special cleaning later. Next, still with her hair tied up, she had spent two hours with her violin, standing very close to the stove to save fuel and keep her fingers warm. She played well that morning: even her own critical ears were satisfied, and the portier, repairing a window lock in an empty room below, was entranced. He sat on the windowsill in the biting cold and listened. Many music students had lived in the apartment with the great salon; there had been much music of one sort and another, but none like this.

"She tears my heart from my bosom," muttered the portier, sighing, and almost swallowed a screw that he held

After the practicing Harmony cleaned Peter's room. She felt very tender toward Peter that day. The hurt left by Mrs. Boyer's visit had died away, but there remained a clear vision of Peter standing behind the chair and offering himself humbly in marriage, so that a bad situation might be made better. And as with a man tenderness expresses itself in the giving of gifts, so with a woman it means giving of service. Harmony cleaned Peter's room.

It was really rather tidy. Peter's few belongings did not spread to any extent and years of bachelorhood had taught him the rudiments of order. Harmony took the covers from washstand and dressing table and washed and ironed them. She cleaned Peter's worn brushes and brought a pincushion of her own for his one extra scarfpin. Finally she brought her own steamer rug and folded it across the foot of the bed. There was no stove in the room; it had been Harmony's room once, and she knew to the full how cold it could be.

Having made all comfortable for the outer man she prepared for the inner. She was in the kitchen, still with her hair tied up, when Anna came home.

Anna was preoccupied. Instead of her cheery greeting she came somberly back to the kitchen, a letter in her hand,

Mistory was making fast that day.
"Hello, Harry," she said. "I'm going to take a bite and hurry off. Don't bother, I'll attend to myself." She stuffed the letter into her belt and got a plate from a shelf. "How pretty you look with your head tied up! If stupid Peter saw you now he would fall in love with you."

"Then I shall take it off. Peter must be saved!"

Anna sat down at the tiny table and drank her tea. She felt rather better after the tea. Harmony, having taken the towel off, was busy over the brick stove. There was nothing said for a moment. Then:

"I am out of patience with Peter," said Anna.

"Why?"

"Because he hasn't fallen in love with you. Where are his eyes?"

"Please, Anna!"

"It's better as it is, no doubt, for both of you. But it's superhuman of Peter. I wonder

"Yes?"

"I think I'll not tell you what I wonder." And Harmony, rather afraid of Anna's frank speech, did not insist.

As she drank her tea and made a pretense at eating, Anna's thoughts wandered from Peter to Harmony to the letter in her belt and back again to Peter and Harmony. For some time Anna had been suspicious of Peter. From her dozen years of advantage in age and experience she looked down on Peter's thirty years of youth, and thought she knew something that Peter himself did not suspect. Peter being unintrospective, Anna did his heart-searching for him. She believed he was madly in love with Harmony and did not himself suspect it. As she watched the girl over her tea-cup, revealing herself in a thousand unposed gestures of youth and grace, a thousand lovelinesses, something of the responsibility she and Peter had assumed came over her. She sighed and felt for her letter.

"I've had rather bad news," she said at last.

"From home?"

"Yes. My father-did you know I have a father?"

"You hadn't spoken of him."

"I never do. As a father he hasn't amounted to much. But he's very ill, and—I've a conscience."

Harmony turned a startled face to her.

"You are not going back to America?"

"Oh no, not now anyhow. If I become hag-ridden with remorse and do go I'll find some one to take my place. Don't worry."

The lunch was a silent meal. Anna was hurrying off as Peter came in, and there was no time to discuss Peter's new complication with her. Harmony and Peter ate together, Harmony rather silent. Anna's unfortunate comment about Peter had made her constrained. After the meal Peter, pipe in mouth, carried the dishes to the kitchen, and there it was that he gave her the letter. What Peter's slower mind had been a perceptible time in grasping Harmony comprehended at once-and not only the situation, but its solution.

"Don't let her have him!" she said, putting down the letter. "Bring him here. Oh, Peter, how good we must be to him!"

And that after all was how the thing was settled. So simple, so obvious was it that these three expatriates, these waifs and estrays, banded together against a common poverty, a common loneliness, should share without question whatever was theirs to divide. Peter and Anna gave cheerfully of their substance, Harmony of her labor, that a small boy should be saved a tragic knowledge until he was well enough to bear it, or until, if God so willed, he might learn it himself without pain.

The friendly sentry on duty again that night proved singularly blind. Thus it happened that, although the night

was clear when the twin dials of the Votivkirche showed nine o'clock, he did not notice a cab that halted across the street from the hospital.

Still more strange that, although Peter passed within a dozen feet of him, carrying a wriggling and excited figure wrapped in a blanket and insisting on uncovering its feet, the sentry was able the next day to say that he had observed such a person carrying a bundle, but that it was a short stocky person, quite lame, and that the bundle was undoubtedly clothing going to the laundry.

Perhaps-it is just possible-the sentry had his suspicions. It is undeniable that as Jimmy in the cab on Peter's knee, with Peter's arm close about him, looked back at the hospital, the sentry was going through the manual of arms very solemnly under the stars and facing toward the carriage.

FOR two days at Semmering it rained. The Raxalpe and the Schneeberg sulked behind walls of mist. From the little balcony of the Pension Waldheim one looked out over a sea of cloud, pierced here and there by islands that were crags or by the tops of sunken masts that were evergreen trees. The roads were masses of slippery mud, up which the horses steamed and sweated. The gray cloud fog hung over everything; the barking of a dog loomed

out of it near at hand where no dog was to be seen. Children cried and wild birds squawked; one saw them not.

During the second night a landslide occurred on the side of the mountain with a rumble like the noise of fifty trains. In the morning, the rain clouds lifting for a moment, Marie saw the narrow yellow line of the slip.

Everything was saturated with moisture. It did no good to close the heavy wooden shutters at night: in the morning the air of the room was sticky and clothing was moist to the touch. Stewart, confined to the house, grew irritable.

He chafed against the confinement; he resented the food, the weather. Even Marie's content at her unusual leisure irked him. He accused her of purring like a cat by the fire, and stamped out more than once, only to be driven in by the curious thunderstorms of early Alpine winter.

On the night of the second day the weather changed. Marie, awakening early, stepped out on to the balcony and closed the door carefully behind her. A new world lay beneath her, a marvel of glittering branches, of white plain far below; the snowy mane of the Raxalpe was become a garment. And from behind the villa came the cheerful sound of sleigh-bells, of horses' feet on crisp snow, of runners sliding easily along frozen roads. Even the barking of the dog in the next yard had ceased rumbling and become sharp staccato.

The balcony extended round the corner of the house. Marie, eagerly discovering her new world, peered about, and seeing no one near ventured so far. The road was in

> view, and a small girl on ski was struggling to prevent a collision between two plump feet. Even as Marie saw her the inevitable happened and she went headlong into a drift. A governess who had been kneeling before a shrine by the road hastily crossed herself and ran to the rescue.

> It was a marvelous morning, a day of days. The governess and the child went on out of vision. Marie stood still, looking at the shrine. A drift had piled about its foot, where the governess had placed a bunch of Alpine flowers. Down on her knees on the balcony went the little Marie, regardless of the snow, and prayed to the shrine of the Virgin below-for what? For forgiveness? For a better life? Not at all. She prayed that the heels of the American girl would keep her in out of the snow.

> The prayer of the wicked availeth nothing; even the godly at times must suffer disappointment. And when one prays of heels, who can know of the yearning back of the praying? Marie, rising and dusting her chilled knees, saw the party of Americans on the road, clad in stout boots and swinging along gayly. Marie shrugged her shoulders resignedly. She should have gone to the shrine itself; a balcony was not a holy place. But one thing she determined—the Americans went toward the Sonnwendstein, She would advise against the Sonnwendstein for that day.

> Marie's day of days had begun wrong after all. For Stewart rose with the Sonnwendstein in his mind, and no suggestion of Marie's that in another day a path would be broken had any effect on him. He was eager to be off, committed

"Animal, Vegetable or Mineral?"

the extravagance of ordering an egg apiece for breakfast, and finally proclaimed that if Marie feared the climb he would go alone.

Marie made many delays: she dressed slowly, and must run back to see if the balcony door was securely closed. At a little shop where they stopped to buy mountain sticks she must purchase postcards and send them at once. Stewart was fairly patient: air and exercise were having their effect.

It was eleven o'clock when, having crossed the valley, they commenced to mount the slope of the Sonnwendstein. The climb was easy; the road wound back and forward on it:elf so that one ascended with hardly an effort. Stewart gave Marie a hand here and there, and even paused to let her sit on a boulder and rest. The snow was not heavy; he showed her the footprints of a party that had gone ahead, and to amuse her tried to count the number of people. When he found it was five he grew thoughtful. There were five in Anita's party. Thanks to Marie's delays they met the Americans coming down. The meeting was a short one: the party went on down, gayly talking. Marie and Stewart climbed silently. Marie's day was spoiled; Stewart had promised to dine at the hotel.

Marie's sordid little tragedy played itself out in Semmering. Stewart neglected her almost completely; he took fewer and fewer meals at the villa. In two weeks he spent one evening with the girl, and was so irritable that she went to bed crying. The little mountain resort was filling up; there were more and more Americans. Christmas was drawing near and a dozen or so American doctors came up, bringing their families for the holidays. It was difficult to enter a shop without encountering some of them. To add to the difficulty, the party at the hotel, finding it crowded there, decided to go into a pension and suggested moving to the Waldheim.

Stewart himself was wretchedly uncomfortable. Marie's tragedy was his predicament. He disliked himself very cordially, loathing himself and his situation with the newborn humility of the lover. For Stewart was in love for the first time in his life. In his despair he wrote to Peter Byrne. It was characteristic of Peter that, however indifferent people might be in prosperity, they always turned to him in trouble. Stewart's letter concluded:

I have made out a poor case for myself; but I'm in hole, as you can see. I would like to chuck everything here and sail for home with these people who go in January. But, confound it, Byrne, what am I to do with Marie? And that brings me to what I've been wanting Marie? And that brings hie to say all along, and haven't had the courage to. Marie to say all along, and haven't had the courage to. Marie talk her into reason if anybody could. Now that you know how things are, can't you come up over Sunday? It's asking a lot, and I know it; but things are pretty bad.

Peter received the letter on the morning of the day before Christmas. He read it several times and, recalling the look he had seen more than once in Marie Jedlicka's eyes, he knew that things were very bad indeed.

But Peter was a man of family in those days, and Christmas is a family festival not to be lightly ignored. He wired to Stewart that he would come up as soon as possible after Christmas. Then, because of the look in Marie's eyes and because he feared for her a sad Christmas, full of heartaches and God knows what loneliness, he bought her a most

All Day He Had Stayed in Bed for the Privilege of an Extra Hour

hideous brooch, which he thought admirable in every way and highly ornamental and which he could not afford at all. This he mailed, with a cheery greeting, and feeling happier and much poorer made his way homeward.

CHRISTMAS EVE in the salon of Maria Theresa! J Christmas Eve, with the great chandelier recklessly ablaze and a pig's head with cranberry eyes for supper! Christmas Eve, with a two-foot tree gleaming with candles on the stand, and beside the stand, in a huge chair, Jimmy!

It had been a busy day for Harmony. In the morning there had been shopping and marketing, and such a temptation to be reckless, with the shops full of ecstasies and the old flower women fairly overburdened. There had been anxieties, too, such as the pig's head, which must be done a certain way, and Jimmy, who must be left with the portier's wife as nurse while all of them went to the hospital. The house revolved around Jimmy now, Jimmy, who seemed the better for the moving, and whose mother as yet had failed to materialize.

In the afternoon Harmony played at the hospital. Peter took her as the early twilight was falling in through the gate where the sentry kept guard and so to the great courtyard. In this grim playground men wandered about, smoking their daily allowance of tobacco and moving to keep warm, offscourings of the barracks, derelicts of the slums, with here and there an honest citizen lamenting a Christmas away from home. The hospital was always pathetic to Harmony; on this Christmas Eve she found it harrowing. Its very size shocked her, that there should be so much suffering, so much that was appalling, frightful, insupportable. Peter felt her quiver under his hand.

A hospital in festivity is very affecting. It smiles through its tears. And in every assemblage there are sharply defined lines of difference. There are those who are going home soon, God willing; there are those who will go home some time after long days and longer nights. And there are those who will never go home and who know it. And because of this the ones who are never going home are most festively clad, as if, by way of compensation, the nurses mean to give them all future Christmases in one. They receive an extra orange, or a pair of gloves perhapsand they are not the less grateful because they understand. And when everything is over they lay away in the bedside stand the gloves they will never wear, and divide the extra orange with a less fortunate one who is almost recovered. Their last Christmas is past.

"How beautiful the tree was!" they say. Or, "Did you hear how the children sang? So little, to sing like that! It made me think—of angels."

Peter led Harmony across the courtyard, through many twisting corridors, and up and down more twisting staircases to the room where she was to play. There were many Christmas trees in the hospital that afternoon; no one hall could have held the thousands of patients, the doctors, the nurses. Sometimes a single ward had its own tree, its own entertainment. Occasionally two or three joined forces, preëmpted a lecture room, and wheeled or hobbled or carried in their convalescents. In such case an imposing audience was the result.

Into such a room Peter led Harmony. It was an amphitheater, the seats rising in tiers, half circle above half circle, to the dusk of the roof. In the pit stood the tree, candlelighted. There was no other illumination in the room. The semi-darkness, the blazing tree, the rows of hopeful, hoping,

hopeless, rising above, white faces over white gowns, the soft rustle of expectancy, the silence when the dozent with the red beard stepped out and began to read an address-all caught Harmony by the throat. Peter, keenly alive to everything she did, felt rather than heard her soft sob.

Peter saw the hospital anew that dark afternoon, saw it through Harmony's eyes. Layer after layer his professional callus fell away, leaving him quick again. He had lived so long close to the heart of humanity that he had reduced its throbbing to beats that might be counted. Now, once more, Peter was back in the early days, when a heart was not a pump, but a thing that ached or thrilled or struggled, that loved or hated or yearned.

The orchestra, insisting on sadly sentimental music, was fast turning festivity into gloom. It played Handel's Largo; it threw its whole soul into the assurance that the world, after all, was only a poor place, that heaven was a better. It preached resignation with every deep vibration of the cello. Harmony fidgeted.
"How terrible!" she whispered. "To

turn their Christmas Eve into mourning! Stop them!"

'Stop a German orchestra?"

"They are crying, some of them. Oh,

The music came to an end at last. Tears were dried. Followed recitations, gifts, a speech of thanks from Nurse Elisabet for the patients. Then-Harmony.

Harmony never remembered afterward what she had played. It was joyous, she knew, for the whole atmosphere changed. Laughter came; even the candles burned more cheerfully. When she had finished a student in a white coat asked her to play a German Volkspiel, and roared it out to her accompaniment with much vigor and humor. The audience joined in, at first timidly, then

Harmony stood alone by the tree, violin poised, smiling at the applause. Her eyes, running along the dim amphitheater, sought Peter's, and finding them dwelt there a moment. Then she began to play softly and as softly the others sang.

"Stille Nacht, heilige Nacht,"

they sang, with upturned eyes.

"Alles schläft, einsam wacht. .

Visions came to Peter that afternoon in the darkness, visions in which his poverty was forgotten or mattered not at all. Visions of a Christmas Eve in a home that he had earned, of a tree, of a girl-woman, of a still and holy night, of a child.

"Nur das traute, hoch heilige Paar Holder Knabe im lokkigen Haar Schlaf' in himmlischer Ruk', Schlaf' in himmlischer Ruh',"

they sang.

There was real festivity at the old lodge of Maria Theresa that night.

Jimmy had taken his full place in the household. The best room, which had been Anna's, had been given up to him. Here, carefully tended, with a fire all day in the stove, Jimmy reigned from the bed. To him Harmony brought her small puzzles and together they solved them.

"Shall it be a steak tonight?" thus Harmony humbly. 'Or chops?"

With tomato sauce?"

"If Peter allows, yes."

Much thinking on Jimmy's part, and then: "Fish," he would decide. "Fish with egg dressing." They would argue for a time, and compromise on fish.

The boy was better. Peter shook his head over any permanent improvement, but Anna fiercely seized each crumb of hope. Many and bitter were the battles she and Peter fought at night over his treatment, frightful the litter of authorities Harmony put straight every morning.

The extra expense was not much, but it told. Peter's carefully calculated expenditures felt the strain. He gave up a course in X-ray on which he had set his heart and cut off his hour in the coffee house as a luxury. There was no hardship about the latter renunciation. Life for Peter was spelling itself very much in terms of Harmony and Jimmy those days. He resented anything that took him from them.

There were anxieties of a different sort also. Anna's father was failing. He had written her a feeble, half senile appeal to let bygones be bygones and come back to see him before he died. Anna was Peter's great prop. What would he do should she decide to go home? He had built his house on the sand indeed.

So far the threatened danger of a mother to Jimmy had not materialized. Peter was puzzled, but satisfied. He still wrote letters of marvelous adventure; Jimmy still

watched for them, listened breathless, treasured them under his pillow. But he spoke less of his father. The open page of his childish mind was being written over with new impressions. "Dad" was already a memory; Peter and Harmony and Anna were realities. Sometimes he called Peter "Dad." At those times Peter caught the boy to him in an agony of tenderness.

And as the little apartment revolved round Jimmy, so was this Christmas Eve given up to him. All day he had stayed in bed for the privilege of an extra hour propped up among pillows in the salon. All day he had strung little red berries that looked like cranberries for the tree, or fastened threads to the tiny cakes that were for trimming only, and sternly forbidden to eat.

A marvelous day that for Jimmy. Late in the afternoon the portier, with a collar on, had mounted the stairs and sheepishly presented him with a pair of white mice in a wooden cage. Jimmy was thrilled. The cage was on his knees all evening, and one of the mice was clearly ill of a cake with pink icing. The portier's gift was a stealthy one, while his wife was having coffee with her cousin, the brushmaker. But the spirit of Christmas does strange things. That very evening, while the portier was roistering in a beer hall preparatory to the midnight mass, came the portier's wife, puffing from the stairs, and brought a puzzle box that only the initiated could open, and when one succeeded at last there was a picture of the Christ-Child within.

Young McLean came to call that evening-came to call and remained to worship. It was the first time since Mrs. Boyer that a visitor had come. McLean, interested with everything and palpably not shocked, was a comforting caller. He seemed to Harmony, who had had bad moments since the day of Mrs. Boyer's visit, to put the hallmark of respectability on the household, to restore it to something it had lost or had never had.

She was quite unconscious of McLean's admiration, She and Anna put Jimmy to bed. The tree candles were burned out; Peter was extinguishing the dying remnants when Harmony came back. McLean was at the piano, thrumming softly. Peter, turning around suddenly, surprised an expression on the younger man's face that startled

For that one night Harmony had laid aside her mourning, and wore white, soft white, tucked in at the neck, short-sleeved, trailing. Peter had never seen her in white

It was Peter's way to sit back and listen: his steady eyes were always alert, good-humored, but he talked very little. That night he was unusually silent. He sat in the shadow away from the lamp and watched the two at the piano: McLean playing a bit of this or that, the girl bending over a string of her violin. Anna came in and sat down near

him.
"The boy is quite fascinated," she whispered. "Watch his eyes!"

"He is a nice boy." This from Peter, as if he argued with himself.

"As men go!" This was a challenge Peter was usually quick to accept. That night he only smiled. "It would be a good thing for her: his people are wealthy."

Money, always money! Peter ground his teeth over his pipe stem. Eminently it would be a good thing for Harmony, this nice boy in his well-made evening clothes, who spoke Harmony's own language of music, who was almost speechless over her playing, and who looked up at her with

eyes in which admiration was not unmixed with adoration.

Peter was restless. As the music went on he tiptoed out of the room and took to pacing up and down the little corridor. Each time as he passed the door he tried not to glance in; each time he paused involuntarily. Jealousy had her will of him that night, jealousy, when he had never acknowledged even to himself how much

the girl was to him. Jimmy was restless. Usually Harmony's music put him to sleep; but that night be lay awake, even after Peter had closed all the doors. Peter came in and sat with him in the dark, going over now and then to cover him, or to give him a drink, or to pick up the cage of mice which Jimmy insisted on having beside him and which constantly slipped off on to the floor. After a time Peter lighted the night-light, a bit of wick on a cork floating in a saucer of lard oil, and set it on the bedside table. Then round it he arranged Jimmy's treasures, the deer antlers, the cage of mice, the box, the wooden sentry. The boy fell asleep. Peter sat in the room, his dead pipe

in his teeth, and thought of many things. It was very late when young McLean left. The two had played until they stopped for very weariness. Anna had

(Continued on Page 70)

# A YEAR IN BOHEMIA

HEN I realized that my husband had been disloyal to me; when I knew that he would not give up that other woman, would not come to our old home for the summer with the children and me; when I heard him shut the door and go to her, I think I went mad for a few minutes. I came to myself walking in the streets. After a time I found myself at the apartment house where Rhoda Sheldon lived. I hesitated; then I entered. I felt that if I stayed in the company of my own thoughts any longer I should throw myself into the water.

Rhoda knew at once that something had gone wrong. She told me afterward that my eyes were insane; that I looked as if I wanted to tear the flesh off my bones. She kissed me with more feeling than usual and put me in her most comfortable chair, talking about inconsequential matters while I looked at her blankly, not hearing, as miserably absorbed in my grief as if she were not speaking. Presently she said:

"Dollie, you know I am loyal to you and fond of you. I wasn't the first day we met; it was Grant I liked. Because you are so quiet and so conservative and so conventional, I thought you were just a little backwoods person born to hamper a brilliant husband."

"I suppose my dumpy figure helped," I put in bitterly. "But," she continued, "I found out that though you are conservative, it is your independent thinking that has made you that; you are not that just because you are blind. Also you efface yourself because you think Grant is

I began to say something, but she interrupted:

"Wait just a minute. You need me; you can't bear this thing alone. I went through it all alone because I couldn't trust any one. I like you too well to want you to suffer as I did without any vent."

Until she spoke of her suffering I had felt repelled, unwilling to confide in her. But when I saw in her eyes a shadow of the same torture that I knew was in my own I broke down, weeping on her breast.

"Don't men know what Sophie Marston is like?" I sobbed.

'Some of them don't. Some of them do and don't care," she replied. "For that man is rare who will judge severely a pretty woman who he thinks is fond of him."

"I can't bear it," I said.
"Oh, yes, you can," Rhoda said. "I'm here to belp you."

"You say you have suffered, Rhoda?" I asked. thought you believed a man and wife should each go his

or her own way?"
"Oh, yes," Rhoda said in a hard voice; "of course I play the game. Dollie, do you remember that first supper people there. Of all those people, only you and Grant, Archie and I and the Sigersons were living with the same partners with whom they had set

"Oh, not really!" I gasped.

"You take so much for granted," Rhoda said-"and so do the real Bohemians, for that matter.

You take it for granted that people have never been divorced. We Bohemians take it for granted that we are to accept each other at our face values and not ask any questions.

"The Sigersons!" I said. "That woman's face has haunted me. She isn't happy. I don't see how she could deceive any one. And no one seems to feel sorry-

"Of course they aren't sorry; however, we cover it up with manners. Ours is a cut-throat game of getting what we want. It's might that conquers, and the beaten one has the privilege of sheltering her wounds the best way she can—for in the end it is always the woman who is beaten."
"Sigerson looks like a brute," I said bitterly.

Somehow abusing any man made me feel a little as if I

ere punishing Grant and bringing him to heel.

"Sigerson is a brute," Rhoda said. "They were married over twenty years ago, and she worked like a slave to advance him. They came to New York ten years ago and in ten weeks she had lost him. You have only to look at her face to see what she has gone through and still goes through. She adores him. She looked at it in this way: She could divorce him, and maybe she would get alimony and maybe she wouldn't, according as he felt like paying up. For after all, you know, the courts may order a man to pay alimony, but they can't make him do it. If she did divorce him she could not hope to marry any one else, for she's too faded and she hasn't any charm. So she just plays the game his way. He falls in love with a new woman every year, and stays away from his wife for weeks and even months at a time. She never complains, never asks questions. When he is nominally at home, and comes in at three or four in the morning, she always has hot potato soup ready for him. If he is sick she nurses him."

"Doesn't he know it hurts! How has he got the

hardihood?" I stormed.

"Of course he knows, but he likes himself better than any one in the world. He would answer you that he supports her, and that if she doesn't like his way of living she is free to leave whenever she likes. I think he does appreciate her patience—and he likes the potato soup. Poor woman! She could play the game better if the men liked her more."

Rhoda looked at me speculatively. Then she went on: "I want to help you, so I'll tell you my own little tale of woe. Archie and I were lovers till about seven years ago, when he fell in love with some one else. I won't tell you what it cost me. When I got over the first smart I had an affair of my own. It didn't amuse me very much, and while it did have the effect on him that I hoped it would, that came too late to help me much."

"Don't talk about it if you don't want to, Rhoda,"

## By Maude Radford Warren

ILLUSTRATED BY HENRY RALEIGH

"Oh, I don't mind," she said wearily. "Archie and I are the best of comrades. I am sure he is sorry for that first affair of his, and I think he loves me better than he ever did. The difficulty is I'm not like most women—I can't forgive and let things be as before. That first affair of his killed my love. I like him awfully and I'll never leave him, but he robbed me of something infinitely precious. I'd like to love again. I've really looked about a bit for a great love, but I haven't found it in Bohemia. Archie and I have both philandered a bit since those first affairs, but not seriously."

Rhoda's eyes flashed and she added:

"I can't help feeling glad that he is the one that had to pay most in the end in our case. And still I do keep hoping I'll somehow get back that old fondness for him. A woman's life is so empty when she is not in love."

"Oh, it isn't fair!" I said passionately. "The men have such an advantage of us. All wives can't be pretty and fascinating. We've spent our youth and looks on taking care of the children and on advancing our husbands, and then-

"Then along come these unattached women of whom the world of Bohemia is full," Rhoda said-

girls of about twenty-eight; women separated from their husbands and seeking an understanding soul. They are always younger than we are, Dollie, and always with a little more vitality."

In our passionate duet we had been generalizing so vigorously that we had rather lost sight of my problem. I felt that Rhoda's words had made me understand our world as I never had before; it had made me realize the dangers of Bohemian life.

How I longed for the old binding force of the marriage tie as we had seen it in our little Western home! I wanted Grant and me to be humdrum, and fixed eternally in a rut

"What shall I do, Rhoda?" I asked helplessly.

"Of course, Dollie," Rhoda said, "Grant doesn't understand your suffering. He just thinks you're unreasonable. Men have a queer way of using that word, and letting it cover a multitude of traits in women which interfere with their having their own way. Really, Dollie, the best way to get on with a man would be to let him have his own way in every detail."
"It wouldn't be good for him, any more than it would be good for a child," I said drearily.

"We're talking of tact and not of morals, you little Puritan," Rhoda said. "Now as to what you're to do, you can't stop Grant—yet."

"You mean there is no way I can get him away from

Mrs. Marston?

"She wouldn't have it, and her tenacity is perfectly devilish. And Grant wouldn't have it. This is a piquant experience for him. Try to think of it from his point of view, Dollie. Imagine being married for seventeen years, and then coming to New York to find a score of pretty and charming women eager to attract you and considering you handsome and brilliant."

"Don't, Rhoda!" I said sharply.

"But Grant is handsome and brilliant," she persisted. "If you saw it, don't you suppose other women have eyes too? And there are plenty of women, like Sophie Marston, whose joy in the chase is intensified because the prey is supposed to belong to another woman."

I suppose I am too jealous and unhappy to be reasonable," I sighed.

Rhoda went on in the tone of a kindly surgeon who believes that the sight of the knife will prove good for the patient:

"Now the best way to lose Grant forever is to make scenes at home. That will drive him to Sophie for sympathy."

"I won't make scenes."

"And the next best way to make sure of losing him is to be cold and hard to him, and show that you think him a poor husband, and are only speaking to him at all for the children's sakes."

"Do you mean that I've got to act as if I approved of all this?" I demanded fiercely, looking at Rhoda with eyes that were full of indignation.

"Just that. You've got to play the game his way, for a while at least. You can't lose by it, and you're sure to lose the other way. If you keep on friendly terms with Grant, you've gained just so much." I reflected. "Very well," I said, "I'll try to play Grant's

I reflected. "Very well," I said, "I'll try to play Grant's game. I'll have all these people here, including Sophie Marston, and I'll go out whenever I'm invited."

"You talk as if you had intended to sulk at home," said Rhoda with a sharp glance.

I blushed and she went on: "That isn't enough. You'll have to stop being such a mouse. You spoke of your dumpy figure. It isn't a had figure, if you'd take care of it. You must wear conspicuous colors—deep blues and queer yellows. You can with your coloring. And you must be nice to the men."

"If you mean that I must flirt, I can't do it," I said.

"No, I don't mean you to flirt. They'll do that if you give them half a chance," Rhoda said. "I mean you're to try to forget when you are talking to a man that you are married. What difference does it make, in discussing a new play with Archie, whether you remember that you are married or not?"

"I don't think it does, but I feel as if it did," I said.
"But, Rhoda, even if I could do as you say, Grant would
only take it as an excuse for carrying on his attentions
to her."

"He'll do that anyway. I don't think he'll get jealous because men begin to pay you attention, but he won't

expect it, and he'll have more respect for you. Besides, it will take your mind off Grant and Sophie."

I could not agree with her. I knew that I had no talent for flirting. I could not try to philander with some man to make Grant jealous. But I put myself in her hands to the extent of staying all night with her, telling her, too, that I could not bear to see Grant again before I left for our old home. She suggested that I go with her to the seasshore to visit Mary Sigerson while Helena did the packing.

I think Rhoda believed that it would do me good to see Mary Sigerson with the look of strained pleasure all gone from her face, and on it serenity. She supposed that the contemplation of Mary and herself, two who had gone the road I was now about to travel, and quite as unwilling as I, might help me. For, as she pointed out, they both had lived through it and were getting quite a lot out of life. But I was by no means at the stage when any one else's example did me any good. I didn't accept my misery any the more placidly because Rhoda and Mary Sigerson had survived theirs. Rhoda did her best to comfort me, sometimes by abusing Grant and sometimes by excusing him.

"What a stupid give-away it was for him to hand you that jewelry," she said cynically. "That alone proves that he is new to this business. The convincing thing for him to have done would have been to come home and complain about the dinner, and ask you how you expected him to do his full stint of work on overdone beef. Never mind, Dollie, he'll soon get sick of her."

"He hasn't in seven months," I said miserably.

"That was because he was gently wading in, so to speak," Rhoda pointed out. "He didn't take the sudden dive that Teddy Sigerson would have taken and that Sophie is accustomed to. That was what kept her interested. She was determined to get him, and the way he held off only whetted her appetite. She'll tire him out this summer, you'll see. For one thing, she'll insist on late hours; there will have to be gayety every night. For another thing, she always has wretched food. It's so stupid in her, but she's really no judge of what good food is. She'll ruin his digestion and make him unfit to work, and he'll be glad to crawl back to you."

"I'm to have him when he is no good for her any more," I said bitterly.

"But you want him on any terms, don't you, Dollie?" she asked gently.

"I don't know what I want," I said. "I can't tell until I have gone home; until I have begun to live without him."

"You've got a great hold on him as long as you have the children." Rhoda said softly. "Isn't it strange how men can torture a woman with indifference and resent her sense of possession, and yet they want to own their children? Look even at this brute of a Teddy Sigerson! He comes to see Mary once a week and writes her twice a week. It's just because she is going to be the mother of his baby. There isn't a day during the last twenty years when he wouldn't have let her go if she had tried to divorce him. But now, he'd fight like a Turk if she suggested it."

But I didn't want Grant to wish to hold me just for the sake of the children. I wanted him to want me because be loved me. Rhoda saw that.

"He does love you," she said. "This is only temporary. Sophie is like a disease, and when she passes off him his blood will be clear and he won't have another attack. He's not like Sigerson; he's not even like Archie."

I did not see Grant before I went home. I wrote him that I was coming to our flat, but would rather not meet him. He replied that he would do as I said, though it would look strange to the children if he did not see us off. I replied passionately that that was not the only thing that would look strange to the children, if they knew the whole truth about our life in New York. To this he made no answer. When I arrived at our flat I found a note from him, inclosing the monthly sum he allowed me for house-keeping, and saying that he would send the same amount while I was gone, but that he hoped I'd be able to manage return railway fares out of it, because he had been slacking

"I'm Afraid I'm Old-Fashioned. I Really Believe That There is Only One Great Love in a Life"

up on his work of late and, besides, proposed to take a rest during part of the summer.

There was no happiness in going to my old home without Grant. Archie and Rhoda traveled with us, for they had not yet sold their farm, and indeed they were glad to go to it and rest and save money. When we reached our journey's end there was a crowd of friends to meet us, and I think I should have broken down if it had not been for Rhoda's warning hand on my arm. I explained to every one who asked that Grant was coming later; that business was keeping him in New York.

My mother thought I looked older and my friends said I looked smarter. I knew I did. As soon as I had been among them for a little while I realized that I really had taken on a kind of cosmopolitan air. Rhoda said so too. She said that whatever lack Grant might find in me, he could not accuse me of not keeping up with the procession. I was not one of these dowdy wives who hold their husbands back.

"Sophie Marston would say I was trying to hold him back," I said. "She would say that I was keeping his soul from developing."

"When Sophie goes to hell," Rhoda reflected, "this will be her punishment: She will be made to fall in love with a fascinating devil, and then for a billion years she will have to watch him making love to a series of devilesses, each more fascinating than she is."

One of Rhoda's forms of comfort was to figure out various kinds of punishment for Sophie here and hereafter.

We both knew that if we were willing to wait she would be punished in this world. For she could not always be thirty-five and a siren of men.

"The woman has uncanny luck," I said. "She will probably die just before she comes to the end of her power

of making wives unhappy."

I don't know what I should have done without the Sheldons that summer. To every one but Rhoda I had to keep up a pretense. To her I could speak freely. As the summer wore on Grant, who wrote me a brief letter weekly, always posted in New York, said nothing about coming to me. I do not know what I should have written if he had said he would come. But when he showed no signs of wanting to be with the children I felt I had lost him indeed.

Only a woman whose husband some other woman has taken can realize what I suffered. The horror of thinking through the day: "Is he with her now?" All his little ways I knew so well; it was maddening to think that any other woman should know them too. A man has only one way of making love. No matter how different the quality of love he feels for different women, his fashion of expressing it must be the same. When Rhoda was thinking up tortures for Sophie Marston I wanted to add: "Give her the torture of jealousy. There is nothing worse than that."

I am told that it is feminine for a jealous wife to wish to crush the woman in the case, but excuse her husband. If

that is true I am not feminine. I blamed Grant precisely as much as I did Sophie. I don't think I really should have wished to take revenge on either of them, but I certainly should have been glad if I could have made them both sorry, and then got my husband back.

August drew toward a close and Grant had not come. At last he sent a letter inquiring if it was not pretty nearly time for Tommy's school to open and wanting to know when I was coming back. He said that he thought I ought to try to rent the house to the schoolteachers again, and that indeed it would be impossible to do anything else, for he did not see his way to supporting the flat and the house both. He had not been working so hard as he meant to, and his finances were such that he could not manage unless we were all living under the same roof as economically as was consistent. I showed this letter to Rhoda.

"He's spent all his money on her," I said wildly.

"No, he hasn't," replied Rhoda. "I must do Sophie the justice to say that she does not graft off men. She would, of course, if she had to, but she gets heaps of cash out of the poor wretch she's married to. She's already

got more mere things than any man she's ever known could possibly raise for her. I suppose Grant has given her a few presents, but what has happened is what I've told you: She's hurt his power of work, and that's all to your advantage."

"I know his work has gone downhill," I said. "It's not good for a man's art just to be working for money. Still, I don't see how Grant's inferior work is to my advantage,"

"Well, anyhow," Rhoda said a little impatiently, "this letter has taught you what you want to do. You don't want to divorce him and you do want to go back to him."
"No, I don't want to divorce him," I said miserably.

"I can't give him up."

"You poor dear!" Rhoda said; "what you want is to go back to him, and have things as they used to be. But you can't do that, Dollie. You'll have to go back on his terms. He knows he has the whiphand of you too. That's what he means when he talks of money. Oh, I don't mean to say he is doing it consciously," she added, as I made a movement of protest. "But a man can be very brutal to a woman when she's in his power, and when he's angry at her; and he's angry at you because you've put him in the wrong."

For the moment I was angry at Rhoda too, and I wished fruitlessly, as I had wished so many times, that we had never gone to New York, and that I had never had to listen to her cynical interpretations of human nature. And to think that the human nature belonged to the one I loved most on earth, and that I had to admit that there was some truth in what Rhoda said! "You'll find that things will be better," Rhoda said.
"By now his first enthusiasm for Sophie is dulled. She makes the men devote themselves so deeply to her that she soon tires them. Just go back and act as if nothing had ever happened and I am sure things will change."

Grant was at the station to meet us. He greeted us joyfully and kissed us all, even Tommy, who glanced about fearfully to see if any other male creature was looking on. It was then that I noticed Helena's attitude toward her father. She shrank from him the least bit when he kissed her the second time. He did not notice it, but I did. This child, who understood me as no one else did, could not forgive her father because he had chosen not to spend the summer with us.

When we reached the flat I saw that Grant had had it thoroughly cleaned for our homecoming, and I praised him for that. He carried Helena's dress-suit case to her room and Tommy's to the spareroom and mine to our room. He put his arm about me and whispered:

"I've taken yours to the right place, haven't I, Dollie?"
"Oh, yes," I said, but I could not make my tone warm
or forgiving. Perhaps I lost a chance there for reconciliation. I don't know. Rhoda says not. She says that all any
man would want in such an affair would be for his wife not
to make a fuss.

Grant was a homekeeping soul for the next few days. Our friends were slowly coming back to town from the mountains and the sea. Through Rhoda I learned that Sophie Marston was in Maine with her husband—one of her placating trips, Rhoda called it—and rejoiced to think what boredom Sophie must be enduring. For my part I ceased to give Grant full credit for his present devotion.

Early in October Knight gave a supper, with the usual people present—all except Sophie Marston. She came when the evening was almost over. Late entrances were her specialty, but this one had not been calculated. She explained that she had not been able to stand her husband a minute longer, had reached New York at eleven, and had telephoned about until she found who was having a party. She and Grant gravitated to each other at once. I could tell by the amused eyes of some of the group that they considered that Sophie had not yet done her worst to my husband. Archie Sheldon sat by me and talked. I don't know what he said, but I know that he was infinitely kind.

Sigerson was present, and almost none of the group had seen him since he had become the father of twins six weeks before. Some of them congratulated him and some of them teased him. Sigerson, so strange are men, seemed far more willing to conceal the fact of his affection for his children than he ever had been to conceal his attraction for women other than his wife. He seemed positively irritated when Knight accused him of having spent most of the six weeks at the shore with his wife and babies.

I Believe the Child Hid in the Closet Most of the Time

"Well, what if I have?" he asked sharply. "How do I know but the maid might leave or the nurse? Mary and the children have to have some one to look out for them."

Sigerson had no sense of humor, and his friends kept him annoyed and apologizing for his attention to his wife and children until Rhoda interfered and rescued him. Afterward he came to me, as one of the few

women present who had children, and gave me a chance to draw him out about the twins. I did not like Sigerson and I was loath to believe that he could have any real sense of fatherhood. It was only, I thought, the newness of the sensation that interested him. But I had to believe that he really did feel a sense of proprietorship in his children, and affection for them. He described their appearance to me minutely, bragged about their strength and their appetites and their lung capacity and their prehensile qualities. I

listened to him, thinking all the time how little be deserved the happiness of having them. I am frequently blunt and impulsive,

and I interrupted him as he was telling me his theory of gymnastics for babies by saying abruptly: "I can tell you what your wife said when they told her their sex. She said: "Thank God, they are boys."

His jaw dropped.

"How did you know?" he asked. "Did she write you?"

"I just guessed," I said.

He stared at me. Of course he didn't understand. But I knew that poor Mary Sigerson, who had welcomed these children as the great reward of her life of pain and as the means of getting at last a family life for herself and her husband, had out of her very love and experience been grateful that they were not girls whom their husbands might some day hurt. Human like the rest of us, she was not sparing thought for the girl babies whom those boys might grow up to hurt.

"Well, they're great kids anyway," he said.

"Let me tell you this," I said: "You may be their father, but they won't be your children unless you help Mary bring them up."

"I'm helping her now," he said almost indignantly. "I rocked one of them to sleep yesterday. I'm going back day after tomorrow too. I just came down for a change."

I rose to join Rhoda; I never could stand very much of Teddy Sigerson. But I reflected that Mary Sigerson's life promised well, after all. A man like Sigerson could be held at fifty with children where he couldn't have been at thirty. Tears came into my eyes. I almost wished I could begin over with Helena and Tommy as lures to get Grant away from Mrs. Marston. She and Grant were off by themselves in a corner of Knight's smoking room.

It was dreadful just to look at the woman who had taken my husband away from me. I had intended to avoid her, but that was not always possible. One night she and I had arrived together at a studio flat and were taking off our things in a bedroom. Grant had not yet come, so she felt no reason for hurrying. She began to talk about Archie Sheldon.

"Archie is a wonderful person, Mrs. Hollister," she said.
"I knew him first seven years ago. We were very close friends. I think I helped him; but Rhoda——" She finished with an injured sigh.

In the mirror I saw her face with its mixture of triumphant reminiscence and mock sentimentality, and I realized that it had been she who had first spoiled Rhoda's happiness; it had been she with whom Archie had fallen in love. I wondered bitterly if Sophie Marston ever would, in Teddy Sigerson's words, "get hers." I didn't think she would.

"So often a man marries the wrong person," she went on plaintively as I rubbed a powder-puff over my face. "And after that his life principle sinks, unless the great love comes that develops his soul."

I went on powdering my face.

"But what about the man's wife and children?" I asked lightly.

"They cannot be considered, if it is a question of developing his soul," she said earnestly.

"I'm afraid I'm not so keen an individualist as some people," I said, taking some pride in the way I kept my tone light and seemed primarily absorbed in beautifying my face. "For example, take Teddy Sigerson. He's had half a dozen love affairs, I'm told. Did he need them all to develop his soul?"

"Certainly," she returned firmly.

"I'm afraid I'm old-fashioned," I said, returning my powder-puff to its box. "I really believe that there is only one great love in a life."

"Ah, you are wrong?" she said, in a tone which I suppose she thought was thrilling. "It may take several great loves fully to develop a person's soul."

I raised my eyebrows at her in a supercitious fashion.

It is the only facial trick I have that is especially effective.

"Really, Mrs. Marston," I said, "I wish you would tell me what is the good of a soul like that when it is fully developed."

She made no answer. There was none to make. I walked off furious at her insolence. If I had had the power at that moment to transport her to a desert island where there were only women who disliked her, I am afraid Sophie Marston would never have seen New York again.

That evening among the guests was a young man who came late. He was about twenty-eight, very blond and very handsome. Knight and two or three other men gave welcoming shouts. Rhoda peered doubtfully at the newcomer, and then she said to me excitedly:

"It's young Baring! He was with Scott on that expedition to the South Pole. It's four years since he's been in New York, so no wonder we failed to remember him. And, Dollie, I've a new plan to quell Grant and Sophie! You needn't ask me what it is, for I'm not going to tell you yet."

Sophie Marston craned her neck from the corner where she lurked with Grant. She reminded me of nothing so much as a tigress scenting new prey. Rhoda, I am sure, had the same thought. But presently Sophie sank back and again gave all her attention to Grant.

"Never mind," said Rhoda; "he'll be her meat sooner or later. But, Dollie, don't let us wait for that. I told you I thought I saw a way out, and I'm going to make you take it whether you like it or not."

At the moment I was too unhappy and listless to care what she meant. A very few days later I was to learn. She and Helena came to me together. Helena looked unhappy, but transfigured, and Rhoda looked rather guilty.

"I'm afraid you'll never forgive me," she said hesitatingly, but I've been talking to Helena."

"What do you mean?" I asked suspiciously and resentfully.

Helena put her slim arms round my neck.

"Mother dear, you mustn't blame Aunt Rhoda," she said. "I've known for a long time that you weren't happy, but you wouldn't tell me why. And Aunt Rhoda explained that it is because you don't like father's friends and what they do. So we thought out a plan for making father sick of them too." (Continued on Page 76)

#### Steel Armor for Passengers

AMERICANS are always looking for a machine to save our lives because we have no time to save them ourselves by hand. To get the simplest safeguards for life and limb introduced into factories using dangerous machinery took an enormous amount of political agitation. Though the first blame for unguarded dangerous machinery rests on the employer, there is no question that workmen themselves take quite lightly the risks involved.

Trolley companies are finding it expedient to adopt a type of vehicle that is hermetically sealed when in motion, in order to prevent reckless citizens from jumping on and off moving cars. Stout chains and guards are necessary to keep impatient ferry passengers from throwing themselves into the water at each end of the trip. The annual railroad claughter is appalling; but the first analysis of the figures shows that a great proportion of those killed are trespassers who should not have been on the tracks at all, or being there should certainly have kept vigilant watch for trains.

Just now we are insisting on all-steel cars, which are no better than any other cars until after a collision or derailment caused by human carelessness has occurred. This is more or less like dressing pedestrians in motorproof steel armor, instead of requiring both chauffeurs and pedestrians to go circumspectly.

Of course all-steel cars are good and should finally be the only sort used on passenger trains; but to supplant the present wooden cars with steel ones will take ten years at the very least, and probably twenty. To do this in ten years would require the construction of from five thousand to six thousand cars of this type a year—and the lower figure is decidedly above the present capacity of the shops.

There is no question that carelessness of life is an American characteristic. So long as it remains one, no mechanical device will save us from a heavy mortality record.

#### The Russian Temperance Plan

THAT the Czar's Government is willing to keep his beloved subjects from worrying overmuch about politics by supplying them liberally with vodka is a charge that has recently been made with some force by Russian radicals. The statistics are rather on their side. For several years the traffic in vodka has been a government monopoly, for which Count Witte was originally responsible.

In ten years sales of vodka have increased by two hundred and fifty million dollars—the increase last year alone being over forty million dollars—which largely comes out of very meagerly furnished pockets. It is hardly disputed that drunkenness has greatly increased during the period of government monopoly; that there are industrial communities where at week-ends "in every house some one lies drunk"; that the spread of inebriety is a national problem.

Count Witte now comes forward with a novel suggestion: In addition to restricting the sale of vodka he would turn over to temperance societies a considerable part of the government revenue derived from the traffic, to be used by them in persuading people to abstain from the government's alcohol. The proposed temperance fund would

amount to fifty million dollars a year, or about a tenth of the national drink bill.

Giving a man a penny's worth of temperance for every dime he spends in drink does not look like a final solution of the liquor problem; but there is something in the suggestion that every government deriving a revenue from alcohol might study.

#### Policing the Seven Seas

"MAN'S control stops with the shore," said Byron; but in one very important sense it is much less true now than when he said it. Social control over the high seas is extended almost year by year. We are in the process of setting up a police court for Neptune.

In Byron's time the captain on the deck of his ship ten miles from shore was almost as unfettered by human control as the elements themselves; but law now steadily pushes out to see

It will not be long before a vessel in mid-Pacific will be subject to as exact and binding regulations as an automobile on Fifth Avenue. She will have to turn square corners and the captain will be arrested by wireless if he lets the tail-light go out.

No one nation, of course, could do much by way of socializing the ocean; but fourteen nations participated in the international conference on safety at sea that sat in London last November and ended its session recently. The conference formulated regulations as to an international patrol for ice and derelicts, watertight compartments, fire bulkheads, lifeboats and crews to man them, wireless apparatus, prohibition of dangerous cargoes on passenger vessels, and the like.

No doubt these rules will be duly ratified, thus constituting a code of police regulations covering practically every vessel on every high sea.

Humanity affoat almost anywhere on salt water, under almost any flag, will be as much safeguarded by law as in a city street.

Broadly speaking, the true interest of one nation is the true interest of all. This fact gets more and more practical recognition each year. In another generation it will be so universally recognized that dreadnoughts will be used as floating police stations to see that bars on transatlantic liners are closed promptly at one o'clock.

#### A Monroe Complication

IN 1910 Mexico issued some bonds and sold them to foreign investors. The bonds were secured not only by the general credit of the nation but by a special pledge of sixty-two per cent of its customs receipts. On application they were officially vizéed by the French Government and listed on the Paris Bourse, which was equivalent to the French Government's introducing them to French investors. The other day President Huerta announced that interest on the bonds would not be paid, owing to circumstances over which he had no control. Naturally the French Government made a formal protest. These bonds are held in England also, and probably in Germany and the Netherlands.

Mexico is now in the position of a defaulting mortgagor. Suppose the mortgagees—the bondholders—elect to foreclose on the customs receipts. Would this country have a moral right, by virtue of the Monroe Doctrine, to forbid it?

When a country financially no stronger than Mexico borrows money abroad on bonds it is an almost invariable rule to give some specific security over and above the general credit of the nation—such as a first lien on customs receipts or on some governmental monopoly—exactly as a farmer gives a mortgage on his farm.

Even Japan thus secures foreign loans. Can we prevent a country like Mexico, which is theoretically under our wing because of the Monroe Doctrine, from giving a specific lien on some national asset? And if we cannot or do not prevent that, should we prevent the foreign creditor from foreclosing when a default occurs?

Probably France will not press the point in respect of the mortgaged customs dues at this time; but the point is very likely to be pressed some time.

#### English Schools and Ours

ENGLISH free schools are very good as free schools go. Free instruction furnished by the London County Council is said by respectable authority to be better than the average furnished by private schools, because the public body, with the resources of the community to draw on, can get the pick of teachers; but an Englishman in tolerable circumstances must not send his children to these free schools. They are for the poor; and in spite of all democratic politics the poor and the tolerably well-off people are still two distinct folks in England.

One of the heaviest burdens on many an English income of two thousand dollars a year consists of the cost of maintaining one or two children in expensive pay schools, while in this country the children of a similarly circumstanced family would go to the free schools as a matter

of course. Some Americans consider private schools more efficient; but those Americans who choose private schools for children under fourteen on purely social grounds are quite insignificant—thank heaven!—both numerically and intellectually.

In England there is hardly a choice. The tolerably welloff child does not go to the free school. "We do not make these class distinctions," said an Englishman recently; "they were made for us generations ago and we cannot ignore them."

In spite of Lloyd George, the sharp class distinctions do not seem in the way of getting unmade very fast.

#### Curbing the Money Trust

NEARLY forty years ago, when the biggest pot of money in the United States was inconsiderable in comparison with today's hoards, Henry George wrote:

But there is another far more insidious and far more general form of monopoly. In the aggregation of large masses of capital under a common control there is developed a new and essentially different power from that power of increase which is a general characteristic of capital, and which gives rise to interest. While the latter is, so to speak, constructive in its nature, the power which rises on it as aggregation proceeds is destructive.

A railroad company approaches a small town as a highwayman approaches his victim. The threat, "If you do not accede to our terms we will leave your town two or three miles on one side!" is as efficacious as the "Stand and deliver!" when backed by a cocked pistol. . . Or if, where there is water communication, an opposition boat is put on, rates are reduced until she is forced off; and then the public is compelled to pay the cost of the operation. . . And just as robbers unite to plunder in concert and divide the spoils, so do the trunklines of the railroad unite to raise

rates and pool their earnings.

And just as the Duke of Buckingham's creatures, under authority of the king's patent granting a monopoly of gold thread, searched private houses and seized persons and papers, so does the great telegraph company, which by power of associated capital deprives the people of the full benefit of a beneficent invention, tamper with correspondence and crush out newspapers that offend it.

The tremendous power to plunder possessed by great masses of aggregated capital has long been recognized; but what should be done to cure the evils of which Henry George spoke?

Obviously railroads should be forbidden by law to hold up towns along a prospective right-of-way. They are already forbidden by law to raise rates except by permission of the Government. Law already reaches toward a prevention of that cutthroat competition to crush rivals of which the great singletaxer spoke. We do not think a telegraph company would venture to tamper with correspondence or discriminate against any newspaper nowadays. If it should the fault would be largely our own for not having brought telegraphing sufficiently under Government regulation.

In short, the best safeguard against a Money Trust is efficient inspection and regulation of those great and indispensable activities and agencies that employ big aggregations of capital.

If a Money Trust means the aggregation of large masses of capital under a common control, there will be several of them just so long as the capitalistic system endures. The safeguard lies not in disintegrating the masses, but in forbidding them to do injurious things.

#### Some Bargains in Books

OUR mail constantly reminds us that one of the most deserving booksellers in the country is comparatively little known to the public. We imagine his sales are not at all what his authors think they should be or what the merit of the books really warrants, and that he must be as much in the dumps about the book trade as every other publisher we know anything about habitually is.

This bookseller's business style is Superintendent of Documents and his address is Government Printing Office, Washington, District of Columbia. His output covers a great variety of subjects and his prices are merely the cost of printing. On application he will send you a circular; and if you are interested in any one of many special subjects you will very likely find, on inquiry, that he has something worth looking at.

For many people the idea of favor and patronage is so closely associated with the idea of government that if they want a Government publication their first notion is to find a senator or a representative, or other influential person, who will procure it for them gratis. Indeed a great many people do not know that anything of the Government's can be procured except by the exercise of some pull; but it is not worth while to bother the senator or representative or anybody else.

The easy and simple way to get a Government publication is to send to the Superintendent of Documents and buy it at cost. You are beholden to nobody then, and the price is so low that you would probably rather pay it than ask a favor.

# WHO'S WHO-AND WHY

### Serious and Frivolous Facts About the Great and the Near Great

#### The Shagbark by the Genesee

'OW dear to this heart are the scenes of my child-hood!" Thus the poet wrote and thus the souses sing, for no ballad lends itself with greater effect to the harmony superinduced by conviviality than the tender lines of The Old Oaken Bucket, of which this line

is the tenderest. How dear, indeed!

Full well do I remember a tall and stately shagbark hickory tree that stood proudly on the banks of the Genesee River-a noble shagbark hickory tree that guarded the calm waters of the Buck Hole, where the boys of Geneseo-the same being the most beautiful village in the most beautiful valley in these United States, or any other-went to swim-a haughty hickory and a high. How well do I remember that tree! Many a time have I shucked nuts beneath it-and shucked a calico shirt, and a pair of what it were courtesy to call pants, underneath it in the summer, to go whooping and headlong from its shade into the water.

And now it comes to mind with all the clearness of vivid retrospect, for I venture to say it is the only shagbark hickory tree in all this broad domain of ours that has attained a celebrity because of the recent assumption of the reins of government by the Democratic party-the driving being done exclusively by that eminent tooler of the political coach in which we are riding-Mr. Woodrow Wilson, to be exact. It is the only

tree of this kind. I am certain of that.

There can be no denial of the fact that trees have played great parts in politics as well as in poetry and in prose, from the great oak under which the barons met for the signing of Magna Charta down to those other oaks under which the Republican party was formed, and which were variously located at Jackson, Michigan, and at other points-the geography depending on the native obligations of the historian.

This tree, however, the shagbark hickory tree that stood—and, I hope, still stands—on the banks of the Genesee at Geneseo, is preëminently the historic tree of this era of the New Freedom; and it is my happy duty to tell the reason why. A historic tree-a historic hickory

tree-and the tale appends.

Away back yonder in the late seventies and the early eighties there was a brick house on Main Street, in Geneseo, not far from the Wallace House and next to the home of good Doctor West, who assuaged the ills of most of the populace. It was a big house, one of the big houses of the village, and notable because it was the residence of a most imposing Democrat of the old school, one Benjamin Franklin Angel, who had been Minister to Sweden and Norway, by appointment of President Buchanan-a stately man, who moved about in black broadcloth and becoming dignity, albeit a peppery one and much averse to having his harvest apples stolen.

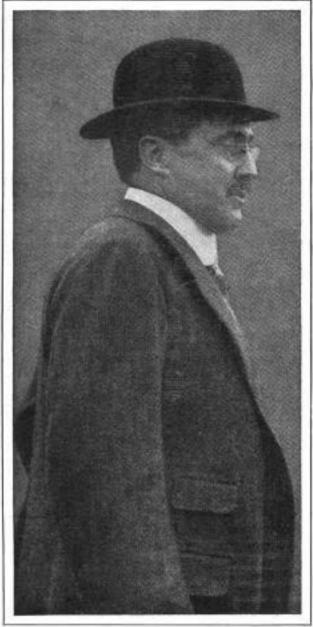

The Episcopal church and the rectory were just across the street; and that rectory was overflowing with boys, sons of the beloved Mr. Coale. Back of both church and rectory was a large lot, and there a coterie of the village boys played ball and pursued various other sports and pastimes.

#### How Buck Hole Became Historic Ground

WHEN summer came and school was out the big house that sheltered the diplomatist of those former days took on an air of life and gayety, for then there came to spend the heated term grandsons from New York—several of them-from the city of New York, mark you !- regular city boys. There came grandsons clad in city clothes, wearing shoes in July-think of that !- and stiff starched shirts and collars, and various other paraphernalia that seemed both unnecessary and absurd to the native ladsstrange garments that stamped their wearers as dudes, and to be scorned and scoffed at as such.

However, they had pocket money and they were eager to be of the gang. So they were taken in each summer and their eccentricities of costume were tolerated, as were their eccentricities of speech and New York manners; for trips to Rogers' corner drug store, with its soda fountain, the city boys standing treat, served to soften asperities caused by the enormities of Eton jackets and the insufferable stuckupness of shoes in summer, as well as condoned patronizing descriptions of the wonders of the elevated milroad, the theaters and the crowds, and all the wonderful details of metropolitan life.

So the grandsons of the Democrat of the old school were taken in and made integral parts of the definite section of boydom that used the lot back of the church as a rendezvous, battlefield and amphitheater.

He Was a Nice Boy, With a Lisp, a Smile and a Trustful Disposition

Once a day, at least, the whole crowd went rollicking down River Hill, across the railroad tracks, through the lumberyard, and thence to the deep side of the Buck Hole-only the kids who could not swim were forced to go round by the mill, tramp across the dusty covered bridge, and walk up the river bank to the shallow side. The older visitors were taken to the deep side, where the long slide was made in the slippery blue clay and where there was a

The brief ceremony of undressing took place regularly beneath the hickory tree-a brief ceremony, indeed, for when the last fence was climbed and the race across the narrow intervening field began it was an inexpert and clumsy boy who did not arrive there in such a state of preparedness that a shake and a clutch at the neck of a shirt were sufficient to unincumber him of all impedimenta in the way of clothes. The city boys, cramped as they were by shoes and collars, were forced laboriously to divest themselves, and were rarely ready to splash in before the rest had raced across the hole and back again.

Still, no boy, however tempered his aversion to city boys with city airs may have been by lavish soda-water hospitality, ever could or ever will be so false to all the accepted tenets of boydom as to let escape the chance provided by such a swimming expedition to prove rural superiority over urban sophistication.

Thus and then the shagbark hickory tree played its part; for the first time the city boys went in, after neatly piling their clothes beneath the tree-at that precise moment, with the metropolitan innocents disporting themselves in the water or on the blue-clay slide, the village boys swam down stream, climbed out, made a long détour to reach the foot of the hickory, and, taking the fashionable clothes of the city boys, tied a few artistic knots in each shirt; and then, with an accuracy achieved by long practice, they threw the garments one by one into the branches of the tree and sneaked back into the water to overwhelm the visitors with boyish kindness and attention.

The hours passed and the time came to hurrah back to the village. The village boys dashed up the bank and inserted themselves helter-skelter into pants and shirts-then waited. The visitors came. Greatly to the astonishment of all present, the city boys found themselves totally without protection against the outer air, save such as hung in the branches of the tree. There was much sympathy. It was the universal and vociferous opinion that the Temple Hill gang had sneaked in and done the dastardly deed. All hands tried to club down the clothes, but to no avail; for the city boys were inexpert at clubbing and the village boys took good care to throw clumsily.

Then came the distressing but now historic moment. The clothes must be secured. So the elder of the city boys was incited to climb the tree. Need I say more? Imagine a boy brought up in New York nakedly climbing a shagbark hickory tree! The world presents no sadder

sight—no more tearful spectacle.

I draw the veil, but only over the sorrows of the climber; for it is at this point and because of this episode repeated summer after summer-so credulous are city boys and so persuasive and innocent are village boys in such circumstances-because of this episode the tree became historic, and now, I hope, stands there as the only shagbark hickory tree in the country ever climbed by a future ambassador to Germany, when said potential diplomatist wore nothing to guard him against the shaggy and rasping bark save his tender city skin and such protection as his tears of woe afforded by softening the edges of those slings and arrows of his outrageous fortune.

#### The Hickory Hero's Rise in Life

 ${
m Y}^{
m OU}$  have guessed the name of the climber—none other than James W. Gerard, now, as the dispatches tell us, hobnobbing with the Kaiser and shedding as much luster on the job of being our ambassador to the Kaiser's domain as he shed scalding tears on the occasion to which I have referred. Possibly there will be a brass plate put on that tree. Let us hope so. Surely the Democracy must have one historic tree-an obvious necessity.

Jimmy Gerard was a nice boy, with a lisp, a smile and a trustful disposition. Presently he ceased to come to Geneseo for the summer visit and presently others of us left that favorite spot; and thus the world wagged along and Jimmy Gerard became James W. Gerard, one of the

leading young lawyers of New York.

The spirit of his stern granddad's Democracy always was strong in him and possibly he inherited his tendency to diplomacy, for his rise in politics was rapid. At an age when most young lawyers are just beginning to get cases he was on the bench of the Supreme Court of the State of New York. Always diplomatic, he maintained an equable political position in the metropolis until he became a judge. After that he was judicial, of course.

The call of the chancelleries was strong within him. He was as ardently and usefully for Mr. Wilson after the nomination as a judge could be; and when the election was over and the contest won his friends and admirers suggested him as a most admirable person for an ambassadorship. The President canvassed his qualities and named him; and now he is in Berlin doing what an ambassador to Germany does with exceeding credit to himself.

He is in his middle forties—a most affable, polished and courteous man; a clever speaker, and tactful and tractable. He will make no mistakes, will represent his country skillfully, and undoubtedly will continue in high favor with the Germans, for he is able, cultured and a fine specimen of a well-bred young American. He made an excellent record for himself while he was a judge, and there seems to be no reason why he should not be as successful in diplomacy as he was in law.

Show me, I say, a hickory tree so worthy of celebration. You cannot. It is much more than thirty years since that dor-in-futuro shinned up that tree and left shreds of his epidermis on every jagged shag; but now the tree has come into its own. It is a noble tree-a historic

Of course we did not know, away back yonder, that the city boy would one day be persona grata at the Court of the Kaiser. We did not know that, for the future then was of no concern. Had we known it—ah, well, I suppose if we had known it we should have tied knots in his stockings and pants as well as in his shirt, and thrown the wholeregalia into the topmost branches rather than tossed it into the lowest boughs.

# The Translation of the Specialist

## Business Explanations to the Public Usually Begin Inside

ON THE books of a big manufacturing corporation the figures showing yearly sales to one of its best customers began to go down in a most alarming way, apparently without cause.

This company makes machinery and supplies of a technical nature, and its customer was another big corporation, which buys such equipment and with it produces various forms of service for sale to the general public.

Both companies seemed to be the last word in largescale organization and modern specialization. Everything the manufacturing concern made was centered in its particular department,

with the best experts obtainable, paying little attention to other products, and backed by research laboratories that sought advancement in the realm of pure science, as well as in matters of practical utility.

The public-service corporation, too, had specialists to make and distribute its products; and because it operated over a dozen states it had everything down to fine averages in finance, administration, standardization, and so on. Yet sales of the first corporation to the second were falling off.

One banner year they had reached nearly a quarter of a million dollars; but several years later the total had dropped to less than a hundred thousand, and two years after that only thirty thousand dollars' worth of equipment was sold to the second company, despite steady growth in its plant and business.

The situation became so serious that one of the manufacturing company's officers—a first-rate executive—undertook an investigation; and here is what he found:

From the many departments of his company a dozen or more experts were constantly calling on the purchasing and operating heads of the other company. All were technical men, each an authority in his line. One was abreast of developments in power production; another knew what the practice would be tomorrow in transmission; and others were deeply versed in transformers, alternators, switchboard apparatus, meters—but none of them knew much about other experts' fields or had a grasp of the business as a whole, or could grasp the customer's side of problems. Each had the specialist's disposition of regarding his subject as most important. Few knew where their specialties fitted into the other fellows' specialties. All were lacking in sales sense.

#### Utility Corporations and the Public

In TRYING to give the public-service company the best technical aid the manufacturing company had been bothering it with non-essentials, and the customer had cut down purchases in self-defense.

When he understood what was the matter this executive organized a clearing house for his own specialists, through which all the information, advice, schemes and technicalities were brought together, checked, harmonized, boiled down and translated into the bare essentials. The specialists were kept at the works and communication between the two companies was delegated to a couple of men who had little technical knowledge, but were strong on the generalities.

This new plan was developed about two years ago. Last year that manufacturing company's sales to the public-service company exceeded a million dollars!

In business everywhere this is a day of explanation. The public is asking questions that are apparently simple. It wants to know about rules, methods, rates, shortcomings,

## By JAMES H. COLLINS

LLUSTRATED BY CHARLES D. MITCHELI

was the breakfast
car, locked and
dark. The young
man from the passenger department
esteward cautiously peered

and so on, of the big public-service corporations; and it is curious about the affairs of industrial and commercial houses that yesterday were regarded as sacredly private enterprises.

Answering these questions is not always simple, for they involve technicalities and difficulties in carrying on the business; but they must be answered, nevertheless. The business has found that out by trying other measures. At first, it bluntly told the public to be blowed—with the outcome that public opinion singled out the most blunt and conspicuous official in sight and lynched him, with the willing assistance of his competitors and political opponents.

Then business tried hiding its head in the sand. When the public asked Why? it was blind, deaf and dumb. That did not work out happily either; and then it turned to special pleaders and secret agents, trying to influence public opinion and legislation, with no more success.

Finally the business world has come to understand that frankness is the best basis for meeting these questions. When the public asks Why? nowadays, business is disposed to tell the truth. This involves more difficulties than one would suppose.

Some months ago a crack passenger train going West ran into a blizzard. Autumn had hardly gone and there was no reason to think of snow in that place and season; but a big storm came sweeping East, burying the track in snowbanks, and the train ran into it, with the result that what was usually but a few hours' brisk run to its destination turned out to be an all-day creeping over a disorganized system.

This train was luxuriously equipped. It carried club cars, a barber, a manicure, a stenographer, and received the latest newspapers and market quotations all along the line; but for a whole day it ran without a dining car, and passengers accustomed to fat living were up against the elemental situation of having nothing to eat—three meals were missed forever, and not even a cup of warm coffee was obtainable.

When that train reached its destination eleven hours late it did not carry the crowd of confident, conservative business men who were its ordinary passengers, but a mob of howling radicals eager for the blood of the man who had blundered. By one mischance in a few hours there was created enough ill will to offset a year of good train service.

Now when the railroad management looks into a shortcoming of this kind it finds precisely what the executive

found at the bottom of the manufacturing company's diminishing sales—namely, specialization. Like other big business, railroading has been divided and subdivided. Each detail of its work is in charge of some specialist who centers on that one thing alone and develops it to the finest point, without much reference to other details or grasp of railroading as a whole.

All the specialties and the specialists are bound together in a unit organization that is a masterpiece of specialization too. Normally the units fit into one another and do their work skillfully; but if a blizzard happens along out of season, running wild, and the unit system provides for dropping the dining car off at a certain station where it has been found best to drop it in normal weather, off she goes, regardless, according to schedule.

In another case a fast train running East in the night apparently got tired of following the rails, for presently it left them and wandered a few hundred feet over into a cornfield, where the engineer brought it to a stop. None of the cars turned over and nobody was hurt; but the steam-heating connection from the engine was broken and in half an hour the passengers, who were all up to see what was the matter, were shivering with cold.

On that train was a young man connected with the passenger department. Hooked behind knocked on the door until the steward cautiously peered out, and then told him to open the car, get his crew at work making hot coffee, and serve everybody with coffee and sandwiches free of charge. The steward refused pointblank. His car was scheduled to open for breakfast, several hours later. He had to obey his orders. Besides, though the passengers might be cold and the train in a cornfield, he was still responsible for all the sandwiches and coffee, and anybody who got them would have to pay him.

The young man from the passenger department argued; but it was only when he paid for the refreshments out of his own pocket that the steward felt free to depart from the rules so far as to serve them. It cost the young man fortyodd dollars; but all the passengers got warm and cheerful, felt that the railroad company was big enough to take care of them, and went back to bed. The next morning, on arriving in New York, he went to his chief.

"You may fire me when I tell you what I did last night," he said, and explained the whole case.

"That was the right thing to do," said the chief. "I'd
'a' fired you if you hadn't done it!"

#### Specialism Run Into the Ground

BOTH of these happenings occurred on the same railroad and to the same crack train. One turned out happily, because a man was on hand to go over the routine; the other turned out otherwise, because there was no such man. Some of the most difficult explanations the business

Some of the most difficult explanations the business world is now called on to make do not involve statements to the public as to why service is not better, or how it broke down, but explanations to workers inside the organization as to what the business stands for as a whole, what it is driving at, and how those shortcomings may be eliminated that arise because every man sticks too close to his own job.

For years the specialist has been sought and encouraged everywhere. This began in Germany. The German felt that his country was a bit crowded and looked about the world for room to grow. Most of the good colonies were already in possession of other nations. Not being able to expand geographically, therefore, the German did it mentally. He sat down at home and expanded into a series of the hydrocarbons, and it was a magnificent success. Thus modern specialization appears to have been born, and other nations have been going in for it ever since.

American business, however, now suspects that the specialist has been rather overdone. He is often blind in one eye or deaf in both ears, so far as the rest of the organization is concerned. The organization tends to be a diversified patchwork of splendid technicalities. It lacks organization spirit. It is afraid to break a rule in an emergency—or does not know how to break one intelligently;

Three Meals Were Missed Forever, and Not Even a Cup of Warm Coffee Was Obtainable

to there is a disposition to develop the numan side of business as it existed in days when organizations were smaller.

Twenty-odd years ago a young man ran mill in one of the famous metal-working alleys of New England. His business of ice was in town. Once a week, however, a appeared at the mill, opened his desk, md got in touch with things and people.
Workmen came in from the shop to ask his dvice about educating a boy or investing i few hundred dollars. Farmers hauling ordwood to the mill in winter looked in, then they saw he was there, to ask how verything was going. Everybody called tim by his first name.

Since then a great trust has grown out of hat mill. It has two dozen big plants scatered over the country and processes have seen wonderfully developed by specialists. He was president for years and guiding pirit of the organization during its growth.

pirit of the organization during its growth. The other day he resigned, saying that he company has reached a point where it is ndispensable to get into it some of the old, lose personal touch of the days when he an the original mill. Size and distance and pecialization have brought public critism, legislative regulation, labor troubles and other difficulties—all due, he believes, o the cultivation of the technicalities at the appense of the humanities; so the rest of its business career will be devoted to restoris business career will be devoted to restorng the humanities. He says he himself
loes not know just how this is to be done;
sut he is certain it is the next thing to do

nd he is going to find out how to do it.

Some months ago a man prominent in great public-service industry brought to ight a larger phase of the same problem. This industry was about to hold its yearly onvention, and he urged that presidents of

ompanies and managers and executives enerally attend the meeting in person.

In the early days of that industry, he reminded them, every company was run by superintendent or manager, or perhaps y its actual owner, because it was small. These men came to conventions and were ble to discuss any phase of the business.

These men came to conventions and were ble to discuss any phase of the business rom their own experience and with authority. Any broad issue that arose was pretty ure to be settled promptly and wisely. As the business grew, however, and commiss became larger, they were split up no departments, each in charge of a specialist. Presently the yearly conventions were attended by these specialists only and levoted chiefly to technical matters. When t came to discussion of engineering, mainenance, cost accounting or claim adjust-ent, the specialist was in his element; but here the industry touched public welfare a matters like franchises, state regulation, aluations, investors' and employees' intersts, the specialists could not speak with uthority or give much light.

#### The Specialists' Narrow Groove

Because these broad generalities of the adustry were being neglected at conven-ions it was under fire from the public; and e believed that good public relations could ot be restored until the big fellows with he say-so again took an active part in the neetings.

For years the man dealing with broad uman issues in business has held the speialist in awe, looking on him as one so eeply learned in his particular line that was useless for a mere layman to try to allow his mental processes and, therefore, be judged only by his results. This view as been helped by the specialist's disposion to wrap up his knowledge in mysterious schnical jargon of his own making.

Now that overspecialization fails to prouce results in some important directions, overwer, the man concerned with the sen-

owever, the man concerned with the gen-ralities of business begins to see that there is good deal of charlatanry in specializa-on—that it is as full of dogma in some mys as the old world of theology ever was; nd that many an engineering, electri-al, chemical or metallurgical expert would illingly burn other experts at the stake as heretic

The broad-gauge business man sees, too, ast mystery, jargon and fine-spun points a specialization usually cover up lack of

ue technical ability.

So, without discounting the value of speal knowledge and service, business has its yes on the specialist with a view to broadring his gauge. It is going to translate im into plain language, make him human, ad set him working with the team.

The specialist himself has gone so far in is own special direction that nowadays he

begins to be lonesome. Big concerns grow up by making and marketing highly tech-nical products, and big public projects of a technical nature are carried out. The specialist knows all about doing the work, and success is built on his skill and learning; yet he sees other men climb past him into the big jobs and salaries—bankers, sales-men, managers, lawyers, politicians. When they want anything from him they re-tain him by a fee for consultation, or just press a buzzer and summon him from the

laboratory.

He is beginning to ask why he holds no place on the boards and commissions, and by a great specialist is so seldom found sitting in the boss' chair. Echo answers very plainly. It tells him that it is because he lacks knowledge of people, perspective, and the shrewd generalities and humanities that go so far in administration. He admits that echo is right and now shows a disposi-

tion to make good his shortcomings. Yesterday the specialist's conception of a great specialist was a man too busy with his specialist to pay attention to anything else; but today he sees that paying a good deal of attention to everything else is about the best way to become a great specialist— for specialists and specialist are not of much value in business unless they fit in

much value in business unless they fit in.

And in the work of explanation, by which business is now being adjusted to the public's standards, and public standards modified by a better understanding of business conditions, the specialist fits in patly and has broad possibilities ahead of him, for both business and himself.

#### Broadening a Technical Man

A rundown machinery concern was taken over by a man whose experience had been chiefly along the lines of organizing and selling. This concern made a type of me-chanical equipment that was then coming into wide use among all sorts of manu-facturers, and made it well, but had no particular standing in the industry technically, compared with competitors who maintained

experts.

To secure technical standing, the new boss picked out the best-known consulting specialist in that field and secured his exclusive services, on a salary, to advise the salesforce in selling equipment and bidding for contracts, and to supervise design and installation for customers.

This expert was really a wizard in his own work, but he was a narrow man in every other way.

His new boss went to work to educate him in the generalities. A big convention of manufacturers was to be held. The boss asked the expert to attend and give a little

"Humph! What do a lot of manufac-turers know about my line?" objected the specialist. "If I put my knowledge and time into a paper they wouldn't be inter-ested in the facts. I'm too busy to talk

anyway. Besides, it would hurt me professionally."

"You've got those fellows sized up just right," said the boss. "They don't think about our equipment five minutes a week. They wouldn't understand the science of it; but I believe you can tell them in fifteen or twenty minutes how to use our equipment

to the best advantage as part of a big plant."
The boss was a good salesman; and his specialist was at the convention and read a paper free from technical terms. It explained how to use the equipment in a general manufacturing plant so that employ-ees could be kept busy in slack seasons and

pressure relieved when times were good.

That simple, non-technical treatment of a complicated specialty was the feature of the convention. Trade journals printed it, manufacturers commended it, and in three months the specialist was looked on among laymen as the one authority in his line-because he was the only one they had ever been able to understand.

Once he had tasted the pleasures of general reputation the specialist liked it and repeated his hit at other conventions. In a year or so his counsel in connection with equipment was in such demand, and the concern doing such business, that his earn-ings increased far beyond anything he could have hoped for as a specialist in the bare

And it all came about because a general man took pains to translate a special man into ordinary terms for the benefit of people who needed his special services.

Editor's Note-This is the second of three articles by James H. Collins.

## For Large Business Buildings

THE St. James Building, Jacksonville, Fla., is built on modern lines. And like almost all first-class modern buildings, its 60,000 square feet of roof are covered with a Barrett Specification Roof.

The general acceptance of The Barrett Specification among first class engineers and architects is a highly significant development in the roofing trade. It is a movement which began with the leaders of the profession, who recognized its technical soundness. Accordingly, the inclusion of The Barrett Specification in full in building specifications is rapidly becoming a universal custom.

The Barrett Specification has the advantage of furnishing a uniform and fair basis for competitive bids, together with satisfactory methods for determining the quality of the workmanship and materials on the job. Our own experts are usually available to inspect the contractor's work and certify whether or not the Specification has been strictly complied with.

A Barrett Specification Roof will usually last twenty or more years without a cent's worth of repairs. It takes the base rate of insurance. It gives the most service per dollar, its unit cost being less than a quarter of a cent per foot per year of service.

Booklets on Request.

Special Note

We advise incorporating in plans the full wording of The
Barrett Specification, in order to avoid any misunderstanding. If any abbreviated form is desired, however, the following is suggested: ROOFING-Shall be a Barrett Specification Roof laid as directed in Specification, revised August 15, 1911, using the materials specified and subject to the inspection requirement.

#### Antiseptics as Fertilizers

AN ODD discovery has recently been made—that the very antiseptics that help quickly to heal a cut or wound will help to raise plants quickly and healthily. Antiseptics are too expensive now to be used regularly as fertilizers, but the dis-tinguished British chemists who have made the discovery see hope of actually applying the idea to plant growth before long. Steam is an excellent disinfectant, for

instance, and under some conditions even now steam could be used as a substitute for

Why antiseptics will do this is not fully understood yet. The first result of apply-ing them—formaldehyde, for instance—to the soil is to kill off large numbers of the bacteria in the earth.

After the chemical has evaporated the bacteria begin to appear again; and the bac-teria that are useful in producing ammonia multiply with great rapidity until there are many times as many of these in the soil as there were before treatment. The final effect is therefore the same as though fertilizers had been applied.

Thus, in order to fertilize soil by antiseptics, what is needed is something that will work its way through the dirt thor-oughly and kill off the bacteria quickly— and then take itself out of the way, so that

other bacteria will get a chance to grow.
Learn does all this best; but formaldehyde and a long list of chemicals have been found to do the work fairly well, though expensively at their present cost.

### Rapid Stars

EVEN astronomers are expressing aston-ishment at a new speed record re-cently discovered among the stars. The Andromeda nebula has been found to be moving in the general direction of the earth at the rate of about sixteen million miles a day, or nearly two hundred miles a second. This is vastly faster than the motion of the earth round the sun or of the sun in

It will be some time before the nebula approaches very close to the earth, however. Observations of the nebula by telescope and photographs do not show the slightest measurable trace of movement toward the earth, which indicates that it is so far away that traveling sixteen million miles a day is too slow to be apparent. The discovery that it is coming at this rate was made by a study of the spectrum of its light.

## Seeing Double

PHOTOGRAPHS that give the same I effect as pictures in a stereoscope, but that give the plastic effect without the use of any lens, have now been produced. The only requirement in viewing them to get the effect is to look at them squarely in front. The idea has been worked out so that it appears practical and a few such photographs have been exhibited, though the idea has not yet gone much beyond the laboratory stage. In order to get the plastic effect it is nec-

essary that the person looking at such pho-tographs should really see two photographs blended together exactly as they are blended by a stereoscope, and the new device ac-complishes this. Two photographs are placed one above the other, and the whole problem is to prevent them from interfering with each other. Each photograph is on a glass transparency, but one is taken so that it will be visible only when placed on a black background, and the other only when on a white background.

After the two have been placed one over the other a sheet of ribbed glass is placed over both. The ribbed glass has the effect of giving a different view for each of a person's eyes. The right eye will see the picture at one angle through the ribs and the left eye at a different angle. The whole device is so arrangen that the right ey the two photographs and the left eye sees only the other photograph. The eyes then blend the two together and give the stereoscopic effect.

In the best examples produced the person viewing the picture does not notice the ribs at all, but sees only a sharply defined picture with plastic values.

## MY LADY'S Conscience

(Continued from Page 7)

We exercise this unrecorded elemency We exercise this unrecorded clemency wherever possible—tempering the wind to the weak. Many a lady's maid, palpably coerced into smuggling, has been sent away with a lecture. The law reads to the con-trary, holding all parties to a conspiracy to be equally guilty; but I am sure most of those who have thus escaped will be on our side in the future.

side in the future.

There was one woman on whom being caught in an attempt to defraud made such an extraordinary impression and resulted in such an extraordinary sequel that I must cite it as the one instance of its kind on record.

She was a woman past middle age and a bit eccentric. Always she carried with her a rope to be used as a means of escape in case of fire. For years she had made a study of the philosophy and religions of the East, and better to pursue this hobby she went to India. Shortly before starting home she bought a pearl necklace, paying ten thousand dollars for it. Homeward bound she stopped in Paris and there was told by a jeweler that she had been victimized. The pearl necklace was worth but five thousand dollars at the outside.

These details I learned subsequently from her. The voyage to New York found her brooding over her loss; and, womanlike—or manlike, for that matter—she was making plans to recoup. What was more natural than the thought of defeating the customs?

customs?

That is what she tried to do. She unstrung the necklace and wrapped the pearls in two paper packages, one much smaller than the other. In her declaration she specified simply pearls, and she was pre-pared to produce for inspection the smaller

pared to produce for inspection the smaller package.

Under the very first questions, however, she faltered and gave up the entire string, stating the full cost. She simply could not lie. So long as the fraud had been confined to a clerical operation she could submerge her conscience; but she could go no further.

## Pearls Lead to a Tragedy

The pearls were seized and with their owner taken to the Custom House preparatory to a hearing. There the woman confided to me the history of the necklace. She added that she had but one friend in New York, and if that person should hear of her plight she believed she would die of mortification. I felt extremely sorry for her and suggested that she employ counsel. This she did; the hearing was postponed and she was allowed to go to a hotel. She selected one of the smaller, quieter places on Fifth Avenue. on Fifth Avenue.

Early next morning, standing on a corner near that hotel, a sleepy policeman chanced to look up. Dangling from a rope over the sidewalk of the avenue he saw a woman's body. The lady from India had tied her fireescape coil about her neck, fastened it in the room, and leaped through a window to her death.

Contrary to general belief, the customs service maintains no agents abroad to spy on the casual traveler in the matter of his purchases. Certain men are sent there as attachés of the Treasury Department, but their chief duty is to keep in touch with and report market-price changes as a basis for

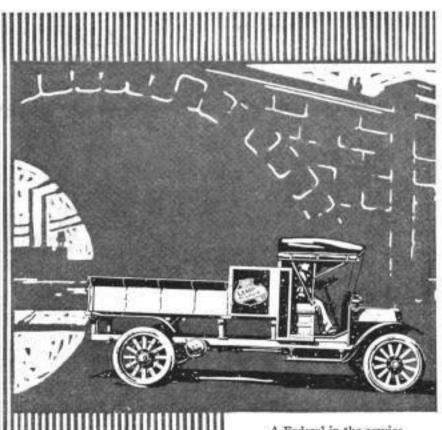

duties on this side.

We do manage to hear of any conspicuous jewel sale; but the returning American, no matter how potential his purchasing power or how great his reputation for exercising that power, steps on the dock innocent in the eyes of every inspector, unless there are marked indications to the contrary. This is one of the cardinal doc-trines of the service. And therein lies one of its greatest problems.

To indicate by word or action that he

suspected, of intent to smuggle, a pompous individual, with a haughty wife, two demure daughters and twenty trunks, might embroil an inspector in an unpleasantness leading to his dismissal. Yet even swifter might be his end should a costly lot of dutiable articles escape him. Only a level-headed man of skill and long experience can meet such situations with credit.

To a veteran, baggage speaks a various language. By noting the character and the number of pieces he can with reasonable accuracy tell you the size of the family

A Federal in the service of the Lemp Brewing Company, St. Louis.

# FEDERAL

## Not Merely Sold to You-**But Fitted to Your Business**

We pride ourselves upon the fact that so many concerns now using large fleets of Federals started with the purchase of one, and bought the others largely because of the assistance we were able to give them in economizing haulage labor and costs. For instance:

> "During July, 1912, we purchased one of your Federal Trucks. After unloading from the shipping car we at once made a temporary body and started the rig on its way. With the exception of two weeks for painting last winter the truck has done daily work. Never in the last year's use have we been held up a minute. The truck has been used in hauling water from our spring to city warehouse, a distance of about four miles (round trip); roads are very poor in places in winter, but wherever the FEDERAL can get traction it will go through."-Rock Spring Water Co.

Many other bottlers, dairies and creameries have had similar experiences with Federals.

Our advisory service—the result of years of experience in practically every line and under all haulage conditions—is free to any manufacturer. It is one of the best means of demonstrating conclusively the relative value of motor and other haulage in different lines of business.

Why not write us? One of our representatives will be glad to call; and he will not try to sell you a truck unless he has convinced both you and himself that you can use one profitably.

## Take the tube home

VOU introduce into your household a dentifrice ■ with three distinct advantages when you take home a tube of

# COLGATE'S RIBBON DENTAL CREAM

As your dentist can tell you—this three fold superiority makes Colgate's an unusually good dentifrice.

It is safe—the base (which we ourselves manufacture for use only in our dentifrices) gives it cleansing efficiency. This base is wholly free from the hard, sharp-edged crystals which in inferior dentifrices so often scratch the enamel.

It is convenient—the ribbon form enables you to use just the right amount without waste or scattering.

It is delicious—the flavor is so pleasant that regular twice-a-day care of the teeth becomes a habit because Colgate's is a treat.

Take the Tube home without a day's delay.

Your dealer has Colgate's Ribbon Dental Cream for you: or Colgate's Dental Powder if you prefer that form—as good a Powder as the other is a

accompanying it, the sex of the various members and the approximate age of each. A glance at the hotel, steamship and railroad labels reveals to him with equal swiftness a fair idea of the course of their journey; and a cursory examination of the condition of the baggage gives him more than a sugges-tion as to the duration of the trip. The determination of the latter is highly im-

Obviously persons who have been away from home a year have had greater need for making and greater opportunity to make purchases than those absent a month. Similarly brand-new trunks almost always indicate that the passenger's luggage ca-pacity has not kept pace with the additions to his wardrobe and effects. It is a curious thing that perhaps four out of ten persons will fail to include a new piece of luggage— itself dutiable—in their declarations. Of-tener than otherwise it is a case of honest forgetfulness

Now a word concerning tips-both kinds, gratuities and what purport to be inside information of smuggling plots. We are equally suspicious of each. Aside from the fact that accepting fees of any sort is pro-hibited, we have learned by experience to regard with suspicion even the individual anxious to press a cigar on us. If you are a passenger it might be well to remember this. To offer an honest inspector a tip will not only get you nothing but will incite him to probe every cranny of your trunks. Un-doubtedly there are amiable persons whose motives are of the best; but it is not human

nature to give without expecting a return.

Tips of the other sort pour into the Custom House continually. They come by mail, telephone and telegraph—warning us to watch Mr. A. or Mrs. B., who is, so our mysterious informants assert, about to smuggle in a fortune in jewels, perhaps concealed in

the gentleman's socks or the lady's coiffure.

The vast majority of such communications are based on malice, desire for revenge, misinformation, a perverted sense of humor, or what-not; and we take them with considerable salt. If one should incite an investigation the case is put in the hands of a tried and tactful inspector, lest he stumble into an embarrassing situation.

#### The Lady Who Boasted

Regularly we receive misleading reports concerning persons of prominence. For years some busybody, writing anonymously, has sought to involve a well-known woman writer, accusing her of repeated attempts to bring in diamonds in her shoes. This woman makes frequent trips abroad. Her mythical attempts to beat the customs have become a matter of jest with her and certain inspectors.

Yet I have in mind a vivid exception to the rule. One of the most important arrests ever made in the history of the service was brought about on information received from

a patriotic woman.

While in a London hotel she overheard another American woman boasting, while she displayed valuable jewels purchased abroad, that she knew a customs official who would enter the jewels free. This so roused the unintentional eavesdropper that she made it a point to ascertain the steamer on which the other was sailing. When the vessel docked in New York the customs authorities had in their possession proof that the jewels in question had been pur-chased abroad. Moreover, they were aware of their cost, and had other facts. The jewels were found cleverly concealed on the woman's person and, after a scene trying to all concerned, were seized. The woman was heavily fined.

Possibly you wonder, in view of the fact that no spies are kept abroad and tips are seldom productive of results, how frauds against the revenue as attempted by the passenger are discovered. It is no exaggeration to say that ninety-five per cent of the seizures are the result of original observation on the piers. No oath is required of the passenger; no traps are set for him.

contrary ever opportunit offered him to play on the square. If he has omitted to declare certain articles he may assume the rôle of forgetfulness and get by with it. The inspector is only too glad to clean the slate, provided the case is not a flagrant one. Let me quote here the words of a Nestor, as contained in a rulebook

for the guidance of the tyro:

"The discovery of undeclared foreign
articles requires careful consideration. The fact of their omission may indicate a willful intent to defraud, ignorance, or a careless

indifference to the law. To determine which taxes the judgment and common sense of the inspector. The method of packing, whether hidden or visible; the value and bulk of the articles; the action and explanations of the passenger before and after discovery; and even his mentality

are factors to be cautiously weighed.
"It is not infrequently the case that small articles are omitted from a large declaration unintentionally, by reason of the large number of small purchases, or that the passenger declares nothing, deeming that few small, inexpensive articles are too insignificant to mention. In the absence of any evidence of intent to conceal or defraud, such instances should not be taken

too seriously.
"The successful inspector finds that a close study of human nature and externals is of material assistance in formulating at opinion of the power, desire and oppor-tunity of a passenger to purchase. Intui-tively he considers age, sex, nationality, occupation, residence, station of life, demeanor, condition, personal appearance.

#### Things Inspectors Notice

"He learns in this wise, among other things, that the aged, infirm and sickly acquire only necessities; that the wardrobe of women are more lavishly replenished than those of men; that the nationalities of the different travelers are reflected in the character of the articles imported; that the American of wealth is the most liberal and general buyer of all tourists; that occupation is frequently denoted by particular articles in the baggage; that there are a marked difference and a wide range between the possessions of a school-teacher and a dressmaker; that the baggage of physicians is likely to contain surgical instruments; that frequently the most valuable of the dutiable effects are f women are more lavishly replenished most valuable of the dutiable effects are on the person and not in the trunks; and that the passenger's demeanor is more often a better index of his intent than the declaration of the baggage.

The last clause cannot be made too emphatic. Frank and positive answers are always a point in the passenger's favor. We notice everything—whether his hands tremble; whether helicks his lips nervously: whether he walks unnaturally, as if afraid of jouncing something from his clothing whether he seems loath to stoop or move rapidly. Meantime, no matter what we suspect, we proceed—or endeavor to— with an air of courteous solicitude, as if our sole aim were to grease his way through the

annoyance occasioned.

Visitors to the piers have to be closely watched. Frequently small articles, partic ularly jewelry, are passed to them. It is not uncommon for a thousand persons with pier passes to greet an incoming liner, mingling with perhaps more than a thou-sand cabin passengers.

One pretty little girl not so long ago, after impressing the inspector with her

naive frankness, turned to a girl who had

come to meet her, opened her fur coat ever so slightly and whispered stagily: "This is all I have!" Unfortunately for her the remark was overheard. "All she had" turned out to be a diamond sunburst, which was seized while she wept.

Naturally we save time in examinations by taking into consideration the class of the ship and the port from which she comes. The gayest birds of passage, with the plumpest purses and accordingly the most staggering array of foreign purchases, come and go, as a rule, on the big, supersumptu-ous floating hotels, which, notwithstanding their leviathan proportions, speed from Daunt's Rock to Ambrose Light at almost express-train speed.

In their baggage and on their persons are the rarest finds—jewelry, laces, furs, Con-tinental-made gowns and garments. The quality sloughs off as the luxuriousness of the craft decreases.

rs from the West Indies seldom have anything of great value-souvenirs, usually duty free, predominating. On ships from Mexican and Cuban ports we center our attention on drawnwork, mantillas, tobacces and cigars.

Of late we have been busy with the aigret crusade. By this I mean enforcement of the new law barring the plumage of wild birds. Most of the women have bowed before the regulation with good grace; a few have been fussy and argumentative. The newspaper boys have written a lot

Is known and recognized in every Civilized Country as the Leading Brand of Condensed Milk.

is principal use in all lands is for the Feeding of Infants. It is prepared with Scrupulous Care for this specific purpose.

No expense is spared to safeguard the production of the raw milk from which Eagle Brand is prepared. Every sanitary precaution is taken at Dairies and Condensing Plants, with a Determination to supply a product that is Perfectly Safe for the Baby.

Send for our Baby's Book and Feeding Chart—also our booklet "Where Cleanliness Reigns Supreme."

BORDEN'S CONDENSED MILK CO.

"Leaders of Quality" NEW YORK E± 1857

about our wielding long shears and snipping off hat decorations while the owners shrieked. That is not true. If the feathers are found to be those of a wild bird the owner is requested politely to remove them. If she has not the means at hand implements are provided.

The contraband property is then taken to the public stores for destruction. More than one woman has blushed when feathers she bought at a fancy price, as those of an egret or osprey, have been returned to her as imitations. Aigrets of the horsehair or barnyard variety are plentiful.

Recently I questioned a about the plumes on her hat.
"That's right!" broke in her husband, a "That's right!" broke in her husband, a

"That's right!" broke in her husband, a big, wholesome sort of man. "I'm a gamewarden. Take 'em along! I'm in favor of the law."

"Oh, you are, are you!" exclaimed the wife. "Well, then ——" And she snatched her hat from her head and threw it off the pier into the Hudson.

The plumage of unplucked game birds also comes under the ban. This has hit a number of New York's exclusive clubs, which import for their fastidious members pheasants, grouse, and so forth.

Several consignments have been held up while the anxious importers contended that they were not game birds, having been raised in captivity. If they were not game when they arrived such shipments as were removed to the public stores, pending determination of this moot question, were certainly game by the time they reached the club table.

the club table.

While on the subject of prohibited articles, I must not forget sealskins. The importation of skins or manufactures thereof of seals taken in the North Pacific is absolutely prohibited, even if they are bought in this country. When found they will be seized and destroyed—unless you care to ship them back to Europe.

If you have any sealskin you wish to take abroad—and bring back—the only way to avoid conflict with the law is to register it at the Custom House before you sail. Production of this certificate of registration when you return and identification of the

when you return and identification of the skin will insure its entry.

#### The Forbidden Mongoose

Finally, do not try to import a mongoose. Rikki's entrance is barred, the theory being that we have in this country more chickens than cobras. The mongoose, I understand, is a great killer. It has never been my pleasure to find one aboard ship or on a passenger's person or in a trunk. Nor have I ever run across a flying fox, or fruit bat. He likewise is classed as a nuisance.

At the outset I mentioned being a dor

At the outset I mentioned being a dog fancier as a necessary qualification of an inspector. Not only are dogs dutiable, but they are subject to inspection by the Bureau of Animal Industry in order that the state of their health and their breed and origin may be ascertained.

As it is inexpedient for the bureau to have its inspectors at the pier, this duty devolves on us. Dangerously unhealthy dogs are sent to a quarantine station at Athenia, New Jersey. You can picture My Lady's perturbation if she thinks Cutie or Tootles or whatever his name may be—is likely to be seized. Many Tootleses cross and recross the ocean in luxury these days.

A few years ago a well-known woman, accompanying the body of her late husband, sent a wireless message summoning a young New York physician to meet her at Quarantine. She was a wealthy woman, and the resum physician was a heart of the resum physician with heart of the resum physician who had heart of the resum physician who had heart of the resum physician who had heart of the resum the resum the resum that and the young physician, who had heard of her husband's illness abroad—but not of his death—climbed aboard at Quarantine with visions of fat fees and enhanced reputation. What was his disgust to be informed by the lady that she had summoned him to examine her pet dog! That

## The Magnet Lamp

A LITTLE electric light that will stick to almost any part of an automobile where it is placed is the latest form of the electric magnet, which has come into such great use for odd purposes in the last few years. The magnet is on the side of the lamp

and obtains its current from the same wires that supply the lighting element. As most parts of an automobile are of steel, it can be applied almost anywhere and stays put, furnishing light for any repairing or cleaning operations.

A new idea in Self-Filling Fountain Pens

The wonderful new Parker Self-Filler is a decidedly different self-filling fountain pen. Its barrel, without projections or outside contrivances, is a refreshing innovation. There is nothing in the way to interfere with your grip or impede writing. From outward appearances you can't even tell it's a self-filler,

but to see it work! - well, that just about settles it. You want one for its convenience, writing qualities and because the new self-filling idea will win your instant approval.

## Press the buttonfills in 2 seconds

Take off the shield cap at end of barrel, drop pen point in any inkwell, press the button and it fills itself in 2 seconds.

# Self-Filling Fountain Pen

move cap—press tion—Pen fills in seconds.

The new Parker Self-Filler is a practical fountain pen behind which are experience, stability and a well grounded reputation, plus the endorsement of 15,000 of the most progressive merchants in the country. Ask any Parker dealer

to show you this wonderfully handy pen. It makes writing a positive comfort. Find out for yourself how a clever invention made possible this big improvement in fountain pens. Regular prices prevail—\$2.50, \$3, \$4 and \$5.

## Transparent Pen

If you have something dis-tinctive to a loosain per, you'll like the new Bakellie barret. This wonderful ma-terial looks exceity like a lear, Yanaparent and er - bet you see jast how much ink there

## The Parker Jack Knife Safety

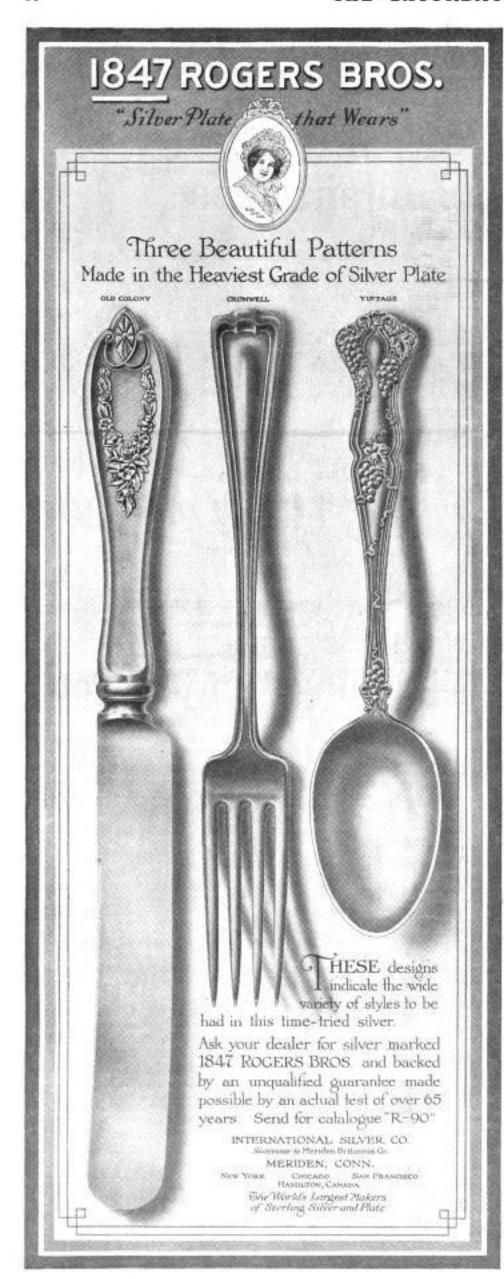

The most cherished of all fountain pehs and a great favorite with ladies. It simply can't leak. A lock-ing device holds in the ink. You can carry it upside down, rightside up or flat-drop it into any pocket or toss it into a trunk or traveling bag without danger of leaking or smearing fingers or linen. It has the wonderful Lucky Curve, the big idea that has made the Parker cleanly.

Parker Fountain Pens are made in over 200 styles—Self-Filling, Safety and Standard. Furnished with disappearing clip which clings to the pocket like a steel trap, but snaps back to the level of barrel when you write—25c extra. If you cannot locate a dealer, write us and we will send you illustrated catalog

Parker Pen Company 90 Mill Street, Janesville, Wis.

## THE LAME DUCK

## Views of an Innocent Bystander

WASHINGTON, D. C.

DEAR JIM: To be conservative about tottering to its fall ten times in the past twenty years, and have observed twice as many crises within that period which, though not totting the nation to a totter, shook it to its foundations; or, in other words, headed it toward the reefs—to say nothing of jamming it over to the edge of

the precipice.

We laugh at the excitability of the French and jeer at the ebullitions of our lemon-colored neighbors to the south of us; but all persons and sundry will have a difficult time showing me where either the French or the Latins have anything on the Americans when it comes to emuliant absurdity. icans when it comes to emotional absurdity as related to national affairs. We tell ourselves we are a clear-headed and a sober-minded people, when the fact is there is no nation on the face of the earth more vola-

tile than ours.

We may have been staid in days gone by, but as things stand now we fly off the han-dle at the slightest provocation and often-times without the slightest provocation. And we run round in desultory circles, shouting over whatever crisis seems to crise at the moment, without any idea as to what it is all about, where we are going, why we want to go, or what we intend to do

after we get there.

As I recall our history, the progress of this country has been marked by one crisis after another. We had them in the beginning and we have had them regularly ever since—like chills and fever—and have es

caped dissolution each time and proceeded on our way with considerable celerity. However, few remember the past and fewer still take a peer at the future. Today is always the hottest day, or the coldest, or the finest; so the crisis that is at hand is the one to be excited over; and, as it falls out, we are now excited over the Mexican busi-ness. The newspapers are clamoring about it and the statesmen are yammering about it, and everybody is all torn up about itthat is, everybody with the exception of Woodrow Wilson, who has the final say in the matter.

#### The Warlike Investor

Let me tell you something about Mexico, Jim, and you can stick a pin in it: Unless there shall be some real—not fancied, but real—affront to our national honor and our settled American policy of the Monroe Doctrine, there is no more chance of our going trine, there is no more chance of our going to war over Mexico or with Mexico, because of what has happened or is happening, than there is of our going to war with Switzerland because we don't like the size of the holes in Swiss cheese.

It may happen, of course, that some of our Mexican friends will indulge in some indecency like the blowing up of the Maine and force us to go over there and larrup the

and force us to go over there and larrup the whole lot of them—federals, constitutional-ists, brigands, bandits and hoss-thieves in-cluded; but unless that sort of thing does happen, or a chesty European nation breaks in in an arrogant manner, we shall continue

in our attitude of absolute calm. Notwithstanding the newspaper screams about it, and the editorial howls, the Mexican situation isn't at this writing, and never has been up to this time, a crisis or any-thing like a crisis. What it is and what it has been is a troublesome affair nearby that has never in any sense demanded the sacrifice of the lives of our soldiers or the spending of our money. When you get to the bottom of most of these demands for immediate action of some kind in Mexico you will find they are based on self-interest

and on nothing else.

The loud shouters for protection and intervention, the men who are proclaiming that we have sacrificed our national honor and have become cowards, and all that, are men who own land or mines, or have some other similar interest there; and they do not care a hoot about national honor except to invoke it to help them save their money. There isn't one of them who isn't perfectly willing to have a thousand, or ten thousand, American soldiers killed by bullets or disease if the slaughter will avert the greater-to these men-disaster of losing a few dollars,

One man in this country who understands this is President Wilson; and you can put it down, Jim, and so can all others who are interested, that a greater incentive to war than greed and self-interest is needed to force him to move a soldier across the border. There have been some anxious mo-ments for him, but those have not been due to any lack of determination on his part to hold off, any lack of patience, any lack of self-control. They have been due to unforeseen situations arising always through the blundering, the vanity, the incapacity, the absolute asininity of others. The President hasn't flickered an eyelash since he took his stand on Mexico. He is not going to fight on a pretext or a protest, or because a lot of

on a pretext or a protest, or because a lot of hollow-headed jingoes are shouting at him. If there should come a real cause for fighting he will be on the Mexicans before they think he has started; but he is not a person who deals with half facts. More than any man I have ever known in public life, Woodrow Wilson demands to be shown. You cannot convince him with conversation. You cannot scare him with threats. You cannot swerve him by clamor. If you have the facts on your side he admits them and acts accordingly; but he does not admit them until he has proved to his own satisfaction that what you have are facts, and not half facts or shadows of facts, or reports, or rumors, or opinions.

#### The Englishman's Conundrum

Often the President must be reminded of the yarn about the Englishman who was a visitor at the Lambs' Club, in New York. At the time the members of the club were amusing themselves by asking conundrums. The Englishman listened for several nights, vainly trying to think up a conundrum of his own, so he might get into the game. He was out of it. No conundrum occurred to him.

One night, however, he came in beaming. "I say, you fellows," he shouted, "I have thought up a jolly good conundrum for you,

you know."

"What is it?" chorused the crowd.

"Aw," the Englishman replied, pulling at his mustache—"Aw, what is it, you know, that has feathers, a long bill, builds its nest on a chimney, stands on one leg, is popularly assumed to bring the babies, and barks like a doz, you know?"

Nobody could guess.
"What is it?" was finally demanded.
"A stork!" exclaimed the Englishman

"A stork!" exclaimed the Englishman triumphantly.

"A stork? Why, you bally ass, a stork doesn't bark like a dog."

"I know that, old chap; I know that. I put that in to make it more difficult!"

A whole heap of things seem to have been put into the President's Mexican conundrum to make it more difficult. Take that Benton killing, for example. That was had Benton killing, for example. That was bad enough; but when there were hopes of composing it, what happened? Why, nothing—nothing, at all, except that our old friend Carranza, universally esteemed to be the brains and, what is more to the point, the horse-sense possessor of the constitutionalists, gave a loud snort, grabbed out a hand-ful of his own whiskers and went stark, staring, raving mad at the exact moment when all the horse sense he was reputed to have was worth as much a gram as radium to the constitutionalist cause.

Instead of assuring Secretary Bryan that he would do all he could to help get himself and his people, and especially his brigand Villa out of the mess, Carranza haughtily replied that, inasmuch as Benton was a British citizen, he, Carranza, as supreme chief of the constitutionalists, would treat only with representatives of Great Britain in the matter. Whereupon the jingo press shouted that Bryan had been rebuffed by a rebel chieftain, and the pot began to boil again so furiously that it sounded like Mount Pelée blowing off its head.

It so happens that I know the men who are earnestly trying to bring about some semblance of order in Mexico, and who are trying to do what they think is best by eliminating Huerta and giving support to Carranza and the constitutionalists. Some of these men are in Washington. They have been and are in close touch with affairs, and

they have been aided to some extent by the iriendly attitude of this Government toward the anti-Huerta movement. They worked for a long time to get the embargo on arms removed and they have had considerable success otherwise. Do not think they are doing all this for love, Jim, for they are not; but they have at least a semblance of right on their side and certainly have a

strong case against Huerta.

Well, I have heard many men in my time rise to heights of denunciation of other men; but I must confess that all I ever heard before was merely kindergarten work compared with what these men said about Carranza the day he made it more difficult. The telegrams they shot into that swelled-up patriot must have scorched his whiskers! They told him about himself in code, in Spanish, in Mexican, in English and in American. They roasted, toasted, basted and lambasted him. They described to him what an idiot he is in any and all sorts of

what an idiot he is in any and all sorts of language the telegraph company would accept; and what the company wouldn't take straight, for fear there might be some lady operators on the line, they sent in code.

It all goes to show, though, that in a situation like this anything is likely to happen—or everything. No person on earth knowing the circumstances would have supposed Carranza would have taken such a wallon at men who were trying to such a wallop at men who were trying to help him, and at a president and a secretary of state who felt, bad as the constitutional-ist outfit is, that it is the best to be had, and is to be tolerated for a time provided it comports itself anywhere within the bounds of reason.

Anyway you look at it, it is a nasty mess; but that doesn't mean that we are to go to war about it. War, James, is a much more serious proposition than the gentlemen who howl about the flag imagine. No person realizes its seriousness more than President Wilson. War, as General Sherman said, is hell! And this Administration isn't taking

any of that, as we put it in English.

Meantime the celebrated aggregation of topliners in the State Department has been broken up. Of the Bryan-Moore-Folk com-bination there remains only Bryan, for John Bassett Moore has resigned and Joseph W. Folk has shifted. John Bassett couldn't stand the gaff and Joseph Wingate wouldn't, so Moore is retaring to private life and Folk is to become first attorney for the Interstate Commerce Commission, and Colonel Bryan holds the fort alone.

The action of Moore is not surprising. He is a big man, Jim, is John Bassett Moore, within his limitations. He lacks initiative, though he didn't need any where

he was. When you tell him what you want, | within the radius of his activities, he is a wonder at working out the correct details. He knows how to do everything that inter-national law and usage demand—but he starts nothing.

Cite a set of circumstances to him, and

after he has looked into the case he will hand you all the precedents, all the traditions, all the law, all the difficulties neatly tabulated, all the specifications and all the plans of operation, based on every national or international event of similar character from the time the Children of Israel crossed

the Red Sea until now. His heart was bowed from the very first however. He was in wrong—if you know what that colloquialism means. Of course you understand—or if you do not I am tell-ing you—that John Bassett Moore is the author of an eight-volume work on inter-national law and author of many other vol-umes of similar import; indeed, he is our umes of similar import; indeed, he is our leading authority on that evanescent subject. When President Wilson came in Mr. Moore was lecturing on international law at Columbia University. The President, who knew Moore, knew his reputation and admired him, and sent for Moore; and Moore came to the White House.

The President asked Moore to take the place of counselor for the State Department, ranking next to Mr. Bryan, and Moore consented.

Moore consented.

Moore consented.

Wherefore, the story goes, the President, after thanking Moore, suggested that he go over to the State Department and see Mr. Bryan, his new chief, and arrange about going into the Department. Moore went. Mr. Bryan received him graciously. They talked of many things. Mr. Bryan told Moore how glad he was to have him as his right hand, how sure he was they would get along together; they made many polite exchanges and a pleasant time was had.

As Moore rose to go, Mr. Bryan said:

"By the way, Mr. Moore, there is another thing I should have mentioned. Of course, as you know, there are many matters con-

as you know, there are many matters con-stantly arising in this Department that have to do with international law. Have you ever made any particular inquiry into that subject?" Well, I am telling you the story, Jim—telling it as it was told to me—Moore tottered out; and from that time, which was a year ago, until he quit there never has been any other outcome of his latest adventure into our diplomacy. His heart was broken at that particular

Small wonder, too, when one considers those eight volumes and what they contain! Yours diplomatically, BHL

Y or more genuinely satisfactory than a box of Whitman's at Easter—or any other time. A variety of choice is offered in the special Easter List below.

## A Fussy Package for Fastidious Folks—

The most aristocratic package of sweets ever put up, Designed particularly for those who do not care for cream centers. Selected chocolates—all hard and nut centers. In one-half, one, two, three and five-pound boxes, at \$1.00 the pound.3

## The Sampler Package—

Affords an opportunity to enjoy, or sample, ten varieties, selected from ten popular Whitman packages. Two sizes, \$1.00 and \$2.00.

When you have decided which you like best, you can get them in individual packages,

## Assorted Milk Chocolates—

One of the newer Whitman favorites. Made with coatings of pure milk chocolate. Centers are creams and nuts. An artistic 20-oz. box, \$1.00.\*

## Old Time Favorites—

This package is the response to a demand for old-fashioned candies—Caramels, Mints, Taffies, Molasses Candy, Gum-Drops, etc. In bright, 20-oz. boxes with an old-time design, 60c a package.\*

## "1842" Bitter Sweets-

Put up especially for folks who delight in the combination of the old-style bitter chocolate coatings and very sweet, creamy centers. Really one of the choicest of the many Whitman varieties. A taste makes many people devoted to them. One and two-pound boxes, 80c a pound.\*

## The Pink of Perfection Package—

Chocolates or confections, in one, two and five-pound boxes, \$1,00 a pound.\* A beautiful box in old-rose and gold—ribbon bedecked. Contents packed in removable trays.

Whitman's candles are sent fresh and frequently from the factory to each local agency. Every suckage is guaranteed. If there is no Whitman agency near you, we'll send any of the Easter List, postpaid, on receipt of price.

Write for Illustrated List of Gift Packages.

# The Forehanded Man

## By WILL PAYNE

UNDOUBTEDLY a great many small investors start wrong. I shall not attempt to estimate the number of letters I have received describing wrong starts, and I have heard many verbal reports on the same subject. It strikes me that the man who is beginning to invest is very apt both to fear too much and to expect too much, with the melancholy result that a lot of people start their investing career with a loss. We used to hear that the great difficulty

in making a fortune lay in accumulating the first thousand dollars; after that it would be comparatively plain sailing. Probably the typical amateur investor in this country is a man on salary or in a profession. He sets a point at which he will begin investing-one thousand dollars or five thousand, according to his income.

When he has reached that point he expects something rather important to hap-pen. The nest-egg, no doubt, represents a good deal of self-denial and careful nursing on his part. Now that it is ready to hatch, he wants it to produce a bird commensurate

He could have had a good deal of fun with the tens, twenties or hundreds he has dutifully salted down to make up that investible capital; his wife could have had some fine clothes and the flat some new furniture. He rather feels that the foregone enjoyments ought to come back to him in

a lump—or quite rapidly.

Naturally a poor five per cent looks inadequate. A man cannot get rich very fast
by adding only fifty dollars a year of bond interest to his income. Twelve per cent, or

something with a handsome bonus of com-mon stock, looks more like what he wants. Of course there are no statistics on the subject; but I am satisfied that venders of wildcat securities find their victims pretty largely among people who are making their first investment—especially if women with life-insurance money be included; in fact it is only the fakers who can promise what first investors are so apt to want—safety and an extravagant return.

Milk Cho

hilmans

On the other hand, by an odd sort of paradox, it is rather characteristic of the first investor to hesitate unduly long before investing at all. I knew a man who wound up a small business in which he had been engaged a good while, realizing twelve thousand dollars cash. The business from which he retired was the only one he knew anything in particular about. He spent eight months looking for a satisfactory investment for his twelve thousand, rejecting opportunity after opportunity because it did not quite come up to his mark. Then he invested all his money in a fly-by-night

Almost everywhere in the United States some sound bank will pay at least three per cent interest on a time deposit. If a man accumulates any money at all it naturally goes into a bank. He feels that it is safe there—yet wants a greater return than three per cent. Now if he has never made an investment he is very likely to attach an exaggerated importance to the rather simple act of converting that bank credit into a bond credit or a mortgage credit-of exchanging the piece of paper

## For Service, Endurance, Economy-**Build YOUR Roads of Concrete**

AD streets and roads are a disgrace to a community. They are a menace to life. They hamper commercial activity. They actually help to keep some towns from expanding.

Any highway should outlive its guarantee and that is why wide-awake public officials in every section of the country are specifying concrete for new highways.

Concrete, made with Lehigh Portland Cement, is the logical form of road construction.

Lehigh Cement gives a concrete road just the strength, resisting power, solidity and surface that mean ideal service under every traffic condition.

It is extremely economical. It is an assurance against continuous and expensive upkeep. No need of pocket-draining, special assessments to over-tax the members of your community.

And here's another vital reason why you should

# LEHIGH CEMENT

Concrete made with Lehigh, grows stronger with each succeeding year. All tests prove that its strength continues to increase. It continually gathers power to resist the wear and tear of traffic, rain and snow, heat and cold.

We want every public officer or tax payer to know about Lehigh Cement for concrete roads. Write and tell us about the road plans in your community. We will help you in planning concrete roads and give you some valuable information. We have some astonishing figures on the economy of Lehigh Cement concrete that apply equally to the construction of private roads, terraces, walks and other forms of private home construction.

### LEHIGH PORTLAND CEMENT CO.

130

which shows that the bank owes him so many dollars for another piece which shows that some other concern owes him the same amount. He sort of feels that this exchange is a letting go of the sheet-anchor and sailing away on unknown seas. So in many cases, by an odd paradox, he sticks long at the dock, then sails off with a pirate. Now few bankers will deny that plenty

of other concerns can offer you, as a longtime creditor, a position as secure for all practical purposes as that which the bank offers you. They will take your money, give you better interest than the bank can afford to pay, and practically as good security. They can do this because they get more

complete use of your money. The bank gets a strictly limited use of your money. It must stand ready to pay it back at the end of ninety days—or even on demand; but the railroad or street-car line or gas company, borrowing on a long-term first mort-gage, gets undisturbed use of the money for twenty or thirty years, and so can well afford to pay more for it than the bank does—but not a great deal more.

The difference between the bank rate and

the bond rate simply represents the price for a less limited use of the money and not necessarily a difference in security or in the creditor's ability to pay. A and B are equally good. A will pay you three or three and a half per cent for your money on ninety days' time. B will pay you five per cent on twenty years' time

twenty years' time. There is nothing of a momentous character in converting the bank credit into a bond credit, and the point to which I have been working round is, if you are saving money begin investing it early. Do not say: "When I get one thousand or five thousand deliars in the bank I will make an thousand dollars in the bank I will make an investment." Let yourself into the invest-ing habit by shorter steps. A number of concerns now issue hundred-dollar bonds,

and the number, no doubt, will steadily

The city of New York, for example, now

issues bonds of that denomination. There are one-hundred-dollar railroad and other bonds, which any well-informed banker would recommend. As a cure both for being too fearful to invest and for expecting too much from investment the purchase of a good hundred-dollar bond is excellent. The whole point about investment, anyway, is that by exercising reasonable judgment and dealing with thoroughly responsible

persons you can get more interest than the bank will pay you.

#### The Safest Place for Bonds

One important consideration is involved, however, in the purchase of a bond— namely, a safe place in which to keep it. No doubt more than nine-tenths of all the bonds outstanding in this country are of the coupon form, which almost invariably means they are payable to bearer, and that, generally speaking, physical possession of the bond is taken as sufficient proof of

ownership.
In other words, the coupon bond passes from hand to hand like a banknote, without indorsement and with no record of the owner on the books of the company. So the possession of a bond may bring trouble to the unhappy individual who is always leav-ing his portable properties within reach of others or walking off and leaving them on

the counter.

It is a notable fact that wastepaper baskets are seldom found in the coupon rooms of safe-deposit vaults. The reason is that some absent-minded renter is always throwing his bonds into the wastebasket and putting the blotting paper securely away in his box. With a perfectly bare floor, it is easier for the attendants to discover the absent-minded renter's securities and return them.

I should not advise any one to buy a bond and trust its safekeeping to the bureau drawer or the mattress. It should, in fact, be kept where it is not liable to theft or to destruction by fire or other agencies, though every now and then a complaint at police headquarters shows that some cheerful investor has been keeping his bonds in the writing desk at home or on the sill of the open window.

The safe-deposit box is the usual expe-

dient for the safekeeping of bonds.

True, the rent of a small safe-deposit box will probably come to two or three dollars a year, which would not leave much from the interest on a hundred-dollar bond; but somebody else's box or safe may be available as a friendly accommodation.

The destruction of a bond by fire or other agency, to be sure, does not entail a loss of its value. Nearly all mortgages nowadays provide for the issue of duplicate bonds to replace those that may be destroyed, and on satisfactory proof that the bond has been destroyed the company that issued it will give the owner a duplicate; but the trouble and possible expense of getting a duplicate are enough to make it well worth while to keep your bond out of the fire.

Nor is the loss of a bond by theft neces-sarily irreparable—especially under the new income-tax law. Every bond bears a sep-arate number and wherever it is kept the owner should have a record of the number. If the bond is stolen notice should at once be given to the broker from whom it was bought. By newspaper notice or otherwise the theft may be published and banks warned not to handle the coupons-or the bond itself if it has matured.

The new income-tax law also requires that a certificate of ownership must accompany bond coupons when they are turned in for collection; so it should be comparatively easy to trace a stolen bond, and corre-spondingly hard for the thief to dispose of it. Even without this provision of the income-tax law, it was generally possible to trace a stolen bond; and payment of the principal and interest of a stolen bond can

be stopped. The income-tax law, I believe, will have another important effect, still further reduc-

another important effect, still further reducing the very slight liability to loss through theft, fire, and the like. As I said before, more than nine-tenths of all bonds in this country are in the coupon form, payable to bearer. Investors have preferred that form mostly because they did not want to be known. They felt a trifle more comfortable when no record of their ownership—which a prying assessor might possibly discover—was in existence.

#### Registered Bonds

It is true the payable-to-bearer form is easier to handle. It may be sold or put up as collateral by simply handing it over like a banknote; but the secrecy it permitted was no doubt a strong reason for its popularity. That reason is removed by the new law, which requires a bondowner to disclose himself when collecting his interest.

Title to a registered bond passes of

Title to a registered bond passes, of course, by an entry on the company's books. The mere physical possession of the bond is of no consequence. Thus there would be no more object in stealing a registered bond than in stealing a stock certi-ficate that is in some one else's name; and, with a registered bond, there are no coupons to be collected. On every interest day the company mails its checks to the registered owners of its bonds, just as it mails dividend checks to its stockholders.

Some bonds are registered as to principal. but not as to interest; but I expect the bond that is registered as to both princi-pal and interest will come into vogue as a result of the income-tax law. The borrowing corporations no doubt prefer the coupon bonds, payable to bearer, because that form involves less trouble and expense to them. It is easier to use the payable-to-bearer coupons than to keep a register and make out a check to each owner. Brokers also may prefer the coupon-bearing bonds because they are easier to handle.

To the investor—especially the small investor—the advantages of the registered form are that he need be at no trouble or expense to protect his investment against loss by theft and fire; that he is spared the bother of making out certificates every time he turns in interest coupons; that his in-

terest will come to him wherever he may be. Bond interest that falls due in the owner's nbsence is not collected until he gets back to his safe-deposit box—or else he has to cut off the coupons before leaving home and deposit them in the bank for collection at maturity. With a registered bond, the in-terest check would follow him like any other

Cashing your pay check or collecting money that is due you involves some little bother and risk. You may have to walk two or three blocks to the bank and back again. You may lose the check. It may be stolen. Yet you regard pay checks as very desirable things to have. So with the coupon-bearing bond—the slight trouble of taking care of it is amply recompensed by possession of it. Do not be too fearful about making an investment. Start small and early-and do not expect any miraculous return.

## The Coming Back of Jawn Doherty-by Edmund vance cooke

"I 'VE got to do it, dad, before I leave for Yard.

"I did it when I was yer age meself and I did it when I was twicet yer age," said the older man at the story-and-a-half cottage window, out of which he bulged like a yeasty loaf overrunning its pan. Then he sighed. "Tis manny the year—at least 'tis several—since I've been able to do it."

do it."

"Careful, dad! If any one hears you counting up on yourself like that you'll be chucked into the Home for Aged and Infirm

County Commissioners."
"'Tis not old I am. I'm stout!" asserted

"'Tis not old I am. I'm stout!" asserted the senior Doherty gravely.

"No one will deny you that last word, dad," grinned the youngest of the Dohertys from below.

"Do yer stunt!" said his father sharply.

"All yer brothers before you could do the same before they was allowed to vote the Dimmycratic ticket; but you—you may be on the track team of yer college, an' they say you're not bad at pushin' a pigskin full of wind across a whitewashed cow pasture if there's a gob of girls a-lookin' on! An' I also hear you did a fine job feedin' a pair of pillows to the perfesser at the Turnverein last Friday, him bein' nothin' but a Lutheran. But all that doesn't make you a Doherty—not yet."

a Doherty—not yet."

"Put your hands under your belt, dad, give yourself a grand tug, and see whether you can lift yourself off that windowsill—for I'm a-coming!" cried the lad.

With that he spat on his hands, leaped for the polished hickory pole and swung out until his pointed toes all but touched the clapboards of the house. As his body came back he brought the soles of his feet against the pole, and as his head came up he re-leased his hands and came upstanding on the pole, his legs slightly bent. Then, as he poised for one dizzy half-instant atop of the pole—perhaps five degrees past the vertical—his legs straightened out like two rods of spring steel and he shot into the air with arms outstretched toward the open

It was the Doherty trick which, up to that time, he had never accomplished. He could do the snap-up as easily as a painted monkey can climb its stick; he could do the giant swing; and could chin himself with one hand—his left one at that; he could hang from the bar and go straight up to a vertical arm position above it in a single pull, keeping both elbows even all the way— but all these may be seen wherever good barwork is done.

The Doherty stunt was as individual to the Doherty pole as some particular hazard is to its golf links, or some extraperilous water-jump to a hurdle course. The Doherty mansion had been founded

in the old days when Doherty Senior was on the force at eighty dollars the month and could handle any three roughnecks on the river beat in a short scrap. It was not a very lofty mansion, being of the kind known as a story-and-a-half cottage; and, moreover, it was not so wide as some church doors nor yet so deep as some cathedral altars; yet it covered most of the cramped city lot and left but scant room for the open lawn in front—on which his wife had insisted—and the athletic field at the back

which had been John Doherty's chief desire. In consequence of this the horizontal bar In consequence of this the horizontal bar was erected but a few feet from the house, and most of your fancy stunts had to be done with your back to the house, so that you might have room to swing forward and alight gracefully when you had finished.

For the Doherty stunt, however, you faced the house, as we have already seen. It was well for you if you did not face it in a most familiar sense: for if you leaved at

a most familiar sense; for if you leaped at any but the exactly correct fraction of a second in your orbit round the pole, or if you weakened ever so slightly in your jump so that you missed the windowledge by an inch, or failed to find sufficient prehensibility in your flat fingers against a sloping surface, down you came, leaving part of your face attached to the Doherty clap-boards and crumpling into a hapless heap at the bottom-lucky if you escaped a

snapped bone or two.

And has Danny Doherty been pointing, like a human indicator, at five minutes past

the hour all this time, or hung in midair like Mohammed's coffin? Not he! As before explained the entire trick is a single operation and admits of no pauses. It is one fine exemplification of the motto that he who hesitates is—well, whatever he is,

he is no Doherty.

Danny made the leap and his fingers clutched the ledge—but, alas! the ledge only. The trick is to make your leap strong enough so that you hook the sill. His father, standing just inside the window, saw the finger ends whiten against the ledge and restrained his deep yearning to grasp the lad's wrists. Even though he expected, in a moment more, to see him crumpled like an old newspaper at the foot of the window, he would not help. It was the Doherty

There was a mighty cohesiveness in Danny's finger tips however. Even the swing of his body against the house did not wholly jar him loose. For a second he not wholly jar him loose. For a second he hung; then slowly, slowly, up he came. It was a hard strain and Danny felt his grip, such as it was, weakening. With a great effort he stuck on, his elbows crooking. Then, with a sudden lift, he shifted his weight to his right hand, thrust in his left and hooked the sill.

"Come on in!" said his father kindly but calmly. "Ye'r a Doherty!"

"Lucky I haven't got your front elevation, dad!" grinned Dan as he somersaulted into the room. "Well, I can go back to the U now, a grave and reverend senior—and at peace with the world."

"Dan," said his father, "that's twice today you've cast slurs at me figure. Honest, am I so damn fat?"

The earnest note in his father's voice got under Danny's skin; yet he was too honest

under Danny's skin; yet he was too honest

to spare him entirely.

"Why, dad, surely you're entitled to a bit of flesh at your age! You eat like a—well, I mean you have a fine inclination toward mealtime. And you haven't trained for fifteen years, have you?"

His father was silent a minute before he

answered:
"Don't tell your mother, Dan; but I'm

afraid it's that which grips me inside once in a while."

Danny took the Ann Arbor Special that

night; and the next morning his father woke betimes, but had no inclination to woke betimes, but had no inclination to get up. He lay and fought for breath and pretended he had no pain over his heart. After a while his wife woke also, lay idly for a few minutes, then rose; and still he did not move. She berated him in her wifely way about his laziness and he took it so meekly she saw something was wrong. "You stay in bed and rest yourself, Jawn!" she cried. "Maybe you're gettin' somethin'. Is there annythin' particular you want to eat?"

you want to eat?"

Half an hour later she brought him a grapefruit, a bowl of oatmeal, eggs and bacon, a Pisa'd tower of pancakes and a pot of coffee.

"You must keep up yer strenth, Jawn, dear," she said.

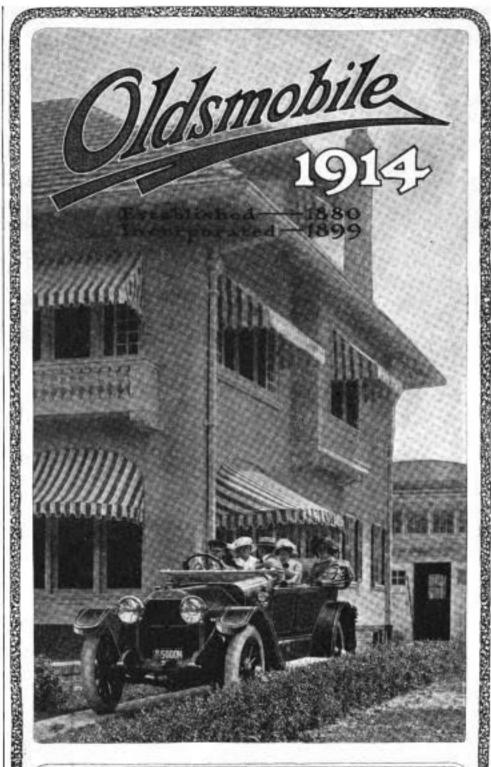

Doherty ate the breakfast and felt no better. He lay and thought a long time. Then he crawled out of bed with an effort and got his friend, Doctor Holliday, on the

wire.
"Say, doc, don't think I'm gone looney,
but I got a little bet with myself. Do you remember fifteen or twenty years ago, when I was runnin' the Alhambra Gym, and Billy Madden and Jawn L. come through town?—Yeah; that's it! Well, you was some sport in those days, and you and me and Billy Madden and Jawn L. was gassin'. and Billy Madden told us of a wonderful doctor that knew all the good people and could tell what ailed a man by giving him a once-over.—Yeah, that's the name, Mac-Murray. Where is he now? New York? Somethin' in the press dispatches about him this mornin'?—Well, what do you know about it? I guess I win my bet. Good-by!"

Doherty, exhausted, crawled back to bed; but not for long. He ate his luncheon, still keeping up his strength, and then said: "Mollie, gimme my clothes and call me

"A hack!" cried his wife, aghast.

"Oh, well—a taxi, then. Why bother me with yer fine distinctions? I was minded of the time when Jawn L. visited my old

World! Call me a taxi, woman."
"But, Jawn, yer sick!"
"I am and I'm takin' one taxi for that all-gone feelin'. When taken, likely I'll be well shaken."

It speaks well for what was to be the vital ingredient of John Doherty's treatment that his wife gave in, recognizing his in-domitable determination, even though she euphemized it by the more expressive name

of pigheadedness.
"Union Station!" ordered John to the

chauffeur.

"Mollie, I'm off for New York on busi-ness. I'll be back in three days at the furthest. Don't sit up for me." The trip to New York was not an easy

one for Doherty, but he was upheld by a great hope. He was going to see Mac-Murray. Arriving at the Grand Central he called another taxi and drove straight to the office of the great MacMurray. He was two hours too early and was told he could see the physician only by appointment; but

"I've come six hunderd mile and I was a friend of Billy Madden. You tell him!" he

God is on the side of the heaviest artillery and luck favors the determined man. In this instance luck brought the eminent diagnostician to his office half an hour earlier than usual. Doherty seized the half

Tell me what ails me!" he demanded,

and his jaw clamped hard.
"All right. Strip!" said the doctor and

turned to the window.

"Is it a fight to a finish or a Turkish bath?" murmured Doherty. He had refused to disrobe on the Pullman the night before through sheer weariness; but now, when the doctor turned round, he was as naked as Adam.

The doctor gave him a comprehensive

glance. "You were a good man once," he conceded. Why not twicet?" jerked out Doherty. "Man, you were once a wedge from your

shoulders down, and now you're a pyramid from your belly up. Lie down!" The doctor went over him carefully with

most of the usual instruments and with his own good digits. He burrowed for Doherty's bone until the big man grunted in spite of himself. He spirometered him; he stethoscoped him; he sphygmomanometered him, and thumped him in many places. Then he said:

places. Then he said:

"You may have a test breakfast and a blood count, if you like, but I don't think it is necessary. Your case is plain enough."

"So is me face," answered John Doherty;
"hut I can't see it like you can."

"You drink, don't you?"

"Sure! I take me glass on occasion, not to

say opportunity; but I'm no two-handed

souse."
"You don't put any such limitations on your eating, do you?"
"I have a fine, healthy appetite,"

protested Doherty.
"Wrong adjectives—diseased appetite
would be better. You used to be an active

would be better. You used to be an active athlete. Your severest exercise lately has been pulling at a cigar." Doherty opened his mouth, but found no words. "You're fat!" snapped the doctor.
"Is that all? Just fat?"
"That's all, but that's fatal. You're

seventy pounds overweight and getting heavier. Your heart's fat; your liver's fat. In a sense your brain's fat. You've lost the power of resistance, of determination. I can send you to Carlsbad if you prefer to die in Europe instead of America; but I don't suppose you do. Some of the sanatoriums might help you temporarily, but not for long. The fault's in you. You've dug your grave with your teeth." But Doherty had heard only the first

"Seventy pounds, did you say? Only seventy pounds! If I shook that off, would I be well again?"

The doctor smiled grimly.
"Why, man, at your age it's an impossibility! Every ounce of you is crying to be fed—crying for sugars, starches, fats, carbo-hydrates. You're like an alcoholic or a dope fiend—only worse. Drugs and alcohol are an unnatural diet, and, properly aided, Nature overcomes the desire for the un-natural; but the appetite for food is entirely natural and you have two men in you demanding food—your natural self and your superfluous self. You have pampered

## The Pipe That Became "House-Broken"

"That pipe of yours" and "Oh, that pipe" and "Please, you are not going to light that pipe in here" are familiar expressions on the lips of the wife of the man who loves to smoke his pipe in the dining room after

supper. Now this is the tale of a man whose wife formerly was displeased when the pipe came

This man saw one day an advertisement headed, "The Man With Fifteen Pipes And What He Said."

"Whew, I wonder what his trife said," he thought, as he read further.

The upshot of his reading was that he sent to Larus & Bro. Co., 1 South 21st Street. Richmond, Virginia, for a free sample of Edgeworth Ready-Rubbed Tobacco that they offer to send.

In due time the sample came-a liberal package of tobacco.

That evening he pushed back his chair, fetched out his pipe, blew in it, opened up the Edgeworth sample and filled up. Then be fumbled, tried another pocket, found his match box and lighted up.

Alter a few minutes the good wife looked up and sniffed —"Well. thank goodness you've bought a new pipe, she said. "But I haven't—this

"Well, it isn't the same old olfactory in-sult," the woman per-sisted. "What have you done?"

Her husband puffel a couple of satisfiel puffs before answering. Then he said, in a most decided tone:

"I'll tell you what I've done. changed my brand to Edgeworth, and I think I shall never change again." A sample of Edgeworth Ready-Rubbed is

ADYRUBBIO

something easy to obtain. All you have to do is to make up your mind to ask for it and send a post card request to Larus & Bro. Co., 1 South 21st Street, Richmond, Virginia, who will be glad if you will also mention you tobacco dealer's name. You are invited to send for the sample.

That every man who smokes a pipe will try Edgeworth at least once is a fond hope of the makers, and this offer of a liberal sample free is the best means they know of meeting

you half way. Will you go the other half by sending that post card?

The original Edgeworth was a Sliced Plug wrapped in gold foil and sold in a blue tin Edgeworth Ready-Rubbed may be bought in 10c and 50c tins everywhere and in hand to be sended to be a support of the property of the some \$1.00 humidor packages. Edgeworth Sliced Plug, 15c, 25c, 50c and \$1.00. Soli by practically all dealers but mailed prepail

## EAVE BOARD

them both until they have mastered you and they're two to one anyhow; and the majority rules.

I'wo to one, did I say? Millions to one! "Two to one, did I say? Millions to one! The cells of your tissue are erroneously trained. Their habits are fixed now; and those habits are fatty habits, so to speak. You've noticed how rapidly a young athlete can train down to weight and how impossible it is for an old one to get down to ringside requirements? It's a matter of cellular habit."

"Seventy nounds!" reneated Deberty."

"Seventy pounds!" repeated Doherty.
"Doc, how much do I owe you?"
"Call it twenty-five."

"It's cheap at twicet the money. Here

'tis. I'll be on my way, doc."

As soon as he had finished getting into his clothes Doherty walked to the station, upheld by a new purpose in life. The said new purpose in life was to live. On the way home Doherty thought it all out. He walked to his office in the courthouse from the train. He also walked home at night,

where Mary greeted him with an excep-tional banquet in honor of his homecoming. "'Tis a fine supper, Mary," groaned John. "Could I have some toast and

John. "Could I have some toast and tay?"
"Toast and tay! What's come to the man?" cried Mary in genuine alarm.
"I can't eat like this any more, Mary. I'm in trainin' to fight old Adipose Tissue three rounds a day for the rest of me life. You've got to belo me gurrul and not You've got to help me, gurrul, and not tempt me with such conglomerations of joy as will put me into Purgatory before

From prehistoric times-not that I have any more knowledge of prehistoric times than other prehistorians, but that is one reason for making the assertion-from prehistoric times woman's prime duty has been to prepare man's food and to see that

she prepared enough of it.

It is second nature in her to resent any interference with this plan, especially on the part of the beneficiary. John knew that his first fight was to overcome his wife's culinary kindness; so—though his yearning esophagus yammered for the roast chicken, the mashed potatoes with the butter melting into them, the hot biscuit, the candied sweets, the pickled pears, the marble cake and the sandariam has a standard reached isless. and the apple pie—he sat and cracked jokes over his dry toast and diluted tea. It might have been a consolation to his

wife had she known that he was not to forget the sight and smell of that supper for months—that his glands were to ache and his nerves to tingle at the tantalizing memory of that lost opportunity!

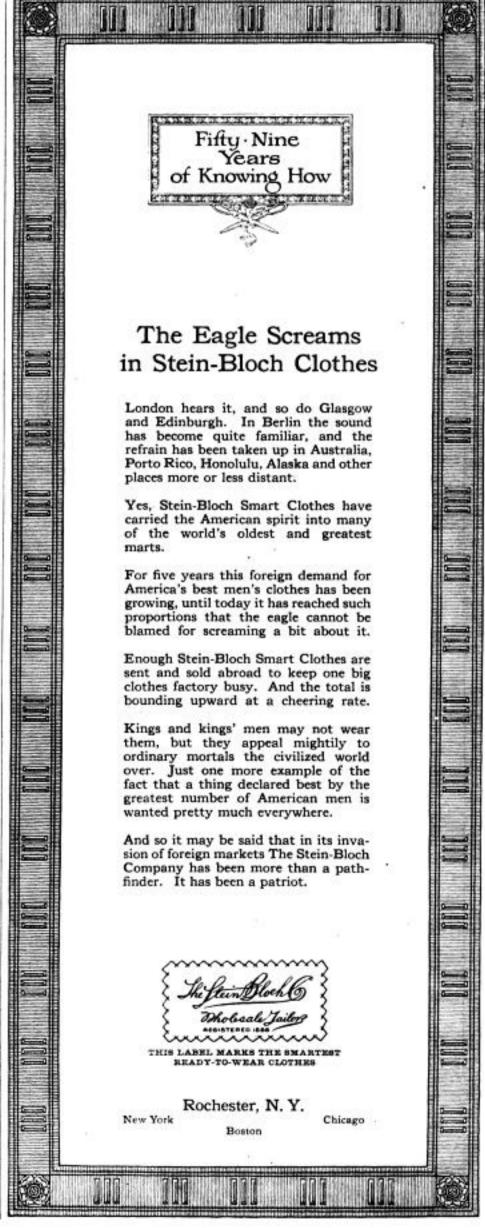

After supper Doherty read the paper for a while, without lighting his pipe; then he took a walk, as brisk as he dared make it, a bath and a rubdown, which left him puffing like a grampus; and he rolled between blankets and lost himself in sleep.

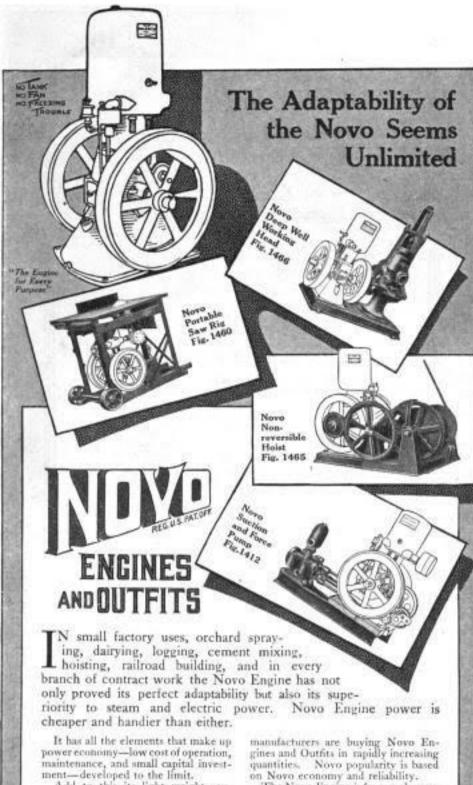

Next morning Doberty woke and, lying on his back, tried to bring his body to a sitting posture—a familiar exercise of his youth. He was startled to find he could youth. He was startled to find he could not do it. His abdominal muscles refused to raise his hulk. Doherty reversed the process, trying to lift his feet slowly back to touch the pillow. He failed by considerable, there being too much Doherty intervening; and when he let his feet return to normal

position they got away from him and jarred Mrs. Doherty into wakeful complaint. "Ye'r right!" said Doherty. "I'll take Danny's room at the back. It has little but the bed in it and will give me room to swing myself."

Back to Dan's room he went, where he tried the bricklayer's exercise. Standing with his feet apart, he extended his arms at right angles to his body and stooped with a straight back as though trying to pick up a brick from the floor with each hand. Two or three trials convinced him he was not yet ready for the severity of this. Standing flatfooted and stretching his hands above his head he lifted himself from the pelvis and let himself down again until he was tired. Still keeping his hands above his head he swung round in a circle from the waist, making very heavy work chiefly because he had no waist.

One of his old exercises had been to lie on the floor, face downward, and-keeping a straight back-see how many times could raise his shoulders from the floor. It sounds like an arm exercise. As a matter of fact the strain comes on the abdominal and diaphragmatic muscles, which, indeed, was the aim of all Doherty's exertions. There had been a time when Doherty could let himself floorward to the limit and only his toes and nose touched; now when he had

power economy—low cost of operation, maintenance, and small capital invest-ment—developed to the limit.

Add to this its light weight, extreme compactness and easy portability and you have the reasons why, for example, over 61% of the best concrete mixers in the country are run by Novo-Engines, why 40% of spray outfits in-clude a Novo, why contractors and

The Novo Engine is four-cycle, vertical, hopper-cooled, entirely self-con-tained. It is the lightest engine for power developed and is guaranteed against damage from freezing. It can be started with its cooling system frozen solid.

just off the press. This is one of the most valuable engine books ever published for the use of the man who wants to know how to get cheaper and better power. Sent free if requested on your business letterhead.

The Novo Engine is the source power in the famous line of NOVO OUTFITS. They have all the characteristics of strength, durability and efficiency that have made for the Novo Engine such a remarkable record among power users of the country.

"Little Cuant" Centrifwest

Novo Centrifugal Pumps—Three types—chain drive, direct-connected and belt-driven. Used by contractors for draining excavations and for irrigation. Mounted on all-steel trucks, channel-steel or solid iron bases,

Novo Suction and Force Pumps are made in styles and sizes to fit all requirements, with capacities of from 300 to 10,000 gals, per hour. Used for farm and home water-supply systems, for factories, filling railway tanks and city water service. Mounted on channel-steel or cast iron bases, according to character of pump.

Nove Hoists — Made in three types — non-reversible, reversible and double drum— and in ten sizes from 600 to 4,500 lbs. lift-ing capacity. Used in building construc-tion, lee handling, hugging, car building, back filling of sewers, freight handling, etc.

Novo Double Drum Holst is the newest ddition to the Novo line; equipped with 0, 12 and 15 H. P. engines.

Novo Portable Saw Rig-Rips J-Inch lumber, joints 4-inch, planes, plows and bores window frames, etc. It is strong, light and rigid.

MIND ENGINE CO.

473 Willow Street Lansing, Mich.

pushed to the highest his frontal protuber-ance filled the space. Doherty blushed with mortification.

Now Doherty tried shadow fighting, lunging at an imaginary opponent, ducking from an expected blow, escaping punish-ment by pretty footwork, and coming back strong, with a tattoo on shadowy ribs. Eventually the shadow beat him, but not until Doherty was drenched in perspiration. A bath and a rubdown, and Doherty could have eaten a horse right down to its shoes. Instead he ate one hard graham biscuit and drank a cup of milk.

He took a roundabout route to the office and day by day increased the roundabout-ness until he was walking four or five miles to work. Then he added indoor pedestrian-

ism to his curriculum.

Be it known that county commissioners have some very important work to do. Now let us, after the manner of Koko in the opera, step to the other side of the stage, where the captious taxpayer cannot hear us, and remark in a properly modulated aside that county commissioners also have some idle moments.

The top floor of the courthouse was little used. The space round its railed rotunda made a very fair running track, with no gallery for annoying spectators. Several times a day Doberty ascended to the top floor and did his mile, at first at a brisk walk and later at a doctron

and later at a dogtrot.

At first, too, he took the elevator to his track; later he climbed the stairs. If you have any doubt about the effectiveness of stairclimbing on wind and limb, just try lifting your own weight, plus seventy pounds, several hundred feet several times

a day.

We have seen the simplicity of Doherty's breakfasts. His luncheons were exactly the same. His dinner was a little more elaborate, for he usually allowed himself a portion of white meat or fish and a single vege-

He cut out coffee, tobacco, alcohol. Water he drank inordinately except at meals. Whenever he felt hungry, which was pretty much all the time, he drank water—cold water, hot water, or just water. Even in the middle of the night he would rise and drink all the water he could hold.

all the water he could hold.

And he frequently woke in the night; not from insomnia but from pain; from the mental and physical pain of hunger—keen, crying hunger. Often he had the most delicious dreams—always dreams of food, of good things to eat. Often and often he smelled his wife's last supper. Often he was in a favorite café, where the joint was wheeled round on a server and one fell to

wheeled round on a server and one fell to and helped oneself to just the quantity of juicy tenderness one wished.

Often he was in Florida, with a repast of red snapper, crisp lettuce, tender peas, luscious strawberries, sparkling wine, aro-matic coffee—all served on a snowy cloth spread in a perfumed orange grove with the golden globes bending down to tempt his fingers. Then, as he touched them, he would wake up, crying like a child with the

In a bound he would be on his feet, headed for the pantry, telling himself he would eat one real meal and die happy. And then MacMurray looked at him from six

then MacMurray looked at him from six hundred miles away:

"You're fat! Your heart's fat; your mind's fat. You're a dope fiend—only worse. Habit holds you in the hollow of its hand. You think you can crawl away from it. You can't! You're weakened by indulgence and you carry the sign of your decadence in front of you."

Yes, a man had so talked to him—to him, a Doherty! So John Doherty would drink much water, bite his lips, nip his nails into his flesh and resolve to die fighting if die he must. For Adipose Tissue was fighting too—fighting for its life; and it is a stubborn foe.

For a long eternity—or so it seemed to

a stubborn foe.

For a long eternity—or so it seemed to Doherty—the said A. T. utterly refused to retreat at all, though Doherty's muscles grew responsive and his wind durable. Then—almost, as it seemed, while Doherty was not watching him—A. T.'s forces began to desert, and desert rapidly. Doherty began to feel some of the rewards of a vicines. to feel some of the rewards of a winner.

He was still hungry, but he felt well. He got past Thanksgiving without any of the trouble he had anticipated—except that it was all he could do to restrain himself

from rushing on to the football field when he witnessed the game. "Man! Man!" he yelled at the quarter-back. "Are you a stump waitin' for the blastin' powder to move ye? Push in a

few faces and run! Run, you light-headed, heavy-footed Swope! Give me the ball and

heavy-footed Swope! Give me the ball and let me show you!"

There was a telegram from Danny, who had to play on the Varsity that day against Wisconsin, but who promised to be home for the Christmas holidays.

"Think of that, mother!" cried John, executing an Irish jigstep and then kissing his wife long and loudly. "Our little boy will be home for Christmas!"

"Go along with you!" cried Mary, wiping off the kiss and looking immensely pleased. "Our little boy, is it? If he's gained a pound since last summer he's bigger than you this minute, you scarecrow,

gained a pound since last summer he's bigger than you this minute, you scarecrow, with yer clo'es flappin' on four sticks!"

A few days before Christmas it chanced that Doherty was called out of town. Re-turning in the middle of the night he found himself minus his latchkey. Stepping round to the back he found the window of his soon wide open for the winter was open

to the back he found the wintow open his room wide open, for the winter was open too and the night was mild.

A boyish whim seized Doherty. He laid his suitcase on its side, put his hat, coat and vest on the case, and his shoes along-side of it. Then he leaped for the hickory was a superposed by the highest state of the highest land to the land to the highest land pole, swung out and snapped back. Not for fifteen years had he tried it; but the memory latent in well-trained muscles remembered. He came atop of the pole, his legs straightened and he shot for the window, hooking the inside of the sill cleanly. A joy welled up in Doherty's soul as he head-longed into the your. longed into the room.

The next instant a heavy body fell on him and two hands clutched his throat. Doherty seized the hands, tore them away indignantly and dropped on all fours, with his head huddled into his shoulders.

Seemingly his assailant understood the challenge and accepted it. He tried for the half-Nelson once, twice, thrice; and thrice Doherty's bullneck evaded it. The man on top now feinted for a toehold, but presently his hands shot under and he had an irresistible full-Nelson.

Doherty's hulk came into the air with the pressure on his neck; then his feet shot straight up, he spun on his head out of his opponent's grasp and came down across his body. Out of the mêlée he issued with a cruel hammerlock; and, with a sudden effort, he flung the other man over and landed him heavily three points down.

Both were on their feet in an instant and both seemed to realize instinctively that the game had changed. Doherty stood, his left hand forward, his right guarding his body. The other crouched like a panther, his hands in front of his head and working ceaselessly. Like a panther, too, he

Doherty took a single step aside and swung to the other's head as he went by.

Like a fury the panther-man came back and in that fury he lost his mode of defense.

Doherty straightened him up with a left uppercut and crashed heavily to his right sending him flying across the with his right, sending him flying across the room. Despite himself the man's hands came down and, finding himself near the electric button, he flashed on the light.

'Dad!" he cried. "Dad!" he cried.

"I thought it would likely be you, Danny," said John Doherty, breathing easily, "though you said Friday and 'tis only Wednesday. Would you go down to the yard and bring up my suitcase like a good lad?"

"Dad!" cried Dan again in the same tone.

Dad!" cried Dan again in the same tone of amazement, and running his hands over

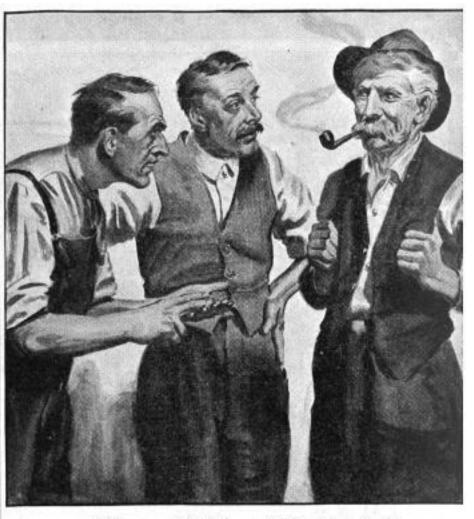

his father's body with a sort of awe.

"'Tis all my fault, son," said his father apologetically; "me coming in at the window that way. I should have wired I was coming back."

"Dad!" exclaimed Dan for the third time. "You don't need to wire anybody you're coming back. You are!"

## Electric Scrubwomen

MACHINERY has now invaded the field scrubbing machine has just come into use. It is a little pushcart, supplied with electric power through a cable connected with a lamp socket. The operator simply pushes it over the marble floor and controls its operations by levers on the cart handle. A set of brushes revolves on the floor while a little stream of water trickles down through them from a tank. Powdered soap is fed to the water in easily regulated amounts. As the cart is pushed ahead the dirty water is swept up to a pipe, and a little pump sucks it up from the floor.

When a fellow's got his pipe in his mouth he don't have to say a lot o' fool things. It gives him a chanst t' think up Velvet goe suthin' wuth sayin'.

DIGHT, Joe; that's what the college presi-And dent was driving at when he said that the thinkers of this country were the tobacco users. If every man considered his words for half a pipe full of good, old, slow burning VELVET, there'd be fewer words spoken, but they'd be kinder, wiser words.

VELVET, the smoothest smoking tobacco, mellowed by more than 2 years' ageing, is the choicest of Kentucky Burley, with all the richness, the flavor, and the satisfaction that has won for it the title of "Nature's

## HEN TAKES POSSESSION

(Continued from Page 9)

"Seein' as how business is," said Sophie, "It can't be done. I'd like to do it, but — An' what's the matter with yer horse?
You could 've brought over the ice wagon
fr ma to ride back in."
"Ma couldn't ride in that," said Gret
wearily: "she'd die with the jolt. Besides,

I ain't got no horse no more. He's gone. Somebody stole him." "Who?"

"I don't know!" returned Gret, with the emphasis on "know."
"Hen's in jail," went on Sophie; "he couldn't 've ——"

"It wasn't Hen," interrupted Gret curtly. "Come on, ma; we've got to catch that train. We've got to get back early, f'r Gretta'n me has to cart ice an' coal in handcarts now. Come, ma!"

On the train she gripped ma by the arm. "Ma," she said, "it was Schepp that stole

"Ma," she said, "It was Schepp that stole
the horse."

"Your man?" cried ma. "How do you
know, Gret?"

"Al Simonson saw him," returned Gret.
"He saw him with the horse and he knew
him; and he spoke to him. Al thought
he'd come back and that I'd taken him in."

"You can get the law on Schepp,"
returned ma.

returned ma.

Gret shook her head.

chames, 179 Ma. nd poeaus, one sold tops, Alk

"I don't get the law on nobody," she returned, discouraged. "If he's that mean let him take the horse. It's tur'ble, ma. Me an Gretta's gettin' all wore out." She shrugged her shoulders. "Let 'em go!" she went on. "There's two men I ain't got no further use for—one of 'em's Schepp."
"Who's the other, Gret?" quavered her mother.

"Never you mind, ma," returned Gret. "Look! We're almost home."

In due time Ma Hinkley shuffled off this mortal coil. There were two people present at her deathbed—one was Gret her daugh-ter, the other was Gretta Schepp her grandchild, the young girl. Hen was still in jail. Sophie and her older sister were too far away to stir themselves to come. They got word but they did not heed it. They attended the funeral—that was expense enough; and then they went back to their respective homes.

"Twasn't necessary," Mena explained to her husband, "that the will should be

read at the funeral—or after, neither. Our lawyer told me so; so I didn't fetch it. Our

lawyer says we'll go over to the courthouse after ten days and he'll probate it for us."

Eleven days after, Mena and her husband went up the courthouse steps.

"Won't Sophie an' Gret an' Hen be furi-

ous?" said Mens, her eyes glittering. "But my lawyer says they can't break the will. He says ma knew what she was about."

They turned a corner in a corridor and met Sophie Gebhard and her husband. "We got ma's will," said Mena. "Our lawyer's goin' to probate it today." Sophie nodded and followed Mena into

the probate office. Mena's lawyer was al-ready there with the other witness to the

will.

"Let me have it, Mrs. Kessler," he said, holding out his hand. He turned to an official. "This is Mrs. Hinkley's will," he

official. "This is Mrs. Hinkley's will," he said.

"No it ain't!" cried a voice in tones of assurance. "This is Ma Hinkley's will—and it leaves everything to me!"

It was her will—there was no doubt about that, for it was the latest. No later will had been offered. The ten dayswere up. Sophie's witnesses were present. The probate office, in the presence of the gaping Kesslers, admitted Sophie's will.

"It leaves all to me," repeated Sophie with a lofty smile.

"It's a fraud!" said Mena.

"Why?" said Sophie's lawyer, "Because it leaves everything to Mrs. Gebhard,

cause it leaves everything to Mrs. Gebhard, one daughter, rather than to you, another daughter? Rather difficult, isn't it? Better go ahead and try it out. We'll meet you— and we'll beat you too."

The Kesslers did not fight it out. They had played a trick. Sophie had played another. She had gone them one better, however; so they slunk away in dudgeon. Sophie and her husband left the court-house with their heads in six Sorbio.

house with their heads in air. Sophie nodded to her lawyer.

"You must come with us to Hendershot," said Sophie. "We've got to take possession of that house."

The lawyer went with them. Before they entered, the lawyer from a discreet

distance looked the place over.

"Some property!" he said admiringly.

He was quite right. There was a white house—small but quaint; kept constantly coated with repeated doses of whitewash—Gret saw to that. There were green shutters. There were a white barn and a white shed. There was almost helf a mile of white picket. There was almost half a mile of white picket fence—so it seemed—inclosing the entire domain. There were a small orchard, a big garden and a multitude of flower beds. The garden and a multitude of flower beds. The place just as it stood was a gem, a bit of pleasing landscape. It might have caught the eye of any artist. "Some place!" repeated the lawyer. He knocked at the front door. Gret opened to him. Gret kissed Sophie on the cheek and shook hands with Gus Gebhard.

"You wasn't over to the courthouse," said Sophie. "We been over there today to probate ma's will."

"I didn't know ma made a will," said Gret. She turned to the pretty young girl who stood behind her. "Did ma say any-thing to you about making a will?" she

thing to you about making a will?" she asked.

Gretta shook her head.

"She never did," she answered.

The lawyer interposed.

"I may as well tell you, Mrs. Schepp," he said. "that she did make a will and that the will was probated today; and that by its terms Mrs. Hinkley left everything to Mrs. Gebhard here."

"Everything!" echoed Gret. "Why, madidn't have anything but this property here. All the household goods was mine."

Sophie lifted her chin. She glanced contemptuously about the room.

"I don't care about the household goods," she said loftily; "they're not worth having. You're welcome to them, Gret."

"Thanks!" said Gret. "They belong to me anyway; but I didn't want to have no trouble—I thought you might be thinkin' ma had some claim on 'em."

"All we want," the lawyer proceeded, "is possession of this place. You can have a reasonable time to get your goods out, Mrs. Schepp."

Gret seemed startled.

Mrs. Schepp."
Gret seemed startled.
"I don't have to move, do I?" she

queried. "Of course!" said Sophie. "I got to get

"I don't know nothin' about law," said Gret. "You know Brad Fettinger, don't you—the lawyer here in Hendershot? Well, you go down and see Brad Fettinger. If he says for me to get out, I'll git—that's all."

all."
"That's better," said Sophie's counsel.
"I can talk to him. He'll understand and he'll advise you right. We'll go down and talk to him."
"There went down. Gret did not accom-

They went down. Gret did not accompany them. They found Brad Fettinger. He was a long, lean, lanky individual with long hair shot with gray, and with a dingy office replete with dusty lawbooks. He possessed a drawl. He knew Sophie's lawyer and shook hands with him. He acknowledged that he represented Mrs. Schepp.

"Here's a copy of Mrs. Hinkley's will,"

said Sophie's counsel.

Brad Fettinger examined it.

"Satisfactory to me—seems to carry
everything the old lady had to Mrs. Gebhard here. Looks all right and regular to

me."
"Then," said the other man, "you'll advise Mrs. Schepp to move out?"
"Bless you, no," exclaimed Brad Fettinger; "not at all!"
"Why not?"
"Why should I?"

"Why should I?"

"This will gives everything that Mrs. Hinkley had to Mrs. Gebhard here."

"True; but what's that got to do with Mrs. Schepp's moving out, I'd like to

"It's our property—it's Mrs. Gebhard's house and lot."

"Oh, no," drawled Fettinger; "it's Mrs. Schepp's. It was Mrs. Schepp's before Mrs. Hinkley died."

"Did she leave a later will?" queried the

"Did she leave a later will?" queried the

other man, alarmed.
"No," said Fettinger. "I'll tell you all about it. Ten days before she died—she was a spry old woman, Mrs. Hinkley, even if she couldn't smell Hen Hinkley's breath ten days before she died I was passing

there—I pass there once in a while—and she called me in. Mrs. Schepp was down to the canal and so was Gretta. They were carting ice and coal by hand—Schepp stole their only horse, you know."

"Never mind the horse," said Sophie's

lawyer.
"The old lady called me in. She was in a great state of mind. She said she'd made her will twice and she'd go to state prison if she made another—she said you told her

Sophie flushed-her own lawyer even

"She said she'd treated Gret, her daughter, like a dog. She'd given all her money to Hen when Gret needed it. Gret had supported her and had worked for her. Nobody else had done anything for ——" "Oh-h-h-h!" said Sophie, shocked. "And

it cost us over twenty dollars extra to have ma visit with us!"

"That's what she said," went on Brad Fettinger; "but she wouldn't make another will, for she'd go to state prison. She didn't see any way out; but she wanted me to fix it right. Bless your heart"—Brad laughed in his long-drawn-out way—"I didn't want to send her to state prison; so I had her make a deed—she executed it. I delivered it to Gret and then I recorded it for her. You can search the record. Mrs. Schepp has no objection to the will at all. It carries anything of which Mrs. Hinkley died seized—but she didn't die seized of this real property. Bless your heart, before her death it belonged to Mrs. Schepp!"

"It's a fraud!" screamed Sophie in the

"It's a fraud!" screamed Sophie in the accents of her other disappointed sister, Mena. "An underhanded swindle—that's what it is!"
"Good!" drawled Brad. "It's that kind of spirit that makes lawsuits. If you feel that way you hire my brother at the bar and Gret Schepp'll hire me; and we'll go to it, tooth and nail—and may the best man win!"

They did not fight it out, however. Law-

They did not fight it out, however. Law-suits in Hendershot and Bascom were events too overwhelming for the Gebhards. Besides, as their counsel took pains to inform them, there was a doubt—considerable

doubt—about success.
"Ding 'em!" said Brad Fettinger to him-self one day. "Why don't they fight?"
His musings were interrupted. The door

of his office was flung open and a man lunged in. He was a very disreputable-looking man. He was Hen Hinkley. He was not alone. With him was another disreputable individual. They had been drinking, both of

Hen Hinkley brought a heavy fist down

on the desk. I won't stand fer it!" he said.

"I won't stand fer it!" he said.

"Where did you get your money to buy drink, Hen?" queried Brad. "And where did you get the nerve, two bums like you, to come into my office? Get out!"

"Not," said Hen, "until I've had my say. I serve notice on you. I know a thing or two! Gret Schepp—my own sister—what do you think of that!—she sends me to jail to get me out of the way. An' then she gets my mother—my poor old mother—to give her all her property!" At the words "all her property" Hen's voice broke with deep emotion.

deep emotion.

"All her property, you understand! An' when they let me go, what do I find in the warden's office? A five-dollar bill—a measly five-dollar bill—and a letter—an insultin' letter—tellin' me all about it; an', warnin' me—warnin' me!—her own brother—to clear out and to stay cleared out! Sava she stood me just on account of out! Says she stood me just on account of ma, to make ma happy. Now she's through with me. Insultin' minx! Through with me, eh?" He turned toward the door, pulling his companion with him. "Well, I ain't through with her—nor Schepp ain't,

ain't through with her—nor Schepp ain't, neither."

"You bet I ain't," said Schepp—for the other man was Schepp. "I'm her husband. Ain't I got some rights in that there property? Ain't that there my home?"

"Come on, Schepp!" went on Hen Hinkley. "We ain't through with her. We'll just naturally go down and talk politics to her." He stopped and brought his fist crashing down once more. "I give you fair warning, counselor," he said, "that piece of property belongs to me. My mother piece of property belongs to me. My mother

meant it for me. It's mine! And I'll tell you what I'm goin' to do—I'm goin' down today—I'm goin' down to take posses-sion! See if I don't. Schepp an' me'll go down and take possession. Won't we,

go down and take possession. Won't we, Schepp?"
"Yer kin stake y'r bottom dollar 'at we will!" said Schepp.
"Fair warning, counselor!" repeated Hen. "Hen Hinkley goes down and he takes possession! See if he don't!"
They left the office. Brad followed them downstairs. He prepared to follow them further; but Brad was a lawyer and his chief concern for the past few days had been the further; but Brad was a lawyer and his chief concern for the past few days had been the scarcity of clients. The richest man in town was coming up, and he stopped Brad as Brad was going down.

"I was looking for you, Brad. Are you coming back?"

"I'll come back now," said Brad.

Brad went back to his office. He tried to get the town hall on the wire, but nobody answered. He tried to get the constable's home, but no one answered.

home, but no one answered.
"What's the row?" queried the richest man in town.

"Never mind," said Brad; "I can't help it. It's beyond me now. I'm not a peace officer. Go ahead and spin your yarn."

It was late in the afternoon when the arn was fully spun. Brad advised his rich client and started a proceening. He got a fee. His client left. Then Brad's con-science smote him. He felt that he should have warned Gret Schepp and her daughter somehow, at any rate.

"I can't sleep tonight," he told himself, "unless I go right down there and tell her all about it."

It was dusk when he reached the turn in the road that led to Gret Schepp's house. As he turned he saw two figures coming toward him. They were clinging together. He stood and waited. Finally they approached

stood and waited. Finally they approached him. He looked them over.

One of them was Schepp. Schepp had both eyes blackened. His nose was bleeding generously. One ear was three times its normal size. The other man was Hen. Hen as an exhibit was quite as wonderful. Hen had a scalp wound that would have done duty as a saber stroke. He was expectorating blood. Three teeth were out. His coat was torn to rags.

"Come on!" moaned Hen. "We got to hire a speshlust er we'll die, both of us—an' go to hell."

They did not even notice Fettinger. Fettinger went on.

When he reached the little white house he pushed open the door and stepped fear-

he pushed open the door and stepped fearfully inside. His alarm was unjustified. Gret Schepp, clad in a clean white shirt-waist, was washing off a rolling-pin at the

The pin in spots was slightly ruddy. "The hair sticks to 'em sometimes," she said nonchalantly.

"Hen came to take possession, then?" queried Brad Fettinger. Gret dropped her rolling pin into the water

to let it soak.

"Hen come to take possession," she repeated; "but he took us by surprise. We wasn't wasn't quite prepared for Hen. We wasn't quite prepared for Schepp. If I'd knowed they was comin' I'd 'ave made out to treat 'em rough; but they took us by surprise. We wasn't quite prepared."

We wasn't quite prepared."

Brad looked at Gret. He looked at the rolling-pin. He recalled some blackened eyes and broken noses and injured scalps. "I wonder." he said gently, "what would have happened if you had been quite prepared!"

prepared!"

"As I was sayin'," returned Gret, "I might 've treated 'em some rough."

A young vision of beauty had tripped into the room. She was warm and rosy. Probably she had been taking exercise, but she did not show it.

"Somebody f'r some coal, ma," she announced.

announced.

"I'll get it," said Gret. "You run along. There's Al Simonson a-comin' up the road, and he'll be wantin' to lalligag with you from now till suppertime."

Fettinger strolled homeward, laughing

to himself.
"They wasn't quite prepared," he smiled,
"not quite prepared! Dear me!"

# Never rub the dirt in —always wash it off

On dry, breezy days, gusts of wind fill the pores of your skin with dust; in damp, rainy weather, they are constantly breathing in smoke and soot from the heavy, humid air.

These conditions, which must be endured, soon ruin any skin unless precautions are taken to intelligently counteract their effect.

There's a big temptation to rub this dirt off with your dry handkerchief. Never do this. The rubbing of the grime and dust over your skin irritates it and destroys its texture. Instead of this way, which throws an unnecessary burden on the skin and tends to overtax it, use this specific cleansing:

> Apply your hot washcloth, lathered with Woodbury's Facial Soap, for several minwoodniny's Facial soap, for several mini-utes. Then when the pores are thoroughly open, rub in a fresh lather of Woodbury's. It dissolves the dirt, makes it almost melt away without the slightest irritation. Then close the pores and arouse the circulation in your skin by a cold water rinse.

Use Woodbury's regularly. It costs 25c a cake. No one hesitates at the price after the first cake.

## One Broken Threadthe Tire is Gone!

The strength of a tire is all in the fabric - the layers of tire fabric which are built into the tire. Without this fabric the tire would blow up like a toy balloon. It is the fabric that withstands road shocks and strains. Let one little thread of the fabric break and your tire is gone. The tremendous strain widens the breakthe air seeps out - worming its way in between layers until it has reached the surface.

So it all gets back to the thread. The thread of a good tire fabric must be unbreakable after it's in the tire-literally unbreakable.

## Unbreakable Vitalic Thread

The triumph of Vitalic Tires is really the triumph of Vitalic Triply Twisted Thread. For the splendid rubber would be worthless if the thread broke. This thread is made of the finest Sea Island Cotton with tough, silky fibres fully two inches long.

### Triply Twisted Thread

The thread is twisted-not once like ordinary thread-but again and still again until it has almost the tensile strength of wire. The bicycle rim itself will break before a thread in Vitalic

Into this indestructible fabric foundation we force by tremendous pressure the finest, toughest, most enduring rubber that can be compounded.

And then we build up each tire by hand, layer on layer, by a process that makes a joint-

After the tire is vulcanized it is tested three times - the test is so drastic that no imperfect tire

## Satisfaction or a New Tire

Now you know why Vitalic Tires are Guaranteed - why we can say to you, "If a Vitalic Tire in any way fails to satisfy you, take it

## The Gay-cat

The Kid was on his feet. He was sob-ng. The madness of revolt was still on bing. The madness of revolt was still on him. He must knock out Frisco Red. It was the law of the road. Ere he could save his dog he must prove his right thereto—his right to run his own game. The Kid had learned from Frisco Red to be cruel and brutal. Cruelty and brutality are the gods of the pagan road. Frisco Red was supine, flat on his back in the dust. With his foot the Kid applied two finishing blows. They the Kid applied two finishing blows. They were cruelly placed. They were brutally

It had all occurred in a shock of time. The Kid looked down at the still heap on the ground. Then the Kid looked full at the many eyes in the shadow. He had beaten Frisco Red. Viciously, in brutal fashion, he had beaten his master. That brutality was the fault of his education. But that brutality was effective with the many eyes in the shadow. He was free to run his own game, to work his own will, to

do as he pleased.

The wail of the dog shrilled on his ear.
He stepped over the body of Frisco Red.
Precipitantly, breathing hard from the fight, he ran to the trough.

"Come out, old-timer," he called.

"You're in a deuce of a fix, aren't you?" His voice was, for all its gasping, strangely pliant and tender. He jerked up the board cover. By one of the frantic forepaws he lifted out the drowning Gay-cat. He hugged the whimpering, wet, shaking form

to him. He laughed once hysterically.
"You little drownded rat!" he whispered. "You should have seen how I beat up Frisco Red."

The dog whimpered and snuggled close The dog whimpered and snuggled close. Hugging the dog in his left arm the Kid came back. He felt round with his right hand until he found the razor. That he examined with great pride. He doubled it up against the crotch of thumb and forefinger and, like a regular blown-in-the-glass stiff, slashed about with it in the air. Then very constraint he tucked it arms in an overally he carefully he tucked it away in an overalls

Silently he joined the hoboes asprawl beneath the tank. They had no word for beneath the tank. They had no word for him; but they made space for him—for him and for his dog. It is the way of the road. As soon as a road-kid is strong enough to beat his master the domination of that hobo ends. Age makes no difference. It is the primeval law of strength. The Kid becomes a masterless road-kid, a younger hobo. The Kid had beaten Frisco Red. Impossible it was for him longer to serve that hobo. He was free. He was free to wander wherever the wanderlust called. serve that note. He was free to wander wherever the wanderlust called. He and his dog were free. That thought made freedom sweet. He was for at once being off along gypsying roads where Red would be forgotten and the dog could chase sparrows through the fallen leaves.

"Give me a smoke," he said to the haboes.

In his voice was the note of equality. In the silence of equality they gave it him. The Kid rolled the brown-paper tube. The Southbound whistled far up the track. He Southbound whistled far up the track. He lighted the cigarette. The rumble of the approaching train shook through the ground. The Kid got afoot. Walking to the trough, the Gay-cat at his heels, he filled his cap with water. He dowsed it on Frisco Red. "Get up, bo," he said, the gruffness of manhood in his voice. "Can't yer hear the train?"

Frisco Red opened his eyes. The Kid turned and walked away. Dazedly Red rolled over and felt in the dust for the razor. But the Kid did not notice the futile search.
The hoboes had spread out. The train was
slowing at the tank. The Kid lifted the
dog in his arms.
At ten o'clock that night at a waystation the Kid was ditched. The bark of

the startled dog at sight of a brakeman was the cause. The Kid with the dog had been riding all alone on the bumpers between two freight cars. The others were not discov-ered. The Kid stood on the tracks, the dog in his arms, as the train foreshortened into

the night.
"Goodby, Frisco Red," said the Kid soberly. Then his head lowered to the

dog's drooping ear and he whispered:
"It was for you I done it, Gay-cat, old-timer! Honest, it was for you I done it."

"Always movin', always movin' on," the Kid would say to the dog. "Gay-cat, when we gets tired of bein' boes we'll go

back to the valley and surprise my ma. But I guess"—with a wistful smile—"you and me'll never get tired of bein' hoboes. We're blowed-in-the-glass stiffs, we are, and it's in our blood."

The Kid was, when he said that, an older boy by a full year. Also his love for the Gay-cat had made him thoughtful. Sometimes on dewy mornings he saw, more clearly than the road he walked, the cottage up in Grass Valley. The marguerites near the picket fence were white and fresh. It was sweet where he was born. Sometimes he wished he could go back. But there was that itch in his boy's soul that kept him wandering—wandering to find peace.

And the dog understood. It was wonderful. The dog understood why he could not

ful. The dog understood. It was wonderful. The dog understood why he could not go back. The dog, too, was cursed with the wanderlust. The dog whimpered in sympathy up into his face. Then onward into the dawn the dog led the way.

They came back over the Hump for the fall and winter in California. The freight from Ogden was headed for Sacramento, the great dumping-off place of the wintering hobo. It was here near Sacramento, just a year gone, that the Kid had found the Gay-cat and that he had beaten Frisco Red. It was near Sacramento and in the case of the sacramento and the case of the winter-ing hobo. Gay-Cat and that he had beaten Frisco
Red. It was near Sacramento, up in
Grass Valley, where were his mother, graying in her shawl, and the cottage with the
picket fence and marguerites. Perhaps
that was why, while the Kid still wandered,
he wandered close.

There relied in that train of that some

They rolled in that train of flat cars through the Sacramento Valley, golden with autumn, until Sacramento neared. The train slowed down. The Kid swung off. He feared the railroad police in the terminal yards. The train clacked onward in a slowed flow that the train clacked onward in a slowed flow. cloud of hot dust as he stood to one side, the dog in his left arm. He set the dog afoot, and the dog led the way up the levee for a look at the river where so often they

had gone swimming.
In a flushed sky slowly the sun sank. It dropped behind the black feathers of tule on the other levee. The levee dimmed and grew remote. A stern-wheeler from San Francisco coughed upstream. Its whistle sounded, through the screen of dusk, weary and lonesome. The swell from its paddles broke in tiny ripples at their feet as the steamboat rounded a bend in the river and

was gone with the day.

Thoughtfully the Kid and the Gay-cat turned their backs on the darkened river. They walked down the slope. The Gay-cat barked. He dashed, with a sudden show of spirit, across the tracks and into a little faded road hidden in the mystery of twi-

The Kid followed his brave lead. The lane was pungent with fruity odors. It wound between green curtains of hop vines, softly stirring in the breezes of the evening. A strange peace was on the Kid. Some-thing about the lane, lost in the thick of twi-light, the smells and random breezes filled his soul with a gypsy content. That gypsy content it was that made his wanderings with the Gay-cat sweet. And so they came to a white wooden gate beyond which, on the black flat of a patch, melons lay cut and tempting, splotches of gold and green. "Cantaloupes," said the Kid. "Canta-

loupes would go good now. Wet and cool after that ride, hub—Gay-cat?"

The Kid clambered over the creaking gate. The dog bellied under the gate. They were inside when, in the gray house that squatted down in the field, a door was flung open and voices came from the lighted dooropen and voices came from the lighted door-way in the uncouth vocables of the Jap-anese tongue. The Kid crouched. The dog barked sharply. The Kid pulled the dog off his feet and quieted him. The door slammed shut. The house slept grayly. Sniffing the air for danger, the Gay-cat trotted out on the black loam of the natch.

the patch.
"Come here, Gay-cat," the Kid whis-pered. "Keep close to me and don't think you own this here patch. Them Japs don't invite boes in here to mooch melons. They sleep in the fields sometimes with guns."

The Kid made short dashes between the muskmelons to see how ready for eating each was. Some were green. Others were overripe. One, cut from the trailing vine

and leaves, was a golden temptation. He lifted that. It was quite heavy.

The dog scuffled ahead. The Kid, ready for retreat, called softly. The dog answered in a yelp of fright. Abruptly the

The Oliver Typewriter Company 1106 Oliver Typewriter Building, Chicago

dog came back. He came back as if shoved by some invisible hand on his quarters.

To see what was the matter the Kid moved forward. The dog was whimpering nervously at his heels when he came full upon the Japanese laborer asleep on a mat among the vines and leaves, his brown, shiny, stupid face upturned. The Kid stepped back in fright just as the dog had done. His heel caught in a melon vine. The vine tripped him. His arms flung behind to ease the fall. The muskmelon bounded from his the fall. The muskmelon bounded from his

the fall. The muskmelon bounded from his flinging arms and rolled against the laborer.

The laborer leaped afoot. His arms were upraised before his face in an almost articulate gesture of bewilderment. The Kid leaped afoot. Thereat the laborer, seeing what had awakened him, screamed shrilly in Japanese. He gave chase. He showed in his hands a long-handled shovel.

"Gay-cat!" yelled the Kid. "Oh, Gay-cat! Come here!"

But the dog did not run for the gate at

cat! Come here!"

But the dog did not run for the gate at the heels of the Kid. He dashed, barking and snapping, toward the oncoming laborer. The laborer cried out. He cried out in what appeared to be genuine fear of the dog. Full on the head of the rushing, snapping dog he brought down the sharp metal edge of the

The defiant barking of the dog rose into a shrill yelp of pain that was almost a scream. A second yelp followed on the heels of the first. Then another, and another. The yelps were continual and

The Kid ran back. Unconscious of all personal danger he ran back to the yelping dog. He had no eyes for the Japanese laborer. He saw only his dog, bleeding from a red gash in the head and staggering, as he yelped, on bending legs. He scooped the bleeding Gay-cat up into his arms. White and cold and blind with grief, he rushed past the bewildered laborer. He floundered through the soft field to the gate. He sobbed love words. The yelps of the little Gay and drawned to white soft field. little Gay-cat dropped to whimpers, slow

little Gay-cat dropped to whimpers, slow and dull as moans.

The Kid walked in a miserable dream. He was stupefied by his despair. On the outskirts of Sacramento he stumbled into a drugstore. At sight of his anguish-filled eyes and the bleeding dog the druggist was won over to mercy. With a gauze bandage he bound up the gash in the Gay-cat's head between the drooping ears.

The pain of the dog was somewhat soothed. The Kid staggered on through the railroad yards, through the city and along the road to where, in a grass-disheveled field, a haystack bulked. The wretched search was ended. In the hay he would find some soft nest wherein to lay the wounded Gay-cat.

All that night in the haystack the Kid watched and worried over the whimpering dog. He was a boy alone in a waste where sympathy was not. Yet out of those barrens of brutality had come to him a great love. And that love was stricken, sick with pain. Through that long night, as the dog whimpered continually in dull agony and the moonlight silvered down, the Kid accused himself:

"It's all my fault that you're half dead."

"It's all my fault that you're half dead, Gay-cat, all my fault. Cantaloupes! I couldn't do my own moochin' for canta-loupes! And look at the other risks I let loupes! And look at the other risks I let yer take. I let yer ride where you could be killed. You could fall off the rods. You could slide from the roof. A piece of coal thrown from the cab could mash yer. You, the only one that loved me, and I let yer hobo with me like that for all these months and days and days."

The dog licked his face. That only made him the more miserable. He wanted to ask forgiveness of the dog. And the dog reached up and licked his face. It was terrible, such love. He would prove himself worthy of that love!

"Hoboin' is no place for to keep a dog!" he told the dawn. "Jes' supposin' he was killed!"

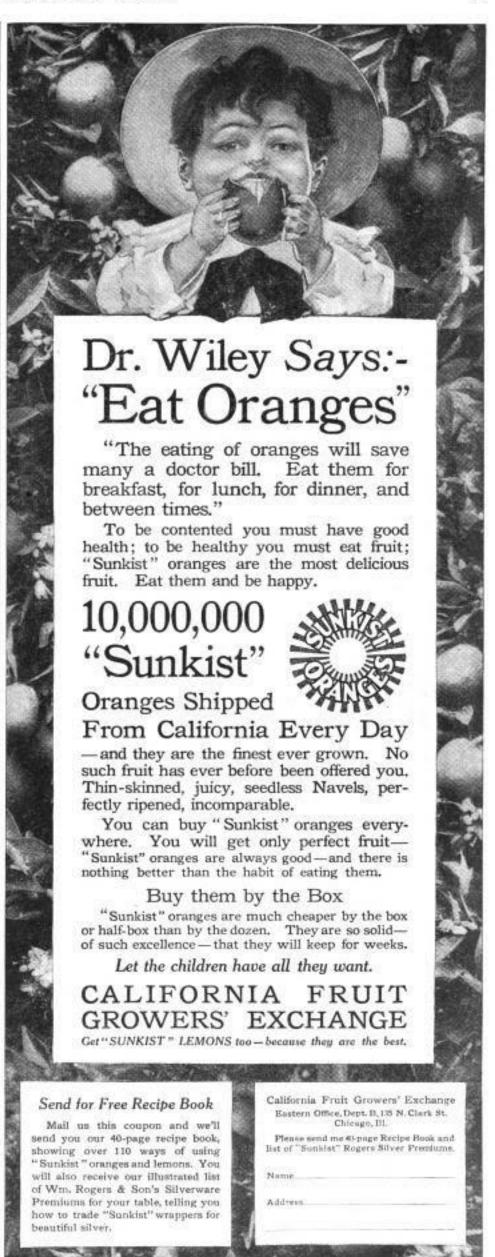

His white face was set with lines deeper than ever had been the dirt scratches. lifted up the bandaged head of the wh pering little brute.

"Gay-cat, we'll square it!" he said fiercely. "It'll be hard for you. It will be hard for me. But it's got to be done. This night has give me a lesson. Right now it's got to be done. This mornin' I gets a job, see? I gets a job. We'll square it, Gay-cat, old-timer. You and me, we'll square it."

That was an appalling step, but after the tragic happening of the night it had to come.

The Kid took that step without quiver of lip. He would prove himself worthy of the

lip. He would prove himself worthy of the

Those pictures of father and mother—quaint in their old-fashioned clothes, are all the more precious because they recall the father and mother of your childhood.

Some day your photograph will be just as precious to others. And the present-day photographer is well equipped, both in skill and in the tools of his profession, to pay the obligation that this generation owes to the next.

There's a photographer in your town. Eastman Kodak Company, Rochester, N.Y.

dog's love. He would cease to be a hobo. He would fight the lust for moving on. He would settle down in one place.

place—that was the appalling thing.

The Kid slid down out of the stack in the early morning to beg food for the hungry dog. He had little choice. There was the camp beyond the fence of the field where ate the workmen who were macadamizing, for the county, the road into town. There was the shanty of a farmhouse. The Kid looked at the house.

The house was two-storied, clapboarded and drab. It stood sullenly alone in the grass-disheveled field. On the second floor were two windows, opaque with dirt. Ye some one lived in that house. As the Kid looked a wisp of smoke lifted out of its roof. It was a pathetic wisp of smoke, like the draggled exhalation of an old hobo's last cigarette. All that night no lights had showed in the house. The wisp of smoke was the only sign of a life within.

The Kid decided. The miserable aspect of the house made that decision. Its occu-

pant or occupants would be as miserable. Were the Kid to approach that house it would be discovered that he was living in the haystack and he would be routed out. There was no better nest, no softer flopping for the wounded Gay-cat than that hollow in the hay

The Kid begged food from the camp cook. He fed in pinches most of the bread and meat to the dog. In a battered tomato can, sunk in the hay, he left a supply of water. He pressed the warm muzzle of the dog to his cheek. Then he went into Sacramento to make, along K Street, his last clean-up of dimes.

With a load of groceries and a singing heart he reappeared at noon. He had landed a job. A man from whom he had begged a nickel had offered him work. It was in a cracker factory, piling empty boxes at the bottom of an endless hoist. It was treadmill work, but it was an anchor to

hold him fast.

The while he fed the dog the Kid talked happily, but there was no hiding the sacri-It was a sacrifice. Day in, day out for a full year the dog never had been out of eyesight of the Kid. And now the Kid was going to leave him for the greater part of the day. It was a terrible sacrifice. But they were squaring it. That meant sacrifice.

As the Kid left in the damp earliness

of morning the dog whimpered miserably.
The Kid, as he tore himself away, muffled his ears with his hands. He worked manfully; but his thoughts were not with the empty cracker boxes. They were out in the sun-scorched haystack with the dog. He knew it was lonely for the dog. His own life, while he was away, seemed desolate. Through the dragging hours he heard, as he bent over the boxes, the whimpers of the lonesome Gay-cat. He even remembered how the love-mad dog had licked his hands,

his face, and forlornly wagged its tail when he had hurried back at noon to the farm.

They lay, that night of the first day's work, side by side in the haystack. Over their heads the stars breathed.

"I brown it's language Coverant" said the

"I know it's lonely, Gay-cat," said the
Kid. "It's lonely for me as well as for you.
But yer got to bear it. I got to bear it,
Gay-cat. I hates the smell of crackers.
The piles of boxes jes' bear me down. And
I hates to think of you so lonesome. Perhaps if we went home, Gay-cat, if we went up the valley to my ma it might be easier. She could take care of you and love you for It would not be so lonesome for you while I was away at work, and we would love her so much we could square it. There would be no longin' to be hoboin' it again.

We'd never want to leave her no more."

The dog lifted up his bandaged head and

The dog litted up his bandaged head and licked the Kid's face for all the world as though he understood and sympathized.

The Kid fell into a period of uneasy slumber. Rose, against the lids of his eyes, a bush of white marguerites, clean of dust and sparkling with dew. Behind it shaped the cottage and on the doorsill a pale little shawled woman. He could see the dimmed plaid of the shawl about her thin shoulders. Her pale face was that near and distinct he could see the blackness of her once brown eyes. She looked over the marguerites along the road. She called. She called his name. Then she faded from sight. The white marguerites faded.

The Kid looked up at the breathing stars. The air was thick with odors. It seemed to quiver with his name. That call of his mother seemed, in all reality, to be quiver-ing through the heavy air. He sat up in the

(Concluded on Page 57)

Why that pain, when Blue-jay would relieve it instantly?

Why have a corn, when Blue-jay would remove it in two days?

Why that discomfort, when millions of people could tell you a way to get rid of it?

These are the facts.

Blue-jay is applied in a jiffy. And from that instant the pain is

Then, while you work or sleep or play, Blue-jay undermines the corn. Generally in two days you can lift it out, without any pain or trouble.

Think how easy, how simple.

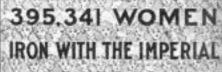

While you pare corns, or treat them in other petty ways, Blue-jay is taking out a million corns a

It is simply folly, in these modern days, to suffer from a corn. A single test will prove this.

"She must be a-callin' me up there in trailey," he said, "a-callin' me all these

The dog grew strong enough to play res he was sliding down the slopes of the as to the ground. Often, at noon or night, a Kid found the dog nesting in some nook as the base of the stack. Because of that the Kid grew afraid. He was afraid lest, his way, their presence would become year to the inmate or inmates of the year and the Gay-cat mistreated while be UB IVAY.

But there was another thing that worried the Kid. The Gay-cat was growing indif-ferent to the Kid's leavetakings. True, he did tried in forlorn attempts to follow the kid but why did he not whimper at the grings? The Kid brooded over the case. be dog's indifference was quite natural. be dog was growing used to being left and The Kid should have foreseen it. Yet

set it now pained the Kid. One still noon as he hurried, in a cloud of I-raised dust, up the road and under the rice, no Gay-cat ran from the baystack to jump on him and lick his hands. The Ed went to the stack. He whistled. No rice old head shoved above the ragged edge the hay. No four-legged streak of yellow tabed out from some nook in its base. The arm was steeped in noontide sun. There rus not so much as a rustle from the hay.

The Kid was alone.

"Where is he?" he asked himself. "The
trie Gay-cat! He's a-foolin' me to make
as skeered."

Enserved.
Under the gray of dust his face was white.
Esserved the field. He looked along the
ad. There was no sign of the Gay-cat.
For whistled. He called. He was in a
pair of dread. Despite his fear of the ocpaints of the house he called and called in d shouts. Nor dog nor answer of any

Indicate to him.

That which was broad noon closed like the black and elemental, about the Kid. It stood in the dead field stooped to an uniterable despair. From his heart, testening him like the loss of blood, someting was running out. And he could not the for all his loss and his despair he add not cry

Some time later, with hard eyes, he ad-acted on that old derelict of a farmhouse. "Maybe," he choked—"maybe he's in

The door, lacking knob and lower panel, gened to his touch. He reeled into shadwa. The place was thick with dust and A musty smell hung heavy in the air. Here was no living thing on that whole over floor, excepting some horseflies that runmed back and forth through the dusty

Up one wall from the entrance totof sanded white near the wall with fallen lister. The Kid went up. At the top he wed across a creaking flooring in a room tere the sun fought through a dirt-coated thou to light a bed and a bureau.

I pon the hureau were a tin plate of food, up and a prayer-book. A woman lay between clothes of a woman that struggled ber feet until the last insufferable pang. in hair fell disheveled and white about her themsted head. She lay, eyes closed, on beeige of the bed. One hand hung limply the side of the bed, and snuggling and being that hand was the Gay-cat.

The dog, at the creaking sounds of the coring, turned from licking the hand. He was the Kid. He did not leap up and upon Kid. He turned back to licking that

The old woman did not move. The Kid and over her. Her eyes opened, but she dut see him. She was looking up at that hadow as though to pierce its dirt-thick like and see into the day.

"Ralphie," said she. "Oh, darlin'!"

Her voice was plaintive with longing. the pillow. On her old worn face was

a brain unclouded by sorrow. Her love saw. And in an indescribable voice she

cried out:
"My boy! Ralphie! It's prayin'—
prayin' on my worn old knees that brought

you. Four years and me prayin' all alone.
Oh, my boy!"
There was everything in her voice. Sorrow suffered, and age, and joy transcendent.
Until she could stand no longer the loneliness and the longing she had lived in the little cottage up in Grass Valley, where the marguerites were fresh and white. She had fed hoboes, and as she rocked in her misery They had told her to go to Sacramento. That city was the clearing-house of all the hoboes. Soon or later he would come there, they had said.

For a small sum she sold the place in the before the fire they had given her advice.

or a small sum she sold the place in the For a small sum she sold the place in the valley. She came down to the city. She was pitifully wrought up for the meeting; but he did not come. She waited and slowly spent her money. She became penniless and then, with lack of nutritious food, sick. Sick of workworn body and sick of living all alone she crept to the ramshackle farmhause to die.

an alone she crept to the ramshackle larm-house to die.

So she cried and yearned and faded. He did not come. Only came a little yellow dog to lick her hands. It was the Gay-cat. He came every day. She told the dog of her lost boy, and he seemed to understand. In with he licked her hands. She called that

pity he licked her hands. She called that dog Prince.

And now her boy had come!

The Kid put his tousled boy's head on the pillow beside her. She touched and kissed his hair. The Kid wept as she crooned

over him. "It was the Gay-cat," he gulped to him-self. "It was the Gay-cat that done it. The little old hobo Gay-cat brought me

The Kid went to work in the sunny, pungent hopfields behind the levee below town. He had lost, on account of his absence, the job in the cracker factory. Bare of foot and happy he picked hops. At noon his old mother brought him his lunch. She sat in the shadow of the vines and watched the boy—her boy—eat. She picked a few hops for his basket. She picked as much as he would let her. Then she went softly into the peace of the afternoon.

The Gay-cat was growing stronger and friskier. Of afternoons she left the Gay-cat with the Kid. The Kid would weigh in his hops at four o'clock. Then it was over the levee with the dog to take in the mellow-He had lost, on account of his ab-

levee with the dog to take in the mellow-ness a swim in the river.

ness a swim in the river.

Thus each day the road called. The sunset lured. The tracks had in them some magnetic pull.

The day was mellow and golden. Again were they fresh and tingling from the swim. The dog was wet and draggle-haired. He was eager. He leaped upon the ties. The Kid fell into the slouching stride, shoulders hunched, head lowered. The dog whined with happiness. Down the tracks he followed the Kid. He was eager. Down the tracks he followed the Kid. We was eager.

tracks he followed the Kid toward the glow of sunset.

The Kid drew up. Pale with the effort of it he drew up. He turned slowly round. The Gay-cat whimpered. He kept on. The Kid stood still. He watched. His face was drawn. He whistled. The dog looked back. The dog barked once shortly. The lust surged up in the Kid. The world reeled—the world of glistening tracks and glowing, beckoning sunset. He bit his lip. That held him from taking the first step—that first step that would give momentum and send him onward all his days!

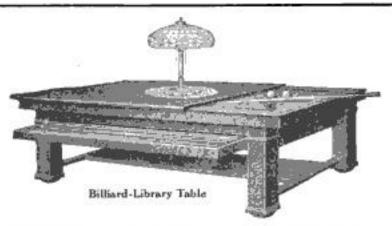

The Gay-cat went on. His head was lowered to the ties. His tail was a-droop. There was in that drooping tail something that appalled the Kid. He stood aghast. After a time he called:

After a time he called:
"Gay-cat! It's for her!"
The dog halted. All that time he had been going on. He sat up. Over a wet, hairy shoulder he sent back one look of utter misery. He dropped down. Alone

and drooped to the long walk the dog swung on into the sunset. Flat on his face on the grassy bank the Kid threw himself. He raged against fate.

He cried hotly. He was to cry for love and longing of that dog later in his mother's arms. But just then, as he cried, in his voice was all the contempt of those that resist temptation for those that fall: "The Gay-cat!"

For the first time he said the word as a blown-in-the-glass stiff should say that

# Billiard-Library Table -20 Cents a Day

The trifling sum of 20 cents a day will pay for this beautiful Brunswick "Convertible" Billiard-Library Table, including complete Playing Outfit.

The table is made of finest Quarter-sawed Golden Oak, handsomely finished. Equal in playing qualities to the famous "Baby Grand."

Concealed Cue Rack and Accessory Drawer hold entire playing equipment.

Adapted for use in library, living room, or den; no extra room required.

# Brunswick "Baby Grand"

## Billiard or Pocket-Billiard Table

The Brunswick "Baby Grand" is a masterpiece in Mahogany. Fitted with a genuine Slate Bed, the celebrated Monarch Quick-Acting Cushions and Accessory Drawer to hold entire playing equipment. Sizes 3x6, 31/2x7, 4x8. Furnished as a Carom, Pocket-Billiard or Combination Carom and Pocket-Billiard Table. Attractive prices and easy terms.

## Let the Boy Buy the Table

Your boy can easily pay for the table-it's a good way to teach him to save. We offer very easy terms.

## Playing Outfit Free

The price of each table includes complete high-grade Playing Outfit—Cues, Balls, Bridge, Rack, Chalk, Markers, Brush, Cover, Rules, Book on "How to Play," etc., etc.

## Send the Coupon

or a postal card for richly illustrated book, "Billiards-The Home Magnet," containing pictures, descriptions, Factory Prices and details of Easy-Purchase Plan. This book will help solve the gift

## Three things to remember-

Jap-a-lac is a very real economy in making your old things new. Real Jap-a-lac results are possible only with Jap-a-lac.

So when you go to your dealer to buy, just to be certain, remember these three things:

# Jap-a-lac—Green Can—Glidden -the name —the package —the maker

You may forget one—or two, possibly—you can't forget all three.

Jap-a-lac has put the renewing of everything in your home on an easy basis—right in your own hands. That's why you naturally think of it first. But don't merely think Jap-a-lac—do things with Jap-a-lac.

You will find Jap-a-lac at quality stores—where everything in stock is on a par with Jap-a-lac.

## Canada

Canadian readers will be pleased to know The Glidden Varnish Co., Ltd., of Toronto, are supplying Glidden products to Canadian dealers throughout the Dominion. Most dealers are now in position to supply you with Japa-lac and other Glidden goods, but if you are unable to get just what you want, write direct to our Canadian factory.

## Delivery

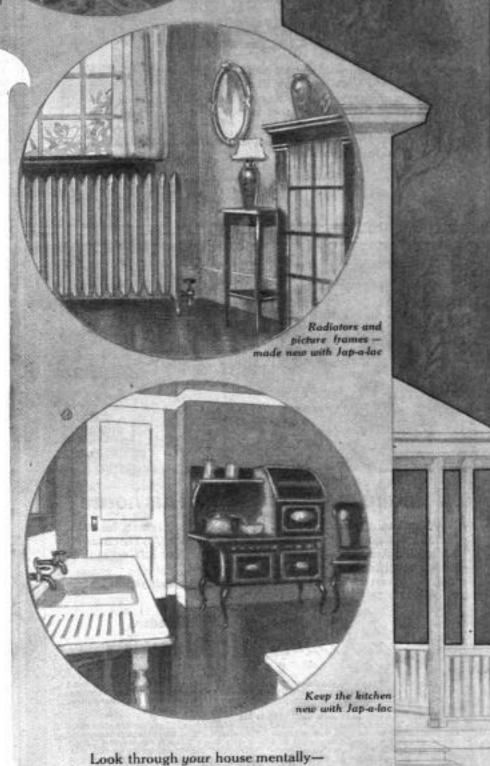

We do not sell Jap-a-lac except through dealers, but should you experience any difficulty in securing just the colors you want, send us your remittance (price per can 25c) and we will see that you are supplied promptly through the nearest dealer withany or all of the three kinds—transparent, solid enamel, or Gold or Aluminum—and in the colors you prefer. The excellent Jap-a-lac booklet gives full instructions, the color card shows all colors. They are yours, free, on request,

## Jap-a-lac is sold the world over

Many dealers in foreign countries now carry Jap-a-lac and Glidden products in stock regularly—any dealer anywhere can get Glidden goods for you. Spanish, Portuguese or British literature sent on request; correspondence in any language.

(Continued from Page 15)

after all, and how closely are all peoples knit together in common bonds of love and affection. The hot dog, as found here, is just as we know him throughout the length and breadth of our own land—a dropsical Wienerwurst entombed in the depths of a rye-bread sandwich, with a dab of horseradish above him to mark his grave—price, creation over five cents the copy.

creation over, five cents the copy.

The woolly plush hat shows no change either, except that if anything it is slightly woollier in the Alps than among us. As transplanted, the dinky little bow at the back is an affectation purely—but in these parts it is logical and serves a practical and a utilitarian purpose, because the mountain byways twist and turn and double, and the local beverages are potent brews; and the weary mountaineer, homewardbound afoot at the close of a market day, may by the simple expedient of reaching up and fingering his bow tell instantly whether he is

going or coming.

This is also a great country for churches. Every group of chalets that calls itself a village has at least one long-spired gray church in its midst, and frequently more than one. In one sweep of hillside view from our car window I counted seven church steeples. I do not think it was a particularly good day for churches either; I wished I might have passed through on a Sunday, when they would naturally be thicker.

Along this stretch of railroad the mountaineers come to the stations wearing the distinctive costume of their own craggy and slabsided hills—the curling pheasant feather in the hatbrim; the tight-fitting knee-breeches; the gaudy stockings; and the broad-suspendered belt with rows of huge brass buttons spangling it up and down and crosswise.

Such is your pleasure at finding these quaint habiliments still in use amid settings so picturesque that you buy freely of the fancy-dressed individual's wares—be

always has something to sell.

And then as your train pulls out, if by main force and awkwardness you jam a window open, as I did, and cast your eyes rearward for a farewell peek, as I did, you will behold him, as I did, pulling off his parade clothes and climbing into the blue overalls and the jean jumpers of prosaic civilization, to wait until the next carload lot of foreign tourists rolls in. The European pessant is indeed a simple, guileless creature—if you are careless about how you talk.

In this district and on beyond, the sight of women doing the bulk of the hard and dirty farmwork becomes common. You see women plowing; women hoeing; women carrying incredibly huge bundles of fagots and fodder on their heads; women hauling heavy carts, sometimes with a straining, panting dog for a teammate, sometimes unaccompanied except by a stalwart father or husband, or brother or son, who walks alongside smoking a china-bowled pipe to see that the poor human draft-animal does not shirk or balk, or shy over the traces.

## Where Nobody Works but Grandma

To one coming from a land where no decent man raises his hand against a woman—except, of course, in self-defense—this is indeed a startling sight to see; but worse is in store for him when he reaches Bohemia, on the other edge of the Austrian Empire. In Bohemia, if there is a particularly nasty and laborious job to be done—such as spading up muck in the rain or grubbing sugar-beets out of the half-frozen earth—they wish it on dear old grandmother.

She always seemed to me to be a grandmother—or old enough for one anyway. Perhaps, though, it is the life they lead, and not the years, that bends the backs of these women and thickens their waists and mats their hair and turns their feet into clods and their hands into swollen, red

monstrosities.

Surely the Walrus, in Alice in Wonderland, had Germany in mind when he said the time had come to sing of cabbages and kings—because Germany certainly does lead the known world in those two commodities. Everywhere in Germany you see them—the cabbages by the millions and the billions, growing rank and purple in the fields and giving promise of the time when they will change from vegetable to vine and become the fragrant and luscious trailing sauerkraut; but the kings, in stone or bronze, stand up in the marketplace or the public square, or on the bridge abutment, or just back of the brewery, in every German

city and town along the route.

By these surface indications alone the most inexperienced traveler would know he had reached Germany, even without the halt at the custom house on the border; or the crossing watchman in trim uniform jumping to attention at every roadcrossing; or the beautifully upholstered, handswept state forests; or the hedges of willow trees along the brooks, sticking up their stubby, twiggy heads like so many disreputable hearth-brooms; or the young grain stretching in straight rows crosswise of the weedless fields and looking, at a distance, like fair green-printed lines evenly spaced on a wide brown page.

Also, one observes everywhere surviving traces that are unmistakable of the reign of that most ingenious and wideawake of all the earlier rulers of Germany, King Verboten the Great.

In connection with the life and works of this distinguished ruler is told an interesting legend well worthy of being repeated here. It would seem that King Verboten was the first crowned head of Europe to

learn the value of keeping his name constantly before the reading public.

#### The Legend of King Verboten

Rameses the Third, of Egypt—that enterprising old constant advertiser who swiped the pyramids of all his predecessors and had his own name engraved thereon had been dead for many centuries and was forgotten when Verboten mounted the throne, and our own Teddy Roosevelt would not be born for many centuries yet to come; so the idea must have occurred to King Verboten spontaneously, as it were. Therefore he took counsel with himself, saving:

saying:

"I shall not erect statues to myself. Dynasties change and wars rage, and folks grow fickle and tear down statues. None of that for your Uncle Dudley K. Verboten! No; this is what I shall do: On every available site in the length and breadth of this my realm I shall stick up my name; and, wherever possible, near to it I shall engrave or paint the names of my two favorite sons, Ausgang and Eingang—to the end that, come what may, we shall never be forgotten in the land of our birth."

And then he went and did it; and it was a thorough job—so thorough a job that, to this good year of our Lord 1914, you still see the name of that wise king everywhere displayed in Germany—on railroad stations and in railroad trains; on castle walls and dead walls and brewery walls, and the back fence of the Young Ladies' High

And nearly always, too, you will find hard by, over doors and passageways, the names of his two sons, each accompanied or underscored by the heraldic emblem of their house—a barbed and feathered arrow pointing horizontally.

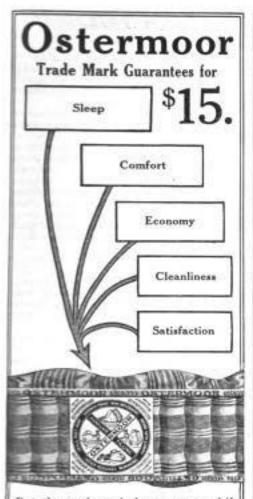

And so it was that King Verboten lived happily ever after and in the fullness of time died peacefully in his bed, surrounded by his wives, his children and his courtiers; and all of them sorrowed greatly and wept, but the royal signpainter sorrowed most

I know that certain persons will contest the authenticity of this passage of history; they will claim Verboten means in our tongue Forbidden, and that Ausgang means Outgoing, and Eingang means Incoming or, in other words, Exit and Entrance; but

surely this could not be so.

If so many things were forbidden, a man in Germany would be privileged only to die—and probably not that, unless he died according to a given formula; and certainly no human being, with the possible exception of the comedian who used to work the revolving-door trick in Hanlon's Fantasma, could go out of and come into a place so often without getting dizzy in the head. No—the legend stands as stated.

Even as it is, there are rules enough in Germany—rules to regulate all things and all persons. At first, to the stranger, this seems an irksome arrangement—this posting of rules and orders and directions and warnings everywhere—but he finds that every one, be he high or low, must obey

But the trade mark does you no good if you don't insist on seeing it before you buy a mattress—and if you don't believe in the Ostermoor sufficiently to refuse any one of the hundreds of initations which are offered in its place—at a lower price—of course. Their cheapness (not their economy) is their only excuse.

or go to jail-there are no exceptions and no evasions; so that what is a duty on all is a burden on none.

Take the trains, for example. Pretty much all over the Continent the railroads much all over the Continent the railroads are state-owned and state-run, but only in Germany are they properly run. True, there are so many uniformed officials aboard a German train that frequently there is barely room for the paying travel-ers to squeeze in; but the cars are clean and the schedule is accurately maintained, and the attendants are honest and polite and cleanly of person—wherein lies another point of dissimilarity between them and those scurvy, musty, fusty brigands who are found managing and operating trains in

certain nearby countries.

I remember a cup of coffee I had while going from Paris to Berlin. It was made expressly for me by an invalided commanderin-chief of the artillery corps of the imperial army—so I judged by his costume, air and general deportment—who was in charge of our carriage and also of the small kitchen

at the far end of it.

He came into our compartment and bowed and clicked his heels together and saluted, and wanted to know whether I would take coffee. Recklessly I said I would. He filled in several blanks of a printed form, and went and cooked the coffee and brought it back, pausing at intervals as he came along to fill in other blanks. Would I take cream in my coffee? I would; so he filled in a couple of blanks. Would I take sugar?

I said I would take two lumps. He put in two lumps and filled in another blank. I really prefer my coffee with three lumps in it; but I noticed that his printed form was now completely filled in, and I hated to call for a third lump and put him to the trouble of starting his literary labors all over again. Besides, by that time the coffee would be cold. So I took it as it was—

with two lumps only—and it was pretty fair coffee for European coffee.

It tasted slightly of the red tape and the chicory, but it was cleanly prepared and promptly served.

#### Hessian Hands Across the Sea

So, over historic streams no larger than creeks would be in America, and by castles and cabbages and kings and cows you come to Berlin; and after some of those other Continental cities Berlin seems a mighty restful spot to be in and a good one to tarry in a while.

It has few historical associations-has Berlin; but you are loaded to the gills with

historical associations by now.

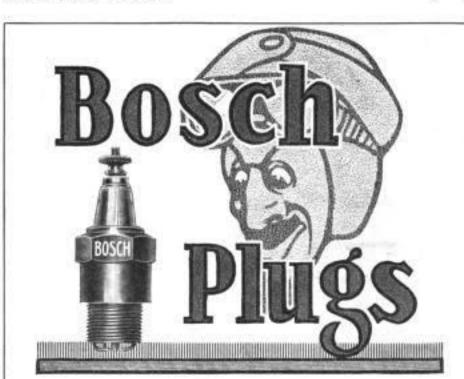

Most of the statuary in Berlin is new and shiny and provided with all the modern conveniences—the present Kaiser attended competently to that detail. Wherever in his capital there was space for a statue he has stuck up one in memory of a member of his own dynasty, beginning with a statue apiece for such earlier rulers as Otho the Oboe-Player, and Joachim, surnamed the Half-a-Ton—let some one correct me if I have the names wrong—and finishing up with forty or fifty for himself—that is, there

with forty or fifty of him when I was there.
There are probably more now.
In its essentials Berlin suggests a progressive American city, with Teutonic trimmings. Imagine a bit of New York, a good deal of Chicago, a scrap of Denver, a slice of Hoboken, and a whole lot of Milwaukee; imagine this combination as being secured every day until it shines: imagine waukee; imagine this combination as being scoured every day until it shines; imagine it as being beautifully though somewhat profusely governed, and laid out with magnificent drives, and dotted with big, handsome public buildings, and full of reasonably honest and more than reason-

ably kindly people—and you have Berlin. It was in Berlin, too, that I picked up the most unique art treasure I found anywhere on my travels—a picture of the composer Verdi that looked exactly like Uncle Joe Cannon, without the cigar; whereas Uncle Joe Cannon does not look a thing in the world like Verdi, and probably wouldn't if he could.

I have always regretted that our route through the German Empire took us across the land of the Hessians after dark, for I wanted to see those people. You will recollect that when George the Third, of England, first put into actual use the great Anglo-American policy of Hands Across the Sea he used the Hessians.

They were hired hands. Editor's Note-This is the third in a series of articles by Irvin S. Cobb. The fourth will appear in an early issue.

BOSCH Spark Plugs eliminate short circuits, breakage by acci-dental blow or heat, and compression leakage, which are common faults often found in other spark plugs but never in Bosch Plugs. Bosch Plugs are designed to uphold the reputation of the name they bear - they must be good,

Even the perfect Bosch Magneto cannot overcome the loss in effi-ciency resulting from the use of improperly designed and poorly constructed plugs. Don't use them—use Bosch Piugs.

Insist on Bosch Plugs and you can equal the spark plug efficiency of such high grade cars as the Peerless, Pierce-Arrow, Hudson, Mercer, Garford, Speedwell, Jeffery, Velie, Fiat, Marion, Case, Stutz, Moline-Knight, Lozier, etc. — which regularly are Bosch-Plug-Equipt. ## KEEPING JOHN BARLEYCORN OFF THE TRAIN

(Continued from Page 17)

"Nineteen years ago, back in Tennessee, I married a girl whose folks didn't like me any more than my folks liked her. Both sides made all the trouble for us they could. Finally the girl's people convinced her that I was a bad one. I was so disgusted I skipped out and went to New Zealand. I heard two or three years later that a boy had been born after I left. It took me fifteen years to realize what I should have

done under such circumstances.

"Lately I've got to thinking what a fool
I was, and I can't stand it—that's about all
there is to it. You wouldn't like to tell the con of that train over there to carry me to

the next town, would you?"
"Suppose I made them take you back
in the roundhouse for three months, would you give me your word not to take a drink during that period?" asked the Old Man.

"No-because I might not be able to keep my word."
"I'm willing to take a chance on your word."

Two weeks before the three months expired Tip Bunter appeared at the superintendent's office.

"Lift my promise off my neck and fire me!" he said. "I haven't slept for three nights."

The Old Man grasped Tip Bunter by the shoulder, threw him into a chair, and went about coaxing a soul back into what had become beef. It was a changed Tip Bunter who slipped away to the roundhouse— after he had given his word to go another quarter year dry.

When the third three months, served

under a third promise, were ending, the Old Man sent for the mechanic.

"I've arranged a thirty-day layoff for you, Tip," he said. "Here's the wages you asked me to look after and here's a round-trip pass to Memphis."

"What does all this mean?" asked the

astonished Tip.

I thought maybe, now that you have a good job and money and a pass, you would be wanting to go back and look up that boy

## Tip's News From Memphis

Tip Bunter said nothing; he just grabbed the Old Man's hand as though it were the throttle of a train about to be run into from behind. Four weeks later Tip came back to the office. He had undergone a facial transformation.

"Did you find the boy?" the superintendent asked when he had made sure of

intendent asked when he had made sure of his caller's identity.

"Aw, say," Tip Bunter answered, "you ought to see that lad! Tall as I am—and they say he looks like me. His mother died years ago; but he's had a good raising. Why, he's the brightest boy in the old town! Last month he graduated from the high school. He was to go to work in a foundry, but the school principal got him to take the entrance examination for the university anyway—the professor told me he just anyway—the professor told me he just wanted to show off his prize pupil. The boy

"When I found him he was already an apprentice molder; but I got the foundry people to let him off. I took him to the university myself, got him started and left him about all the money I had. I must get over to the roundhouse now. You see, I'm

going to make a great railroad builder out of my son; and I've got to keep the money orders going back there regularly every month for the next four years. Do you want my promise for that length of time?" "No," smiled the Old Man. "Your promise for the rest of your life happens to be written in indelible letters across your

Eight years ago a young man from San Francisco presented a letter at the New York office of Edward H. Harriman.

"This note from the vice-president says you bring something he wishes me to con-sider. What is it?" said the head of the great railroad system as he tapped impa-tiently with his pen.

"A scheme for saving ninety per cent of the breakage on Rule G," confidently

answered the caller.

The magnate gazed at his visitor. His face undoubtedly was the face of a dreamer,

but sanity looked out of his eyes and pur-pose fastened the corners of his mouth. Mr. Harriman let his pen fall to the blotter.

"Do you mean you have discovered why railroad men drink?" he asked.

that workmen in countless other trades drink." Yes. They drink for the same reason

And that reason is what?"

"So they can forget for a little while our artificial social distinctions," the young man replied.

"You don't think they drink for the love of the drink, then?" asked the railroad

president.
"Men have to learn to love the kick in liquor. They drink primarily because they have found that alcohol wipes out the sense of inequality. With three jolts under his belt one of your section men feels himself equal to the head of the road-equal to

you."
"How do you know so much about our section men?"

#### Explaining to Mr. Harriman

"I have worked for you as a section man, as a section foreman and in other capacities. Also, I have gone up and down the right-of-way as a tramp. The railroader is the most interesting worker in the world. I have spent several years studying him in order to help him."

"And what has your study taught you about the railroader?"

"That he is subject to the same four instincts that govern all men-the fear instinct, the play instinct, the social instinct and the mating instinct. He is going to give these four instincts expression. The saloon flourishes because the saloon catera to the last three.

The head of the system showed his in-terest in the ideas of this unusual young

By what process does the saloon get hold of the railroad employee in order to

cater to the play instinct, the social instinct and the mating instinct?" he inquired.
"By an offer of equality that cannot be felt outside the swinging doors. The ordi-nary saloon is the home of the only true democracy. Any one who enters puts him-self on a parity with every other man who is there or who may come in. A total stranger denies your right to refuse to drink with him. You must play the game or get out.

"The workman doesn't want to get out, because he finds the saloon catering to instincts within him that he could not analyze if he tried. He has the blessed feeling of being mentally comfortable. Equality breeds real congeniality. The social instinct finds agreeable expression. Every drink adds to the sense of equality and sociability. The machinery for gratifying the play in-stinct is at hand. The pictures in saloons are not landscapes; they cater to the mating instinct."

### A Highly Developed Institution

"There is no doubt the saloon employs an admirable though unhappily directed intelligence in carrying on its business," the railroad president agreed.

"The saloon is the most perfectly developed of our institutions," the young man pursued. "It is the finished product of experience. It does nothing haphazard. The salt pickles and dried herrings on the lunch salt pickles and dried herrings on the lunch counter, the glint and shape of the glassware, the nature and location of the con-veniences, the lights, pictures, music—all are dictated by a system in which the crude

and the uncertain have no part."
"Sit down," said Mr. Harriman, "and tell me how we can knock the saloon off the

nd rescue Rule

The dreamer rested his elbows on the reat man's desk and unfolded his plan. What are known as the Harriman railroad clubs, of which fifteen are in operation on the Pacific System, grew out of that conference. The young man, often fighting for enlargement in funds and in specifications, put his idea into vigorous practice; and after several years, when his institution had outgrown reliance on its founder, he heaved a sigh of satisfaction and went into the practice of law.

(Continued on Page 65)

(Continued from Page 62)

The first clubhouse was established at a mentains. The town had a rough-and-eaty reputation. It had twenty-six saens, all within sight of the depot and the ergs and the roundhouse. An attractive unding was constructed on a site a little mon. The rooms were comfortably furand for lounging and recreation purposes.
here was plenty of light and warmth.
here was a library of interestingly chosen one and a reading table containing many and pastimes; there was a writing room and stationery; a tobacco shop; and a the room where a barber waited with your and shears.

A secretary was in charge. His function ras to supply any reasonable want that was reaght to him. There were no admission rs, no dues, no rules, no special privi-gs. Every man who had been in the emnoy of the company for ten years or ten minutes was invited to use the club as he rould his own home, without any expense

thatever—except for a shave or a smoke. The experiment was on. Could the hunands of railroaders be enticed into their Would it supply some of the human sessities that the twenty-six saloons were sustomed to supply? Predictions were that the men would be afraid of the session because it was free. At first be men came timidly—then boldly; then boy took possession, as a matter of course, and began to give the place an atmosphere. From the first they hung up their titles with their hats, and were equal. They beneate draw up their chairs round the great

replace of an evening and in congenial and noisy council to discuss the day's work, map tales of experiences, regulate all traffic malens and criticize the officials of the odd in six months the clubhouse was mirord headquarters.

There isn't a darned rule on the walls,"

menneer told his wife. "You can do

whing you want to—though the men are agreed among themselves not to play ares for anything but cigars. You never as so much light as fills the rooms! It made a fellow want to sing. Why, the place at like a saloon with the booze cut out."

#### Ladies' Night at the Club

Why can't you arrange to have ladies' resoccasionally?" asked the wife.
Forties and dancing would be mighty war the firemen and brakemen and shop who are not married. Ask the secreabout it.

what the secretary replied was that the set were boss—that the club belonged to dener. The ladies' nights began. They are never ceased. When a party is on at the dub you need not look anywhere else in the railroader who is off duty. Half the mathes in the town have their inception is served.

nunct is served. son after this first clubhouse opened, be vice-president of the road arrived in private car to inspect it. Standing
the porch that evening, he pointed
to the sparkling necklace of twentysisons and said to the division superinwhere the saloons in the town. Today

By the time the second and third railroad percent operation in substantial buildare man with the idea the title of social He was given an office on the consists and the general passenger agent.

It was no longer a theory occupying a booking. He was very busily social entering. He hired a chemist and requirement. d a chef from the dining-car service and a doctor from the chief surgeon.

is was moving scientifically toward the hig discoveries. He knew the mental on or drinking; now he was after the british reasons. When the little laboration had consent and smell, when the little had achieved berends, the social engineer stood before

in the name of Rule G, I must demand men must be able to do their eating of backing there.

"Your dining room would have to keep range hours," the vice-president smiled. strange hours, Railroaders do their eating when the train

gets in."
"Exactly," said the social engineer. "It is the trainman who gets in late, maybe long past the meal hour, and who is hungry and cold, that we must head off before he uptown. I want a restaurant that will be on the job twenty-four hours a day for seven days a week. I want two stoves in the kitchen so there will never be a time when the collections. when the coffee isn't hot or when a famished brakeman can't get a rib steak done to his order in five minutes; but it is not merely on account of the late brakeman that I want the restaurants. We have just discovered that the chophouses where rail-roaders now have to eat are the finest imaginable drummers for the saloon, though they don't know it themselves."
"I do not follow you," said the vice-

president.

#### The Water Cure

"We have discovered," explained the so-cial engineer, "that the food in the appetite-killers along the right-of-way is prepared and served without the slightest regard for the reasonable demands of the human digestive process. The means are carelessly selected and abominably cooked. The coffee is warmed over. But the chief crime lies in the vegetables. Usually they have been cooked several hours before they are served; and our experiments show that the served; and our experiments show that the longer a vegetable is off the fire the more indigestible it becomes.

"The railroader slides down from his

"The railroader slides down from his stool after a hearty meal and in ten minutes he is in distress. The lump inside is talking. He knows only one prescription for indigestion, which he can get filled in any neighborhood. Most men have a hard time remembering Rule G when there is work ahead and they are doubled up with pain. We must do as much of the feeding as we can and must do it scientifically. We will serve everything at cost; and the lower price, as well as the better food, will make the man out on the road willing to go hungry until he gets in."

"I suppose we can find the money some-

"I suppose we can find the money some-where," said the vice-president thought-ully. "Why the bathtube?"

fully. "Why the bathtubs?"
"To expand the skin. The logy condition that tells a man he is badly in need of stimulation is frequently due, we have discovered, to the fact that his pores are not properly exuding. His skin must rid itself of the unwholesome secretions. A proper bath will do it. I want to offer, for the sum of ten cents, a fine porcelain tub with shower, a forty-two inch Turkish towel and the services of a white-uniformed attend-ant who will conduct the man to his bath-room, draw the bath and look after the laundering of the man's linen if he wishes.

I want to make bathing a revelation. A man must be able to bathe whenever he gets in or whenever he wants to. Like everything else in the club, the bath department must be in operation twenty-four hours a day."

"I understand," said the vice precident.

"I understand," said the vice-president.
"This is just another of your physical
means for accomplishing a moral end."
"My double aim is to achieve pep and
purity at the same time. Why, a man just

out of a good bath can't even tell a smutty story! I wish to make the trainman so fit physically that he will not require an arti-ficial stimulant of any sort, and so wholesome mentally that the sight of a saloon sign will make him mad."

New clubhouses came into existence with architectural provision for a model kitchen and dining room—table or counter style, take your choice—and a bathing department. Every man found a ventilated locker ready for the safekeeping of his linen and his Sunday suit. The installing of eat-ing and bathing facilities made easy an addition the social engineer had had in his plan from the beginning—the building of sleeping rooms.

When prepared to feed his man the social engineer wished to be able to send him to rest close at hand, between fresh sheet so the finest hair mattress money could buy. It would be impossible, the social engineer theorized, for the man to wake up feeling himself any other man's inferior. He would bank on the man's eating a cheerful breakfast and going down to the yards with his face puckered in a whistling effort to express the harmony of his being. The theory is a mere theory no longer.

The addition of sleeping rooms completed the magic circle the social engineer was

# Guaranteed in writing

FOR NINE YEARS Ajax Tires alone have been guaranteed in writing for 5000 miles. We have always believed honest manufacture, right materials and

skilled workmanship would produce a tire capable of 5000 miles use, and from the start every Ajax Tire has been so guaranteed.

The number of Ajax Tires produced has increased steadily as Ajax users told others of their satisfaction. The demand has always exceeded the supply. Since February, 1911, Ajax factories have run continuously 24 hours

daily. This growth has been possible because our guarantee has been justified by higher in-built quality.

Investigate! See the Ajax dealer who is close at hand, or write for Ajax booklets.

drawing about his men. The club swallowed the man when he came off duty; and, since it now contained about everything he needed or desired, whether it was a postage stamp, a newspaper, or a domino opponent, the man did not need actually to emerge from the place until he went back to his train. It was really pretty rough on the saloon up in the next block.

And how the saloon-keepers in the clubhouse towns raved and roared! After that first club showed how twenty-six saloons could dwindle to seven in two years, the coming of the clubhouse to a railroad town was bitterly opposed and its reaching out for the men was contested at every step. The saloons smote the railroad company with the maul of their united political influence. Town councils and county boards of supervisors were adroitly worked up to the point of passing hostile and annoying ordinances.

A frequent form of attack was by false reports that had a semblance of foundation. It was cunningly suggested to the men that the generosity of the railroad was in order to get them into a trap. When a clubhouse was opened in a certain terminal town in California an effort was made to bribe the railroaders not to go near it. Unpleasant consequences were promised those who only laughed at the offer of a bribe. But presently the club thrived.

Then an era of illness fell on the place. At the end of an investigation in which many detectives played parts, the chef broke down and confessed that he had been supplied with a mysterious powder and had been paid to stir it into the food that went on the club tables. The powder was a light drug.

#### What the Committee Reported

The protective committee of an organization of liquor men was instructed to make an investigation into the secret of the railroad clubs' instant and undiminishing success. In time the chairman appeared before the parent body with the report. "Why," he exclaimed without reference to the typewritten paper in his hand, "they

to the typewritten paper in his hand, "they are making all this noise with our own thunder! With the single exception of liquor, they offer everything we offer—only they offer it more attractively. The railroad has a fortune tied up in those clubhouses. The only hope I see is that the big cost may soon begin to make the company tired of its little game of philanthropy."

a fortune tied up in those clubhouses. The only hope I see is that the big cost may soon begin to make the company tired of its little game of philanthropy."

What the chairman could not understand was that the company did not regard the club as philanthropy, but as the cheapest as well as by far the most effective device ever found for patching the hole in Rule G.

The social engineer kept on with his work. It appeared from the study of many cases that there were times when even the best of food, prepared by the most nearly perfect methods, did not meet the full demands of the husky railroader's husky stomach. The men grew confidential with the social engineer. They confessed to an occasional craving they could not explain. It was not exactly a craving for liquor, they thought—and yet alcohol seemed to be the only thing that would satisfy it. What they said was that a drink made them forget it.

The social engineer undertook to analyze that craving and find its non-alcoholic antidote. Again his efforts were rewarded by discovery. He discovered—candy! Candy has taken care of the craving; candy fills the bill. Every clubhouse now has its glass case of the choicest chocolates, caramels and French mixed. Last year the clubhouses sold at cost to the men of the Pacific System forty-eight thousand pounds of assorted sweets.

The average cost of a clubhouse when ready to open its doors has been twenty thousand dollars. The railroad asks of the clubs merely that they sustain themselves; no interest is asked on the investment. That sum is a cheerful sacrifice on the altar of Rule G. Maybe the auditor charges it off to disasters that never occurred!

to disasters that never occurred!

There is no doubt that the use of intoxicants by railroaders in the West has been reduced to a minimum. The number of discharges under Rule G has decreased amazingly—as has the number of wrecks.

A decrease in the minor mishaps attests to a gain in the individual efficiency of the trainmen. The duration of service has increased and so has the total amount to the credit of the men in numerous savings banks. There is more contentment. Several roads, sharers in the struggle to preserve Rule G, are taking up the clubhouse idea. One road is transforming its libraries into clubs.

If you are privileged to go into one of these clubhouses, where there is order without printed or unprinted rules, and where vandalism is unknown; where wholesome food, wholesome pastimes and wholesome habits are enjoyed; where the prices are low and the conversation is high; where neither secretary, waiter nor barber is able—on peril of his job—to distinguish between a rear brakeman and a division boss, you are likely to discover that in this place the man satisfies the wild craving in his heart to express himself to the full of his ability among men who are neither above nor below him, but his equals.

The social engineer came to know hundreds of trainmen intimately. Sometimes he was the target for the grouch, but more often he suffered the rich embarrassment of being idolized. He was a man of ready resources—he needed to be. Usually he could master the situation; but once the situation mastered him beyond any human expression that may be translated into

print.

The social engineer was visiting one of his towns. On the way to the club he was stopped by a passenger fireman he knew. The fireman introduced his wife. The wife extended a cordial invitation to dine at their home that evening. The invitation

was accepted.

When the social engineer arrived at the fireman's dwelling he was not met by his host, but by his hostess. There were no other men present, but there were women—ten of them. The lone male was led to the dining room and seated at the end of the long table. On each side of him stood a brilliant bouquet. There could be no doubt as to who was the guest of honor. The genuineness of the hospitality and the excellence of the cookery made him forget his unique position.

The topic from which they seemed unable to get away was the railroad club and its work. The social engineer told the ten women how the idea grew out of his study of the railroaders' needs; how the club-houses were made possible because the president and the vice-president gave their enthusiastic support. He declared that because the clubs were appreciated by the men the company could not fail to regard them as a good investment.

### The Thankful Ten

When they were finishing the lemon pie an elderly woman rose to her feet, and the nine other women laid down their forks. The elderly woman was the wife of a locomotive engineer. She might herself have been the engineer, for the burden of the runs was written on her face. Periods of mental anguish had pinched up her temples, but her eyes were the steady headlights of a conquering patience.

a conquering patience.

"We are the wives of ten railroaders, Mr. —," she announced; "and we asked you to come here tonight so we could tell you face to face how we thank you for the club. You have said that because the men appreciate the club the company is satisfied with its investment. No miracles between friends, my friend! We know what it is all about. Shall I tell you how we

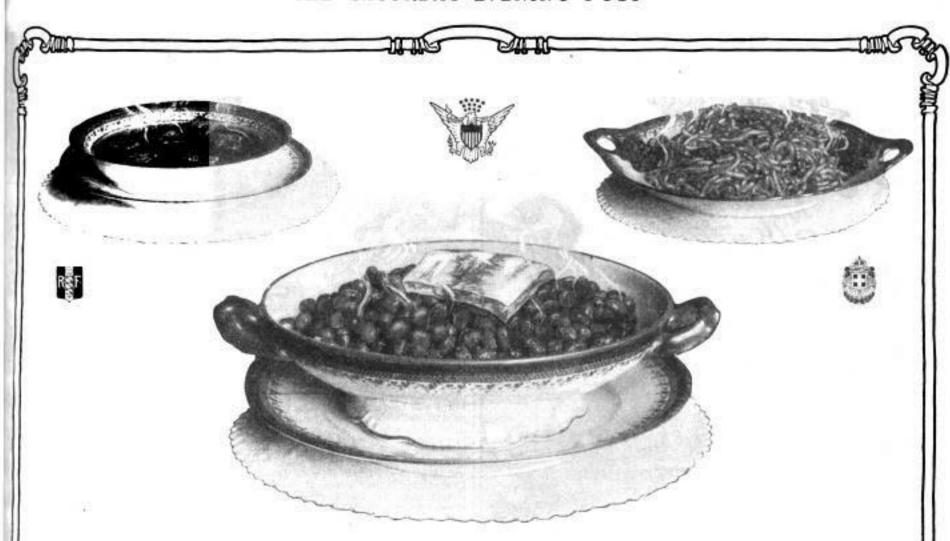

know?

"We are the wives of ten railroad men who used to be soaks. They never take a drink now—they never want a drink! That's why we got you here—to thank you out of the bottom of ten women's hearts. Maybe you think you can guess what it meant to be the wife of a trainrunner who had to have his booze. Well, you can't! Nobody could imagine it, my friend—unless maybe another woman who has had her own hell.

her own hell.

"Can you guess what it means to go to bed four nights a week knowing something dreadful may happen before sunrise to the father of your children? Can you guess what it means to sit holding your baby against your breast all night when the feeling is on you that your man's unsteady hand is going to pile up his train? Can

Vain inquiring! The social engineer's forehead had sunk down—down until it rested on the shining white tablecloth between the bouquet of red roses and the bouquet of pink and purple sweet peas; and, though his face could not be seen, the convulsive digging of his fingers into the cloth made it plain that he was not going to answer one of the questions the wrinkled old heroine asked.

# Some Far-Famed Dishes

## Made from Priceless Recipes — By the Very Chefs Who Devised Them And Served by Van Camp to Two Million People Daily

## Where Would You Go?

Where would you go for the finest Soups in the world? Perhaps most cosmopolites will answer, "To the Hotel Ritz in Paris."

But the chef who used to make those Soups is in our kitchens now. The very chef who won French medals against all rivals in this line. His finest creations are now known as Van Camp's Soups. And your nearest grocer sells 18 kinds, all at 10 cents per can.

Where would you go to get Chili Con Carne with the rarest tang and flavor? Bon vivants who travel will tell you the place—in Mexico. And the chef who created it gained international fame.

But that chef also is now in our kitchens—making Chili Con Carne for you. Your grocer will supply this identical article, made by the chef who made it in Mexico, if you specify Van Camp's.

## Italy's National Dish

Where would you go to get Spaghetti at its best? Among connoisseurs, perhaps nine in ten will name a restaurant in Rome.

But we use the same recipe and employ the same secrets. In the cheese and tomatoes we get better materials. Now Van Camp's Spaghetti—sold right at your door—has all the savor, all the richness of that famed Italian dish.

What nation excels in Evaporated Milk? Most experts in Milk will say Holland. But the scientist who perfected the best Milk in Holland came here and perfected Van Camp's. Now no homes in the Netherlands enjoy better sterilized Milk than your grocer can bring in five minutes.

## Where Would You Go For Baked Beans?

Once you would say, "To New England," but ideals on Baked Beans have changed. Now armies of city men who lunch downtown can tell you where to go. They will name you a lunch room, café or hotel which serves a superlative dish.

They will tell you of Beans which are mealy and mellow, uncrisped and unbroken. Of a sauce that's baked into them—a matchless sauce with a zestful tang and sparkle.

Some think, no doubt, that only one caterer serves Baked Beans like those. But the truth is that thousands do it. Those

Van Camp's Chili Con Carne
Van Camp's Tamales
Van Camp's Spaghetti à l'Italienne

talked-about Beans are all baked in one kitchen, and that kitchen is Van Camp's.

Countless restaurants, and even Broadway hotels, are serving Van Camp's Pork and Beans. In New York City alone, over 500 restaurants serve them every noon. They have learned that men like them like them better by far than the Beans which they baked themselves.

## These Envied Dishes Now Brought to Your Home

Note what Van Camp has done for you. You can serve Soups in your home like the best Soups in Paris. You can serve Spaghetti better than the best in Rome.

You can serve Chili Con Carne exactly the same as the best in Mexico. And Evaporated Milk as perfect as the best in Amsterdam.

You can serve Baked Beans identical with the best men find downtown. In less than ten minutes you can serve them hot, and fragrant with oven flavor. And you can have all of these dishes always on hand, ready for any emergency.

About two million people daily enjoy these Van Camp delights. Your folks should be among them.

Some of these recipes are priceless. Some of these dishes have cost us years of effort. The ablest chefs prepare them. Experts select the materials. Chemists analyze them here to know that they are right.

No home or hotel could afford the facilities to prepare these foods as we do.

# Representatives Wanted

We have positions for several young men and women of the right kind to assist us with our spring subscription work. These positions are only for men and women of good address, refinement and ability. Services will be paid for in cash. If you feel you are our type of person and would like to be out making money in this invigorating spring air, we shall be glad to consider your application. Address letter as below, stating your qualifications.

## THE TRAIL OF THE TAMMANY TIGER

(Continued from Page 21)

the dock department, which according to common gossip was the most vulnerable of the departments. However, the assertions

made at that time have never been proved.

Croker sailed for Europe immediately after giving his testimony, and when he came back in the fall he used all his energy and power in making a fight against the reelection of Chairman Mazet. There is no doubt that the machine Republican politi-cians aided Croker in his effort, and Mazet

went down to defeat,

Among all his achievements while leader of Tammany Hall, Croker was probably proudest of a banquet that he gave in 1899 to celebrate Jefferson's birthday. Acting for the Democratic Club he engaged the Metropolitan Opera House. It took considerable money to arrange the auditorium suitably for banquet purposes. In this he manifested his wonderful power over New York. He had two streets, Thirty-ninth and Fortieth Streets, leading from Broadway to Seventh Avenue, closed for a couple of days. Improvised kitchens were set up in these streets, for there was no place to do the cooking inside the building. All the boxes were sold at big prices and each diner paid ten dollars. Unquestionably it was the most elaborate banquet, considering the large number who attended it, ever given in America. Everything was done with splendor. For weeks before the banquet was held it attracted national attention. Croker had not then become an out-and-out Bryan man. The friends of Mr. Bryan on the same day gave a largely attended din-ner at Chicago, where the Nebraskan was the guest of honor.

The chief orator at the Metropolitan hanquet was Former-Justice Augustus Van

Wyck. In his speech he said that the trust question was the greatest issue before the American people; and the conservative New York papers howled next day about Van Wyck's radicalism. As a result of this speech there was no end of talk for several months to come of a Van Wyck presiden-tial boom. Joseph J. Willett, a brilliant orator, took charge of the Van Wyck boom and in parts of the South it was taken quite and in parts of the South it was taken quite seriously. As a matter of fact it was only intended to make Van Wyck a candidate for vice-president on the ticket with Mr. Bryan, but the Ice Trust scandal which developed a year after this rendered Van Wyck's canvass out of the question.

## The Famous Ice Scandal

The greatest shock that Tammany had ever received since the days of Tweed was early in 1900, when it was discovered that Mayor Van Wyck, John F. Carroll, the assistant leader, Charles F. Murphy, and many other big Tammany leaders were involved in the Ice Trust scandal. When I first read of the charges in the newspapers. I first read of the charges in the newspapers I could not believe my eyes. Van Wyck had said to me a hundred times, if he had once, that any mayor who used his office to make money was a crook. I often heard him make the same remark after he ceased to be make the same remark after he ceased to be mayor. The exposure was first brought about when Van Wyck and Carroll, in com-pany with Charles W. Morse, visited the ice plants of the Kennebec River in Maine. If Van Wyck had actually been convicted of killing babies he could not have been more roundly abused by the newspapers. It was shown that the ice company had received some favors from the dock depart. received some favors from the dock department which gave it a great advantage over the independent companies, and with the power of Tammany behind it that meant a monopoly in the ice business, with increased

To make matters worse there was an stremely hot spell in the early spring. Two of the newspapers having the largest circulation yied with each other in airing the scandal. These papers also went into the courts. There was a clause in the city charter making it a felony for city officials to sell anything to the city. As it was proved that Van Wyck and other officials owned stock in the Ice Trust, which did business with the city departments, they were liable to removal from office. Van Wyck was hauled before the courts and forced to give testimony. He acknowledged that a block of the trust stock was in his name. He said that he had purchased it

from Charles W. Morse upon credit, giving his notes as security. He had sold the stock at a loss of \$40,000. There had been much speculation in the stock of the ice company, and on account of the exposure the price of the stock fell rapidly in value. Hundreds of Tammany politicians who had been induced to buy it were heavy losers. Assistant leader Carroll was generally blamed for these losses, as it was charged that he had advised his friends that ice stock was a "big buy." Charges were filed with Governor Roosevelt against Van Wyck and his removal from office was demanded. The scandal was at its height when the Republican National Convention met in Philadelphia, and Governor Roosevelt, in from Charles W. Morse upon credit, giv-

Philadelphia, and Governor Roosevelt, in a speech before the convention, after he had been nominated for vice-president, denounced the Ice Trust scandal and prophesied that no Democratic candidate for president would dare talk about trusts in the ensuing campaign. This led to the belief that Governor Roosevelt intended to remove Van Wyck. Croker was known to remove Van Wyck. Croker was known to own Ice Trust stock, but holding no official position he could not be brought into court. From this time to the end of the term of office Van Wyck's picture was seldom printed except encased in a block of ice. Usually Croker was pictured as the ice-man holding a block with a pair of tongs.

#### Croker Behind Bryan

When Mr. Roosevelt went on the stump as a candidate for vice-president a large part of his speeches dealt with the Ice Trust, which again strengthened the belief that Van Wyck was to be removed from office. During the campaign the report that Governor Roosevelt made, dismissing the charges against Van Wyck, was stolen from the governor's office in Albany and published in a New York paper. This was the only time that I ever heard Van Wyck make a complaint about the treatment he received when mayor. He always excused received when mayor. He always excused the newspapers for attacking him, but he said that Governor Roosevelt had no right to go on the stump and hold him up before

the country as a criminal when he had already dismissed the charges.

"I can only be thankful that my old mother is dead," said Van Wyck. "If she were living these speeches of Governor Roosevelt's would have killed her. The Van Wyck and Roosevelt families have been friends for years and I do not think that wyck and Rooseveit lamilies have been friends for years and I do not think that Theodore has treated me fairly. He should have made known his decision as promptly as possible, and not locked it up in his safe. However, he probably thought that as I was only a bachelor, political expediency justified his act. But I never can feel the same toward him again."

When the Democratic State Convention

When the Democratic State Convention met that year Croker practically assumed the leadership of the party in the state. He furnished ninety per cent of the money for the campaign. James K. McGuire, then in Syracuse, was in charge of the state com-mittee, but he strictly followed the orders of Croker. Croker attended the Kansas City Convention where Mr. Bryan was nominated for the second time, and he was the most conspicuous man at that conven-tion. His fierce fight with ex-Senator Hill made Croker the most prominent Democrat in the United States, with the exception of the Democratic presidential candidate. He stood for Bryan in everything, including free silver, and this was his excuse for pre-venting Hill from serving as a member of the committee on resolutions.

The fight over silver was probably one of the most dramatic things that ever occurred at a national convention. Croker, with the consent of Mr. Bryan, decided to make Judge Augustus Van Wyck the New York member of the committee. Hill fought desperately, and even went so far as to make a personal appeal to Croker not to humiliate him. When Hill entered Croker's room, hat in hand, and begged for the mercy of the Tammany leader, Croker turned his back upon him and simply remarked:

"I believe in Bryan and free silver."
Hill next appealed to Senator Murphy to save him, but Murphy also refused. Then Hill appealed to Judge Van Wyck, who, though he refused to accede to Hill's demand, was more sympathetic.

## Over Forty Thousand People

Added to the comfort and attractiveness of their homes this past year by placing into them Limbert's Holland Dutch Arts & Crafts Furniture.

For beauty and refined simplicity of design, for strength and durability, for long, hard service, for looking well with little care, FOR BIG VALUE, there is no furniture made superior to Limbert's Arts & Crafts.

There is a dealer near you who sells this furniture. Let us send you his name and our FREE, 64 page booklet which illustrates the suite to match sideboard shown here and over 300 other patterns—several Arts & Crafts rooms in colors-and tells an interesting story about the Dutch Craftsmen who make Limbert Furniture.

MEAD CYCLE CO. Dash M-55 CHICAGO.

MEAD CYCLE CO., Dept. M-55, CHICAGO

Everybody was wondering how Croker would meet the Ice Trust scandal when the Democratic State Convention met. The majority of the committee on the platform was composed of up-state Democrats, and they did not want to offend Croker, knowing that he was expected to finance the campaign. They drew a platform simply denouncing the trust generally. When Croker saw the draft he pronounced the plank regarding the trust to be bosh. Tak-ing his pencil, he wrote: "And we particu-larly denounce the Ice Trust as the most vicious and indefensible of all trusts, be-cause it most affects the poor." While Croker was writing these words he never cracked a smile.

The demonstration in honor of Mr. Bryan about the middle of October was the most wonderful thing that New York had then

ever witnessed. The night of Mr. Bryan's speech Croker, surrounded by his chief advisers, the majority of whom were not Bryan men, pointed to the cheering crowds and re-marked: "If I had not come out for Bryan the rank and file would have taken Tam-

many Hall away from me."
Shortly after the election Croker appointed a committee made up of Tammany men, and headed by Lewis Nixon, to investigate the horrible social conditions on the East Side. The committee brought in a report showing that the conditions were

bird S. Coler, who was the controller of the city, had been fighting Croker for some time, and, sided by ex-Senator Hill and John C. Sheehan, had built up a considerable following. It was apparent to any close observer that Coler was about the cole was a point the cole was about the cole was a source. only man who could be elected by the Democrats as mayor to succeed Van Wyck. However, nobody believed that Croker would consent to Coler's nomination. The legislature had amended the city charter, cutting down the term of the next mayor to two years instead of four.

#### The Defeat of Tammany

Croker spent over six months in Europe this year, although his friends told him that if he did not stay in New York Tammany would be defeated at the approaching elec-tion of 1901. Croker replied that rather than give up his life in England he would prefer giving up the leadership of Tam-many Hall. It was generally accepted as fact that Croker had become very rich and that he was tiring of the hardships of politi-cal life; nevertheless he returned in the early fall and in a very had temper. He early fall and in a very bad temper. He became convinced that the police conditions were fully as bad as the newspapers had painted them. He met John F. Carroll, his assistant in the Democratic Club, and charged him with the full responsibility, in the presence of a number of others. He told Carroll that he had lied to him about the horrible conditions in the city. He also recognized that the Brooklyn Democracy. promised that the Brooklyn Democracy could name the candidate for mayor. Van Wyck was nominated for the supreme court bench and Carroll really made most of the other nominations. I am satisfied that Croker saw what was coming, although he buckled down to work and spent hours every day at Tammany Hall, after Edward M. Shepherd had been nominated as the Democratic candidate for mayor against Seth Low, the Republican and Fusion candidate.

The horrible social conditions on the East Side, Crokerism and Deveryism were the only issues of the campaign. It was in this campaign that William Travers Jerome was a candidate for district attorney, and he made a national reputation as a stump speaker. The whole Tammany ticket went to defeat. Van Wyck ran behind the greater part of his ticket. The Tammany defeat, however, was not so emphatic as the defeat of that organization at the recent election, when John Purroy Mitchel was elected mayor.

A few weeks after the defeat, Croker astonished New York by calling a meeting of the Tammany district leaders and tendering his resignation. He then made a motion, which was carried, making Lewis Nixon his successor as the Tammany leader. A few weeks after this Croker sailed for his home in England, and since then he has made only four visits to America, never spending more than two weeks at a time in New York.

-With an Underfeed!

Here's testimony that convinces. Read Mr. Wirth's letter. Think about it. Let it sink in. It's one of the greatest money-saving pieces of evidence we ever heard of. Mr. Wirth writes: "My Underfeed is the most economical I could have installed. During the last very cold winter I burned only 18 tons of soft coal screenings at \$4 per ton for my 15 rooms. Hard coal would have cost double the amount." To add emphasis to his recommendation, he said: "The

three Minneapolis park buildings heated by the Underfeed have given zery good satisfaction." Others write:

"Heats 12-room house for \$40." "A great fuel saver." "No repairs in 7 years." "For economy and heat, can't be beat."

"Ten rooms heated for \$28." "Saved \$122 a season." Over 25,000 Underfeed users have proved our claim that

> VILLIAMSON Underfeed **Furnaces** and Boilers Cut Coal Bills 1/2 to

The Underfeed principle is different from all others—and it's better. Coal is fed from below. All the fire is on top. Smoke and guess are consumed, making more heat with no soot, smell, smoke, clinkers or dirt, and few ashes. Cheap slack soft coal or pea and buckwheat sizes of hard coal yield in the Underfeed as much clean, even heat as highest priced coal in other heaters. The Underfeed is adapted to warm air, strain or hot water in buildings of all kinds, large or small. Soon pays for itself.

Cut-Out View of Underfeed Furnace

## 50% Saving Guaranteed With an Underfeed

We guarantee a saving over your present coal bills of at least one-half by means of the Under-feed, when properly installed and operated. Every Underfeed carries this guarantee, which is backed by a \$750,000 company. So you take no risk. The burden of proof is on the Under-feed. It has satisfied thousands—it will satisfy you. If you are tired of paying big coal bills, or if you are going to build, send the coupon for full details of the Underfeed. The result will pleasantly surprise you. (2)

## THE STREET OF SEVEN STARS

yawned herself off to bed. From Jimmy's room Peter could hear the soft hum of their

"You have been awfully good to me,"
McLean said as he finally rose to go. "I—I
want you to know that I'll never forget this

evening, never."
"It has been splendid, hasn't it? Since "It has been spiendid, hash tit? Since little Scatchy left there has been no one for the piano. I have been lonely sometimes for some one to talk music to."

Lonely! Poor Peter!

"Then you will let me come back?"

"Will I indeed! I—I'll be grateful."

"How soon would be proper. I daresay

tomorrow you'll be busy-Christmas and

"Do you mean you would like to come

tomorrow?"
"If old Peter wouldn't be fussed. He

might think ——"
"Peter always wants every one to be happy. So if you really care -"And I'll not bore you?" "Rather not!"

"How—about what time?"
"In the afternoon would be pleasant, I think. And then Jimmy can listen. He loves music.

McLean, having found his fur-lined coat, got into it as slowly as possible. Then he missed a glove, and it must be searched for in all the dark corners of the salon until found in his pocket. Even then he hesi-tated, lingered, loth to break up this little world of two.

"You play wonderfully," he said.

\$3.00

\$3.50

\$4.00

"So do you."
"If only something comes of it! It's curious, isn't it, when you think of it? You and I meeting here in the center of Europe and both of us working our heads off for something that may never pan out."

There was something reminiscent about that to Harmony. It was not until after young McLean had gone that she recalled. It was almost word for word what Peter had said to her in the coffee house the night they met. She thought it very curious, the coincidence, and pondered it, being ignorant of the fact that it is always a matter for wonder when the man meets the woman, no matter where. Nothing is less curious, more inevitable, more amazing. "You and I," forsooth, said Peter! "You and I," cried young McLean!

QUITE suddenly Peter's house, built on the sand, collapsed. The shock came on Christmas Day, after young McLean, now frankly infatuated, had been driven home

Peter did it after his own fashion. Harmony, with unflagging enthusiasm, was looking tired. Suggestions to this effect rolled off McLean's back like rain off a roof. Finally Peter gathered up the fur-lined coat, the velours hat, gloves and stick, and placed them on the piano in front of the younger man.

"I'm sorry you must go," said Peter calmly, "but, as you say, Miss Wells is tired and there is supper to be eaten. Don't let me hurry you."

The portier was at the door as McLean, laughing and protesting, went out. He brought a cablegram for Anna. Peter took it to her door and waited uneasily while she read it.

It was an urgent summons home; the old father was very low. He was calling for her, and a few days or weeks would see the end. There were things that must be looked after. The need of her was imperative. With the death the old man's pension would cease and Anna was the breadwinner.

Anna held the paper out to Peter and sat

down. Her nervous strength seemed to have deserted her. All at once she was a stricken, elderly woman, with hope wiped out of her face and something nearer resent-

ment than grief in its place.

"It has come, Peter," she said dully.

"I always knew it couldn't last. They've

always hung about my neck, and now ——"
"Do you think you must go? Isn't there some way? If things are so bad you could hardly get there in time, and—you must think of yourself a little, Anna."

"I am not thinking of anything else. Peter, I'm an uncommonly selfish woman, but I ——"

but I -

Quite without warning she burst out crying, unlovely, audible weeping that shook her narrow shoulders. Harmony heard the sound and joined them. After a look at Anna she sat down beside her and put a white arm over her shoulders. She did not try to speak. Anna's noisy grief subsided as suddenly as it came. She patted Har-mony's hand in mute acknowledgment and

"I'm not grieving, child," she said; "I'm only realizing what a selfish old maid I am. I'm crying because I'm a disappointment to myself. Harry, I'm going back to America."

America.

And that, after hours of discussion, was where they ended. Anna must go at once. Peter must keep the apartment, having Jimmy to look after and to hide. What was a frightful dilemma to him and to Harmony Anna took rather lightly.

"You'll find some one else to take my place," she said. "If I had a day I could find a dozen."

"And in the interval?" Harmony asked

without looking at Peter.
"The interval! Tut! Peter is your brother, to all intents and purposes. And if you are thinking of scandal-mongers, who will know?"

Having determined to go, no arguments moved Anna, nor could either of the two think of anything to urge beyond a situation she refused to see, or rather a situation she refused to acknowledge. She was not as comfortable as she pretended. During all that long night, while snow sifted down into the ugly yard and made it beautiful, while Jimmy slept and the white mice played, while Harmony tossed and tried to sleep and Peter sat in his cold room and smoked his pipe, Anna packed her untidy belongings and added a name now and then to a list that was meant for Peter, a list of possible substitutes for herself in the little household.

She left early the next morning, a grim little person who bent over the sleeping boy hungrily, and insisted on carrying her own bag down the stairs. Harmony did not go to the station, but stayed at home, pale and silent, hovering around against Jimmy's awakening and struggling against a feeling of panic. Not that she feared Peter or herself. But she was conventional; shielded girls are accustomed to lean for a certain support on the proprieties, as bridge players

support on the proprieties, as bridge players depend on rules.

Peter came back to breakfast but ate little. Harmony did not even sit down, but drank her cup of coffee standing, looking down at the snow below. Jimmy still slept.

"Won't you sit down?" said Peter.

"I'm not hungry, thank you."

"You can sit down without eating."

Peter was nervous. To cover his uneasiness he was distinctly gruff. He pulled a chair out for her and she sat down. Now that they were face to face the tension was that they were face to face the tension was lessened. Peter laid Anna's list on the table between them and bent over it toward

her.
"You are hurting me very much, Harry,"
he said. "Do you know why?"

"I? I am only sorry about Anna. I miss r. I—I was fond of her."

her. I—I was fond or ner.
"So was I. But that isn't it, Harry. It's something else."

"I'm uncomfortable, Peter."
"So am I. I'm sorry you don't trust me.
For that's it."
"Not at all. But, Peter, what will
people say?"

"A great deal, if they know. Who is to know? How many people know about us? A handful, at the most, McLean and Mrs. Boyer and one or two others. Of course I can go away until we get some one to take Anna's place, but you'd be here alone at night, and if the youngster had an attack

"Oh, no, don't leave him!"
"It's holiday time. There are no clinics until next week. If you'll put up with me-

"Put up with you, when it is your apart-ment I use, your food I eat!" She almost choked. "Peter, I must talk about money."

"I'm coming to that. Don't you suppose you more than earn everything? Doesn't it humiliate me hourly to see you working

here?"
"Peter! Would you rob me of my last
vestige of self-respect?"
This being unanswerable, Peter fell back

on his major premise:

"If you'll put up with me for a day or so I'll take this list of Anna's and hunt up

(Continued on Page 73)

(Continued from Page 70)

somebody. Just describe the person you desire and I'll find her." He assumed a certainty he was far from feeling, but it reassured the girl. "A woman, of course?"

"Of course. And not young."
"'Not young," wrote Peter. "Fat?"
Harmony recalled Mrs. Boyer's ample

figure and shook her head.
"Not too stout. And agreeable. That's

most important."
"'Agreeable,'" wrote Peter. "Although
Anna was hardly agreeable, in the strict
sense of the word, was she?"

"She was interesting, and—and human."
"Human!" wrote Peter. "Wanted, a woman, not young, not too stout, agreeable and human. Shall I advertise?"

The strain was quite gone by that time. Harmony was smiling. Jimmy, waking, called for food, and the morning of the first

day was under way.

Peter was well content that morning, in spite of an undercurrent of uneasiness. Before this Anna had shared his proprietor-ship with him. Now the little household was his. His vicarious domesticity pleased him. He strutted about, taking a new view of his domain; he tightened a doorknob and fastened a noisy window. He inspected the coal supply and grumbled over its qual-ity. He filled the copper kettle on the stove, carried in the water for Jimmy's morning bath, cleaned the mouse cage. He even insisted on peeling the little German pota-toes, until Harmony cried aloud at his wastefulness and took the knife from him.

And afterward, while Harmony in the sickroom read aloud and Jimmy put the wooden sentry into the cage to keep order, he got out his books and tried to study. But he did little work. His book lay on his knee, his pipe died beside him. The strangeness of the situation came over him, sitting there, and left him rather frightened. He tried to see it from the viewpoint of an outsider, and found himself incredulous and doubting. McLean would resent the situa-tion. Even the portier was a person to reckon with. The skepticism of the American colony was a thing to fear and avoid.

And over all hung the incessant worry

about money; he could just manage alone. He could not, by any method he knew of, stretch his resources to cover a separate arrangement for himself. But he had undertaken to shield a girl-woman and a child, and shield them he would and could.

Brave thoughts were Peter's that snowy morning in the great salon of Maria Theresa, with the cat of the portier purring before the fire; brave thoughts, cool reason, with Harmony practicing scales very softly while Jimmy slept, and with Anna speeding through a white world, to the accompani-

ment of bitter meditation.

Peter had meant to go to Semmering that day, but even the urgency of Marie's need faded before his own situation. He wired Stewart that he would come as soon as he could, and immediately after lunch departed for the club, Anna's list in his pocket, Harmony's requirements in mind.
He paused at Jimmy's door on his way out.
"What shall it be today?" he inquired.
"A postcard or a crayon?"
"I wish I could have a dog."
"Well have a dog."

"We'll have a dog when you are better and can take him walking. Wait until spring, son."
"Some more mice?"

"You will have them-but not today."

"You will have them—but not today."
"What holiday comes next?"
"New Year's Day. Suppose I bring you a New Year's card."
"That's right," agreed Jimmy. "One I can send to dad. Do you think he will come back this year?" wistfully.

Peter dropped on his baggy knees beside the bed and drew the little wasted figure to him.

to him.
"I think you'll surely see him this year, old man," he said huskily.

Peter walked to the Doctors' Club. On the way he happened on little Georgiev, the Bulgarian, and they went on together. Peter managed to make out that Georgiev was studying English, and that he desired to know the state of health and the abode of the Fraulein Wells. Peter evaded the latter by the simple expedient of pretending not to understand. Thelittle Bulgarian watched him earnestly, his smoldering eyes not with out suspicion. There had been much talk in the *Pension* Schwarz about the departure together of the three Americans. The Jew from Galicia still raved over Harmony's beauty.

Georgiev rather hoped, by staying by Peter, to be led toward his star. But Peter left him at the Doctors' Club, still amiable, but absolutely obtuse to the question nearest

the little spy's heart.
The club was almost deserted. The holidays had taken many of the members out of town. Other men were taking advantage of the vacation to see the city, or to make acquaintance again with families they had hardly seen during the busy weeks before Christmas. The room at the top of the stairs where the wives of the members were apt to meet for chocolate and to exchange the addresses of dressmakers was empty; in the reading room he found McLean. Although not a member, McLean was a sort of honorary habitué, being allowed the privilege of the club in exchange for a dependable willingness to play at entertainments of all sorts

It was in Peter's mind to enlist McLean's assistance in his difficulties. McLean knew a good many people. He was popular, good looking, and in a colony where, unlike Lon-don and Paris, the great majority were people of moderate means, he was conspic-uously well off. But he was also much younger than Peter and intolerant with the insolence of youth. Peter was thinking hard as he took off his overcoat and ordered beer.

The boy was in love with Harmony already: Peter had seen that, as he saw many things. How far his love might carry him, Peter had no idea. It seemed to him, as he sat across the reading table and studied him over his magazine, that McLean would resent bitterly the girl's position, and that when he learned it a crisis might be pre-

cipitated. One of three things might happen: He might bend all his energies to second Peter's effort to fill Anna's place, to find the right person; he might suggest taking Anna's place himself, and insist that his presence in the apartment would be as justifiable as Peter's: or he might do at once the thing Peter felt he would do eventually, cut the knot of the difficulty by asking Harmony to marry him. Peter, greeting him pleasantly, decided not to tell him anything, to keep him away if possible until the thing was straightened out, and to wait for an hour at the club in the hope that a solution might stroll in for chocolate and gossip.

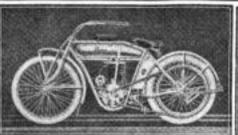

In any event explanation to McLean would have required justification. Peter disliked the idea. He could humble himself, if necessary, to a woman; he could admit his asininity in assuming the responsibility of Jimmy, for instance, and any woman worthy of the name, or worthy of living in the house with Harmony, would understand. But McLean was young, intolerant. He was more than that, though Peter, concealing from himself just what Harmony meant to him, would not have admitted a rival for what he had never claimed. But a rival the boy was. Peter, calmly reading a magazine and drinking his Munich beer, was in the grip of the fiercest jealousy. He turned pages automatically, to recall nothing of what he had read.

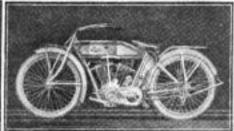

McLean, sitting across from him, watched him surreptitiously. Big Peter, aggressively masculine, heavy of shoulder, direct of speech and eye, was to him the embodiment of all that a woman should desire in a man. He, too, was jealous, but humbly so. Unlike Peter he knew his situation, was young enough to glory in it. Shameless love is always young; with years comes discre-tion, perhaps loss of confidence. The Cru-saders were youths, pursuing an idea to the ends of the earth and flaunting a lady's guerdon from spear or saddle-bow. The older men among them tucked the handkerchief or bit of a gauntleted glove under jerkin and armor near the heart, and flung to the air the guerdon of some light o' love. McLean would have shouted Harmony's name from the housetops. Peter did not ac-knowledge even to himself that he was in ove with her

It occurred to McLean after a time that Peter being in the club, and Harmony being in all probability at home, it might be possible to see her alone for a few minutes. He had not intended to go back to the house in the Siebensternstrasse so soon after being peremptorily put out; he had come to the club with the intention of clinching his resolution with a game of cribbage. But fate was playing into his hands. There was no cribbage player round, and Peter himself sat across deeply immersed in a magazine. McLean rose, not stealthily, but without

unnecessary noise.

So far so good. Peter turned a page and went on reading. McLean sauntered to a window, hands in pockets. He even whistled a trifle, under his breath, to prove how

Pope Model H-14. Motor, 4 h. p.; imported mag-neto; V belt drive; Eclipse clutch; apring seat post; large separate gasoline and oil tanks; 51-inch wheel base. Price \$150.

Pope Model L-14. "The Greyhound of the road." Chain drive: Bosch magneto; Eclipse multiple disk clutch; Pope celebrated rear spring suspension: 5615 inch wheel base. Price \$250.

## To and from your work with comfort and pleasure

Ride a Pope Motorcycle to and from your work. Save time, strength and money; enjoy the keen, open-air exhilaration of gliding smoothly and swiftly along the streets. Run your errands on a Pope; take your holidays on it.

No one can pass you on the road. You can take hills that are supposed to be impossible; many competitive hill-climbing tests have proved that.

All working parts are exceptionally strong; they do not get out of order. No stopping beside the road for mussy, tiresome repairs.

The Pope is comfortable; it is as nearly "jarless" as a motorcycle can be made. It holds the road like a six-cylinder automobile.

Model H-14 is built for the man who wants a light, reliable, moderate priced machine. It has a speed range of 4 to 45 miles an hour. It was the first and leading popular priced motorcycle made, and is a splendid bargain at the price. It holds the road as well as a heavy machine, and is a wonderful hill climber.

Model L-14 "Twin" has developed, under scientific test, 13.9 h. p. measured at the rear wheel. It has the Pope Overhead Valve Motor -the most powerful and economical motor. Also rear spring suspension, insulating frame, motor and rider complet. ly protected from road shocks, and assisting steady, forward motion. Noone can passit—70-mile speed if you want it.

Other Pope Models, \$200, \$215, \$285

# Cutting Wholesale Bookkeeping Costs

HIS is the subject of the new Burroughs bulletin for wholesalers and jobbers.

This bulletin is filled with short-cut bookkeeping ideas gathered by the Burroughs Information and Research Department from thousands of pro-gressive houses in all lines of business.

"Cutting Wholesale Bookkeeping Costs" shows how wholesalers are getting records and cost figures by simple, short-cut methods and how you can get business-building information in the same way.

Among the short cut ideas in this bulletin are boiled-down suggestions for getting out monthly statements on the money-collecting dates; for error-proof invoice checking; for a daily sales recapitulation: by actual bookkeeping and statement forms; and other valuable suggestions.

Our purpose in offering you this service bulletin is; that the business man who saves money by using short-cut methods is usually ready to look into the still greater saving he can make by handling these same methods on a machine.

Send the coupon or ask our System Service Department for specific infor-mation on your bookkeeping problems.

very casual were his intentions. Still whistling, he moved toward the door. Peter turned another page, which was curiously soon to have read two columns of small

"Yes."

"Mind if I go with you?"
"Not at all."

Peter, taking down his old overcoat from its hook, turned and caught the boy's eye. It was a swift exchange of glances, but illuminating—Peter's whimsical, but with a sort of grim determination; McLean's sheepish, but equally determined. "Rotten afternoon," said McLean as they started for the stairs. "Half rain, half

snow. Streets are ankle deep."
"I'm not particularly keen about walking, but—I don't care for this tomb alone."
Nothing was further from McLean's mind than a walk with Peter that afternoon.

He hesitated half way down the upper flight.
"You don't care for cribbage, do you?" "Don't know anything about it. How about pinocle?"

They had both stopped, equally determined, equally hesitating.

"Pinocle it is," acquiesced McLean. "I was only going because there was nothing to do."

to do."

Things went very well for Peter that afternoon—up to a certain point. He beat McLean unmercifully, playing with cold deliberation. McLean wearied, fidgeted, railed at his luck. Peter played on grimly. The club filled up toward the coffee hour. Two or three women, wives of members, a young girl to whom McLean had been rather attentive before he met Harmony and who attentive before he met Harmony and who

bridled at the abstracted bow he gave her.
And, finally, when hope in Peter was dead,
one of the women on Anna's list.
Peter, laying down pairs and marking up score, went over Harmony's requirements.

Doctor Jennings seemed to fit them all, a woman, not young, not too stout, agreeable and human. She was a large, almost bo-vinely placid person, not at all reminiscent of Anna. She was neat where Anna had been disorderly, well dressed and breezy against Anna's dowdiness and sharpness. against Anna's dowdiness and sharpness.

Peter, having totaled the score, rose and looked down at McLean.

"You're a nice lad," he said smiling.
"Some time I shall teach you the game."

"How about a lesson tonight in Seven-Star Street?"

"Tonight? Why, I'm sorry. We have

Star Street?"

"Tonight? Why, I'm sorry. We have an engagement for tonight." The "we" was deliberate and cruel. McLean writhed. Also the statement was false, but the boy was spared that knowledge for the moment. Things went well. Doctor Jennings was badly off for quarters. She would make a change if she could better herself. Peter drew her off to a corner and stated his case. She listened attentively, albeit not without

She listened attentively, albeit not without disapproval.

She frankly discredited the altruism of Peter's motives when he told her about Harmony. But as the recital went on she found herself rather touched. The story of Jimmy appealed to her. She scolded and lauded Peter in one breath, and what was more to the point, she promised to visit the house in the Siebensternstrasse the next

day.
"So Anna Gates has gone home!" she reflected. "When?"
"This morning."
"Then the girl is there alone?"
"You She is very young and inexpe-

"Yes. She is very young and inexperienced, and the boy—it's myocarditis. She's afraid to be left with him."

"Is she quite alone?"

"Absolutely, and without funds, except bough for her lessons. Our arrangement was that she should keep the house going: that was her share."

Doctor Jennings was impressed. It was impossible to talk to Peter and not believe him. Women trusted Peter always.

"You've been very foolish, Doctor Byrne," she said as she rose; "but you've been disinterested enough to offset that and to put some of us to shame. Tomorrow three, if it suits you. You said the Siebensternstrasse?

Peter went home exultant,

## Positions for Students This Summer

WE will have openings for about six hundred students this summer to assist us in our field work. Students may either work at home or travel, alone or in company with other students.

Last summer, of the five hundred students, men and women, who assisted us, 8 made over \$1,200.00 during the vacation period; 15 made \$600.00 and upwards; almost all averaged over \$25.00 a week.

Applications for this year should be made at once. State your qualifications. Address EDUCATIONAL DIVISION, Box 257, THE CURTIS Publishing Company, Philadelphia, Penna.

## a year in bohemia

(Continued from Page 27)

I looked into her innocent young eyes. I looked into her innocent young eyes.
No, she didn't understand. Rhoda had said nothing to make her doubt her father. But I caught my breath at the narrow escape and I looked coldly at Rhoda.

"It's the only way," she said in answer to my unspoken accusation.

"Mother," Helena said, "I want you to take me to all those parties you and father go to. Aunt Rhoda says father won't want it, and she thinks he will begin to see that what isn't good for you and me isn't good

what isn't good for you and me isn't good

for him either."

"Go into your room for a moment, dear,"
I said, "and let me talk alone with your
Aunt Rhoda."

After she had gone I turned angrily to Rhoda.

"If this is your way out ——" I began.
"It is," she said coolly, "and it is the only way."
"It's nonsense. I can't let that ignorant

"Helena is innocent, but she is not ig-norant as you think," Rhoda said. "She knows you are unhappy. Outsider as I am, I have seen that she blames her father for it. You know her manner to him isn't natu-ral any more."

"But he doesn't know that. That is

"But he doesn't know that. That is not the point anyway. I can't have her meeting these men."

"Most of them would respect her youth. Besides, don't you see that Grant would have to be looking after her? I'd put Archie on, too, in case Grant ever fell asleep at his post."

"I can't do it, Rhoda," I said.

"You're always talking of using children to bind a man to his wife," Rhoda reminded me. "Here's a new way of using your daughter. It isn't as if Helena would get smirched."

"She can't help it," I said. "She doesn't even know that we drink at our parties."

Helena came down the hall.

Helena came down the hall.

"I can't help hearing some of the things you say, mother," she said. "I know you do have things to drink, because one day last year I saw the bottles in father's closet when I went to borrow his sweater.

Rhods compressed her smiling lips. "And once or twice you waked me last

"And once or twice you waked me last year when you came in, and I looked at my watch and it was past two," Helena said.
"Go away, child," I said irritably.
After she had gone, Rhoda said:
"Now do be sensible, Dollie. Won't the day come when Helena will have to meet your friends if you stay on here? You are simply pushing things ahead a year or so. I tell you Sophie's kept her hold on Grant far longer than I thought she would. I thought she'd let go when Baring was thought she'd let go when Baring was flashed on her sight, but she was in a crowd

mashed on her sight, but she was in a crowd with him last night, and as soon as Grant came in she dropped him. The point is, Baring's a nice, clean, sophisticated chap who wouldn't look at Sophie ——"

"Thanks on Grant's account!" I put in.

"Grant is no judge of women," she said impatiently. "At heart he's only a country boy, or he'd have shaken Sophie long ago. Excuse me for speaking the plain truth, but you've irritated me, when I'm ago. Excuse me for speaking the plain truth, but you've irritated me, when I'm doing my level best to help you. As I started to say, young Baring wouldn't look at Sophie, but Sophie doesn't know that. Doubtless she thinks she's got him in reserve. Now do you see what I mean?"

I shook my head.

"I mean," explained Rhoda patiently, "that if we bring Helena out, Grant will be so busy looking after her for a little while that he'll have to neglect Sophie. Then to

that he'll have to neglect Sophie. Then to make him angry she will begin on Baring. Presently she'll find Baring as impervious as one of his South Pole icebergs, and she'll drop Grant like a last year's bone and sink every tooth in her head into Baring. I tell you I know Sophie. She's taught me all

her ways."
"But if anything should happen to Helena ——" I began.
"How could it?" urged Rhoda. She saw that I was weakening and she pressed her advantage. "It's the only way to save things for yourself. The men are all saying that Grant's work is losing its grip. Of course if you're afraid of the row he will make when

he finds out what you're up to ——"
"I don't care for that," I said, tightening
my lips. "I suppose I'll have to do it, Rhoda, since you've gone so far with Hel-ena. But I do resent your doing this over

She kissed me relievedly.

"I don't care what you resent if you'll only doit," she said. "I had to proceed over your head, otherwise you would not have consented. It would have seemed to you as if you were making a burnt offering of your child."

It still looked to me a little like that, but I felt I was committed. I arranged for a big supper, nominally in honor of Baring. Grant was pleased with me for thinking of it, and for one or two of the special "stunts" I had hit on. He said to me that of course I had made arrangements for sending Hel-ena to spend the night with some one of her college friends, and I replied carelessly that I had attended to it.

On the evening of the supper Helena stayed in her room until half the guests had arrived. I believe the child hid in the closet most of the time, so fearful was she that Grant would spoil the plan. For all my Heiena's innocence and highmindedness, I think there was in her an element of excited enjoyment at being on the brink of the pit, so to speak. Grant did not see her when she first appeared, because he was talking to Sophie Marston. Between us Rhoda and I had introduced her to several people before Grant woke to her presence. She was listening to Knight's talk at the time, her big soulful eyes gazing up at him trustfully. I saw Grant go over and shake her playfully by the shoulder, and say something to her. Then he went back to Sophie.

Helena came to me presently.

"Father told me to go to bed as soon as Mr. Knight got through that paragraph, mother," she said, "and he was so sure I would that he went back to that thin lady. I think she's horrid. And Mr. Knight said."

"I should like that paragraph to last for-I should like that paragraph to last for-

ever!' Isn't he a funny man?"
"He didn't mean that," I said.
"Oh, I know he didn't," Helena replied serenely. "Aunt Rhoda told me that your friends always say things in jokes, and that I am never to take what they say seriously."

"Go over to your Aunt Rhoda now," I said, for I saw Grant coming toward us.

It was some minutes before Grant could

speak to me alone. Then he said rapidly,

for people were coming toward us:

"I told Helena to go to bed twenty minutes ago. What does she mean by disobeying
me?"

I looked him straight in the eye.

"She's going to stay up till the last person goes if she wants to," I said. "I told her she might."

"She shall obey me," he said, gritting his teeth.

"Make a scene, if you want to," I said, "but you know what Helena's will is. If it comes to a choice between her parents, I don't think she'll choose to obey the one who deserted her this summer."

A fresh guest arrived and I greeted him smilingly, and even with a little elation. For many months I had been unwillingly yielding to Grant. I had a feeling that I might get the whiphand of him now.

might get the whiphand of him now.

Later on, when the supper was half over, he left Mrs. Marston to come to me again.

"Send Helena to bed," he said, and this time his tone was pleading rather than commanding. "I don't want her to see any of these people taking wine."

"Can't you trust your friends?" I asked mockingly. "Anyhow you are free to protect your child from your friends."

Three things I noted in the course of that to me very exciting evening. What with

Three things I noted in the course of that to me very exciting evening. What with his anger at me, his watchfulness over Helena and the attention he had to pay his other guests, Grant was very little with Sophie Marston, and he was not so devoted as usual. She did just as Rhoda predicted—made a dead set at Baring. As Rhoda predicted also, Baring was impregnable, though dicted also, Baring was impregnable, though I am afraid Sophie could not bring herself to see it. And lastly Baring scarcely took es off my beautiful young daughter. I had a fierce pleasure in the irony of the

Grant scarcely waited for the last person to leave before he turned on me, his teeth

set, his eyes angry.

"Now what does this mean?" he said grimly. "Why did you let that child..."

"Helena? She's not a child. She's seventeen. Her birthday was last week, but

you weren't home." He winced at the thrust. "Seventeen is a baby."

Helena is quite mature for seventeen," I said. "You'd have noticed that if you

ROYAL CHAIR CO., STURGIS, MICH.

had been with her very much during the past year."

I was trembling, and yet I was not afraid. I had been passive for a long time, for loving Grant so much I had been in his power. Now that I saw signs of his being in my power I liked the change. I am not one of those who prefer the meek martyr's crown. "I won't have it," he cried. "I forbid you

to allow Helena to——"
"To meet our friends?" I finished.

"If you put it so."
"What will you do if I disobey?"
I had him there and he knew it. He couldn't send us away. He had already said that he could not afford to keep up two establishments for his family. He could not afford to send Helena to some woman's college when she could live at home and attend Columbia. He could not drag her away from any company to which I took her without giving the people we knew a

chance to gossip.

"Why are you doing this?" he stormed.

"Isn't it obvious? You are away so
much, I can't always depend on your escort in the evening when we are invited out. I want Helens for a companion. It's only putting forward the time a year or so. Had you thought of that?" Evidently he had not. "Whom is she to meet if not our friends?"

pursued.

He began to storm again.

"She was talking to Knight—Knight whom two women have divorced! Upon my soul, Dollie, you amaze me! Where is your mother-care and love for that child?"

My voice broke.

"Where have been your husband-love and care for me, Grant, if it comes to that? She is only meeting the sort of people I have met. As to Knight, she might do worse him."

met. As to Knight, she might do worse than marry him."

"Might do worse!" Grant dashed his fist down on the table by which he was sitting. "Do you realize the sort of man Knight is?"

"Oh, of course," I said, pretending to misunderstand; "he's twenty-five years older than Helena, but he has money."

"Dollie," said Grant, trying to speak quietly, "I don't know what has got into you....."

"Oh, I don't prefer that sort of marriage for her," I broke in; "but as I tell you, whom is she to meet and marry if not one of our friends? I have had to change all my views of life since I joined this group you have chosen. I have not liked it, but I have accepted it. I want to keep our family together. If I have compromised to please you, so shall Helena—"
"But I don't want her to compromise!"

"But I don't want her to compromise!"
he shouted.

"Why not?" I asked innocently.

"Why not? You're mad. She's a young
girl; we're middle-aged. There is no need
for—for spoiling her girlish ideals."

"What you really mean," I said slowly,

"is that you don't want her to be in our
world and learn what kind of man you are.
But why should I help deceive her in that?
It will be better for Helena to open her
blind eyes soon. According to your scheme. blind eyes soon. According to your scheme, she would some day marry one of our friends and, finding out what he was, learn what you are. It will be less expensive for her to learn what you are, and decide whether or not she'll risk a husband like

I had Grant gasping, appalled at my cynicism, yet not daring to answer me for fear he'd get tangled still further in the net

of my logic. 'I'm sure, on thinking it over, that you'll "I m sure, on thinking it over, that you is agree with me and that your daughter might as well understand what is coming to her now as later," I went on in a reasonable tone. "Suppose she marries Knight. That's what you are afraid of, isn't it?"

"I won't discuss it!" roared Grant, for he

saw what I was coming to again.

"That is what you are afraid of. You don't want Helena to be hurt. But you let me be hurt. Knight, or whomever Helena marries, will probably look at things about as you do. He needn't protect his wife from pain if it interferes with his own pleasure, but he is determined to protect his daughter. Now I want Helens to be happy in her marriage. But I don't see how I can insure it. That being so, she might just as well get used to our world early. It is because I want to save Helena what I have suffered

that I am beginning to inure her now."

Grant was as baffled as he was enraged. There simply was no answer to my argument. I was merely carrying out logically for the whole family the kind of life he had

# Have YOU a camera?

If so, do you know Photoloid PHOTOLOID-

the wonderful new material for printing?

Photoloid is to photography what canvas is to painting-it makes your pictures permanent.

### WHAT PHOTOLOID IS:

Photoloid is a hard, impervious, washable product made of Fiberloid — imperishable, stainless, fadeless, indestructible, water-proof and chemical proof. Its fine, hard surface readily receives the most delicate and minutest detail.

Photoloid is handled similar to any "gas-light" paper.

Photoloid is a tremendous time-saver. Photoloid is ideal for transparencies.

Photoloid is suitable to amateur and profes-

Photoloid is made in Porcelain White Opaque, Veined Ivory and Cream translu-cent. Blacks, Sepias, Olives and Grays printed by direct development.

Photoloid is the most important discovery in photography in years, and therefore demands your investigation.

## WHAT PHOTOLOID DOES:

Photoloid facilitates the process of printing.
Photoloid insures genuinely artistic and PER-MANENT prints.
Photoloid eliminates mounting.
Photoloid simplifies the securing of carbon

effects. Photoloid takes water colors easily. Photoloid makes wonderful miniatures. Photoloid makes you an artist in photography.

ITS SALIENT FEATURES:

-1. IMPERISHABLE
-2. NEEDS NO MOUNTING
-3. NON-CURLING
-4. WASHABLE
-5. QUICK-DRYING

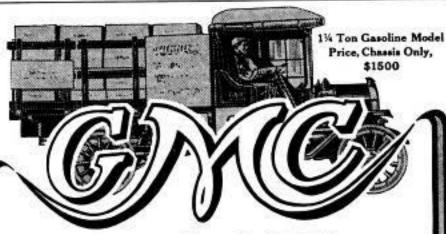

Any studie will print your photograph on PHOTOLOID il so requested. All shadon can get it. In your own camera work, ask whomer does over penting ill sie di not own on hisse PHIOTOLOID. Ill pos conset get il done in your term, send in the registres with restance resenting own of material and her cents additional for each print, and we will do the rest.

## PHOTOLOID

If not on hand at your dealer's, we will gladly and promptly fill all orders accompanied by remittance. Be sure to specify color and size.

Acme Folding Canvas Root Co., Minerisburg, Ohio,

A line today addressed as below will give you complete details of a permanent, profitable, interesting plan that will satisfy your "money wants," however large they may be. Address THE SATURDAY EVENING POST, Box 255, Philadelphia, Pennsylvania set for himself and me. To resent it merely put him in the wrong.

He flung away to our room and locked the door on me. I was too exalted with my victory, for I saw it was that, to be annoyed, and besides I was amused at his childish-ness. After a little while I tapped on the door and said softly:

"You'd better open the door, Grant.
Otherwise I'll have to stay with Helena."
When presently he flung open the door
I could not help adding:

"I want to protect you from her judgment just as far as I can." It was a hateful thing to say, though true, but I had been hurt for so long, and

this was the first chance I had had for months really to count with Grant.

Then began for me a time of victory and of misery. For after the first glow of the battle I was not happy in getting on badly with the man I loved; and besides I was terrified about Helena. I was afraid that after all I might be sacrificing her to myself. Perhaps Grant went to Mrs. Marston for sympathy and perhaps he bore his anger alone. I saw very little of him for the next week or two, except when we were out to-gether. Then he was pretty busy helping guard Helena.

Things fell out much as Rhoda had predicted, with just one variation. Sophie Marston began to pursue Baring, but I do not think she did this at first because she thought Grant was neglecting her or be-cause she was really tired of him. She did it because she saw Baring's adoration of Helena. She could not bear to have a man whom she considered worth while prefer any one to herself. Besides, I think she considered it a test of her power to take a man away from a girl almost twenty years younger than herself. She was absolutely sure that she could do it. I do not think her interest in Grant waned until she realized that Baring would not look at her. Then she went after Baring tooth and nail.

Helena passed through it all, serene and with shut eyes. She still considered Knight amusing, and told me always what he said and thought it all just jokes. She looked on Sigerson as a funny old man rather silly about his twin boys. Grant's care of her she resented a little. She told me she thought father must be afraid she did not know how to talk to grown-up people, beknow how to talk to grown-up people, be-cause he kept poking round and listening

to all she said.

to all she said.

What my husband's psychology was I could not guess; I was too much interested to dare judge. Rhoda said that he plainly resented it when Sophie first abandoned him to sail after Baring. Her belief was that Grant did his best to hold Sophie, and that Sophie, angered that she could not move Baring, showed her teeth and claws to Grant and disgusted him. I suppose that was it. Grant had a good deal of vanity, self-righteousness and fastidiousness. He would have been hurt at Sophie's attitude; would have been hurt at Sophie's attitude; then angry; then he would have argued that she wasn't worth it, and pretty soon it would be hard for him to believe that he had ever been more than superficially attracted to her.

All I can be sure of is that I dragged him out as much as he would go, and that I entertained lavishly in our own home. Sometimes I let him think Helena was going to he with us when I really sent her to bed. I did my best to guard the child's health. But I did nothing at all to guard Grant's, for I wanted to wear him out. He did very little work, and Rhoda told me that not only his fellow-writers but even the editors now had begun to say that his power was leaving him. His attitude toward me was hard and disapproving. Sometimes he did not speak to me for days and sometimes we had dreadful scenes, and I felt all the time as if I were on a battlefield.

I wondered when it would all end. About May, Sophie Marston broke down from nervous prostration, and her long-suffering husband took her to a cure. I think now that Baring had told her he loved Helena. He told me so, and said he had not spoken to her because he knew I would think she was too young. I was glad he had so much consideration. I asked him to wait a year or two. I said I wanted to see how he wore in some place not New York." He announced

that when we went West he would com He was and is a very understanding perso

At last the end came, but in a way I hi not anticipated. Tommy had a dreadf fall from the roof of one of the school buil-ings. Grant was in Washington when I g the telegram, but I sent him word at one He reached the school only a few hours aft Helena and I did. For days Tommy hu between life and death, unconscious, som times delirious, calling especially for Grat Once when he was asleep and the thr of us were walking in the school ground Helena said:

"If Tommy dies you'll always be sor you weren't home last summer, won't yo

She did not mean to be cruel; it was ju the trick a young girl often has of dro ping into a state of tactless, truth-telli childhood.

"Oh, don't, Helena," I cried, and I p my hand on Grant's arm with all the c love showing in my face.

That was the beginning of our reunion sad one at first when we did not knowhether Tommy would live or die, a again when, though his life was saved, did not know what state his body and mi would be in. Toward the end of June, wh Tommy was fit to be moved, he ask

"Are you coming home with us the summer, father?"
"Of course I am," Grant said. "Bari is going to take the flat off our hands to the summer."

That was the only remark he made abo our plans. He and Helena went down New York and packed, and, as she was me, we didn't even leave a Hollister hair; me, we didn't even leave a Hollister harr behind. But it was not until we he reached our own home, and had giv Tommy his supper and put him in he with Helena sitting beside him, that Gra gave me any indication of what our futu would be. I had gone to walk in the graden, which the school-teachers had kind beart we for us and often a few memorial kept up for us, and after a few moments

joined me there.

We paced quietly up and down t paths, the starlight above us, the scent the flowers about us, and in the distance t laughter and voices and songs of our neig bors. It all fused into a sweet symphoof home, which made the tears roll do-

my face.
"New York seems a long way of Grant said.

I nodded. He looked into my face a saw my tears.
"It can stay a long way off for all of me

my husband said. He gathered me into his arms a

went on:

"Can you see, Dollie, that I had a ki
of mid-summer madness? No, it w
Indian-summer madness. I wanted a fre
go at youth, and Sophie Marston gave;
the chance. But it's all over now. I
purged and sane. I care so little about
that I don't even want not to see her are that I don't even want not to see her aga
I'm so indifferent that I'd just as soon pa
the time of day with her as not."
They were very sweet words to me, a
I sobbed quietly in Grant's arms.
"I have never loved any woman but ye

and I'll never look at any one but you."
said. "I'm afraid you'll never feel quite t
same again, but do try to let it all be as
was before."

It was the same as before, even thoug did not tell him it would be. It is amazi what human beings can live through, a be happy and not remember the scars. It as happy as I used to be, but a much ker critic of life. We live in our old home a Grant's work is better than ever. B that old adage about the tiger tasti human blood is true. Every two or the months Grant gets restless, and I kn that means a trip to New York. I ps up and go with him, putting Tommy in a mother's care. I trust my husband, bu prefer not to let him go to New York alor We do everything together-see our ( friends, stay up late, drink deep of Bohem And at the end of two weeks or so Gra

says:
"Guess I'm getting old, Dollie. Le go home.

mome. He didn't rob his land to mainmuries as Mathews had done. He was

alle to do what he did and he was using a long way ahead.

My farm is going to pay in proportion aline, my partner, keeps well and strong chappy," he told me. "Every cent I've cent is with a view to saving her unnecessary effort and annoyance. There's plenty anawaidable work left even then."

It he very start of his housekeeping held down a set of rules which he

had down a set of rules which he

You aren't going to waste your time in acre folderols," he told her. "I don't to see any fancy cooking on our see with French names, no bridge-whist in no afternoon tea desserts. If I is work up an appetite for plain, wholesse food I'll go without. If you want se things I'll buy them all made or take in town to dinner. I'm willing to eat = an honest hash or a stew that isn't chid to show what's in it. And I can eat regstables plain-boiled with plenty of in on them. As for desserts, a simple in oid-fashioned chocolate frosting, with tany of doughnuts and now and then a spood enough for me. And what's not enough for me is good enough for prets.

hat is the way Ruth cooks. Take a town every recipe to a variation of the fundamental recipes that wouldn't have a book half an inch thick. You get caps fifty real recipes and then five and names for the same thing. It's orgonic with those five hundred that the hitchen slave. It's fooling round to those five hundred that helped bring but the decline and fall of the Roman increand goes a long way toward bring-guiout the decline and fall of many an

American household. The tried to figure out the reason for the Obviously they are meant, for one that to tickle a palate grown stale with with food and too little exercise. But that many a cook doesn't appreciate the hat that a few things made right will to see that better than a hundred things amply made. It often costs less to get a cut of meat and cook it well than it to get a cheaper cut and bolster it up mushrooms. A simple cake made of willter and eggs is cheaper and better many cakes dependent upon fancy and cream, expensive as it is, as in the long run a cheaper dessert any substitutes which offhand are with to be more economical. People take into account the fact that cream ent merely tickle the palate, but cos sound nourishment.

The we were living in Little Italy worked out a scheme of simplified that was a revelation to many. It was combination of the simple standards redby the foreign immigrants, applied sill better results to simple New Lod cooking. Dick's idea was a little look. Where Ruth's chief object was Where Ruth's chief object was to be money Dick's main object was to be money Dick's main object was to be more. The boy could well afford many that had been beyond our means. I want necessary for Jane to spend her than the nergy seeking food bargains. Her wild nergy seeking food bargains. Her wild nergy seeking food bargains. Her wild and was as well as her eggs, milk and had, were supplied by the farm, which we great saving. Her meats she could have to buy at current prices and buy the less. Even so she might have wasted a lot that the property if it hadn't been for Dick. thusbe energy if it hadn't been for Dick. a much of an art to save work as to

know many families of means who burdens in the home tion it in such headless fashion as to in home into the chief burden of all. > hisband, instead of securing a haven st discovers that he is nothing but proif relieved of some of the minor of housekeeping, finds herself the of saving them work, makes still work for them. It's small wonder any end either in sanitariums or - Twit houses.

Now Dick undertook housekeeping as every sane man undertakes a new business. He considered first what he wished to accomplish and then the best way to accomplish it. He planned his home as a man plans a business plant—for efficiency. Then be made it beautiful, still retaining his simple standards. Next he proceeded to operate it, keeping always foremost in his mind the idea of peace and rest and comfort for the wife first and himself next and his guests had the comfort of the wife first and himself next and his guests. last. This was to be first of all his wife's home, with some real meaning in the word home; then it was to be his home; and finally guests were always welcome so far as they didn't interfere with this mutual

When Dick said no folderols in cooking he meant it. Take, for instance, the matter of breakfasts. He was up pretty nearly the year round at four o'clock. There's many a man will do this in camp and come back boasting about how much better he feels, but there are mighty few in town who wouldn't think they were being killed if they had to rise at four regularly. But Dick was sound as a nut and in as good condition the year round as an athlete, and he enjoyed

the early morning.

A man who sleeps between dawn and

sun-up hasn't half lived.

Dick came downstairs and lighted the kitchen fire, which after all isn't much more of a job than getting some one else to do it. He put on the oatmeal and coffee and teakettle, which didn't take him five minutes. Then he went out to the barn, where he had plenty to do for the next hour. By that time Jane was up and had made the toast and boiled the eggs. That was all there was to it. Oatmeal and cream, toast, coffee and

eggs day in and day out.

I know that right here there's many a man and many a woman who'll turn up their noses at the scheme as impossible. No human beings could stand it; they'd tire of it. But understand this: that oatmeal was cooked right-some three hours the day before; upon that oatmeal cream was used—thick, yellow cream that tasted like nuts; the coffee was cooked right and when used with that cream turned a golden brown; the eggs were fresh from the nest; the toast was cut thin and served daintily. If a man tires of such things, then in my opinion there's something wrong with the man. Dick is no weakling and requires a man's diet, but he kept full weight and hard on this. That's true, too, of Jane

Having this first meal fixed, definite and easy to prepare both were left fresh for the day. I don't believe Jane was half an hour in the kitchen and the boy not over ten minutes. Once the breakfast things were alcounted around large search box times with cleared away Jane spent her time with Dick until he left for town.

After this she cleared up her routine housework and did her general cooking. Perhaps three days a week she was busy in this way until eleven, but more often she was through by halfpast nine or ten. Two ordinary servants would have puttered round about the same tasks until noon. To do this she had to get up about five o'clock. Yet I've seen many a woman come down yawning at ten and then not be half so fresh for dinner as Jane. I believe men and women were made to get up in the morning.

Jane consulted her own taste about lunch. She didn't worry much about what she had-bread and butter and milk as often as not. She was no more of a weak-ling than Dick, and perhaps it's this very fact that gave her a relish for the simple

Jane began her dinner about halfpast four. It seldom took much over an hour to prepare it—a plain soup, a roast with potatoes and sometimes one other veg-etable, lettuce, and a dessert prepared in the morning. This was ready for Dick as soon as he arrived, about five-thirty. It was out of the way an hour later. could be done in the new kitchen without any lost motion. I've seen it done day after day, and next to Ruth, who was a good housekeeper when ten years old, Jane, had very little previous experience, did it more easily than any one else I've ever

THERE'S nothing like beginning right. Dick and Jane began their housekeeping from the day they were married, for, in violation of all established custom, they

FOSTER

ORTHO E

passed their honeymoon quietly in their new home instead of wearing themselves out with travel. This was Jane's idea. The boy suggested Yellowstone Park, California, or a trip abroad, not because he himself wished to go, but because like every honest American he felt he ought to do something big to celebrate the event. But Jane said:

"Dick, starting life fresh in a new home is a big enough change for me. Let's just

visit by ourselves."

So instead of fretting themselves half to death jumping from train to train or adding the strain of foreign travel to hearts al-ready beating hard with excitement, they just drove from our house, where they were married, to the peace and seclusion of their own little home. And by passing their honeymoon there they hallowed their home forever with those first joyous memories.

I never saw a new house which showed its newness so little as Dick's. It was settled from the first day they moved in. Dick left no traces of the builders and had the patience to wait until it was complete in every detail. When he and Jane moved in, the early spring flowers were growing round the house as though they had always been growing there. And being right there by Jane's side during those early days gave Dick a chance to help. He had his own ideas about the home duties of man and wife. I think they were sound—absolutely sound. This is the way he put it to me one

day:
"I don't see why there should be any sharp line of division, dad. I expect my wife to take an interest in my business and to help me run it in every way she finds possible. I, in my turn, want to take an active interest in my home and help there in every way I find possible. It's the only way a home can be run today without servants, and a real home for the average man must be run without them.'

'Homes used to be run without servants,"

"Yes, but then the wife did all the home work. I don't think that's quite fair, either. Besides, mighty few women can do it to-day without killing themselves. They are the product of a different civilization. They haven't the physical endurance to stand what their grandmothers stood. Jane her-self hasn't. Women lead different lives today. But here's another point—the men folk are leading different lives too. In the old days when a man got out at dawn and worked his body until dark there was some excuse for leaving all the home work to the wife. There wasn't any alternative. But men aren't doing that today. Even most day laborers are on an eight-hour schedule. Why shouldn't they give the wife the benefit of their shorter hours by taking some of this extra leisure and making things

easier for her?"
"That might apply to the day laborer, but how about the business man?" I said

for the sake of argument.

The boy was dead in earnest about these things he was working out for himself and perhaps in his enthusiasm he overstated them. But I didn't mind that. I don't like to see young men too conservative. I like to see them make a dash for truths. I like to see them play the swift, impulsive game for a few years. Now Dick wasn't like that at all in his business, for there his training had been different; but in the way

he tackled everything else he was.
"What about the business man who

doesn't have time to do anything round the home?" I said. "Dad," said Dick, "you know as well as I what a hypocrite the tired business man is. He's as big a bluff as the man the hired labor agitator pictures as a slave to capitalism. You know this better than any one because you've had experience with both ways of earning a living. You know it isn't hard work that's killing either of them. but what they do with their time when they aren't working."

This is the way the boy argued, and he lived up to his own convictions. But at the basis of his convictions lay an unusual respect and passion for the home. I had never been aware of it until his engagement. don't believe the boy himself was aware of it. But when I spoke of this to Ruth she smiled-that deep, quiet smile of hers that comes from a spot in women men don't know anything about.

The boy had a passion for home—for the old-fashioned home built upon a warranty deed and free of debt. His house wasn't

## Supplementing Your Income By \$20.00 a Week

WE have permanent openings for five hundred men in given localities throughout the country, including your locality. We prefer family men, men who are well known, with present business connections, but sufficient time to develop our work as a side line, men of stamina, who need more money and, given the opportunity, will get it.

Mr. Tierney (above at left) is a hardware salesman, who devotes only one hour a day to our work, and has earned over \$200.00 in five recent months,

Mr. Dicker (center) averages over \$110.00 a month extra-He is a department store Manager in a Michigan city.

Mr. Stephens (right) supplements his income with over \$150.00 a month along the lines we propose to you. He is an expert accountant.

If you need more money and are our type of person, we will show you how profitable, interesting and permanent the work is. Write today to

built as an investment or as a speculation; it was built as a home and nothing else. This was fundamental. It was built to be the permanent capital of his little republic. That was the way he felt about it from the first, and it had a lot to do with his whole attitude toward life. When he married he founded a new house of Carleton.

This was the boy's point of view and it accounted largely for the spirit in which he tackled the problem. It lent dignity to his home and to his work in the home. It accounts for the fact that with Dick the home was always first. If any sacrifices had to be made, either of time or money or social pleasures, those sacrifices were always made outside the home, which is rather an unusual stand for a young man to take as I've observed other young men.

The boy was young when I fought my fight in the suburbs, and yet I think he must have learned something from that. There the home was always last. We must have our social pleasures, our parade clothes, our clubs even though we couldn't afford them. If it was present to applies afford them. If it was necessary to sacrifice

afford them. If it was necessary to sacrifice anything we didn't sacrifice those items but we cut down our home expenses. We took it out of our hides.

But Dick didn't have to go back so far as that. He had among his town friends a dozen examples of this policy of considering the home last. His own partner wouldn't marry because it meant giving up his automobile, his clubs and a certain amount of freedom. That man was sacrificing a home freedom. That man was sacrificing a home after his own fashion. There was Stephens who had married, but who lived in apartments not to save money but in order to be able to spend more money outside the home. And his wife egged him on. There was Chadwick with a boy ten years old whom he shipped off to a boarding school in the winter and to a boys' camp in the summer, while he with his wife burned up gasoline all over the state and slept in any hotel

oline all over the state and slept in any hotel where they happened to be at night.

Lord pity all of them when with dulled senses they find their hands empty! Lord pity them when they realize the hideous, hollow selfishness of it all! With their unsatisfied longings, with their lives incomplete, some day they'll learn that the price of not sacrificing is in the end to offer themselves a sacrifice—a vain and useless sacrifice.

sacrifice.

The boy was making money in his con-tracting business and he might have made more, but from the day he stepped over the threshold of his home there never was a moment when he hesitated if the issue was raised whether it should be less home and more business or less business and more home. As much money as he was able to make and still maintain the established standard of his home, that much he would make and no more. His office hours in town were from nine to five, and no money reward could tempt him to extend them.
When he was at his desk he worked sanely
and consistently, but he never came home
exhausted. The business he developed on
the farm later on made a longer day for
him, but back of this was a spirit that made it different from the business of sheer money-making.

What was true of his business was true of his social life. He and Jane went out whenever doing so did not interfere with their home life. In this matter Jane was the boss. She said where and when it pleased her to go, and Dick went along cheerfully. But Dick was back of her when she didn't want to go. There were no social obligations or social duties in their lives. It must be a social pleasure or nothing. They never hesitated about refusing an invitation if they preferred to stay at home.

There were those who called them selfish at the start, but when they really knew Dick and Jane and knew their home, that feeling didn't last long among those worth knowing. Their home stood for something worth while in the village, and people came to understand this.

In their turn they entertained, but they entertained genuinely. The people they invited to visit them were the people they enjoyed. They were their real friends. And they established a new standard for enter-taining. A guest who came to their house came to their home. He or she became for the time being one of the family.

I have told of these things because to me the boy's home seemed just what a home ought to be and because in his home life the boy and Jane got back to ideals worth while. Their standards had a great influence not only upon Jane and Dick themselves

## The Boss is proud of his business

and the treasurer is proud of his bank balance. The more I pay for office stationery the better pleased is the Boss, but it's another matter to explain to the treasurer form letters on high-priced bond.

I fooled them both. "How do you like our new letterhead?" says I to the Boss, handing him a fine, crackly sheet. "Great," he said. "Stick to it." "Um!" said the treasurer dub-ously. "Looks like pretty expensive

paper to me ibetter use it sparingly."
The new letterhead was on Hammermill Bond and cost less than

9 cents a pound.

I now use Hammermill Bond for everything — letterheads, office and factory forms, price lists. It's eco-nomical, but so durable, clear of finish and "quality" in feel that the Boss is proud to sign a letter on it.

What's more, Hammermill is wa-termarked. The man who made this paper seems to say to me: "Not only this year, but next year and every year thereafter, I will make this paper the same in materials, the same quality and the same in all things whatsoever. In no way will I cheapen this paper on which I have set this, my mark.\*\*

Yours fastifically, A Purchasing Agest I advise you to send for this new book, "The Signal System."
Histonermill Bond can be obtained in taken form, Six popular sizes; three dishes, Ripple, Lines and Vellum. At any stationery store,

but upon the whole village. Though Ruth has been doing much the same all her life, the influence of the older woman didn't carry as far with the new generation as did the influence of the younger.

WHEN Dick bought the Dardoni farm his interest was centered chiefly in the fact that it was to be the site of his future home. He didn't have in mind anything yery definite as to how he would work the farm itself, although he was definite enough about the necessity of working it. In a gen-eral way he had in mind the mixed farm that prevails in our town and that I have always recommended. He proposed to keep a horse, a cow, chickens and pigs for his own use, to raise his own produce and sell off all surplus. But about this time Doctor Barney, the young physician who had taken Doctor Wentworth's place in the village, had a talk with Dick.

This man Barney had come pretty near revolutionizing medical practice in Brew-ster. We had secured him right after his hospital service, while his ideals were high and his courage good. He hadn't fallen into any rut and he hadn't had his hands and feet tied by that old octopus of the profession, "Professional etiquette." He wasn't afraid to speak right out in meeting about conditions in the village needing a change, even when it meant hurting the feelings of the three other doctors in town. He was a live wire. One of the first things he did was to give a talk before the Pioneer Club on the dangers of the promiscuous use of morphine that made the other three physicians sit up and rub their eyes. As a result of that the three talked of bringing action against him before the medical society and one of them even proposed suing

him for libel.

"Let him do it if he dares," I told Barney.

"I'll furnish the money to fight it and we'll give him an airing such as a doctor hasn't had in this old state for a good many years.

As for Holt, he was so anxious to get at him that he almost pushed the old doc into the suit.

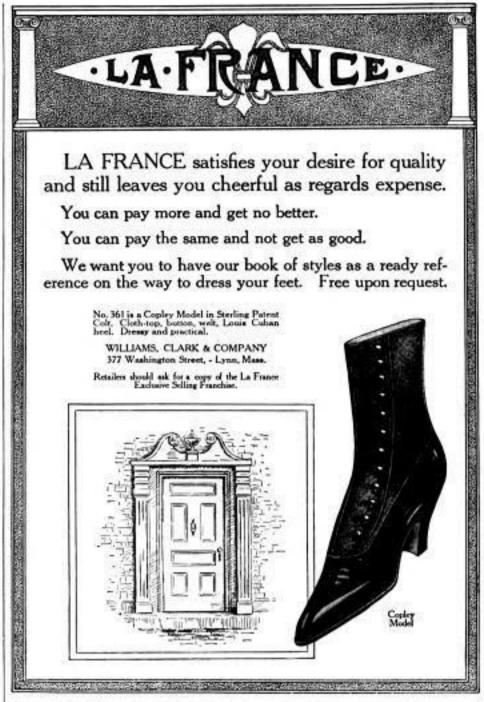

"If only I could get him into court once," he said, rubbing his hands together.

As a result of the talk Barney gave us we voted him a salary of five hundred dollars a year to give us a regular monthly talk on such problems of sanitation as he thought most urgent and to serve as general health officer for club members. He had just been married and needed the money to live on. I didn't want to see him forced to his knees for lack of money. That's what happens too often to young men. Our law schools turn out every year hundreds of young men filled to the brim with enthusiasm, clearsighted and untrammeled, ready to throw themselves into business reforms and po-litical reforms and legal reforms. Unbound by conventions, ungagged by business affiliations, afraid of no man, they may be a bit extravagant in their ideals but there's fire in them and a noble purpose. Then that grim old bully, Expediency, stands over them with a club and threatens them with starvation and bribes them with baubles until within a year most of them have fallen into line. That's equally true of the medical schools. Listen to a young doctor fresh from his hospital service and you'll learn what the professional weaknesses are and what ought to be done to reform them. You'll hear that farce, professional etiquette, which bids doctors protect each other at the expense of the pub-lic, called by its right name. Listen to that same youngster five years later and you'll probably find him right in line-a trifle shamefaced, to be sure, but right in line. And it's just as true of other professions. It's a burning shame the way the fresh and daring and noble enthusiasm is pounded out of young men.
So we gave Barney enough to live on in

connection with his small farm. Not only that, but we threw a lot of practice his way. Then I said to him:

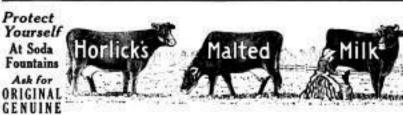

"Now you go ahead and express yourself. I'll guarantee to furnish the funds to protect you, and Holt will furnish the legal experience. Keep young. Call things by their right names. If you catch the other doctors leaving forceps in a wound after an operation, as I've heard has been done, let us know. If you catch them not setting bones properly, as I've also heard has been done, let us know about that. If you yourself make a mistake, own up to it. For heaven's sake let us have the truth."

So far as I've been able to see, that's what he's done, and we've benefited wonderfully

by it. One or two hysterical women have objected to being told there was nothing in the world the matter with them after they'd been under Wentworth's care for fifteen years, but they didn't have a very sympa-thetic audience to listen to them.

Barney came over to the house one night shortly after the fact was announced that

Dick had bought the Dardoni place.
"I'm glad you've bought that farm," he said to Dick. "It makes you just the man I've been looking for."
"How's that?" said Dick.

"You can raise milk for some of my

Dick had used Barney to look after any of his men that were sick. The men liked him and had called him, in a good many cases, to their families. In this way Barney had worked up quite a practice in Little Italy. It wasn't a practice that paid him very much, for half the time he wouldn't present a bill and about half the rest of the time he spent in preventive work. His hearty common-sense and his genuine in-terest in these people made him tremen-dously popular. Some of the physicians down there—though not among the public health officers—were shysters and quacks. They were not only incompetent but bar-barously cruel, prolonging cases purposely, sometimes at the cost of lives.

"You mean you want to turn my farm into a free-milk supply station?" said Dick,

a bit frightened.
"Free?" said Barney. "I hadn't
thought of that now. But if you could

thought of that now. But if you could afford to do it ——"

"I can't," said Dick.

People in Brewster had become almost superstitious about Barney. He had put through so many reforms against opposition, which though for the public good had been at private expense, that folks began to think he had some privilege like that of Federal confiscation. Most of his suggestions came pretty near being commands.

tions came pretty near being commands.
"I'm not a millionaire," said Dick.
"I've put a lot of money into this farm and

"Ob, I see," said Barney. "Well, I wonder now if you couldn't make clean milk pay."

"I haven't thought about it," said Dick

uneasily.

"Then why don't you?" said Barney,
"I can't imagine any line of farming that
would bring a man a deeper personal satisfaction than the production of clean milk

at a fair price."

"But can the kind of milk you want be produced at what you call a fair price?"

"I believe you can produce it, Dick,"

said Barney "I don't know. The cost of sterilizing

it \_\_\_\_"
"I don't want my milk sterilized,"
exclaimed Barney.
"Huh?"

"If you're going to raise the kind of milk that has to be sterilized I don't want it for my babies. Clean milk is sterile milk. When milk comes from a healthy cow it's

as sterile as Nature wants it to be. All you have to do is to keep it clean."

This was a new idea to Dick. So it was

to me.
"Then what's the meaning of all this

"Then what's the meaning of all this hullabaloo you doctors are making about sterilizing milk?" Dick asked.

"It's a war measure," said Barney. "We sterilize it, not because we want to, but because we can't trust the average milk any other way. It's a shame it has to be. What I want is a milk the public can trust."

"But you demand so much of it."

"It demand nothing of it but decent

"But you demand so much of it."
"I demand nothing of it but decent cleanliness," broke in Barney. "Just simple, decent cleanliness and four per cent fat. It's kind of tough on the kiddies, isn't it, when that is classed as a luxury. Kind of tough on everyone when to stand a fair show of not noisoning their children a fair show of not poisoning their children so many men either have to pay a fancy price or denature their milk. That surely doesn't speak very well for some of the men who raise and handle milk."

Barney leaned over and put his hand on Dick's knee.

He spoke soberly, but with a touch of something in his voice that made my own

-----

heart beat faster. "I honestly believe that it's actually within your power to make a decent profit and at the same time save each year more children than all the doctors in the whole city save. That would be a fine thing to do, wouldn't it? And Carleton milk would do it."

## THE BOY WHO COUNTED A MILLION

Erect upon one of the straight-backed chairs beside the desk, he was seen to be moving his lips as always, seen by any who cared to peer through the window, secure at last from vexatious interruptions. It became known later in the day, also, that Amos had nobly relinquished the licorice drops, to be locked in the safe against the nearing day of his triumph.

Old Slicky had observed that they seemed

to delay his counting.

It was frankly conceded that evening, upon the best village authority, that Slicky Balch had come to his second childhood—"throwing his money right and left like that!" His mind had gone or was going. Even when it was definitely ascertained by several of these hopeful theorists that he was, in the matter of compound interest and overdue notes, still curiously his old normal self, the theory was by no means abandoned. It was still believed that he would presently be giving away all he had, and an unwonted cheerfulness sat the faces of his clients.

How were they, indeed, to divine that for the ordinary mechanics of his trade the delicately stupendous performance of Amos had merely ground his acuteness to a finer edge? How were they to conceive that he might—and still retain his craft—squander the interest for a year on nearly a whole dollar, in that delirious moment when Romance had flung her silvery veil across

his cunning old eyes?

Then came renown in the public prints. That spring was "in our midst," as the editor of the local weekly would have it, a New York reporter in process of recupera-tion from his city toil. He had sent to his paper such freakish items as came to his notice, and had written up several of our local worthies—to their mingled wrath and pride. And Amos was considered to be a Sunday feature. At the dizzy altitude of the nine hundred thousands he was led to the photographer; nor was old Slicky omitted. The two were portrayed, Amos standing a bit in advance, stiff and terrified, and Slicky sected and revealing a kind of old Slicky seated and revealing a kind of proud humility. A week later the likeness came to us in a Sunday issue of the New York paper, festooned with impressionistic portraits of Alexander the Great-in ar-mor-Julius Casar, Charlemagne, and some mor—Junus Casar, Charlenaghe, and some minor celebrities who supposedly had never counted a million. "Obscure lad in teens stirs New England village," declared the heading, and in the course of the column write-up it was intimated that one Silas Balch, "respected as the leading capitalist of this thriving community," intended to make the young poet of numbers his sole heir. In fact old Slicky was bluntly labeled 'A Village Mæcenas.

That was a bitter day for us who had so recently scorned Amos Apple for his inept-ness at sport, his rabbitlike timidity. How small beside him now was one who merely possessed a fishhawk's egg or a bone felon! At five hundred thousand he had been called upon to settle a dispute, and even at three hundred thousand we had asked himasked him-to join our games. Now we would as soon have asked the minister. Far above us, he went to and fro upon his lawful occasions and we were the abashed

Nor was the million to be achieved without a further, an unbelievable exaltation. At nine hundred and seventy-eight thou-sand—to be precise—Amos became truly feverish and was conveyed to his home in a hired carriage by old Slicky. There he was put to bed and the doctor was thrillingly called. Old Slicky, who was himself feverish, hore all the expense. The mother of Amos had stolidly declared for a mustard footbath and boneset tea, proffering gratuitously, moreover, the diagnosis that her son suffered from nothing but incurable laziness. Yet she was overborne by old Slicky, and the mysterious and expensive drugs were administered.

The doctor's son disclosed to us that Amos was indeed sick unto death-that the fever was slowly turning his blood to water. It was fascinating pathology. While I think none of us really wished Amos to die, there must have been an undercurrent of opinion that it might be best for all concerned. It would show that a mere nobody had better be mighty careful how he exalted himself above his superiors by a trick; and if he really had to go, it were better, dramatically, that he went before the count was done. We were discreet of speech in this matter, but I think that is how we felt.

But regardless of our secret convictions, our fine esthetic willingness to see Amos a martyr to his pride, the god of numbers permitted him to survive, not only to survive but to persevere; for on his sickbed he continued to count, and bulletins were fetched to us, chiefly by old Slicky, who watched and tended him as if he had been

a delicate mortgage.
On the third day's seclusion—a Satur-day—we learned that one million was at hand. A hushed and respectful group, we gathered on the new grass before Amos' door. We came at nine hundred and ninety six thousand, eight hundred, and we stared with awe at the inferior Stubbs house. We marveled, too, that the mother of Amos could apparently be discharging the common offices of her household as if no great moment were at hand. Too plainly she had

no spark of the true fire.

At nine hundred and ninety-eight thousand Amos tragically appeared, wan but unconquered. There was a discreet, a quickly stifled cheer. Amos ignored it. He seated himself in the doorway, gazed above our heads and waggled his upper lip as of yore. His expression was beatific. Before such intensity of devotion St. Cecilia at the organ would have seemed a gross and frivolous trifler.

We all counted with Amos now. That was no longer to be resisted. We must go out to meet the panting runner and pace the final stretch beside him. Only at the very last hundred did we lose our control. We could no longer count. We could but

Amos finished with the unhurried coolness of a veteran; with his last twenty he but toyed, mouthing the count deliberately, as one who would extract the final flavor from a prized titbit—and this before the day of Fletcher! We stopped breathing. Amos lifted his pale eyes full to the zenith and declaimed with thrilling slowness:

"One mill-yu-u-n!"

There was no immediate demonstration. The time was too great for aught but a shuddering sigh of relief. And discipline still gripped Amos. He arose and we saw that he grasped a hammer. Majestically he stalked to a near-by maple tree and into its already abused bole he sternly drove a nail—there were nine other nails beside it. Then at last he folded his arms and consented to receive our plaudits. We rendered them vociferously while he stood with lips for once at rest. After a time of this he graciously unbent and was good enough to converse upon the superficial aspects of his ordeal—such as beans. There were ten limas and hundreds of the small ones. It is unlikely that Amos had foreseen the now tremendous significance of these beans. He was not bright enough to have divined that they would become historic beans, especially the ten limas. He actually bestowed one as a gift upon the first boy who asked for it. But he was swiftly enlightened, for in the ensuing rush for the others offers of valuable property were frantically made, and Amos suddenly tightened up, as it were. On the spot he acquired, among other valuables, the best collection of birds' eggs in town, a poison-tainted surgeon's scalpel, a kite, a madstone and a tame crow. The last lima, so spirited had the bidding become, brought from Goat Edwards the amazing price of two flint arrowheads, twenty sweet-fern cigarettes and a fresh pig's bladder, inflated

and tied to a stick.
On account of their great number and the ease with which such coinage might be debased by the unscrupulous, the lesser beans were like silver in the days of Solomon the King, "nothing accounted of," though the very small boys traded in them and I have known twenty to buy a neatly blown

robin's egg.

And yet as we traded feverishly there for the beans, how blind we were! Not one of us had the wit to consider the driven nails which, as the ultimate counters, were patently of a superior value. It was old Slicky who came back later, and with much labor, for they were soundly driven, withdrew them one by one and carried them off

## SAFETY FIRST

The foundation quality idea in the manufacture of Goodrich Tires

The Goodrich method of mak-ing tires is based on the "Safety First'' idea. Safety for your family and yourself.

Goodrich puts forty-four years of experience and quality in rubber manufacturing in every Goodrich Tire.

That puts the safety in the construc-tion of the tire itself — puts strength and resilience and service in it.

Goodrich Unit Molded Tires are the standard by which all other high grade tires are judged because of their wonderful wearing quality and uniform excellence. That's why Goodrich has held the leadership for nearly twenty years.

The extra thickness of tough Goodrich rubber in the treads at the point of contact with the road provides longer satisfaction and lower-cost

# Goodrich

The thick, tough rubber bars and crosstie of the safety tread as shown above, make a "Safety First" road-way for the car. They clean and dry the path and grip it and make the brake effective.

Here are the prices on the best tires ever produced in the Goodrich factory:

Size	Smooth Tread Prices	Salety Tread Prices	Grey Inner Tube Prices	Size	Smooth Trend Prices	Salety . Tread Prices	Grey Inner Tube Prices
30 x 3	\$11.70	\$12.65	\$2.80	34 x 4 1/2	\$33.00	\$35.00	\$6.15

A Boy Worth Having

He approaches you confidently. He does not stammer, scuff his feet or hang his head. He approaches

you at your office or home and asks you to buy your copies of The Saturday Evening Post from him. There are elements of real salesmanship in his talk. He is a

product of the Curtis Boy Plan.

There are thirty thousand boys of this kind selling the Curtis publications today. They are sons of doctors, lawyers and business men. They sell more than hundreds of thousands of copies of The Saturday Evening Post each week.

If you know one or two of our boys, you know how the work counts for character and manliness. If there is no  $P_{vit}$ boy in your neighborhood, there is a business opportunity waiting for one of your young friends.

Send us the names of two or three boys whom you can recommend and we will give each of them an opportunity to secure a Curtis agency. To their parents we will send free of cost a mighty helpful booklet, "What Shall I Do With My Boy?" Write today to

to lock in his safe-old Slicky, shrewdest of

us all, and the arch-sentimentalist.

And now, though the death angel had trifled with us unwarrantably, Amos was riding to a fall of another sort. At school riding to a fall of another sort. At school the following Monday he behaved with the arrogance of those great ones who are about to topple. He collected boys in his train and was insufferable to them. He demanded worship, and then brutally flouted his devotees. His followers were made to sound the lowest depths of servility. He was chary of words, though he hinted mysteriously of future feats. "I could count a billion if I wanted to," he was heard to say; and "Maybe I will count a billion if I take the notion. You can't tell what I might do if I took the notion." It was a perilous moment; had he but known was a perilous moment; had he but known it, a less lordly arrogance of bearing might

it, a less lordly arrogance of bearing might have marked him.

It was the closing hour of school that day. The heat had been trying, and Miss Apgar, the cartilaginous cynic who taught us, had been rather testier than was her wont. Under her irritated prodding we labored through the recitation in arithmetic. Amos Apple was called to the blackboard to demonstrate a problem in fractions. It was not complex. It was blackboard to demonstrate a problem in fractions. It was not complex. It was easily within his powers, and Amos swaggered as he went. There was disrespect for us and for his teacher in his brusque manner of grasping the chalk. And then he blundered. The dizzying toxins of adulation must have mounted to his brain, though I have always attributed his failure partly to the minuteness of the fractions he was called upon to manipulate. His soul had soared among starry millions, and now it must pettily engage itself with the absurd residue of the half of a fourth of an eighth. And nothing came right. All might yet And nothing came right. All might yet have been well with Amos, but when

have been well with Amos, but when nothing came right he was heard to sniff.

The lips of Miss Apgar tightened. She said: "Ah, yes! Ah, yes!" as if she had been made free of understanding's remotest caverns. Amos, still hardily arrogant in his new honors, sniffed again, while his right hand floundered with aimless chalk. "Tell me, Amos," demanded his enemy with an arch but acid sweetness, "is it true that you have intely been successful.

true that you have lately been successful

in counting some vast amount—five thou-sand, was it; or might it have been ten?"

To the rest of us this was smug, brazen effrontery. We knew that she knew what Amos had done. But Amos stepped neatly

"Huh! I counted a million—a whole million, that's what I counted. And maybe I'll count a billion if I take a notion——"

"No, Amos; you did not count a million!" Her words cut the air crisply. They dazed Amos—all of us. Such was the sensation that order had to be rapped for.
"A million—yes, ma'am!" repeated

Amos.

"Tell us, Amos," continued the implacable one in her sweetest public manner—

"tell us the precise method by which you were enabled to count so vast a sum."

"Why, now," answered Amos, recovering his blandness, "I'd count a hunderd, then I'd put a white bean in m' right pants packet, then I'd count another hunderd.

pocket, then I'd count another hunderd, then I'd put \_\_\_\_\_"

"That will suffice, Amos!" We heard the iron come into her voice. "You have not counted a million. You have merely counted one hundred ten thousand times." I now see that the "merely" was neat.

Amos glared reproach. He was a stricken door.

deer.

"Ain't that jest the same? Yes, ma'am!"

"Oh, not at all, Amos!" Still the venomous sweetness. "Let me hear you count aloud from one to one hundred. I shall note the time by my watch here. Proceed,

Amos did proceed, and as the final "hunderd" fell from his tired, patient lips, "hunderd" fell from his tired, patient lips, the enemy pronounced, "Ver-ry good! Ver-ry expeditious! Thirty seconds. You are undeniably a bright boy, Amos—in lived to borrow money of Amos.

Number 41

RADUALLY the stragglers had dropped back, until now only two were left—a woman and a girl. They stood on a rise, before them a moor, parched and crackling, with eddies of fine dust.

ILLUSTRATED

The broad plain was saucer-shaped, lipped by the rise. Under the midday sun it cracked, and beetles crawled over it, seeking shade and moisture.

The lip rose at the far side into two hills-round bare breasts that had gone dry like the rest of the world. The trampled path led between them and the dust cloud hung there like a curtain. Through this curtain filed the children, twenty thousand of them, with gray banners and gilt crosses, but

with feet that already dragged with weariness and eyes strained ahead for the city of the Sepulcher. As they shuffled on, the dust cloud grew denser. The gray-green of the hills turned brown; over the moor lay a gash that

still quivered. When the last straggler had disappeared the girl drew a long breath.

"They have gone," she said dully, and put a hand on her mother's arm.

The woman shook off the hand almost fiercely. Her eyes rested, not on the dust cloud, but south, over the hills toward the far-away Mediterranean.

"For the cause of God and without price," she muttered, and crossed herself.

The girl turned and looked back. The village was not in sight. Along the path went groups of drooping figures, heavy-headed, sodden in grief—returning to childless homes, to quiet streets, to the long waiting. The exaltation of sacrifice was over. Through their lives had swept a sudden fever, and left them desolate.

Come," said the woman, steady-voiced, and turned. "Come, child, the Holy Mother will care for them. They will neither hunger nor thirst. The path is smooth for the pilgrim's feet."

But the girl had less courage. She was hardly more than a child herself, still with

a child's terror of the unknown.

"He is so small!" she said with trembling lips. "So small and so frail! Who is to cover him against the wind at night? The others are larger—they may take his bread. And what about his milk? Are there cows in the land of the infidel?"

"The Holy Mother will feed him."

The girl eyed her wistfully. Why was her own faith so faint? Surely the Holy Mother would indeed care for those who sought to rescue the Sepulcher of her Son from the unbeliever! A mother was a mother. And also had she not herself seen, in the church that morning, the holy image smile and bow in evident approval.

Still she hesitated to turn back. It was like abandoning the child, the little brother she had tended for all of his few years, who was now manfully trudging beyond that dust cloud, the smallest, she thought, in all that army. His little pilgrim sandals, how tiny they had been, not the length of a hand! And his gray coat with its scarlet cross! He had liked the cross—it was bright and glowing.

She had put him into the coat with slow tears.

"But do you know where you are going, little brother?" she had asked. "Of course, great silly! We go to Jerusalem to the grave of Our Lord."

"And when you reach it? The infidel is there with sword and battle-ax." She quivered with terror, but the child was undaunted.

"We bear the cross," he said. "When they see the cross they will kneel to it. And while they kneel we will kill them."

"Brave words!" she had cried and caught him to her. "Brave words, little brother!" The dust cloud was settling again. All was as it had been, save for the trampled path across the moor. The beetles scuttled about, seeking moisture.

Suddenly it seemed to the girl that she could not bear the parting. She faced her mother, agonized.

"But a little farther!" she cried. "Let me go a little farther. Let me but see that he can keep up and is not left behind! Let me watch his feet until they harden!"

Fanaticism blazed in the woman's eyes. She caught the girl's wrist as in a vise.

"You!" she sneered. "Girls there are that followed-strumpets who retard the holy work. But boys only are called. The pope has said so. Go back to your goats and pray for faith."

Over the lip of the moor they turned, joining the procession that dragged its broken length back to the village. Geese cackled by the path, stupidly bewildered at finding themselves untended. Goats wandered at will; the dust cloud had swallowed up the small goatherds. The fever had left behind it chaos, delirium.

The girl followed her mother, but with many pauses to look back. It was not for women, this task of driving the infidel from Jerusalem and the Sepulcher; but if only one might help in woman's way, a cup of water to the thirsty, the protection of the

She was a tall, slim girl, narrow-hipped, low-bosomed, broad-shouldered, with golden-brown hair in two heavy plaits. Her eyes were wide, fearless, fringed with black under narrow black brows. It was the day of the droit de seigneur. The girl had blood. It was said that the warrior overlord had begot her of this heavy-footed bigot who moved shead, and surely, if it were true, he had put his mark on her. She had beauty in an almost radiant degree-beauty, fire, race, and with them all simplicity. Only one passion she had-the small brother, son of the woman by her husband, but retaining in curious fashion some of the attributes of the girl's father.

The path, now trampled broad, led back toward the river again; a stone bridge and beyond that the town. At the bridge the girl stopped for the last time and looked

Little Farther!

Let Me Go a Little Farther"

back with trembling lips. The dust cloud had settled. There was nothing in sight but the twin dry breasts of the

"But a

hills, and over all the

brass face of the July sun. The village lay in a plain, a stream, tributary of the near-by Rhine, on one side, with its bridge of stones gathered from the fields. With all the countryside to spread over, the town was compacted within its gates of narrow twisting streets; of overhung houses; of lower floors, fortress-like, with doors of heavy oak and huge bolts of handworked iron. For sole breathing space a market square in the center, with wooden shoes on sale, fruit, crockery. But the marketplace was empty, benches were bare. No vegetables withered in the sun. The streets, accustomed to the voices of children at play, now echoed only to the heavy clack of wooden shoes. People knelt in the silent church, and crossing themselves withdrew to their houses to pray

The woman went into the church, but the girl passed on. There were plenty to pray, if prayer availed. But would prayer fill the small wallet with bread? True, the children of Israel had been fed; but they had been led by Moses, while these little ones were led by one of themselves, a child of ten! A sort of desperation possessed her, a madness of inaction.

As she went through the marketplace she passed a blind fruitseller, sitting unblinking in the glare. Lightly as she stepped, he knew her and called to her.

"Have they gone on?"

"They have gone, Father Nicholas!"
"Madness!" The fruitseller plucked at his beard.

"You-do you think they will come back?" "I came back, child, but as you see! I, who with sword and battle-ax had no equal in all the country round! Aye, they will come backperhaps."

"Is it very far?"

"A weary way. As they passed through the square their feet dragged. I gave them all my fruit, but it was little among so many."

The girl stood, wistful, her eyes turning ever south. "How do they go, father? By the sea?" "Over mountains and then

by the sea." Having lived always on the plain, mountains meant little to her. The sea she knew not.

"They say that the Blessed One will turn the sea back, so that the children will walk dry-shod to Jerusalem. Do you think He will?"

"There have been many who wore the cross, and none have yet gone through the sea dry-shod." His quick ears caught

her sharply indrawn breath; he modified his statement. "But all things are possible for the pure in heart. It may be that He will turn back the sea."

By grant of that baron who was the father of the girl the woman's husband had tended the town gates. But the husband had tottered

home from the fatal excursion of Henry VI to the Holy Land, had lived long enough to become the father of a male child, and had passed on to the New Jerusalem, where the infidel ceased to trouble, and no Sepulcher, but a living Christ, awaited him. So the woman tended the gates and morning and evening crossed herself before her husband's dented shield and heavy sword.

The girl kept the gate that afternoon. Toward sunset came flocks of bewildered goats, untended, and sought admission; long lines of geese and thirsty cows lowing softly. She let them in to pursue their uncertain homeward way. The people still stayed in the church, watching the Virgin for another sign. But whereas in the morning she had seemed to bow and smile, now she stood gray and rigid, and the Holy Child lay weary with closed eyes.

At dusk the woman came and they ate their supper of goat's milk and bread together in silence. Some of the light had died in the woman's eyes. The Virgin had not

'He Was My Good Friend and You Killed Him" smiled, and night was coming with the boy far away. The light of the open fire flickered over the girl's gold bair, over the child's bowl, empty on the shelf, over the sword and dented shield. Mother and daughter had little in common save the boy. They sat

on stools with a rushlight between them on the table. The silence of the town made their ears ache. The girl was quick to discover the mother's weakness. She bent over and put a strong young hand over the woman's. "He is so afraid of the

dark, mother!"

"It is starlight." "Think you he has supped tonight?" 'I gave him food."

"Ah, but there were others who had come a long way and were hungry. What chance has he?" She rose. Mother, I am going with him. He will die without me.'

The woman was not tender, but suddenly all her fiercely restrained maternity leaped up.

"Am I then to lose everything? I have given one child is it not enough?"

"I am strong. I

The woman whirled on her.

"Aye, strong enough," she cried. "But you, with your eyes, your hair, your princess body—you that men turn in the streets to watch, what will happen to you? God does his work sometimes with crooked instruments. Saw you not today, fringing the procession, abandoned women, thieves, sharpers, all the vilest of the kingdom?"

The girl remembered the blind fruitseller and quoted him. "For the pure all things are possible."

Her red lips, usually so tender, were mutinous.

At the time for the closing of the gates came a palmer, long of robe and broad of hat, carrying his palmer's staff. Sewed to the front of his gown in the shape of a cross, but now dusty and worn, was the sacred palm, emblem of his successful pilgrimage. But his face was set, not from the Holy Land, but toward it again. Although he used a staff it was with vigor. It rang out with a militant snap as he marked his way over the street stones—an elderly man with deep-set eyes that, like those of the children, looked ahead.

He passed on into the town, taking his way toward the blind fruitseller's. Though all the town harbored pilgrims, it was to the fruitseller that the majority made their way,

sure of a shelter and a welcome.

Toward dawn the woman ceased tossing. The girl listened with haggard anxiety. It was sleep at last.

She made her few preparations hurriedly—a cloak, bread, fruit and a bit of cheese, and after a moment's hesitation one of the coverings from her bed. Summer nights were occasionally chill, and the boy was liable to a huskiness that sometimes became a choking.

The dawn came early over the plain, a brassy glow in the east, silhouetting a row of poplars that, like everything else, seemed to march toward the south. It threw long pale shadows across the marketplace, over bare booths and closed houses. In the center of the square lay a white banner with a red cross, dropped by some weary, childish

The fruitseller's hut was closed and quiet. The girl waited with such patience as she could. Time was passing. Even the cuckoos, laziest of birds, were about and a cow lowed near by.

It was five o'clock when the palmer emerged quietly from the hut and rapped across the square. The girl followed him timidly; finally accosted him.

"Father!" He wheeled.

"You follow the-children?"

"Yes."

"I too-I wish-my brother has gone. He is very small.

The palmer paused. The sun shone full on the girl, on her gold hair and black-fringed eyes, on her lithe figure. There was no fault in her.

"It is a long and weary way, child."

"That is why I must go. He-he has never been away from me."

The palmer would have said many things, thought deep. looked at the girl's troubled eyes and determined mouth, and said only:

"Come, if you will. I, who have nothing, can share nothing."

But the girl was content. She told him of the bread and cheese and of the fruit. She walked along beside him, stepping easily and freely, keeping time to the tapping of his staff, and talked of the yesterday: of the twenty thousand children from Köln, led by young Nicolas, who had swept through the village like the river at flood and had carried away all the boys-their purpose to do what four Crusades had failed to achieve, to rescue the Sepulcher.

"Do you think they will succeed?" she inquired anxiously. "Perhaps where the sword has failed, the prayers of little children -

"'I came not to bring peace, but a sword," said the palmer into his beard.

THE town had been lax that night of loss. The river I gates were not bolted. The gatekeeper had lost three sons, all under twelve, and lay drunk to forgetfulness. The two passed out unquestioned. No need to seek the way; the unhealed scar lay before them.

Purpose to Do What Four Crusades Had Failed to Achieve

Through the long bright morning they walked, saying little. Now and then the girl looked back, but there was no pursuit. At noon they stopped in a shady place and she offered the palmer food. He took but a trifle and prayed before he ate. They were among low hills now, heavily wooded, so that the springs were not yet dead of the drought. Trampled about they were indeed; mud holes only, some of them, full of the tracks of small feet, basins feebly refilling after yesterday's thirsty onslaught. The girl's eyes read tragedy. She was for hastening on without pause. But the palmer was skilled in the ways of the road and the sun was white-hot. He rested for an hour or more, and then moved on without haste.

They were gaining on the children. In mid-afternoon they entered the village where the child-army had spent the night, sleeping in houses, in the streets, inside the gates, wherever a weary small body might lie. The holy palm brought them the small courtesies of the village—ale, bread, a cup of milk for the girl. And here they met the student.

He was sprawled out in front of a wretched inn, a mug of ale beside him, his long legs obstructing the narrow way. The palmer, who led, stopped at this barrier and plucked at his beard without words. The student hummed a song and looked ahead, whereon the palmer raised his peaceable staff and brought it down with vigor across the obstructing shins. From his slouching attitude the student leaped to his full height.

"Death of God!" he cried, and looked into the palmer's eyes, which were fringed with red lashes. Also his beard was red. Moreover, over his shoulder peered a face of most astounding loveliness. The student's heart stung suddenly as did his shins. With a mocking smile he doffed his cap and bowed deep.

his cap and bowed deep.

"Pardon!" he said. "If I unthinking have blocked the way it was because of my thoughts, which are confusing—a problem in astronomy, which suggested itself last night as I lay in the fields, the town being full of children."

The palmer inclined his head and passed, but the girl delayed timidly.

"You saw the children then?"

The student's bold eyes missed no detail of her white throat, of her oval face, of the delicate line of her eyebrows. He looked and moistened his lips.

"Children!" he cried. "I have seen nothing else, mistress; children that go like a pest of locusts, devouring everything in their path. Beds! The children sleep in them! Food! The children hunger and must be fed!"

The palmer, not without a glance over his shoulder, had gone on out of sight. They could still hear the tap of his staff. "Saw you then a very little one—a boy with hair like

mine? One of the smallest? He carried a banner."

"Nay, mistress." His bold eyes traveled over her, noting her slender ankles and slim hands. "Among so many, covered with dust as they were, even such hair as yours, mistress—"

Her color rose under his audacious gaze. Her troubled eyes turned in the direction the palmer had taken.

"Think you they are far ahead?"

"They move but slowly. With brisk going by sundown one could reach them."

Still he interposed his tall bulk in her path. Still he leered down at her, the mug of ale in his hand. But the tapping of the palmer's staff was growing louder again. He came in sight and stopped. As the student wheeled, brown eyes clashed with blazing red-fringed ones. Then with a sweeping bow the student stepped aside.

"Perchance, good sir," said the student derisively, "we may meet again. I, too, crave a sight of the Tomb."

The palmer muttered in his beard, and with the girl beside him moved on. Mug in hand, the student stood in the narrow street and listened until the tap-tapping of the staff faded into the mid-afternoon stir of the hamlet. His mocking eyes were not pleasant to see.

In his haste to leave behind the student and what he had read in his face the palmer pressed on. They did not stop for bread or meat; the girl felt a danger she had not comprehended and made no protest. Besides, were they not minute by minute nearing the army of the Little General of the Holy Ghost? Traces there were in plenty—dropped banners, flying clouds of dust, startled country folk slowly returning to their fields, springs swept dry. Soon they came on the stragglers, children in twos and threes struggling on, footsore, so weary that they zigzagged from side to side of the road and made slow going. In each hamlet these stragglers paused and asked their question.

"Is this Jerusalem?" they cried to the houses. But the townspeople, swept bare by the flood that had passed, could only shake their heads.

"Not yet, children."

So they wandered on, the stragglers making little plaintive spurts to regain the army, only to lose ground again.

"All There Years I Have Held
You in My Heart"

But always, unfaltering, their childish eyes were fixed ahead. Those who had breath to sing, sang:

"Fairest Lord Jesus,
Ruler of all Nature,
Thou of Mary and of God the Son!
Thee will I cherish,
Thee will I honor,
Thee my soul's glory, joy and crown."

Back through the dust cloud came the song. The girl's heart ached, so indomitable was the spirit behind their weary voices. But the little brother was not among them. Something of pride mingled with her pain. He was keeping up, then, for all he was so small!

The palmer was a man of few words. Once or twice he asked the girl if she wished to rest, and on a negative reply had kept on his even way without noticing her. But the girl was conscious of comfort in his presence; the holy palm, too, visible symbol of the thing for which they were striving, gave her fresh courage. Once she spoke timidly:

"I have a very little money and we have eaten the bread. We must stop in the next town and buy food."

"Bread will be given for the asking. Keep your money," he replied gruffly. But a little later, as they paused at the top of a rise: "Give me the money," he said. "You will have danger enough without that."

Stragglers were plenty now. The roadside was lined with them. Some sat forlornly with blistered feet; others slept on dusty banks, heedless of the sun. Here and there

> one wept for thirst or homesickness. The girl was torn with pity. They made slower progress. There were eyes to dry, little motherings that must be done, and above all there was the boy to be sought. The palmer bent over his staff and waited.

> Sunset found the rear of the procession a scant mile ahead—a grayish, dust-colored column that defiled slowly along the winding roads, banners whipping in the evening breeze, gilt crosses glittering in the low rays of a red sun.

> There was no lack of food or need of purchase. The countryside, now aroused, was flocking to the line of march with the choicest edibles of that fertile land. The palmer and the girl could have supped a dozen times over. The girl ate heartily. An hour or so and she would be with the child, and she had eaten little all day. As at noon, the palmer ate a trifle and prayed before he ate. They were now among the hangers-on of the army. Groups of women with hard faces and evil eyes walked with swaying hips, or arm in arm with male adventurers who surveyed the countryside with the keenness of those who live by their wits. To the simple country folk, with their offerings of food, they threw coarse words. And always, just ahead, were the gilt crosses glittering in the sunset.

The student came up with them ere they had finished their simple meal. He swung along swiftly on his long legs, scanning each weary group as he passed it and whistling. When he saw the girl he paused before her and bowed. The palmer he ignored.

"Slow going, mistress!" he jeered. "Think you to baptize the infidel by such loitering?"

"If the journey is to be long one must eat and drink," said the girl simply.

Once again the eyes of the two men clashed for an instant. Then the palmer rose.

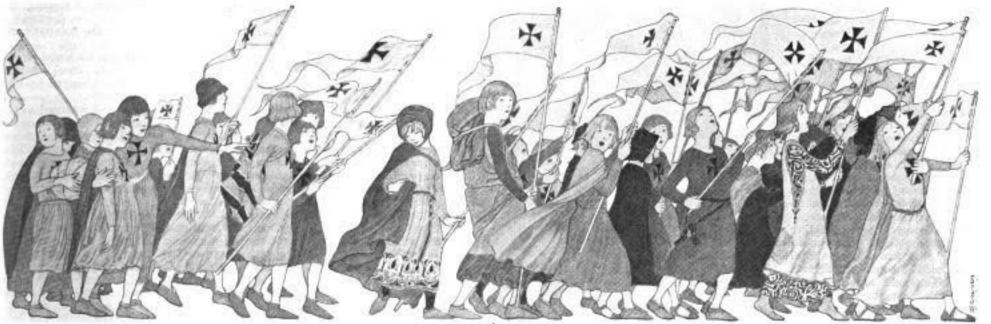

"Come, girl," he said. And to the student sternly:
"We are peaceful folk and would travel slowly. Our

pace is not yours."

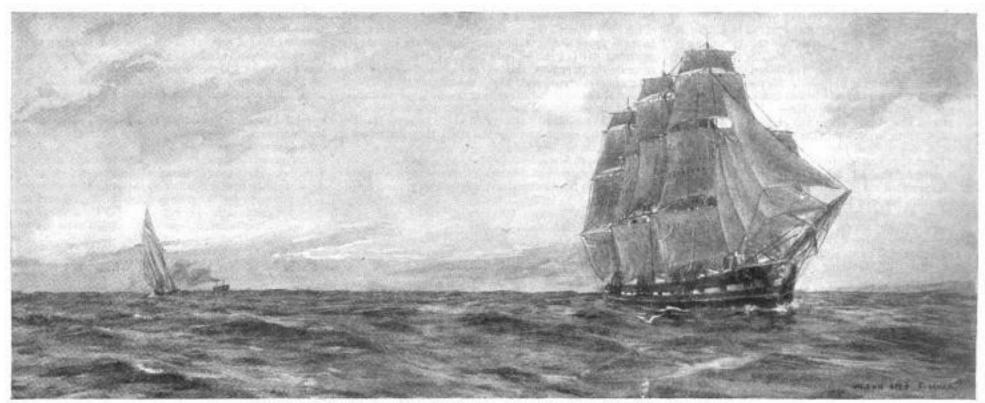

"Why," the student returned easily, "then my pace shall be yours." And fell into step beside them.

Now during all that day the palmer had watched the girl, saying little. He was past his youth and had fore-sworn the love of women; had foresworn passion and battle at the Sepulcher itself, in that dark valley of tombs, fringed by the gray desert, where the infidel jeered at his kneeling, dusty figure. So the eyes he turned on the girl were passionless, but tender, so brave a thing she was and so lovely. And now, from under his pilgrim's hat, he saw

(Continued on Page 46)

# HOW I BECAME A PILOT

I Think Jhe Was About as Old a Craft as I Ever Jaw, Apart From the Whaler Mary Inyder

WHEN my father and mother discussed my future across the sitting-room table at evening they were sure that I showed great aptitude for the profession of teaching. Mother hinted that she hoped sometime to see

me the president of, say, Princeton. As the event has proved, the sea was to be my sphere of activity and "pilot" my title. And mother is just as proud of me as if I were President Jordan instead of Pilot Jordan.

Because the sea offers a special, professional career, with good rewards and great responsibilities, I have thought that I should like to relate my own experiences. They may turn the thoughts of Mr. and Mrs. Smith away from the already overcrowded and too-often petty professions to one that John Smith, Jr.—aged twelve—dreams of o'nights. It is frequently asserted that we have no American merchant marine. They tell us that in case of war we should be unable to man our battleships. It is claimed that the genuine seaman is extinct. The boys know differently. Six hundred thousand of them go to sea every day with W. Clark Russell or Captain Marryat or Robert Louis Stevenson. Little Tommy Little in Ottumwa knows how

to handle a brig; knows the clewgarnet block from the main royal
halliard. Billy Jones, of Salem,
Oregon, can tell you instantly the
difference between bracing a ship
up on the starboard tack and letting her run free under tops'ls with
two men at the wheel. As Captain
Nelson, of the Pacific Mail Steamship Korea remarked to me one
day, every boy between the ages
of ten and sixteen is a sailor even
if he lives at Blue Lakes, Idaho,
and never saw a vessel of any kind
in his life.

### On Board the Halys

THAT'S true, for I was raised in a small college town in Iowa, and the only water that floated anything was a small creek. But before I was eleven I could sail a ship. I dreamed ships, as did my pals, and when I managed to find an old sailor who had a muchmussed chart of the Pacific Ocean I knew perfectly well that I should never be anything but a sailor.

When I was twelve my father moved from the Iowa town to Seattle, then a struggling village surrounded by sawmills, brickyards and half-cleared land. It was still in father's and mother's minds that I was to be a professor. I was to go to Princeton and study four years, and then be appointed an

# By John Fleming Wilson

instructor at eight hundred dollars a year. But there was a missionary ship called the Halys that carried a preacher up and down Puget Sound at the expense of an organization of churches, and my father knew the preacher, who was also master and pilot of her. One trip was enough. I turned my back on school and began to study the sea, which is really and truly a subject as engrossing and as hard to master as either law or medicine. You can become a doctor in four years; you can't get a master's ticket or a pilot's branch in less than eight.

It was one morning when the Halys—it is from the Greek word for fisherman, and referred to what the captain always unctuously called souls—lay off Everett that I was suddenly hailed by a sailor on a steamship called the Premier.

"Ahoy there! Take this line!"

Now I had been waiting since I could read to be ahoyed. I took that heavy line as it flirted out from the great side of

the steamer and I made it fast in creditable time.

"Smart work, son!" yelled the man to me. "You're a sailor all right!"

That was my start. I went to the mate of the Halys, Tom Brown, and he agreed with me that I might do.

"Ye got plenty to learn, kid," he told me. "But when ye've had a couple of deepwater vy'ges ye'll get along like a house afire."

I am glad to say that both my parents realized that I would make a better seaman than I would an instructor in languages. I think it was a romantic strain in my mother's character that led her to understand me. I know that she persuaded father to arrange for my going as an apprentice.

"I understand that all sailors are called 'common," he remarked bitterly. "Our

boy ought to be something better."

"He will be a pilot some day," said she. "What is it that pilots go up and down on?" "Jacob's ladders," I replied promptly.

"You must be careful and not fall off," said she. That went right to the heart of the matter. She spanned all the years of my apprenticeship and simply gave me instructions as to my conduct when I was a full-fledged pilot, boarding the liner at midnight in a gale.

Father's professional position gave him direct acquaintance with many men who were in the shipping business.
He consulted them and they all said that I ought to get my
first training on a Scottish ship. There was one lying at
the time at Tacoma, called the Garnet Hill. She carried
six apprentices in the halfdeck and there was one missing,
lost during the voyage from Shanghai off the foreroyal yard.
Through the agents my father made arrangements with
Captain Robinson to sign me on and paid him the fee of
one hundred dollars. This money was to cover the cost of
my tuition and clothes and give me two shillings a mouth
pocket-money for a year. It was agreed that if, at the end
of the year, I proved my fitness to become a real seaman, I
should be entitled to spend two more years on the ship as
apprentice and that my fourth I should act as third mate-

### Acting Second Mate at Sixteen

I SPENT just three years and a half on the Garnet Hill and on my sixteenth birthday found myself acting second mate. I was then a stout, husky, clear-eyed youth who had learned to do everything, from swabbing down a deck slushing down a spar or polishing brasswork, to tacking ship at two A. M. when the wind and sea were both outrageous. I had learned to use not only my hands but my wits. I was a very good mathematician and a fair linguist, it being a hobby of Captain Robinson's to teach all his boys French, German and pidgin English.

"Your time will be up and you can pass for your first ticket at the Board of Trade at the end of this voyage," the

old man told me.

"Yes, sir," I said. "Do you think the company will have a place for me, sir?"

"I think so," he responded, pawing at his beard. "But

"I think so," he responded, pawing at his beard. "But your mother wants you to better yourself. There's mighty little satisfaction in sailing ships. You'd best go back to Puget Sound and get a job on a steamer."

I took Captain Robinson's advice and returned to the States. Immediately upon my arrival I went before the Inspectors of Hulls and Boilers and passed my examination for master of vessels under seven hundred tons. This entitled me to act as mate or second mate on any vessel. With this in my pocket I went home and spent a month. All that time father kept asking me: "Now that you have got your education, what are you going to do?"

I had balked at the idea of becoming a pilot, for I was still anxious to wander about the world; it seemed very tame to stay in just one port and guide ships across a bar-But something happened that turned the whole tide of affairs. My father decided to go to Portland, Oregon. My mother was by no means well, and she pleaded with me to leave the Sound and go with them to the Columbia River. I did so. And one of the first men I met was an old shipmate off the Garnet Hill, who informed me he was now master of a bar tug, the Escort.

"I need a mate," he told me, "and you'll learn piloting at the same time. There is lots of money in it."

At that time the state of Washington had one set of pilots on the Columbia River bar and the state of Oregon had another. My friend Daly belonged to the Oregon pilots, an association that worked under state laws but was otherwise an independent organization. They owned their own pilot schooner, the John C. Cousins, and the tug Escort.

In those days the Columbia River bar was probably as dangerous a spot as there was in the world. It is still a very hard place for a pilot. At the time that I joined the Escort the jetty, now completed for many miles to sea, was a short and rather insignificant affair. There was no light-ship offshore and few harbor lights. Tillamook Rock to the southward had been completed but its light was not powerful enough to help us to the north. And though the papers claimed that there was thirty feet of water on the bar at mean low water there was really about twenty-four, with a tide of from eight to twelve feet and a current that, owing to the formation of new sand spits, was so irregular as to be a constant menace.

I spent a month on the Escort, learning the tugboat business, which is a special profession and one of the most exacting imaginable. But nothing out of the ordinary

happened during this time, and I managed to get a pretty fair notion of the bar and the difficulties of the channel. We usually handled from one to three sailing ships a day, for the Escort was much faster than the Relief, belonging to the Washington pilots, and we could easily beat her to a ship. Of course they might beat us in bargaining.

The rivalry was intense. The Oregon pilots were at an expense of almost one hundred and fifty dollars a day. That money had to be made out of incoming and outgoing ships, and then they had to make their own wages besides.

As I say, nothing special happened for a month. Then I was wakened at three A. M. of a bleak November morning.

"Salvage," said Daly briefly.
"How are your hawsers?"

"Two aboard and one on the dock," I told him.

"Get the one on the dock and fake it down on top of the deckhouse," were his orders.

## Off for Salvage

NOW a new manila hawser weighs a lot. It took the whole twelve of the crew to get it aboard. No pennant had been bent, and as the Escort steamed down the bay from Astoria I worked the hardest two hours of my life putting the pennant on. The pennant, I must explain, is a wire loop that can be dropped over the bitts, and by it the hawser is hauled aboard.

I had just finished my job and handed my own marline-spike to the boson when a heavy sea struck the tug and we were all nearly washed off the upper deck. I stared round and saw that Captain Daly was taking the southerly channel, almost alongside the jetty. I could see no lights. It was the particular moment in a winter's dawn when you know there is light but you can't dis-

there is light but you can't distinguish anything. "What's all this?" I asked the boson. "I heard there's a German square-rigger going ashore off Clatsop Spit," he told me.

"We can't get her," I returned.

Now I learned a lesson. It's a lesson I've never forgotten, for it means the difference between the sailor and the specialist. The tugboat man and the pilot are both specialists. "We're out here to get 'em," said the boson.

It proved that we did. Daly ran the Escort through that raging whitewater right up to a big skysail-yarder and then yelled to me: "Get that hawser aboard her!"

Now I had sailed the seas for over four years. I was a pretty good boatman and I didn't want to acknowledge that I was unequal to any emergency. But the big ship was thrashing about like a stranded whale within a half mile of cruel quicksand. The seas were tossing the tug so that it was almost impossible to keep one's feet, and the thing was impossible.

To this day I can't tell how it was I managed to get that hawser aboard the ship and make it fast. I did. I think it was by going at the job with a slowed-down mind. I used seconds as most men would use minutes. I never took my eyes, ears or mind off my job. I don't suppose I spent fifteen minutes before the Escort steamed seaward with that packet in tow; and I was as tired mentally as if I had spent a whole eight hours over a mathematical problem.

Then I learned another thing. We pulled the ship out about two miles, still helpless and in a situation she could not extricate herself from without our aid. Daly circled back while I have in the hawser and he megaphoned to the skipper that unless he paid us five thousand dollars we would drop him.

I had heard of these things. Captain Robinson had often spoken bitterly of the ways of some tugboat men. But for Daly to stop and risk both ships to make a bargain struck me as utterly preposterous.

Of course the poor skipper tried his best to beat down the price; but Daly was obdurate and the Washington tug

bark the next, a Norwegian freighter the next, and it was my turn. The boatkeeper, an old Swede, had taken a fancy to me. He advised that we take advantage of the brisk nor'wester and stand to the south'ard. I, by virtue of being the only pilot on board, was in command. So I accepted his advice.

"There's the Washington pilots off there," the boatkeeper told me that evening, pointing to a dot on the horizon.

"They've got word of something."

This was enough. We headed the old San José—a very cranky craft and touchy to handle—outward. At midnight we overtook the Washington schooner, passed her, and at three o'clock, in the pitch dark, hove-to to windward of a huge British tramp.

I got into the yawl and went down wind to her, crossed under her stern and came round on the lee.

"Pilot?" bawled a hoarse voice from the lofty bridge. "Pilot!" I yelled back.

A lantern appeared at the bulwark thirty feet above and

then the Jacob's ladder was lowered.

Thus I boarded my first ship, clinging to the swaying, swinging ladder in the darkness. I have never forgotten the name of that packet—the Monmouthshire.

Once on deck I took my satchel and headed for the steps to the bridge. I don't exactly know why I had the feeling,

but I was strangely elated. I was met by the captain and I handed him the bundle of papers we always carried with

"Where from, captain?"

"Tientsin, Mr. Pilot."
"Good voyage, captain?"

"Twenty-two days. Where are we now?"

"Forty-one miles sou'sou'west of Tillamook Light," I told him.

I shall never forget his sigh. He was a burly man with a short-clipped beard. He wore one of those Chinese caps that fit like a skullcap and have ear-lappets. He sighed again.

## The Man in Charge

"I HAVEN'T been to sleep in sixty hours," he murmured as if to himself. Then he turned to me: "The ship is yours, Mr. Pilot."

He walked away quickly, as if he were afraid I would ask him still to keep his vigil. And I, on my first command, looked over at the officer of the watch, the second mate, and said:

"Nor'nor'east—one-halfeast."

I recall very vividly that when I ordered the engines rung down at five A. M. I scanned the outlines of Saddle Mountain and North Head with a new interest. I was in charge of a big ship.

It is something to know that you have a million dollars' worth of freight and sixty lives in your own hands. I understand that presidents of two and three million dollar corporations on shore sometimes make as much as fifty thousand a year, with no responsibility for life. In my time I have had absolute command of one hundred million dollars and been paid less than a hundred dollars net for my twenty-four hours' work. But I have had my reward. I have never lost a

life or a dollar's worth of other people's money, except in one case. I lost a cool four millions then, but I managed to save the lives. After all, that's what counts. Standing on the bridge of the Monmouthshire, waiting for the mist to rise off the bar so that I could pick up the bell buoy, I thought mostly of the people asleep below me—who trusted me and did not stir in their bunks, because the pilot was in charge.

I have never forgotten that lesson. I have had as many as two thousand souls in my keeping, and, as I have said, one hundred million dollars' worth of freight. I think of the lives first. You can talk to an inspector of hulls and boilers, or to an underwriter, and back up your talk; but

In Those Days the Columbia River Bar Was Probably as Dangerous a Spot as There Was in the World

was nowhere in sight. The ship's captain agreed to pay the five thousand rather than lose his ship and the lives of his crew, and we anchored him in Astoria Bay that afternoon. Daly collected the money before we swung the ship to her anchorage.

This disgusted me with tugboating and I spoke to one of the old bar pilots about going out on the schooner. He was a thorough master of his profession. He said he would do what he could for me. The result was that in six months I got my branch and sailed out one fine June morning on the old San José, a full-fledged pilot.

We cruised about for a week without getting anything. Then a sailing ship took off the senior pilot, a British you can't say much to a widow or an orphan. Somehow they won't understand that it wasn't your fault that you wrecked your vessel. Once I spoke to a great cancer specialist who was a passenger on a liner I was bringing in, and he told me that he never spoke to the wife or daughter or

husband or son of anybody he had operated on and lost.
"One has to save them," he told me. "They expect it. And it's human nature to think that you have been remiss if you don't bring them round."

Right here I want to tell why I quit the Columbia River

bar. This is how I lost the big tanker Mabel Jarrett. It was a very still Sunday in February. I was on the John C. Cousins at that time and we were possibly fifty miles offshore. We had been fishing for silver-side salmon all afternoon, and the boatkeeper had told me that he had never seen the swells so low or the water so smooth.

A look at the sky convinced me that the day was a weather-breeder; yet the glass was steadily rising. Far in the southwest one could see light haze dotted with dark little spots of clouds. I knew that a gale was almost invariably preceded by a heavy swell. The impulse given to the water by the wind travels faster than the center of the storm. I really did not know what to think.

It was just sundown when a steamer appeared over the sealine. It seemed to emerge from this haze. We got the

dory in and with what little wind there was stood outward. An hour later we were alongside the steamship, which was one of the first tankers built. It was a rather light and pleasant evening, and when I bid the boatkeeper goodby I by no means anticipated what the next few hours were to mean to me.

This particular ship was the first experiment, I think, in the construction of crude-oil steamers. Now they know pretty well how to build them, though now and again an old one shows up the same as this one did. She was built on the longitudinal plan, with transverse bulkheads and compressors. These latter were pipes of large diameter that came straight up to the maindeck and were kept filled with oil or water. By the hydraulic rules it will be seen that twenty feet of water in a compressor pipe means several pounds to the square inch against the walls of the oil

I noticed as soon as I got on the bridge of the tanker that she behaved very stiffly. In the slight swell and smooth sea she should have been easy to handle. As it was, the man at the wheel was in a perspiration and the captain absolutely refused to answer my questions.

"I know nothing about her handling," he said abruptly. "She has always done pretty well. You have to take the responsibility yourself."

I think it was eleven-fifteen P. M. when I reached the bell buoy. The Columbia bar was totally obscured in a dense, still fog that seemed to float on the surface of the water. It was obviously impossible to cross in, so I swung outward, telling the skipper that it would be best to lie about twelve miles offshore till the fog lifted.

He demurred very strongly. I refused to take the steamer in and he had to admit that he would not take the

responsibility himself.

We had not got more than two miles out when a huge swell raced in from the southwest and the ship smashed into That began things. Inside of an hour the wind was blowing ninety miles an hour and the sea was terrific. The tanker made heavy weather of it.

Very gradually I began to see why the captain had been so anxious to get inside. His vessel was wholly unequal to the struggle, owing, I think, to a probable bulging of one of the bulkheads from the compression put on them by the pipes. At any rate she neither steered nor steamed, and in spite of all I could do we were soon blown in toward the bar.

"I've got to take her in," I told the captain. "I don't know why she behaves this way," he said.
"The current," I told him. "In this gale you could

stream a thirty-pound deep-sea lead over the rail of a ship

(Continued on Page 80)

# What is the Monroe Doctrine?

HERE is a certain safety in the very front and menace of daring. When the fortunes of battle began to go against him it was the custom of Casar to order all the standards along the line advanced. For a little state of some ten million people, unsteady on its feet and with no fighting force worthy the name, to defy the whole of Europe in a great world policy was a piece of splendid courage.

The situation before James Monroe was, in its ultimate menace, nothing less than the question of the survival of democracy. The men of Virginia and Massachusetts had established representative government in the world; and again, with Monroe as president and John Quincy Adams as secretary of state, it was the men of Virginia and Massachusetts who said that representative government should be given an opportunity to survive.

We forget how things stood in the world when Monroe wrote his message-Russia, Austria, Prussia, and practically all the powers of Europe, with the exception of Great Britain, had formed the Holy Alliance. It pretended to establish a vast Christian brotherhood; but its real and moving object was to maintain the divine right of kings and to see that no throne in Europe was overturned. Napoleon had shown how easily kingdoms might be toppled over. Democracy moved vaguely behind him. The Holy Alliance undertook to stamp this out and to keep existing dynasties intact.

### Monroe's Courageous Words

THIS was the situation on the continent of Europe. On the American continent the colonies and dependencies of Spain had almost all rebelled, and had set up for themselves independent representative governments, modeled, for the most part, after that of the American states.

It seemed clear to Monroe that the Holy Alliance would not confine itself to Europe, but would undertake to stamp out the growth of democracy on the continent of America. He took council with his Cabinet and with Jefferson. It seemed to these great leaders of the democratic movement that the very question of the survival of representative government was before them, and that they must act with the vigor and courage with which they had acted when their little republic began its national life.

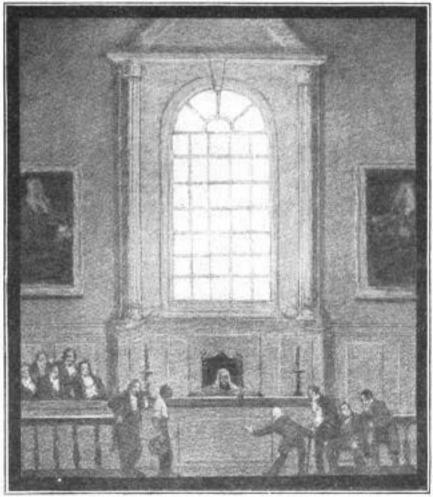

On the second day of December, 1823, after long reflection, Monroe sent his celebrated message to Congress. His immortal doctrine is set out in a few vigorous sentences:

The American continents, by the free and independent condition which they have assumed and maintain, are henceforth not to be considered as subjects for future colonization by any European Power.

And then follows this great, courageous paragraph:

We owe it, therefore, to candor and to the amicable relations existing between the United States and those powers, to declare that we should consider any attempt on their part to extend their system to any portion of this

## By Melville Davisson Post

hemisphere as dangerous to our peace and safety. With the existing colonies or dependencies of any European Power we have not interfered and shall not interfere. But with the governments who have declared their independence and maintain it, and whose independence we have, on great consideration and on just principles, acknowledged, we could not view any interposition for the purpose of oppressing them or controlling in any other manner their destiny by any European Power in any other light than as the manifestation of an unfriendly disposition toward the United States.

This is not the language of diplomacy. It is the language that goes before the bayonet. It contains all those last words that make the final defiance of a state. Nobody knew what would happen when they were uttered; but Monroe, Adams and Jefferson were of the opinion that our little nation must hazard this splendid defiance.

The paragraphs of Monroe's great message were, then, no vague, accidental, unimportant dicta. It was a new Declaration of Independence—not of thirteen states and of one people, but of a whole continent and of innumerable peoples. These men felt that the very existence of democracy was again at issue; and, like Seneca's pilot, they must keep the rudder true-whether in the end Neptune should save

The Doctrine, then, had its origin in a policy elevated and noble.

## Mr. Olney's Definition

MONROE trusted the sea for the same reason that Horace feared it—Occomis

There were some events tending to sustain the little republic in this attitude of splendid courage. Great Britain, outside the Holy Alliance, was favorable to the policy. Canning, the Englishman, pretended to have suggested the Doctrine. That is not true; but he was sympathetic to it. He obtained recognition of the Spanish Republics; and he had some claim to justify his epigram:

"I called the New World into existence to redress the balance of the Old."

The Doctrine has been claimed for John Quincy Adams and Jefferson, but it is more likely that the principles of it were a steady growth-like those formulated by the great Virginian in the American Colonies' defiance to Great Britain at Philadelphia. The geographical position of the United States aided in maintaining the Doctrine.

England's attitude toward the Holy Alliance, the sea, and the very front and menace of the courage with which the policy was announced carried it through. The great powers were astonished; but they respected the Doctrine.

Almost every Administration afterward had something to do with the operation of this policy; but the most conspicuous instance was the Venezuelan controversy.

There had been an old dispute between Great Britain and Venezuela concerning the boundary between the latter's territory and that of British

Guiana. Great Britain refused to arbitrate the question. Venezuela was too feeble to contend with arms and the United States undertook to get the matter adjusted.

Mr. Olney, then secretary of state, presented the matter to Lord Salisbury as within the scope of the Monroe Doctrine, on the theory that the Monroe Doctrine prohibited any foreign power from acquiring territory on the American continent, and that this territory might be acquired as readily by claiming it on a disputed line as by actual conquest. He undertook to define the scope and limitations of the Monroe Doctrine:

It does not establish any general protectorate by the United States over other American states. It does not relieve any American state from its obligations as fixed by international law, or prevent any European Power directly interested from enforcing such obligations, or from inflict-ing merited punishment for the breach of them. It does not contemplate any interference in the internal affairs of any American states. It does not justify any attempt on our part to change the established form of government of any American state, or to prevent the people of such state from altering that form according to their own will and pleasure. The rule in question has but a single purpose and object. It is that no European Power or combination of European Powers shall forcibly deprive an American state of the right and power of self-government and of shaping for itself its own political fortunes and destinies.

That was Mr. Olney's idea of the scope of the Monroe Doctrine outside the admitted tenet that no part of America was open to colonization by any European Power—a doctrine now universally recognized. In a later paragraph of his dispatch he made certain pronouncements that were not within the limitations of his definitions:

Today the United States is practically sovereign on this continent, and its fiat is law on the subjects to which it confines its interposition.

Lord Salisbury replied, admitting that the Monroe Doctrine "must always be mentioned with respect on account of the distinguished statesman to whom it is due and the great nation that has generally adopted it," and that the language of President Monroe was directed to the attainment of objects which most Englishmen would agree to be salutary; but he denied that the dispute over a boundary came within the Doctrine, or that the Doctrine itself was a principle of international law.

The attitude of the United States was firm and decisive. The country was fortunate in the men who handled the affair and Great Britain finally consented to arbitrate the dispute. A recent pretended authority assures us that Lord Salisbury yielded out of a sense of humor—but the sense of humor must be transferred to the reader of that explanation! That Lord Salisbury yielded from a high sense of national justice one is ready to admit; but a sense of humor has not been observed to be a moving impulse in British affairs.

### A Change of National Policy

THE Doctrine was invoked under Polk, Grant, Cleveland, Roosevelt, and recently in the Magdalena Bay incident.

The Mexican Government had granted some four million acres lying along the coast of Lower California, including Magdalena Bay, to an American. The concession was transferred by him to other Americans and a syndicate was formed called the Chartered Company of Lower California. This company failed and the property was taken over by the creditors, who formed a holding company called the Magdalena Bay Company. Then the promoters undertook to form a company for the purchase of the property.

One of the plans was to sell Magdalena Bay and this territory to a syndicate, composed principally of Japanese, the Japanese to take over thirty-five per cent of the stock, with an option to acquire a further interest. The matter had reached this stage when it was brought to the attention of our Government.

The United States Congress felt that there was danger in permitting a foreign nation to control a point of land which might become a naval base—that there was, in substance, but little difference whether such base were held by citizens of a foreign country in a company or controlled by a foreign

It was a difficult question, since it was evidently clear that the United States could not object to foreigners holding real estate in Southern American countries, and that there must be some clearly defined distinction between land owned by foreigners in southern states and a concession which embraced a strategic point, or one suitable for a naval or military base.

As the situation was not acute it was thought advisable to define the position of the United States; and that was done by a resolution making the situation clear:

Resolved: That, when any harbor or other place in the American continent is so situated that the occupation thereof for naval or military purposes might threaten the communications or the safety of the United States, the Government of the United States could not see without grave concern the actual or potential possession of such harbor or other place by any Government, not American, as to give that Government practical power of control for naval or military purposes.

It was pointed out by Mr. Lodge, who had charge of the resolution, that the Monroe Doctrine did not touch on the precise point involved. He said that without the Monroe Doctrine the possession of a harbor, such as Magdalena Bay, would make it necessary to make some declaration covering the case where a corporation or association was involved. He thought the resolution might be allied to the Monroe Doctrine, but it was not necessarily dependent on it or growing out of it.

"This resolution," he said, "rests on a generally accepted principle of the law of nations, older than the Monroe Doctrine; it rests on the principle that every nation has a right to protect its own safety, and that, if it feels that the possession by a foreign power, for military or naval purposes, of any given harbor or place is prejudicial to its safety, it is its duty, as well as its right, to interfere."

The Monroe Doctrine has not always stood for great national acts of unselfishness; but an excuse may be given for anything and a time-honored doctrine may be used for any sort of cover. Did not the American Colonies make war on the king in the king's name? And one remembers that charming, powerful person who burned a cathedral in the Middle Ages, giving as an excuse that he thought the bishop was in it!

Under the cover of this Doctrine, Texas and California were taken over; Guantanamo Bay came under the flag; the customs receipts of Santo Domingo were put under American control; troops were sent into Nicaragua, and so on. These acts were perhaps justifiable on a theory of national interest.

The great outrage to this Doctrine, however, was accomplished by the men who shaped the policy of the country after the Spanish-American War. A strange thing had happened in our political history. Men of high ideals, philosophers—dreamers, if we like—had been at the head of the state.

Now in 1896 the commercialists—the men of business succeeded to the government. They announced a dollar diplomacy and a dollar-gaining theory of government.

These men could not be induced to give up the territory we had taken by force of arms. Senator Hoar, of Massachusetts, labored in vain to persuade them to do so. He pointed out that the traditions of the American people were being outraged—that this policy of gain stultified the integrity of the country. He said the American Republic could not buy a people: "Your purchase or conquest is a purchase or conquest of nothing but sovereignty,"

He thundered in the Senate:

I maintain that holding in subjection an alien people, governing them against their will for any fancied advantage to them, is not only not an end provided for by the Constitution but it is an end prohibited therein.

It is an end that the generation which framed the Constitution and Declaration of Independence declared was unrighteous and abhorrent. So, in my opinion, we have

no constitutional power to acquire territory for the purpose of holding it in subjugation, in a state of vassalage or serfdom, against the will of its people.

And he said that when he pressed these men to answer this immortal doctrine of democracy they replied by talking about "mountains of iron and nuggets of gold, and trade with China!"

It was useless for this perplexed old man to repeat the fine, time-honored ideals of this country. Gain was looking at the men he talked to, with her "golden eyes under her gilded eyelids!"

He pointed out that the purchase of Louisiana, of Alaska, of Florida, of California, was an expansion of liberty, not of despotism.

"Never," he said, "was such growth in all human history as that from the seed Thomas Jefferson planted. . . . It has covered the continent. It is on both the seas; it has saved South America; it is revolutionizing Europe; it is the expansion of freedom. It differs from your tinsel, pinchbeck, pewter expansion as the growth of a healthy youth into a strong man differs from the expansion of an anaconda when he swallows his victim."

These men replied, however, that they were practical gentlemen of affairs and that Jefferson was a dreamer. Their eyelids, like those of the damned in the Inferno, were stitched together with an iron thread. They saw not that the dream Jefferson dreamed had solidified into a structure of enduring basalt, lifting into the heavens towers of gold!

Set on enriching themselves, they could not understand that the race must always be captained by dreamers that only those can go before it who maintain the very highest ideals by which a state can live; that no doctrine of mere expediency can ever be a great national policy; that it is profitless for men to lead a state unless they lead it by this great ideal:

"Except the Lord build the house, they labor in vain that build it."

### A Doctrine Without Exact Definition

WHAT, then, is the Monroe Doctrine? In the popular conception of today it is undefined. The press seems to think of it as the courts think of Due Process of Law—a doctrine not to be strictly defined by terms of limitation. So large and vague is the common idea of it, one might as well ask the average man what the fourth dimension is and expect to receive an intelligent reply.

The courts will not undertake to say what due process of law is; they will say only whether the question arises in the case before them. This is precisely the position we seem to take with the Monroe Doctrine. It is the belief of perplexed foreign governments.

We know precisely what the Monroe Doctrine was. It contained two essentials clearly set forth—that the American continents are not to be considered as subjects for future colonization by European Powers, and that American states must be permitted to govern themselves as they see fit.

There was nothing doubtful about what Monroe intended—the great powers must not seize any of the lands of the peoples of the South and they must permit them to work out their own governmental destiny.

The doctrine was precise and clear—and it was just, unselfish and noble; but we have construed it as the courts have construed the Fourteenth Amendment, until this simple policy has developed into the idea of a

# THE FLOODTIDE OF FORTUNE

You may be old as well as poor.
When Fortune knocks upon your door;
But do not let the lady wait Because she does her calling late. - Etiquette for the Aged.

HEN John Parkin Jones courted Miss Evelyn Spargo there was the usual discussion between the parents of the young lady as to his eligibility. Mr. Spargo objected that John Parkin was poor, which was undeniably true. Mrs. Spargo urged that her daughter's suitor had a good moral character and a lovable disposition, which likewise were incontestable facts.

'And he's industrious," added Mrs. Spargo; "and he's got a fine mind and writes shorthand beautifully; and he can operate a typewriting machine. I shouldn't be surprised to see him a millionaire-another Commodore

Vanderbilt."

"He may, with luck; but those qualities you speak of will be considerably in his way," opined the old gentleman. "He's old enough now to have done something for himself. Why hasn't he?"

"He hasn't had the opportunity-poor boy!" said Mrs. Spargo.

"Well, I'm opposed to it," declared Mr. Spargo emphatically. "I won't have it—and that settles it!" Six months later John Parkin Jones and pretty little

Evelyn Spargo were married. "He'll never get a cent of my money!" said Old Man

John Parkin Jones never did. One fine morning pork did various unaccountable things on the market and, as a result, the old man was wiped out—not merely from his brokers' books but from mortal existence. Financial and heart failure occurred simultaneously.

John Parkin and Mrs. Jones were then living at Bibberly Heights, a southern prairie suburb, in a cottage that might

have been considered a tight fit for three.
"Plenty of room! Oceans of room!" John Parkin blustered. "We'll give her the bedroom and we'll take the sitting room or the dining room-just put the bed lounge where we want it and we'll be as right as rain.'

So Mother Spargo came to live with them, and John Parkin shaved in the kitchen and was a son to her-an affectionate and considerate son. She was devoted to him and to the day of her death was firm in the belief that he was destined to become a millionaire. Sometimes her daughter ventured to doubt this, whereupon the good old creature would wax highly indignant.

(ENECLENI)

By Kennett Harris

ILLUSTRATED BY IRMA DÉRÈMEAUX

No-Evvy did not consider him a fool; quite the reverse.

"Is he lacking in ambition?" John Parkin was by no means lacking in ambition. His wife conceded that.

"Has he a disagreeable personality? Is he a spendthrift? No? Well, I must say you surprise me, my dear. Will you tell me what there is to prevent him from becom-

ing a millionaire?"
"I don't know of anything," Evvy was obliged to admit. "Then let me tell you that you're a very wicked, ungrateful and impious girl!" the mother reproved. "You know that the dear boy has had no opportunity yet; but the opportunity will come and then you'll remember what I have always said."

Not very long after this John Jones, Jr., arrived, and Mrs. Spargo departed this life. The old woman left John Parkin a dying blessing, which, when it is deserved, is no bad thing to have. John mourned her sincerely.

By this time John Parkin was thirty years of age and his hair was beginning to gray at the temples-a rather stockily built, bright-eyed man, with a ready laugh and a benevolent expression that was somewhat accentuated by the breadth and height of his forehead.

Already he had had his ups and downs in a small way, the biggest down being the loss of his position with the local express company. It was no fault of his. The express company, incredible as it may seem, went into bankruptcy, and for six long weeks John Parkin composed and wrote letters of application, and trudged the streets, and besieged offices in search of employment.

The energy he showed in this pursuit was prodigious; the impression he made on the men to whom he applied was usually favorable, in spite of his nascent seediness of apparel; yet it was six weeks before he got his pitiful clerkship in the Gann-Abercrombie Steel Construction

Company. How would you account for it?
"Luck!" said John Parkin, with his jolly laugh. "That's what nobody can account for-altogether. It was just my luck to lose my job and just my luck to have the trouble I had in getting another. On the other hand, it was luck that made the opening for me at last, Evvykins. I might have been jobhunting for weeks to come if it hadn't been for another man's luck in getting the offer of a better thing. Now, my love, if it isn't too much strain on the back of your neck, just watch me climb!"

Mrs. J. P. Jones laughed, hugged him, gurgled delight, and concealed her disappointment with the perfect dissimulation of a thoroughly good wife. After all, they could get along, small as the salary was. Really they did manage surprisingly well, even when the little fellow came to add to expenses. If Mrs. John Parkin ever sighed in secret it was more in pity for her husband than for any deprivation she felt. She was willing to make the best of things, but by this time she had no illusions.

John Parkin had. He might have been possessed of the confident spirit of his dead mother-in-law-he seemed so serenely assured of his future. "My goodness, girl! We're young yet, with all the world before us." He said that at

thirty-three, mind you! "Fortune knocks once at every man's door. I may be down in the basement fixing the furnace when she knocks at ours; but if she gets away before I can give her a glad welcome she's got to be a mighty spry lady."

At other times he would quote:

"There is a tide in the affairs of men Which, taken at the flood,

leads on to fortune; Omitted, all the voyage of their life

Is bound in shallows and in miseries."

"Some time, when the moon's right, there's going to be a floodtide in our affairs," quoth John Parkin. "Then Johnny's going to college; and Loretta—shall we buy a duke for Loretta, mother?"

Mother smoothed Loretta's little velvet

Here Was a Loud and Imperative Call for a New Juit; Also a New Hat and New Shoes

head and pressed it closer to her bosom. One after another little velvet heads had come to that gentle breast and were never unwelcome. It was a wonder, for John Parkin's salary was far from increasing proportionately. Again the question, why?

Jones did his work well and ungrudgingly. More than once he had shown that he had initiative. He was generally liked, generally respected, and-whenever the question of promotion came up—generally neglected. Callow junion, with not a tithe of his ability, had been promoted over his head. They were calling him Old Jonesy in the office, and among the heads there was often talk of giving Old Jonesy something better to do.

In vacation time and during temporary absences of superiors they had given him something better to do, and he had accomplished these unaccustomed tasks to their entire satisfaction; but back he went to the old routine, once the emergency was passed, and the advancement was deferred indefinitely.

Was it lack of aggressiveness on John Parkin's part? He asked himself that question sometimes. He might have gone to Burleson, the head of his department-even to the great Gann himself-and talked turkey. As for instance:

"See here, Mr. Gann, I've been with you people close on to ten years now. I'm a good man-a valuable man: but you don't seem to have the sense to realize it or I shouldn't be plugging along in substantially the same position I was when I first came to you. I know the business from A to Z and from soup to nuts, and I could easily be worth to you ten times the salary I am getting. You don't take that view of it, I know; so I'm here to tender my resignation. Good day!"

Would Burleson-or Gann-say:

"Here! Wait a moment, Mr. Jones. Don't be hasty! Let's talk this thing over a little. I don't know but we have been to blame. Certainly we don't want to lose you."

Or would Burleson-or Gann-remark, with an air of cold annoyance:

"That's your privilege, Jones. The cashier will give you your check. Good morning."

Suppose the latter case. Would he, Jones, step straightway into a highly lucrative position with another big concern? Or would he be trudging the streets as in these bygone days, looking for employment of any kind in vainand thereafter floundering helplessly "in shallows and in

All very well for John Parkin to risk it; but how about Johnny and Loretta and Gracie and Peter Parkin and Baby Bunting? "He that hath a wife and children said the sapient Bacon.

John Parkin shook his head, but his face brightened in a moment. "On the other hand," he murmured, "'there's a tide in the affairs of men which, taken at the flood, leads on to fortune.' Not in the affairs of young men-though, for that matter, I am young enough."

Surely he was young enough! Nobody could have doubted it, seeing him rolling and tumbling on his tiny lswn with the children, his mellow laugh ringing out in pleasant concert with their joyous shrieks. Mrs. Jones, seated on an old campchair and placidly mending small garments, smiled on him quite maternally from time to time. She was young enough too—to be the mother of such a brood.

Time had dealt kindly with her, though she often looked at her once pretty hands with a rueful sigh. Much scrubbing and scouring, mending and making had spoiled them utterly; but they were wonderfully capable hands and infinitely soothing in their caresses. John Parkin loved them and, contemplating them, sometimes had to swallow hard to rid himself of the chokiness of gratitude and admiration springing from his heart and lodging in his throat.

Forty! Forty-odd, in fact! And at forty, one should be established, not living from hand to mouth, with no provision for the future but a wretched little insurance policy the semiannual premiums on which were a perpetual strain on the already full budget. At forty, one should be able to look at achievement over one's shoulder. That is the tradition. But John Parkin disdained tradition still, and

never went to the basement to fix the furnace without a listening ear for the knock of Fortune at his front door.

"Jones," said Mr. Morphew, of the Estimates, "didn't you tell me once that you were a stenographer?"

John Parkin started and disentangled his mind from a mass of complicated measurements he was checking in transcription. It was seldom that Mr. Morphew came out of his mahogany and ground-glass den-more seldom still that he spoke to any of the clerks outside his own department.

"I may have, Mr. Morphew," John Parkin replied, coming to attention. "I was a stenographer at one time."

"Forgotten it? Got rusty?" snapped the Estimates' chief. He was a pouncing, nervous sort of person-tall, gaunt and chilly. Without waiting for an answer, beflicked a pa per from his pocket. "Take this!" he said.

John Parkin had barely time to draw a scribbling pad toward him before Morphew began reading. The document bristled with technical terms and the reader took no particular pains with his enunciation; but John Parkin had taken particular pains not to get rusty and he kept the pace to

"Now read your notes."

John Parkin began to read them; but halfway through Morphew stopped him.

"Good enough!" he said crisply. "Mr. Pakenham is ill and Mr. Gann needs a stenographer for a trip East. He starts tonight. Meet him at Union Station at ten sharp. You'll want to pack a suitcase for a week." He looked at his watch. "You can knock

off now if you want to; but be on hand at ten o'clock." "Typewriter?" inquired John Parkin, with imitative

"There will be a typewriter and everything else you are likely to need.'

He hurried off; and John Parkin, with a sort of numb polness, turned his papers over to a fellow clerk, reported

to his chief and left the office. It was not until he had turned into a hotel lobby and found a quiet seat that he allowed himself to think of what it all meant. To begin with, Pakenham was Gann's righthand man and confidential secretary. Where Gann went, Pakenham went also; and what Pakenham said in the

office went. Pakenham ranked Morphew and was on almost equal terms with Abercrombie. It was said that he had acquired large holdings of the company's stock. So he, John Parkin Jones, was to substitute for Pakenham!

John Parkin was not unduly elated. He was rather worried. How was he to pack a suitcase for a week's trip when he did not even own such an article of baggage? He had a valise, but that would hardly do for this occasion. Clothes! Here was a loud and imperative call for a new suit; also a new hat and new shoes.

Of course his personal expenses on this trip would be paid, which would be something of an offset; but certainly not enough to justify much of an expenditure. John Parkin considered it fully five minutes. Then he got up abruptly and bent his steps toward State Street.

Two hours later he boarded his usual suburban train dressed in a spick-and-span suit of tweed, a natty new hat and neat shoes. In his hand he carried a new suitcase, with J. P. J. neatly stenciled on the end. Bargains allreal bargains; but two flabby dollar bills in John Parkin's pocketbook were all that remained of a week's salary.

Mrs. Jones gasped as she met him at the gate.
"It's me," said John Parkin reassuringly, though ungrammatically. "Come on in and I'll tell you about it."

"It's a mean shame!" declared his wife when he had told her. "Do you mean to tell me that he said nothing about extra pay? Well, all I can say is that there ought to be a law against such an imposition. Still took him by the elbow and turned him round. "Doesn't the coat hike up a little, just a little, behind? No; I guess I just fancied it. I think it's a splendid fit. John, you look like a prince! Dear, what a difference clothes make!"

Now I'll Have a Jauare Meal at Last"

> The children came trooping in at this moment, and there arose a clamorous chorus of wonder and admiration. John Parkin tilted his new hat to one side of his head and, holding an umbrella by the middle, crooked his elbows and strutted about the room for their further entertainment. Altogether they made quite an occasion of it. Neither John nor Mrs. Jones, however, ate with their usual appetite at the evening meal, and as soon as it was finished they went to work feverishly packing the new suitcase.

> Impatient to be done with the ordeal of unwonted parting, John Parkin only allowed himself hurrying time for the seven-fifty-a train a full hour earlier than necessaryand the farewells were made at the gate. He and his wife clung to each other quite as though they had not been old married people-tearfully; then John Parkin dashed off, At the corner of the street he paused to wave his hand and shout something. Mrs. Jones caught only one word of it-

> The week went by slowly enough for Mrs. Jones. Every morning she went down to the post office-it was before

the days of house delivery in Bibberly Heights-and every morning she found a singlespaced typewritten letter from John Parkin. They were the most unsatisfactory letters imaginable—they breathed the warmest affection; they assured her of the writer's health; they contained some really remarkable descriptions of scenery-but they told her not a single word about the things concerning which she was most curious.

Two days were added to the week and then a barefooted urchin padded through the road-dust from the depot with

"Back this morning. Home on the five-ten. Love.

There was excitement in the Jones household then, you may be sure. There was washing and starching in a small way throughout the afternoon, and brushing and combing and pinning, with here and there a hasty stitch between flurried visits to the kitchen, from whence came savory

At last they were all ready-Mrs. John in her best summer dress and wearing her white shoes and stockings; showing, too, a beautiful glow in her cheeks and a lovely sparkle in her eyes; the children in their best, down to

Baby Bunting in the go-cart, pridefully propelled by Loretta.

How they strained their eyes for the smoke of the five-ten! How they danced on the cinder-bedded platform when they did see it, and what a shout went up when John Parkin was distinguished, poised on the step of the second car ready to jump!

He jumped and was instantly overwhelmed, new suitcase and all, by the avalanche of his offspring. Presently he emerged, considerably disheveled, to embrace his wife; then the procession reformed in a certain disorder and very much in its own way, and straggled home.

John Parkin threw his new hat on the table and sank with a sigh of content into his faded Morris chair with the comfortably broken springs. A grunt succeeded, as once more his progeny piled on him en masse.

Mrs. Jones deposited Baby Bunting at his feet, which the delicious infant at once proceeded to gnaw with great gusto. She herself sat leaning against the burdened knees, her hands clasped over an unoccupied part of one.

"You look so grand we hardly knew you," she said, patting him. Jones smiled complacently.

"Pretty swell person, am I not?" he said. "Ouch! How many new teeth has that infant accumulated since I've been gone? Stop it, you skeezicks! What makes him so fond of shoes, I wonder?"

"It's the blacking," explained Peter Parkin. "It's got sweet in I've tasted it."

"I knowded you, papa!" aid Gracie, burrowing into his shoulder with her curly head. "I knowded you des ve moment I saw you!"

"Did you, sweetness?"

asked Jones, hugging her.
"There's three new puppies over at ——" began Peter. "Hush!" said his mother, raising a warning finger. 
"Let your father talk. My! Nobody can get a word in edgeways. You've got to tell first, father. Tell us all about everything!"

"Tell us!" begged the chorus.

EFERENEALLY

"Can't you wait?" asked Jones. "Aren't you going to give me time to get my breath?"

"No!" was the shouted reply.

"Well, then," said Jones, "I started last Monday week, went away-away off to Pittsburgh-and got safely back home five minutes ago. Now tell me about the puppies, son."
"There's three of 'em —

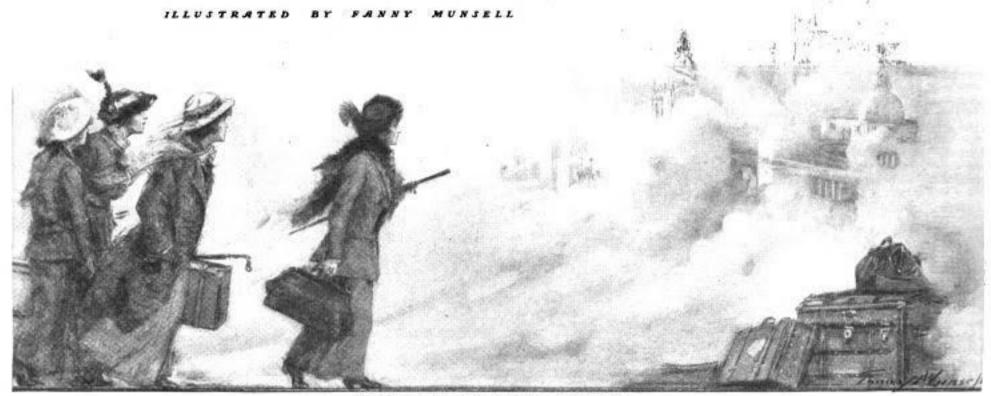

"Des as cute!" added Gracie.

"Children," said Mrs. Jones, "wait now. We'll hear all about the puppies later on. I want to hear what your magnificent father has been doing with himself. I have my suspicions!" Jones pinched her cheek. "Tell me just one thing, dear-did everything go all right?"

(Continued on Page 77)

# A WOMAN FREE-LANCE

By the Author of the Autobiography of a Happy Woman

Longing Eyes Turn to the Macistrom of the Big City

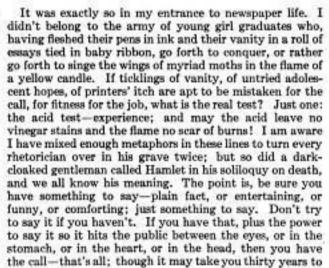

I DID not enter the newspaper world because I thought that I was divinely inspired to write. In fact I knew that ninety-nine people out of a hundred who were writing would have done better by themselves, and life, over the bake board or behind the plow. That is, they would have done better work, saved more money, enjoyed greater security of tenure and extracted more of the flavor called "happiness" out of life. Nor was I attracted because I thought that writing was artistic, bohemian, distinguished, out of the ordinary.

The real bohemians whom I knew were so constitutionally outside classification that they could not have been anything but bohemian if they tried; and people who weren't bohemian and tried always struck me as an elephant that I had once seen at a circus trying to dance the two-step. It was highly amusing for a short time, but must have been a difficult performance for the elephant. Nor had I ever the slightest attack of what the Romans called "the itch for scribbling." It seemed to me then, and it seems to me now, that so much writing has been done

regardless of whether the writer had anything new, true, entertaining or essential to say that the main point was to be sure you had something to say before attempting to say it. This sounds like a truism; but if you ask the manuscript readers of anybig publishing house, they will tell you that out of the thousands of manuscripts pouring in every year only about ten per cent have anything to say; and only about half that ten per cent say it so people will read it.

### Those Who Should Write

HAD taken half a dozen prizes I in the university as an essayist; but it was by accident. I happened to be away when the prizes were offered and was away when they were distributed, and really never knew about them till they were delivered at the door. If I had known they were offered I should probably have embodied every rule under the sun on how to write and killed my chances dead; but as I didn't know they were offered I was keen on my subject, and, the best art being the art that forgets art in its truth to life, results came my way.

find it, as it took O. Henry.

I happened to be stalled, or sidetracked, or what-ever you like to call it, one winter as to health. I had turned the corner and been pronounced well, but had been forbidden to go back to the game of life for a little. I was reading everything I could lay my hands on, not to invite mental indigestion, ness or death or tragedy shakes down all that is flimsy in your lifeplans and creeds, leaving you only a foundation of fact, you have a care, when you rebuild, to use only facts for the walls. I wanted facts, whether I got theminliteratureor news or other lives. Before being stalled by life I used to read only the headlines of newspapers. Any news of crime, of moral delinquencies, of tragedies, anything vulgar or common, I skipped as Peter the Apostle skipped what he didn't like in the bagful of food let down from Heaven in the vision. You remember he called a lot of the bagful "common." Well, I had felt toward a lot of life as Peter did. Though I unconsciously considered myself a first-class humble small exemplar of the Christ creed, I had a hatred that was positively an obsession of what was common, or vulgar, or coarse, or ignorant. In a word I was not only an intellectual cad but a moral snob.

Then life hit me one on the head hard! When I came to, I knew what Christ meant when He said that "publicars and sinners" should go into the Kingdom of Heaven before "these." I had belonged to "these." I had not cared for the Kingdom of Heaven as a harp-strumming proposition, but I had most terribly cared for it as a thing to work for in everyday life and as a thing to hope for when this life merged in a larger. Then illness taught me I was wrong, that the premises had been faulty, that the "publicans and sinners" put it over where I had failed. Now I wanted to know the facts of life—not just the facts that might suit my fancy or taste or caste; and I was reading voraciously for data that might be guidance. I was realizing that God must reveal Himself quite as much in modern life as in ancient days, in modern laws as in ancient saws, in facts quite as much as in ancient pacts. I pounced on everything and read with an appetite that was a sort of greed.

### An Unexpected Beginning

T HAPPENED that the United States and another great L country were engaged in international negotiations on the tariff. Now both countries were at the very crest of the high-tariff mania. Neither wanted, nor under any circumstances at that time would have dared to offer, a low tariff; but to catch a wing of voters in both countries each was putting up a tremendous bluff, or whatever you like to call it, of tariff concessions. The dinners salaries for commissioners and secretaries and so on were costing each country about one hundred thousand dollars. Times were very hard. Money was scarce. The absurdity of this international game of blindman's buff struck me. I wrote something off hot. If I had stopped to consider why I wrote it, or what I was going to do with it, I should have burned it at once; but I was so obsessed with the idea that before I had time to cool I took it down to a stenographer to put in typewriting. Then I posted it to the local daily that had been giving the fullest reports of the commission.

Brevity, a very great writer has said, is the soul of wit. It must have been the brevity that did it. The article was not an eighth of a column; but it was bursting with the

"I'm Just Hunting for Jome Editorials Fit to Steat"

sense of absurdity that had obsessed me when I wrote it. The very next morning there came an envelope, with the mark of the daily on the corner, that set my heart doing acrobatics in my throat. Inside was a letter, handwrittena tiny, cramped hand, plainly that of a gentleman of the old school—asking me to call. I was scared stiff. I had not meant to be a journalist. I had no desire to see my name in print. I hated, loathed and despised notoriety, and the titillations that tickle the vanity beneath notoriety, as the devil is reputed to hate holy water; and here an opportunity, or chance, seemed to be coming my way, like the prizes for those college essays which I did not know I was

I was so aghast that I went straight to the president of the university. He was a wonderful scholar, one of the old-type teachers who taught as they had learned under Sir William Hamilton, after the Socratic method—it should have been called the sword method; for he literally stabbed our mental lethargy into life. He had all the estheticism, all the narrowness, all the wonderful depth and height of clerical scholarship; but in the oncoming tide of modern thought he was like a dazed mariner on strange seas,

Instead of surprise, as I had expected, he burst into a little thin, hard laugh, attenuated from the stooped chest of sixty-five years' bending over books and blockheads.

"I am not surprised," he said. "In fact, dear child, it is just what I have been expecting. I have been waiting to see where you would break out. I was afraid to advise. I hesitate ever to advise. Each soul must work out its own destiny. Out! Understand distinctly I said 'out!' It is from within out, always. That's why we ministers of the soul must keep close to the inspirational teaching of the Christ, who gives dynamics to the soul." He paused, looking into space, tapping his glasses on a pile of papers above his desk and wrapping his clerical skirts about him as a rug for warmth round his emaciated frame.

### Old-School Counsel

"THERE is a new day coming," he said. "What it will bring no man knows; but we can all see the edge of the dawn"-he paused-"or the darkness! The day of creeds and heavydraft theology is past." His voice broke there, that had been his life! The hand tapping the glasses trembled.

"Our day," he said, "has passed. It is you, the new generation of torchbearers, as mothers, as teachers, as journalists, as free-lances, who must carry the light into dark places and herald truth as the trumpet of God." He rose suddenly and took both my hands in his. He was trembling. So was I. I had come for advice; and he had given me—a pagan as to beliefs, a rebel as to faith—not advice, but consecration.

"God bless you!" he said; "and God bless you!" At the door, as I went down the wide steps of the university, he called after me: "I'll see the editor tonight, so you can fill the appointment exactly as he requests to-morrow morning." I turned. He was standing, huddling in the autumn wind, gathering his coat skirts about him as a rug. "God sends the winds called chance," he said; "but we must steer wisely, and hoist our sail." Those were the last words to me of my old teacher, famous for his scholarship on two continents. Soon after I had launched on the

seas of journalism he launched on the wide seas of eternity. I had gone for advice and come away with a consecration. A consecration to what? The street lights looked misty as I tried to figure it out. I knew very well for what journ for women at that date stood: 'Twenty don'ts for husbands; how to cut a pattern; plum puddings; pink teas; gowns of the newly rich. And yet, look back the last eighteen yearswith all our veering and tacking, hasn't journalism inched forward? With all our blundering and fumbling, haven't we followed, clumsily, it may be, this flying phantom called truth? Which modern reform could have been carried out without the preliminary scouting of the free-lances whom my old professor had designated as "torchbearers"? And perhaps twenty don'ts for husbands, the patterns, the plum puddings, the pink teas, the gowns, were to the beginners in this vocation what years of training were in other professions-a testing of aptitude, the weeding of the unfit, the grilling in detail. The point is, the period of grilling has

to be passed. How many of the aspirants with high-school manuscripts under their arms think of that?

When I reached the newspaper office next morning I had to climb four flights of stairs, each one narrower and dirtier than the preceding, past dingy windows without a shade which in all their history, I am quite sure, had never had the smoke and grime washed off. There was first the adver-tising office, which wore an air of—"You're welcome! Come again!" Then came the job-printing department, where the men behind the wickets looked-"You're welcome if you mean business." The third floor was the bindery, where you could hear the presses thumping and everybody scurried on the run through the hall. The fourth floor was the editorial, where the air was unmistakably—"Get out, and get out quick.'

Across the hall a little wicket had been placed. I have no doubt many an aspirant has regarded that wicket as the pearly gates barring Paradise. Believe me, the gates were anything but pearly! They were grimler than the windows; and guarding that gate sat an urchin the color of printer's ink, tilted back in his chair with his feet on the table, chewing gum with a motion like a steam sand-shovel

I Followed Her to the Stairs

that opens and shuts its mouth automatically for several but I said if he would tell me, I would try. Then, looking tons at a chew. To the left was the reporters' room, blue with tobacco smoke, where a dozen men seemed to be riting at a long slanting table as if pursued by the incarnate. The telephone was ringing—half a dozen telephones seemed to be ringing; and typewriters were clicking everywhere. Grimy-faced youths in ink-stained aprons went skating and sliding along the hall, telescoping one another as they ran, with long, thin tissue-paper sheets of telegraph stuff in one hand; long, marked-up galley proofs in the other. I afterward came to know this fraternity as printers' devils. In modern offices they have been almost supplanted by the pneumatic tube system. The youth guarding the wicket gate didn't speak. He got his legs folded off the table and slammed a writing pad at me. On the pad I wrote my name, the name of the editor and my references. Then he went sliding down the dark hall with the printers' devils while I stood at the wicket.

Was this the modern molder of public opinion? I recalled with a grim desire to laugh lectures on journalism about "meticulous accuracy," "the fine shades of meaning in each word," "the high moral purpose of the calling," those "torchbearers." I hope that meticulous-accuracy idea doesn't tickle you as it did me then. Here news came in like loads of wheat to a steam thresher-tons of it; and with a deal of rip and grime and grind rushed out again as a kernel with lots of chaff intermixed. The marvel wasn't that there was chaff. The marvel was that there was as much wheat; for everything was done at top heat, top pressure, top speed, and there was no stop. This paper issued morning editions, evening editions, midday editions, hourly ones when there was any sensation; and it controlled all the telegraph-news avenues of the state.

But the boy's head had appeared at the far end of the smoke-blue corridor. "Yep, it's all right," he yelled. "Come on in." I passed through the city editor's office, where reporters were throwing sheaves and bunches of copy on the desk and half a dozen copy-readers, with green eyeshades over their faces, were reading and lining out copyreading like incarnate furies. No one looked up. Then

came the telegraph office. This office hadn't yet been rigged up with wires of its own. Messenger boys came clumping upbackstairs with reams—it seemed that morning to me miles—of tissue-paper telegrams. Another hall, and I was in the office of the managing editor, the boy swinging the door shut behind me. The editor was sitting in his shirt-sleeves behind a stack of newspapers that almost concealed him, with a pair of scissors in his hands the size of pruning shears, cutting and hacking at a huge Sunday edition of a New York paper. He was a fine old pink-and-white gentleman of the fine old leisurely school, one of the last of his type in newspaper work on this continent. He had been an admiral in his day, and now held his position by virtue of social connections with the directors of the newspaper. When he didn't understand a subject, or wished to crush a bumptious opponent, he would quote Greek and Latin by the mile. He used to rise to read the classics an hour every morning; and yet on the rising tide of rush and complexity and commercialism that has swept modern newspapers down into new seas he was like a baby playing with chips on a maelstrom. He didn't look up when I went in; but he spoke. Here is what he said to this "consecrated torchbearer": "I'm just hunting for some editorials fit to steal. Gray matter not at a premium in this office today; and better steal 'em than write a lot of punk ones!" Then he

"Oh," he said, shaking hands over his desk and donning his coat, "I expected a much older woman."

## The First Assignment

WANTED to tell him that time would mend that defect; but I was too stage-struck or amazed at the quickness with which the door had seemed to open before me and close behind me. It is so all through life. The door of opportunity to go forward to the new is also a door against retreat back to the old. To conquer you have to burn your ships behind you, whether you will or not. He asked me if I would write certain obiter dicta of daily occurrences. I hadn't the remotest idea in the world what it was the editor expected of me;

away as to a promised land, he said he had to go away to the session.

of Western and Middle Western editorial ambition. Our men went East for the winter and got in touch with all the brilliant correspondents of the world and caught momentary glimpses of the underground working of wires in legislative halls. There is probably no position on a local daily that gives a keen-sighted man more power than his report of national politics. I have known of men who would pay their own expenses and sacrifice half their salaries to do it. I have known of local politicians who offered to pay us to let them do it. This editor had been speaker of the house in his day. I could see the longing in his eye for another whiff of the smoke of battle. Would I write, say, a column of editorial a day during his absence? and also, say, two sticks of obiter dicta, chit-chat about local topics in a Western city then beginning to grow by leaps and bounds? Then he looked at me doubtfully:

"But you are very young," he said. "Do you mind doing this on the quiet—doing it in your own home for a

month or two till we see how you pan out?"

So I began my newspaper life, going down every day at three, when the day staff had knocked off and before the night staff had come on, passing in my column for the morning editorial, and getting a hint from the telegraph editor or news editor of a good topic for the next day. Because such fabulously untruthful and misleading statements are issued about the earnings of writers I want to set down the figures at which I began. For the topics which ran about half a column twice a week, I received \$2. For the editorial column I received \$14 a week at first; later, \$16 a week. Within a year I had established connections with Pacific Coast and Atlantic Coast dailies that increased my income \$400 or \$500 a year. Today, though both the population of the city and the circulation of that paper have quadrupled, and with them has quadrupled the cost of living, the space rate is \$4, the editorial rate from \$25 to \$35 a week. It is the capital city of a large and thriving territory. I do not think I am wrong in saying that in New York, Baltimore or Philadelphia the space rate would seldom exceed from \$6 to \$10, and the editorial rate from \$35 to \$50; and in these centers there is practically the pick of the ability of the world. Only the keenest kind of ability, the ability that can make good, has the slightest chance; and the winnowing process is without mercy and without cease. In any other vocation under the sun, with the same grilling, the same experience, the same training, the same ability, the same application a man or woman would earn five times these figures.

There is another point: In other vocations you build a foundation for your future. Each day's work is a brick in the wall of future security against want. In newspaper work, whether you write well or ill, your ultimate fate is the wastepaper basket. If you write badly it goes into the individual newspaper wastebasket before it is printed. If you write well it goes into the multitudinous public's wastebasket after reading; and not ten readers out of one hundred thousand circulation will remember who wrote well or ill. In a big public fight, which you will as inevitably get into as you get into your clothes if you are successful in newspaper work, you will get ten kicks for one handelap; because Pro Bono Publico slumbers majestic as the gods of Olympus when pleased, but roars as loud as the big drum that is empty when displeased. Your epidermis will presently become as indifferent to praise as to blame; and your most joyous sensation will be the satisfaction of just one more day's job well done. I set these facts down because in addition to the titillations of vanity, the promptings of the artistic to writing, a great many

youngsters think that in a writer's career all you have to do is dip your pen in ink, and golden ducats will trickle off the nib. These figures are, of course, good only for newspaper work; not for magazine work, not for literature, where the earnings may be so much less as to be nothing or so much more as to be astounding.

## What Women Can Bear

T THE end of four months I came out A of hiding and went openly on the staff. There were in all departments perhaps a hundred men, and I was the only woman. Later, when type machines supplanted typestickers, the mechanical staff was reduced and the editorial staff increased. I sometimes read in great medical authorities that women cannot stand up physically against stressful, nerve-driving life. In the four years I was on that staff I did not lose one hour. There was only one man on the staff who had the same record. Did I not feel the drive, the concentration, the pressure? Of course, at times it was terrific. A rush of double work has come, of elections or war, when we could not afford to double up workers and we simply all worked regardless of sleep or rest. Were there no evil effects? Not that I know of. I went on that staff the frailest of my family and I came off the toughest and the strongest. I'll admit when I went on that staff I thought deliberately and acted deliberately. When I came off I had learned to think on the run and act on the jump, and never to go round a corner mentally if I could cut across it. If the great medical authorities-who are men and, therefore, cannot know as much about a woman's anatomy as a woman does-will accept matters of fact as data in their masculine theories of things feminine, let me tell them this: What breaks a woman, what peeves her, what harries her nerve ends

into rasping strings, what brings those grave mental and functional disorders about which physicians speak in whispers, is not fullness of days, drive of work, pressure of responsibility. It is one of two other things—the emptiness of gray days that permit nature to turn in, acid, on herself; or the constant presence of something alien in what we love or hate.

As a woman let me add another fact to these masculine data of things feminine, and let me add it as a woman's testimony about women. Let me add it, too, as the testimony of every life-insurance company in the world: The supreme danger to a woman's life, the test of her strength physical and mental, the drain nervous and spiritual, is not in the ordinary wage-earning vocation, in the humdrum, or drive, or bumpety-bump-bruise-and-thump from outof-the-home activities, else would life-insurance statistics rule against her for these. The supreme danger to a woman's life, the greatest risk to her life in an anguish which no soldier has ever known on the field of battle, when the doors of life and death swing open and she hovers inanimate between these two, is in the act of giving birth to a new life. And if one or two of the great theorists had had a baby or two of their own, not in obstetrics by proxy, but in their own flesh, they would appreciate this testimony. The history of every race of every epoch under the sun testifies to this fact in the veneration of motherhood next to God. To tell a woman that she can stand the strain of motherhood, but that if she dares to essay the lesser strain of some extraneous vocation she will be annually, diurnally and sempiternally damned, it is-well, it is, as the grimy little newsies on our grimy stairs used to say, it is to laugh!

There is another point on which I should like to pay my compliments to the neurotic theorists. They tell us that if a woman ventures out of the home vocations she will enter into competition with men, so forfeit their chivalry and arouse sex jealousy or sex antagonism. I worked for four years on this staff, the only woman among a hundred men. And I worked for six years on other staffs in New York and London, where competition was so keen as to be almost vicious; and I never experienced one single episode lacking chivalry, or encountered what could be remotely called sex jealousy, sex antagonism. Have I never then encountered jealousy? Hundreds of times of course; who has not? But never as of a man toward me because I was a woman; but rather because I had permitted a workrelationship to slip into a personal relationship. This does not mean proposals, and it had nothing to do with sex.

For instance I remember a scrub blackguard reporter who was tolerated on the staff for a few months only out of sympathy for his little invalid wife. He had a trick of writing us heart-rending appeals for money to buy medicine for his wife. One week one of us would hand out five dollars; another week another of us, till we learned that

his wife had left him and was earning her living, while the borrowed money was being spent on drink. The next time he sent a heart-rending appeal he was asked to come and get the money. I withdrew. Something bluer than tobacco smoke filled that office for ten minutes. When I came down next morning the legs of one table and back of a chair had gone down in an unrelated smash. Needless to say, the victim of the table legs hated us, not only for the last five he didn't get, but for all the fives he had got. I have sometimes traced lies not worth hearing to that abnormal specimen, who finally wound up in the penitentiary.

Or take another case, that of an assistant editor of magnificent physique, of inordinate sleepless ambition to get on, and the kindest heart I have ever known. But he had no education, no daring and little ability-just a dogged, tense, persistent, day-and-night slavery to work; no bubbles, no joy, no lift on the wings of hope, no song over work! He took himself horribly seriously, and had about ten nerves where other men had two. If you will please look at those ingredients very carefully you will see they have a strong resemblance to the delectable morsels in the witches' caldron of Macbeth. Only one brew can come out of them-jealousy. He would do the kindest things for those under him, and the meanest things to those showing the slightest possibility of going up past him. He seemed to have in his big, manly frame the foolish, almost effeminate idea of social climbers, that he could advance himself by as much as he pushed others down. I never had ructions with that man; but if I had not studied him out and sidestepped him he would have done both me and my work serious damage. But his attitude to me was harmless compared with his attitude toward many men workers.

### **Evils That Scarcely Exist**

FTER the old admiral left, a man came to us as manager A who was almost the duplicate of this assistant editorexcept that he had great natural ability, a geniality that soured at nothing and not an atom of jealousy in his make-up. How the assistant managed it with the directors I don't know; but he had the manager thrown out at a time when the big fellow owned nothing but a wife and twins. And such ambition-meanness accomplishes nothing for its unhappy possessor. When war and elections came on simultaneously that man literally died at his desk. Two years later the other man, big of soul as he was of body, came back as owner of the paper. The jealousy in this case can hardly be set down to that sex antagonism which the theorists so greatly fear. In fact the only occasions when I have seen such sex jealousy aroused have been when a woman tried to use sex appeal as a factor in her work. When the woman worker has done that she has used the lowest type of vanity in her own nature and

has appealed to the lowest type of attraction in the man's nature; and when these two clash in antagonism there does not seem to be any bottom to the abyss into which they may fall. I emphasize these things because physical disability and sex antagonism are receiving such undue emphasis from the theorists; and they are two factors that in twenty years' work outside the home I have not even needed to ignore—I have simply been unconscious of them.

There were a lot of advantages in beginning newspaper work in a medium-sized place instead of a large one. In large centers work is so specialized that a writer of twenty dont's for husbands, of recipes and pink teas might continue doing these things all her life and never attain a general knowledge or general training to turn her hand to everything. I have known special writers in big cities who in ten years never met another soul on the staff but the managing editor. In a small center, if the beginner has aptitude, there will be rush times when all hands will turn in on everything; and a woman will soon find whether she fits in or is a makeshift. This fact should be emphasized; for in the army of young-girl graduates yearly looking to journalism as a career far-off fields look green. Longing eyes turn to the maelstrom of the big city, forgetful that preparation and experience are as necessary to win success in this vocation as years of struggling and preparation are to win a place in the Paris salon or in grand opera.

I began as outside space-writer of editorials. In a few months I was doing my work in the office, cooped off in a little boxlike compartment along with the halftone plates and metal cuts of heroes and criminals; and sometimes—I blush to acknowledge when the hero did things too unexpectedly for us to prepare a cut of him pictures of a

# THIE OTHER CHEEK

NOMANCE has more lives than a cat. Crushed to earth beneath the double-tube non-skiddable tires of a sixty-horse-power limousine, she allows her prancing steed to die in the dust of yesterday and elopes with the chauffeur.

Love has transferred his activities from the garden to the electrically heated taxicab and suffers fewer colds in the head. No-romance is not dead, only reincarnated; she rode away in undivided skirt and side-saddle, and motored back in goggles. The treebark messages of the lovers of Arden are the fiftyword night letters of today.

The first editions of the Iliad were written in the tenderest fleshy parts of men's hearts, and truly enough did Moses blast his sublime messages out of the marble of all time; but why bury romance, with

the typewriter as a headstone?

Why, indeed-when up in the ninth-floor offices of A. L. Gregory-stenographers and expert typewriters - Miss Goldie Flint, with hair the color of heat lightning and wrists that jangled to the rolled-gold music of three bracelets, could ticktack a hundredword-a-minute love scene that was destined, after her neat carbon copies were distributed, to wring tears, laughter and two dollars each from an audience of tired business men?

Why, indeed - when the same slow fires that burned in Gioconda's eyes, and made the world her lover, lay deep in Goldie's own and won her an invariable seat in the six-o'clock Subway rush, and a bold, bad, flirtatious stare if she ventured to look above the third button of a man's coat? Goldie Flint, beneath whose too-openwork shirtwaist fluttered a heart whose tempo was love-of-life; and love-of-life

on eight dollars a week and ninety per cent impure food, and a hall room-more specifically a standing room-is like a pink rose bush that grows in a slag heap and begs its warmth from ashes.

Goldie, however, up in her ninth-floor offices, bent to an angle of forty-five degrees over the dénouement of hectic drama that promised a standing-room-only run and the free advertising of censorship, had little time or concern for her own unfilled needs.

It was nearly six o'clock and she wanted a yard of pink tulle before the shops closed. A yard of pink tulle cut to advantage would make a fresh yoke that would brighten even a three-year-old, gasoline-cleaned blouse.

Harry Trimp liked pink tulle. Most Harry Trimps do. At twenty minutes before six the lead-colored dusk of January crowded into the Gregory typewriting office so thickly that the two figures before the two typewriters faded into the veil of gloom as a Corot landscape melts into its own mist.

Miss Goldie Flint ripped the final sheet of her second act from the platen of her machine, reached out a dim arm that was noisy with bracelets and clicked on the electric lights.

The two figures at the typewriters, the stationary washstand in the corner, a rolltop desk, and the heat-lightning tints in Miss Flint's hair sprang out in the yellow light.

"I'm done with the second act, Miss Gregory. May I go

Miss Flint's eyes were shining with the love-of-life lamps, the mica powder of romance, and a brilliant anticipation of Harry Trimp.

Miss Gregory's eyes were twenty years older and dulled as glass is when you breathe on it.

"Yes; if you got to go I guess you can."

"Ain't it a swell play, Miss Gregory? Ain't it grand where he pushes her to the edge of the bridge and she throws herself down and hugs his knees?'

"Did you red-ink your stage directions in, with the margin wide, like he wants? He was fussy about the

first act."
"Yes'm; and say, ain't it a swell name for a show—The Last of the Dee-Moolans? Give me a show to do every time and you can have all your contracts and statements and form letters. Those love stories that long, narrow fellow brings in are swell to do, too, if he wa'n't such an old grouch about punctuation. Give me stuff that has some reading in it, every time!"

Miss Gregory sniffed—the realistic, acidulated sniff of

unloved forty and a thin nose.

"The sooner you quit curlin' your side hair and begin to learn that life's made up of statements and form letters, instead of love scenes on papier-maché bridges and flashy fellows in checked suits and get-rich-quick schemes, the better off you're going to be."

The light in Goldie's face died out as suddenly as a

Jack-o'-lantern when you blow out the taper.

"Aw, Miss Greg-or-ee!" Her voice was the downscale wail of an oboe. "Whatta you always picking on Harry Trimp for? He ain't ever done anything to you-and you

"Don't! Don't You Come Near Me!"

said yourself when he brought them circular letters in that he was one handsome kid."

"Just the same, I knew when he came in here the second time, hanging round you with them blue eyes and black lashes and that batch of get-rich-quick letters, he was as

phony as his scarfpin."
"I glory in a fellow's spunk that can give up a clerking job and strike out for hisself-that's what I do!"

"He was fired-that's how he started out for himself. Ask Mae Pope; she knows a thing or two about Harry Trimp."

"Aw, Miss -

"Wait until you have been dealing with them as long as I have! Once get a line on a man's correspondence and you can see through him as easy as through a looking glass with the mercury rubbed off."

The walls of Jericho fell at the blast of a ram's horn.

Not so Miss Flint's frailer fortifications.

"The minute a fellow that doesn't belong to the society of pikers and gets a three-figure salary comes along and can take a girl to a restaurant where they begin with horse-doovries instead of wiping your cutlery on the tablecloth and deciding whether you want the 'and' with your ham fried or scrambled—the minute a fellow like that comes along and learns one of us girls that taxicabs was made for something besides dodging, and pink roses for something besides florists' windows—that minute they put on another white-slave play and your friends begin to recite the doxology to music. Gee! It's fierce!

"Gimme that second act, Goldie. Thank Gawd, I can say that in all my years of experience I've never been made a fool of; and if I do say it I had chances enough in my

"You—you're the safest girl I know, Miss Gregory!" "What?"

"You're safe all right if you know the ropes, Miss "What did you do with the Rheinhardt statement,

Goldie? He'll be in for it any minute."

"It's in your lefthand drawer, along with those contracts, Miss Gregory. I made two carbons."

Miss Flint slid into her pressed-plush fourteen-dollarand-a-half copy of a fourteen-hundred-and-fifty-dollar Persian-lamb coat, pulled her curls out from under the brim of her hat, and clasped a dyed-rat tippet about her neck so that her face flowered above it like a small rose out of its calyx.

The Bacon-Shakspere controversy, the Fifth Dimension, and the American Shopgirl and How She Does Not Look it on Six Dollars a Week and Milk-Chocolate Lunches are still the subjects that are flung like serpentine confetti across the pink candleshades of four-fork dinners, and are wound like red tape round Uplift Societies and Ladies' Culture Clubs.

Yet Goldie flourished on milk-chocolate lunches, like the baby-food infants on the backs of the illustrated magazines.

"Good night, Miss Gregory." "Night!"

## By Fannie Hurst

ILLUSTRATED BY MAY WILSON PRESTON

Goldie Flint closed the door softly behind her as though tiptoeing away from the buzzing gnats of an eight-hour day.

Simultaneously across the hall the ground-glass door of the Underwriters' Realty Company swung open with a gust, and Mr. Eddie Bopp, clerk, celibate and aspirant for the beyond of each state, bowed himself directly in Goldie's path.

"Ed-die Bopp! Ain't you awful early tonight, though! Since when are you keeping board-of-directors' hours?"

"I been watching for you, Goldie."

Eddie needs no introduction. He solicits coffee orders at your door. The shipping clerks and dustlessbroom agents and lottery-ticket buyers of the world are made of his stuff.

Bronx apartment houses, with perambulators and imitation marble columns in the downstairs foyer, are built for his destiny. He sells you a yard of silk; he travels to Coney Island on hot Sunday afternoons; he bleaches on the bleachers; he keeps books; he belongs to a building association and wears polka-dot

He is not above the pink evening edition. Ibsen and eugenics and post-impressionism have never darkened the door of his consciousness.

Eddie Bopp is the safe-and-sane stratum in the social mountain, not of the base nor of the rarefied heights that carry dizziness

Yet when Eddie regarded Goldie there was that in his eyes which transported him far above the safeand-sane stratum to the only communal ground that men and socialists admit—the Arcadia of youthful lovers.

"I wasn't going to let you get by me tonight, Goldie, I ain't walked home with you for so long I haven't a rag of an excuse left to give Addie."

Miss Flint's cheeks colored the faint pink of dawn's first moment.

"I-I got to do some shopping tonight, Eddie. That's why I quit early. Believe me, Gregory'll make me pay up tomorrow."

"It won't be the first time I've gone shopping with you, Goldie."

"Remember the time we went down in Tracy's basement for a little alcohol stove you wanted for your breakfasts? The girl at the counter thought we-we were spliced."

"Yeh!" Miss Flint's voice was faint as the thud of a nut to the ground.

They shot down nine fireproof stories in a breath-taking elevator and then out on the whitest, brightest Broadway in the world, where the dreary trilogy of Wine, Women and Song is played from moon to dawn.

"How's Addie?"

"She don't complain, but she gets whiter and whiterpoor kid! I got her some new crutches, Goldie-swell mahogany ones, with silver tips. You ought to see her get round on them!"

"I—I been so busy—nightwork and—and —

"She's been asking about you every night, Goldie. It ain't like you to stay away like this."

Their breaths clouded before them in the stinging air, and down the length of the enchanted highway lights sprang out of the gloom and winked at them like naughty

eyes.
"What's the matter, Goldie? You ain't mad at me us-are you?"

Eddie took her pressed-plush elbow in the cup of his hand and looked down at her, trying in vain to capture the bright flame of her glance.

"Nothing's the matter, Eddie. Why should I be mad? I been busy—that's all."

The tide of homegoing New York caught them in its six-o'clock vortex. Shops emptied and street cars filled. A newsboy fell beneath a car and Broadway parted like a Red Sea for an overworked ambulance, the mission of which was futile. A lady in a fourteen-hundred-and-fiftydollar Persian-lamb coat and a notorious dog collar of pearls stepped out of a wine-colored limousine into the goldleaf foyer of a hotel. A ten-story department store ran an iron grating across its entrance, and ten watchmen reported for night duty.

"Aw, gee! They're closed! Ain't that the limit now! Ain't that the limit! I wanted some pink tulle for tonight, worst way."

"Poor kid! Don't you care! You can get it tomorrow -

you can work Gregory." "I-I wanted it for tonight."

"What?"

"I wanted it for my yoke."

They turned into the dark aisle of a side street; the wind lurked round the corner to leap at them.

"Oh-h-h-h!"

He held tight to her arm.

"It's some night-ain't it, girlie?"

"I should say so!"

"Poor little kid!"

Eddie's voice was suddenly the lover's, full of that quality which is like unto the ting of a silver bell after the clapper is quiet.

"You're coming home to a good hot supper with me, Goldie-ain't you, Goldie? Addie'll like it.

She withdrew her hand from the curve of his elbow.

"I can't, Eddle—not tonight. I——Tell her I'm coming over real soon."

"Oh!"

"It's sure cold, ain't it?"

"Goldie, can't you tell a fellow what's the matter? Can't you tell me why you been dodging me-us-for two weeks? Can't you tell a fellow-huh, Goldie?"

"Geewhillikins, Eddie! Ain't I told you it's nothing? There ain't a girl could be a better friend to Addie than me."

"I know that, Goldie; but --

"Didn't we work in the same office thick as peas for two whole years before her—accident—even before I knew she had a brother? Ain't I stuck to her right through -ain't I?"

'You know that ain't what I mean, Goldie. You been a swell friend to poor Addie, stayin' with her Sundays when you could be havin' a swell time and all; but it's me I'm talking about, Goldie. Sometimes—sometimes I -

"Aw!"

"I've never talked straight out about it before, Goldie, but you-you remember the night-the night I rigged up like a Christmas tree and you said I was all the ice cream in my white pants—the night Addie was run over and they sent for me?"

"Will I ever forget it!"

"I was tuning up that evening to tell you, Goldie-while we were sitting out there on your front stoop, with the street light in our eyes, and you screechin' and squealin' every time a June bug bumbled in your face!"

"My! How I hate bugs! There was one in Miss Gregory's

"I was going to tell you that night, Goldie, that there was only one girl—one girl for me—and-

"Yeh; and while we were sittin' there gigglin' and screechin' at June bugs poor Addie was provin' that a street-car fender has got it all over a mangling

"Yes; it's like she says about herself—she was payin' her initiation fee for life membership into the Society of Cripples with a perfectly good hip and a bit of spine."

"Poor Addie! How she loved to dance! She used to spend every noon hour eatin' marshmallows and learning me new steps."

The wind soughed in their ears and Goldie's

skirts blew backward like sails,

"You haven't got a better friend than Addie right now, girlie! She always says our little flat is yours. The three of us, Goldie-the three of us

"It's swell for a girl that ain't got none of her own blood to have a friend like that. Swell, lemme tell you!"

"Yes."

"It's like I said—I've never talked right out before, but I got a feelin' you're slippin' away from me like a eel, girlie. You know-aw, you know I ain't much on the elocution stuff; but if it wasn't for Addie and her accident right now-I'd ask you outright-I would. You know what I mean!"

"I don't know anything, Eddie: I'm no mindreader!" "Aw, cut it out, Goldie! You know I'm tied up right now and can't say some of the things I was going to say that night on the stoop. You know what I mean-with Addie's doctor's bills and chair and crutches, and all."

"Sure I do, Eddie. You've got no right to think of anything."

She turned from him, so that her profile was like a white cameo mounted on black velvet.

"You just give me a little time, Goldie, and I'll be on my feet, all righty. I just want some kind of understanding between us-that's all."

"Oh-you-I-

"I got Joe's job cinched if he goes over to the other firm in March; and by that time, Goldie, you and me and Addie, on eighty per, could-why, we -

She swayed back from his close glance and ran up the first three steps of her rooming house. Her face was struck with fear suddenly, as with a white flame out of the sky. "Sh-h-h-h-h-h!" she said. "You mustn't!"

He reached for her hand, caught it and held it—but like a man who feels the rope sliding through his fingers.

"Lemme go, Eddie! I gotta go-it's late!"

"I know, Goldie. They been guyin' me at the office about you passin' me up; and it's right—ain't it? It's--" She shook her head and tugged for the freedom of her hand. Tears crowded into her eyes like water to the surface of a tumbler just before the overflow. "It's him-ain't it, Goldie?"

"Well, you won't give—give a girl a chance to say anything. If you'd have given me time I was comin' over and tell you, and-and tell-

"Goldie!"

"I was-I was-

"It's none of my business, girlie; but—but he ain't fit

for you. He ——"
"There you go! The whole crowd of you make me-"He ain't fit for no girl, Goldie! Listen to me, girlie! He's just a regular ladykiller! He can't keep a job no more'n a week for the life of him! I used to know him when I worked at Delaney's. Listen to me, Goldie! This here new minin' scheme he's in ain't even on the level! It ain't none of my business; but Goldie, just because a guy's good-lookin' and a swell dresser, and

She sprang from his grasp and up the three remaining steps. In the sooty flare of the street lamp she was like Jeanne d'Arc heeding the vision or a suffragette declaiming on a soapbox and equal rights.

"You-the whole crowd of you make me sick! The minute a fellow graduates out of the sixty-dollar-clerk class

and can afford a twenty-dollar suit, without an extra pair of pants thrown in, the whole pack of you begin to youl and yap at his heels like -

'Goldie! Goldie, listen -

"Yes, you do! But I ain't caring. I know him and I know what I want. We're goin' to get married when we're good and ready, and we ain't apologizing to no one! I don't care what the whole pack of you have to say, except Addie and you; and—and—I—oh

Goldie turned and fled into the house, slamming the front door after her until the stained-glass panels rattledthen up four flights, with the breath soughing in her throat and the fever of agitation racing through her veins.

Her oblong box of a room at the top of the long flights was cold with a cavern damp and musty with the must that goes with rooming houses as inevitably as chorus girls go with the English peerage or insomnia goes with black coffee.

Even before she lit her short-armed gas jet, however, a sweet, insidious, hothouse fragrance greeted her faintly through the must, as the memory of mignonette clings to old lace. Goldie's face softened as if a choir invisible were singing her ragtime from above her skylight. She lighted her fan of gas with fingers that trembled in a pleasant frenzy of anticipation, and the tears dried on her face and left little paths down her cheeks.

A fan of pink roses, fretted with maidenhair fern and caught with a sash of pink tulle, lay on her coarse cot coverlet, as though one of her dreams had ventured out of

Pink leaped into Goldie's cheeks, and into her eyes the light that passeth understanding. Life dropped its duncolored cloak and stood suddenly garlanded in pink, wire-stemmed roses.

She buried her face in their fragrance. She kissed a cool bud, the heart of which was closed. She unwrapped the pink tulle sash with fingers that fumbled—like a child's at the gold cord of a candy box—and held the filmy streamer against her bosom in the outline of a yoke.

In Mrs. McCasky's boarding house the onward march of night was as regular as a Swiss watch with an American movement.

At nine o'clock Mr. McCasky's tin bucket grated along the hall wall, down two flights of banisters, across the street, and through the kneehigh swinging doors of Joe's place.

At ten o'clock the Polinis, on the third-floor back, let down their folding bed and shivered the chandelier in Major Florida's second-floor back.

At eleven o'clock Mr. McCasky's tin bucket grated unevenly along the hall wall, down two flights of banisters. across the street, and through the kneehigh swinging door of Joe's place.

At twelve o'clock the electric piano in Joe's place ceased to clatter like coal pouring into an empty steel bin, and Mrs. McCasky lowered the hall light from a blob the size of a cranberry till it was no bigger than a French pea.

At one o'clock the next to the youngest Polini infant lifted its voice to the skylight, and Mr. Trimp's nightkey groped round the front-door lock, scratch-scratching for its hole.

In the dim-lit first-floor front Mrs. Trimp started from her light doze, like a deer in a park, which vibrates to the fall of a lady's feather fan. The crisscross from the cane chairback was imprinted on one sleep-flushed cheek, and her eyes, dim with the weariness of the nightwatch, flew to the white china

Reader, rest undismayed. Mr. Trimp entered on the banking-hour legs of a scholar and a gentleman. With a white carnation in his buttonhole, his hat unbattered in the curve of his arm, and his blue eyes behind their curtain of black lashes but slightly watery, like a thawing ice pond with a film

"Hello, my little Goldie-eyes!"

Mr. Trimp flashed his double deck of girlishpearlish teeth. When Mr. Trimp smiled Greuze might have wanted to paint his lips for a child study. Women tightened up about the throat and dared to wonder whether he wore a chest protector and asafetida bag. Old ladies in street cars regarded him through the mist of memories, and as if their motherly fingers itched to run through the heavy yellow hemp of his hair. There was that in his smile which seemed to provoke hand-painted sofa pillows and baby-ribboned coathangers, knitted neckties, and cross-stitched bedroom slippers. Once he had posed for an Adonis underwear advertisement.

"Hello, baby! Did you wait up for your old

Goldie regarded her husband with eyes that ten months of marriage had dimmed slightly. Her lips were thinner and tighter and silent.

"I think we landed a sucker tonight for fifty shares, kiddo. Ain't so bad, is it? And so you waited up for your tired old man, baby?"
"No!" she said, the words sparking from her

lips like the hiss of a hot iron when you test it with a moist forefinger. "No; I didn't wait up. I been out with you-painting the town."

"I couldn't get home for supper, hon. Me and Cutty

"You and Cutty! I wasn't born yesterday!"

"Me and Cutty had a sucker out, baby. He'll bite for

fifty shares, sure!"
"Gee!" she flamed at him, backing round the rocker
from his amorous advances. "Gee! If I was low enough to be a crook-if I was low enough to try and make a livin' sellin' dead dirt for pay dirt-I'd be a successful crook anyway; I'd -

'Now Goldie-hon! Don't-"

"I wouldn't leave my wife havin' heart failure every time McCasky passes the door—I wouldn't!"

"Now don't fuss at me, Goldie. I'm tired-dog-tired. got some money comin' in tomorrow that'll -

"That don't go with me any more!"

"Sure, I have."

I been set out on the street too many times before on promises like that; and it was always after a week of one of these here slow jags. I know them and how they begin. I know them!"

"'Tain't so this time, honey. I been -

"I know them and how they begin, with your sweet, silky ways. I'd rather have you come staggering home than like this-with your claws hid. I-I'm afraid of you, I tell you. I ain't forgot the night up at Hinkey's. You haven't been out with Cutty no more than I have. You been up to the Crescent, where the Red Slipper is dancing this week, you ---

Mr. Trimp swayed ever so slightly—slightly as a silver reed in the lightest breeze that blows-and regained his balance immediately. His breath was redolent as a garden of spices and cloves.

"Baby," he said, "you better believe your old man. I been out with Cutty, Goldie. We had a sucker out!"

She sprang back from his touch, hot tears in her eyes. "Believe you! I did till I learnt better. I believed you for four months, sittin' round waiting for you and your goings on. You ain't been out with Cutty-you ain't been out with him one night this week. You been-you

Mrs. Trimp's voice rose in a hysterical crescendo. Her hair, yellow as cornsilk and caught in a low chignon at her neck, escaped its restraint of pins and fell in a whorl down her back.

She was like a young immortal eaten by the corroding acids of earlier experiences.

"You ain't been out with Cutty. You been -

The piano salesman in the first-floor back knocked against the closed folding doors for the stilly night that should have been his by right. A distant nightstick struck the asphalt, and across Harry Trimp's features, like filmy clouds across the moon, floated a composite mask of Henry the Eighth and Othello and all their alimony-paying kith. His mouth curved into an expression that did not comport with pale hair and light eyes.

He slid from his greatcoat, a black one with a fur collar, bought in three payments, and inclined closer to his wife, a contumelious smirk on his lips.

"Well, whatta you going to do about it, kiddo-huh?"

"I-I'm going to-quit!"

He laughed and let her squirm from his hold, strolled over to the mirror, pulled his red four-in-hand upward from its knot and tugged his collar open.

"You're not going to quit, kiddo! You ain't got the

He leaned toward the mirror and examined the even rows of teeth, and grinned at himself like a Halloween pumpkin to flash whiter their whiteness.

"Ain't I! Which takes the most nerve, I'd like to know, stickin' to you and your devilishness, or strikin' out for myself like I been raised to do? I was born a worm and I ain't never found the cocoon that would change me into a butterfly. I-I had as swell a job up at Gregory's as a girl ever had. I'm an expert stenographer, I am! I got a diploma from -

"Why don't you get your job back, baby? You been up there twice to my knowin'; maybe the third time'll be a charm. Don't let me keep you, kiddo."

The sluicegates of her fear and anger opened suddenly and tears rained down her cheeks. She wiped them away with her hand.

"It's because you took the life and soul out of me! They don't want me back because I ain't nothin' but a rag any more. I guess they're ashamed to take me back 'cause I'm in-in your class. Ten months of standing for your funny business, and dodging landladies, and waitin' up nights, and watchin' you and your crooked, starvation game would take the life out of any girl. It would!"

"Don't fuss at me any more, Goldie-eyes. It's gettin' hard for me to keep down; and I don't want-want to

begin gettin' ugly."

Mr. Trimp advanced toward his wife gently-gently. "Don't come near me! I know what's coming; but you ain't going to get me this time with your oily ways. You're the kind that walks on a girl with spiked heels and then tries to kiss the sores away. I'm going to quit!"

Mr. Trimp plucked nervously at his faint mustache and slowly folded his black-andwhite waistcoat over the back of a chair. He fumbled it a bit.

"Stay where you're put, you—you bloomin"

vest, you!"

"I-I got friends that'll help me, I haveeven if I ain't ever laid eyes on 'em since the day I married you. I got friends—real friends! Addie'll take me in any minute, day or night. Eddie Bopp could get me a job in his firm tomorrow if—if I ask him. I got friends! You've kept me from 'em; but I ain't afraid to look 'em up. I'm not!"

He advanced to where she stood beneath the waving gas flame. A pet phrase clung to his lips and he stumbled over it.

"My-my little-pussy-cat!"

"You're drunk!"

"No, I ain't, baby-only dog-tired. Dogtired! Don't fuss at me! You just don't know how much I love you, baby!'

"Who wouldn't fuss, I'd like to know?"

Her voice was like ice crackling with thaw. He took her lax waist in his embrace and kissed her on the brow.

"Don't, honey-don't!"

"You-you always get your way with me. You treat me like a dog; but you know you can wind me round—wind me round."

"Baby! Baby!"

He smoothed her hair away from her saltbitten eyes, patted her head, laid his cheek affectionately against hers, and murmured to her softly, as a bird croons to its mate.

"Pussy-cat! Pussy!"

The river of difference between them dried in the warm sun of her forgiveness, and she sobbed on his shoulder with the exhaustion of a child after a tantrum.

"You won't leave me alone nights no more, Harry?"

"Thu-thu-thu-such a little Goldie-eyes!" "I can't stand for the worry of the board no more, Harry. McCaskys are gettin' ugly. I ain't got a decent

rag to my back, neither!"
"I'm going to take a shipping-room job next week, honey, and get back in harness. Bill's going to fix me up. There ain't nothin' in this rotten game and I'm going to get out."

"Sure?"

"Sure, Goldie."

"You ain't been drinking, Harry?"

"Sure I ain't. Me and Cutty had a rube out, I tell

"You'll keep straight, won't you, Harry? You're killin' me, boy; you are."

"Come; dry your face, baby."

He reached to his hip pocket for his handkerchief, and with it a sparse shower of red and green and pink and white and blue confetti showered to the floor as if snow were falling through a rainbow. Goldie slid from his embrace and laughed—a laugh frozen with the ice of scorn and as chilled as her own chilled heart.

"Liar!" she said, and trembled as she stood.

His lips curled again into the expression that so ill fitted his albinism. "You little cat! You can't bluff me!"

> 'I knew you was up at the Crescent Cotillon! I felt it in my bones. I knew you was up there when I read on the billboards that the Red Slipper was dancing there. Iknewwhere you was every night while I been sittin' here waitin'! I knew-I knew -

The piano salesman rapped against the folding doors thrice with rage and the head of a cane. At that instant the lower half of Mr. Trimp's face protruded suddenly into a lanter jawed facsimile of a blue-ribbon English bull: his hand shot out and hurled the chair that stood between them halfway across the room, where it fell on its side against the washstand and split a rung.

"You-you little devil, you!"

The second-floor front beat a tattoo of remonstrance; but there was

"Ain't it Grand Where He Pushes Her to the Edge of the Bridge?"

a sudden howling as of boiling surf in Mr. Trimp's ears and the hot ember of an oath dropped from his lips.

"You little devil! You been hounding me with the quit game for eight months. Now you gotta quit!"

"I—I -

"There ain't a man livin' would stand for your long face and naggin'! If you don't like my banking hours, and my game, and the company I keep, you quit, kiddo! Quit! Do you hear?"

"Will-I-quit? Well-

"Yeh; I been up to the Crescent Confetti-every night this week, just like you say! I been round live wires, where there ain't no long white faces shoving boardbills and whining the daylights out of me."

"Oh, you-you ain't nothin' but -

"Sure, I been up there! I can get two laughs for every long face you pull on me. You quit if you want to, kiddothere ain't no strings to you. Quit-and the sooner the better!" Mr. Trimp grasped his wife by her taut wrists and jerked her toward him until her head fell backward and the breath jumped out of her throat in a choke. "Quitand the sooner the better!"

"Lemme go! Lem-me-go!"

He tightened his hold and inclined toward her, so close that their faces almost touched. With his hot clutches on her wrists and his hot breath in her face, it seemed to her that his eyes fused into one huge Cyclopean circle that spun and spun in the center of his forehead like a fiery pinwheel against a night sky.

"Bah! You little whiteface, you! You played a snide trick on me anyway-lost your looks the second month and went dead, like a punctured tire! Quit when you

want to-there ain't no strings. Quit now!'

He flung her from him, so that she staggered backward four steps and struck her right cheek sharply against the mantel corner. A blue glass vase fell to the hearth and was shattered. With the salt of fray on his lips, he kicked at the overturned chair and slammed a closet door until the windows rattled. A carpet-covered hassock lay in his path and he hurled it across the floor. Goldie edged toward the wardrobe, hugging the wall like one who gropes in the dark.

"If you're right bright, kiddo, you'll keep out of my way. You got me crazy tonight-crazy! Do you hear

me, you little -"My hat!"

He flung it to her from its peg, with her jacket, so that they fell crumpled at her feet.

"You're called on your bluff this time, little one. This is one night it's quits for you—and I ain't drunk, neither!" She crowded her rampant hair, flowing as Ophelia's, to her cheap little boyish hat and fumb jacket. A red welt, shaped like a tongue of flame, burned diagonally down her right cheek.

"Keep out of my way—you! You got me crazy tonight—

crazy tonight!"

He watched her from the opposite side of the room with lowered head, like a bull longing for an onslaught.

She moved toward the door with the rigidity of an automaton, her hands groping ahead and her magnetized eyes never leaving his reddening face. Her mouth was moist and no older than a child's; but her skin was dead, as if coated over with tallow. She opened the door slowly, fearing to break the spell—then suddenly slipped through the doorway and slammed the door after her. The slam of

"He Could Have Turned Me Against My Own Mother, I Was That Crasy Over Him"

## WILLIAM CARLET my sor

"If There's Anything Sick Round the Place, Even the Cat, I Want to Know It"

ARLETON milk would do it," said Barney. There was something in his voice that made my own heart beat faster. It was the white idealism of the man that made him ignore the petty little interests of individuals in answer to the cry of the babies. Then, too, he voiced his faith in Dick, and finally he voiced his faith in the name Carleton. It made me proud, I'll admit it, to have him feel that the name Carleton attached to a business was a guaranty of good faith. On the whole I think I valued more highly the good opinion of this youngster than that of any other man in town. This was because he was inspired from within rather than from without.

I waited to hear what Dick would say. Ever since our escape from our neat little suburban prison to the pioneer freedom of the tenement district, I had tried to make the boy see beyond himself. In directing his ambition toward the freedom that comes with capital I had tried to make him see that every honest success is a cooperative success.

"Make some one besides your own people happier for

every extra dollar you earn," I told him.

The contracting business which he took over from me was based on that idea and built up on that idea. Our men grew prosperous with us. And Dick had maintained it on this basis and was still so maintaining it.

But this scheme of Barney's was a little different. In the first place there was a general prejudice against dairying in the town. It's a fact that those men who sold their milk to contractors made a mighty small profit, and Dick was anxious to make his farm pay. A good many people would watch him. Then, too, he had to live up to Dardoni's record or suffer the humiliation of confessing he couldn't succeed so well as a foreign immigrant. But there was the cry of the unknown babies to be considered. And there was the implied demand of Barney to Dick as a young American business man to devote his energies to a cause concerned with something besides his pocketbook. It seemed to me like a crisis in the boy's life.

"Think it over for a day or two," said Barney as he rose

to go.
"I've been thinking it over," said Dick. "I've been
thinking it over and this is what I'll do: I'll promise you
We'll see what we can do and a dozen cows, lose or gain. We'll see what we can do and go as far as we can.'

Barney thrust out his hand toward the boy, and the two

youngsters gripped.

"And I can't tell a Jersey from a Guernsey and neither can you," the boy said to me when we were talking over

the matter more in detail a day or so later,
"That's a good thing," I said; "you'll be able to start fresh. You haven't a century of prejudices back of you nor , a century of bad habits. There are men in the state agricultural school who have made a life study of dairying, not only here but throughout this country and abroad. And they are there to tell you what they've learned. They don't ask for a rarer privilege than to find some one ready to listen."

"But I don't like the idea of putting my business altogether into their hands."

"You do more every time you consult a lawyer or a doctor," I said.

"I know it, but this seems different. I've got to run this business myself, and I don't like the idea of merely carrying out the theories of some one else."

"Don't," I said. "Listen to what they all have to say and then take those theories that appeal to you and make them your own. Besides, I don't believe there is any theory about

the essentials of dairying or any other branch of farming. The fundamentals have been proved. Some one has paid big in time and expensive mistakes to prove them for you. You can start where the other man left off. You don't have to start

I suppose it was the young blood in the boy that made him hate to seek advice, but this feeling of resentment didn't last long. And then Barney, ever breathless to push along anything he started, had sent off by the next mail a request to both the Department of Agriculture and the state school for all data on hand dealing with dairying. The prompt reply and the mass of reports and pamphlets he received proved how eager those bureaus are to grasp a chance to spread their information. Too

often the results of their patient investigations are wasted. Buried in annual reports, few people see them. These reports are to be had free or for a pittance, to be sure, but that's beside the point when the great mass of farmers don't send for them. And it's no answer to say that in this case the farmers don't deserve them. You might just as well abolish truant officers with the argument that children who don't want to go to school oughtn't to be made to go. If the departments of agriculture, both Federal and state, devoted one-half of their appropriations to publicity-much as they need the money in their regular work—the actual results accomplished would in my opinion warrant it. It isn't what the experts themselves learn that is of value to the nation; it's what they can drive home to the farmers who are actually raising the crops. I don't believe a single farmer in our town ever read the annual report of the State Board of Agriculture until after the forming of the Pioneer Club, and yet those reports had been crammed full for twenty-five years and more with information that would have saved them thousands of dollars and that would have brought the state a hundred times in dollars what it would have cost to have mailed to each rural male voter a digest of them. The Federal Government could have accomplished the same result with a single wasted political appropriation

or with the money thrown away in that sop to weak Congressmen called "seed distribution."

These reports which we received covered the problems of dairying from every conceivable angle. In every case they were based upon actual experience, not only in the laboratory but in the field. The Institute papers read before the annual meetings of agricultural societies gave in detail the final successful results that followed years of costly failures. Here was the experience for which men paid, already paid for and given freely. It was in a definite, concrete form. Here were tables covering every item of production and cost in getting a quart of milk to market. It was worked out as accurately as is the cost of production of a pair of shoes. With such material as this at hand I didn't see why a novice, if he had a backing of horse sense and a fair amount of business experience, wasn't in as good a position to embark in this business as a man brought up in a dairy. In some respects he had the advantage. Personally I've found the hardest man in the world to teach farming to is the farmer.

Now in this mass of evidence two facts stood out as fundamental-that the production of milk can be increased by breeding, and that the greatest innovation in the scientific care of milk-clean handlingisn't so much an innovation as it is the correction of dirty habits that milk producers have had for so many years that they no longer recognize them as dirty habits. It's a fact that many a farmer has lived with cow dung so long that he has come to look upon it as clean, just as he has forced pigs to live in filth until now he looks upon filth as their natural habitat. Hadley was convinced that a clean pig was an impossibility.
"It's agin natur' to have 'em clean," he said. "Ain't

they called unclean in the Bible?"

A farmer in our town who groomed his cow would have been thought as absurd as though he put a Brussels carpet down on his barn floor. Such notions were considered the evil result of a college education. A cow barn wouldn't be a cow barn if it didn't smell like a cow barn.

"They'll be tying blue ribbons round their horns next,"

one man allowed.

Barney came hurrying over to the house after supper with his finger between the leaves of one of these reports.

"Look here," he said to Dick; "in Germany they go to

the bottom of things. They don't stop until they reduce facts to cold, hard figures. Listen to the death rate per thousand for babies fed on various foods: Fed on mother's milk the death rate is seven and four-tenths per thousand; fed on mother's and cow's milk, twenty-one and four-tenths; fed on cow's milk alone, forty-two and one-tenth. That makes cow's milk six times as deadly as mother's milk. It comes pretty near ranking it as a poison. But this isn't due to the milk itself, mind you; it's due to the dirt in the milk. You must lay the death of those babies directly at the door of the milk handlers, not the cows. The death rate in this country is probably even higher. There are a million and a half babies under one year of age in this country. Leaving a wide margin for error fortyfive thousand of them are snuffed out yearly by unclean milk. That comes pretty close to wholesale murder."

"Of course some of the milk is dirtied in the homes,"

I suggested.

"Admit it," said Barney, "though clean milk once sealed in clean bottles will stay clean a long while. But admit that careless home handling does some of the damage. Admit a wide margin of error in the statistics. They are bad enough even after that. Then remember that pasteurized milk at once lowers the death rate wherever used and that pasteurized milk isn't improved milk by a long shot. But pasteurization does kill out some of the harmful germs. And wherever that is done the death rate drops. There is a difference between mother's milk and cow's milk, but the biggest difference is that one is clean and the other isn't. Give us clean milk, Dick. That's all we want."

It didn't seem very much to ask for. It sounded a good deal like imploring a candy manufacturer to refrain from putting poison in penny sticks.

"I suppose the reason we don't get clean milk is because it costs more to produce it," said Dick.

"Possibly," nodded Barney; "but as a rule uncleanliness in any business stands for shiftlessness and waste.

Efficient men are clean men, and an efficient business is a clean business. Filth means waste. This is especially true in the case of milk. It means that valuable manure is being lost; it means that cows are depreciating because of slovenly care; it means that a man who is slovenly with his property is slovenly with his business. Cleanliness always pays for itself in the end. But even at twelve cents a quart clean milk is cheap food. That's one thing I propose to make those people in Little Italy understand. Look here."

Barneypickedupanother report and rapidly turned the leaves. Hewas alive, that man. If he had a weakness it was for statistics. He loved to see facts reduced to figures. He made every family in the village with a new baby keep a chart, and

"It's Agin Natur' to Have 'Em Clean. Ain't They Called Unclean in the Bible?"

then he reduced that chart to a curved line. If a mother wanted any flattery from him about her offspring she had to produce that chart and not the baby. With the kiddle gurgling in its cradle beside him he'd hold that chart at arm's length and exclaim:

"Now that curve is going the way it should. Fine! Fine! That's the way I like to see a baby grow."

"Here's what I was after," said Barney. "The actual food value of anything lies in the amount of digestible dry matter it contains. The water in it you can get cheaper by turning on the faucet, and what you don't digest is simply waste. On that basis here's a comparison of the cost per pound of certain common foods. Porterhouse steak at thirty cents a pound produces a pound of digestible dry matter at a cost of eighty cents; round steak at twenty cents a pound produces it at a cost of sixty-four cents; Hamburg steak at twenty cents a pound produces it at a cost of sixty cents; eggs at thirty cents a dozen produce it at a cost of one dollar and three cents a pound; ham at twenty-five cents produces a pound of digestible matter at a cost of sixty-five cents; clean milk at twelve cents produces the same amount of digestible dry matter at a cost of only forty-eight cents. You see it's about the cheapest food a man can buy at even twelve cents a quart, Skim milk is still cheaper, producing a pound of digestible dry matter at a cost of only fourteen cents; but skim milk,

like buttermilk, is an acquired taste." Barney closed the book with a snap.

"If to make a fair profit you have to charge twelve cents a quart for clean milk, charge it. It's worth it, and I'll do what I can to make the public understand that fact.

"And I'll do what I can to produce it cheaper than twelve cents," said Dick.

### VII

 ${
m I}^{
m N}$  THE production of clean milk the farmer starts with one fundamental factor absolutely assured him-his product as delivered by a clean cow is clean. Neither pasteurization nor sterilization can improveit. There remains for the farmer then just one duty, to keep his milk clean. He must see that it is uncontaminated between the cow and the pail, between the pail and the cooling room, and between the cooling room and the bottle, and finally that the bottle itself is absolutely clean. By skillful feeding a farmer may improve the quality of his milk and increase its quantity, but he cannot make it any cleaner than it is delivered to him by a clean cow. As Dick and I read over the many reports we received we saw this fact

emphasized again and again. Nature handed her product to man in a clean state and it was man who undid her work. "It looks to me," said Dick, "as though the chief work of the dairy expert lies, not in the improvement of cattle

but in the improvement of men." And there was something in what the lad said. In the detection of unclean cattle by the tuberculin test experts have made a distinct, concrete advance, but the rest of their work consists mainly in trying to counteract the present day familiarity with filth which has led farmers to view it with contempt. I've seen a cow step in the milk pail, and have known the farmer's only regret to be the loss of a few quarts of milk. On the whole it would have done less harm if the farmer himself had stepped in the milk pail; and yet in that event he would have considered the milk contaminated simply because of the unusualness of the accident.

Little by little the bad habits of our ancestors, bred of shiftlessness due sometimes to enforced neglect and somee to laziness, have accumulated in the present generation who accept them either as inevitable or natural. A routine has been handed down to them and to their wives which has paralyzed both. The man who starts in the business fresh and with his eyes open escapes this heritage.

The more the boy and I read, the more we realized that in dairying the barn is a mighty important factor. Right there is where it was necessary to pull away from the popular conception of a barn. Farmers have for years been throwing together a type of building that is nothing but a lukewarm evolution of the first primitive shelter. In constructing these buildings the farmer has considered neither his own comfort nor that of his cattle. They vary only in size, and consist of nothing but a boarded-in roof that serves to keep off the rain. No attempt has been made

to have a cool stable in summer or a warm stable in winter. while such items as light and cleanliness have been ignored completely. Cattle are not accorded even the consideration given vegetables.

The barn which Dardoni had found on the place and which he had not improved at all was of this old type. Dardoni, like most immigrants, depended upon hard work and economy for his success rather than upon modern scientific farming methods. The latter would have helped him, but he never had the opportunity to learn about them. Even if he had, it is doubtful if he would have adopted them. He fell into his own little tangle of ruts, and if they were an improvement on those of his neighbors they were still ruts.

The barn was big enough, about fifty by sixty, but it was poorly ventilated and poorly lighted, and was, of course, floored with wood. Back of the cows this wood was soaked with the accumulated filth of fifty years. The manure was shoveled through a trap door directly back of the cows to the ground below, where it lay until wanted for use. Much of it was lost by drainage, and what remained polluted the whole barn. You couldn't remain fifteen minutes in that barn without advertising the fact for an hour afterward to every one you met. This came pretty close to Hadley's ideal conception of a barn.

The cattle were watered from a well in the barnyard

which received a good share of the drainage and in winter

"If That Cow Isn't Burled Within a Week She'll be the Best-Advertised Cow in This Neighborhood"

was as cold as it could be without freezing. There were windows back of the stalls, but in winter these were boarded up. The eaves shaded them, anyway, so that no sunlight ever came in. From roof to floor the barn was covered with a fine dust that was stirred up every time hay was pitched down from the loft and every time a gust of wind blew in. Viewing the structure from the point of view of the modern dairyman the barn was about as filthy as it could be. Viewing it from the point of view merely of a man with only average decent instincts it was filthy. Detach that barn and put it down in an orderly community where such barns are not common and it would be condemned instantly by any board of health.

Yet it was no worse than the average barn of the village. We consider ourselves a decent community too. I'll admit that at first it didn't appeal to me as in a very bad condition. That's because it was up to the local standard; because after a long period of slovenly training we had all become used to barns of this type. Only when we looked at it from a fresh point of view did we appreciate its actual condition. I don't suppose our dulled vision is limited to barns either, or that farmers are the only class with dulled vision. Just such conditions exist in every community.

It isn't a bad practice to stop every now and then and try to strip things to their naked selves. I've often wondered what a halfway decent inhabitant of another planet might report back to his fellows after a visit here. Suppose he was what we'd call a savage, and suppose he was so simple-minded he couldn't appreciate our civilization and reported things literally.

'They kill animals down there," he could say, "and eat their flesh-even their livers and stomachs. They drink poison down there because of the fun they get out of it while it is killing them. It is sold in stores like groceries. And they swallow deadly drugs, that drive them mad, because of the brief enjoyment they get before they go mad. Drugs are sold in stores too. They have laws that make it illegal for individuals to settle their quarrels by killing each other, but when groups of individuals fall out they think the only way they can settle the dispute with honor is to kill each other by thousands. The nation that kills the most is then declared to have been right, and this is thought a very brave and pretty affair. The slayers are dressed in bright uniforms and have bands and are highly honored. They can't decide on God down there and hate each other for loving Him in different ways. They don't think much of little children down there; the wealthy call them nuisances and the poor call them burdens. When a man does wrong down there they don't try to make him better, but shut him up and make him worse."

I've often stripped things to the raw that way, just for the good of my point of view. It's amazing how many bitter truths like those we have clothed with excuses until we don't see the facts any more. The matter of our barns in Brewster was a fine example on a small scale.

"The barn is rotten," said Dick, "and I thought of putting a cow in there for my own use,"

The first question with Dick was whether it wouldn't be cheaper to pull down the old barn and start fresh. But

> after examining the structure carefully he found that the framework was as sound as when put together. It was built in the days when both lumber and labor were cheap. Most of those timbers couldn't be duplicated today. Letting in air and sunlight was simply a matter of putting in windows. If the barn was sheathed on the inside this would provide a space serving as a flue for ventilation. As for the floors, they should be cement. There was no possible chance for argument there. Nothing else can be kept so clean.

> Now here's a point I want to emphasize—not one of those ideaswaseither Dick'sormine. My experience with farming in general had taught me that cleanliness in every branch is essential to the best results, and I will say that my barn was a little cleaner than some in the neighborhood. I took care of my dressing, for one thing, and kept my cows fairly clean with plenty of bedding and considerable grooming. But my barn wasn't properly ventilated and wasn't as clean as it ought to be by a long shot. In studying this subject I found I had as much to learn as the boy. The fact that impressed me, as it had already

impressed me about other details of farming, was how simple a matter it is to learn. There is nothing complicated about farming; nothing abstruse. It's just horse sense. The subject presents no technical difficulties. Even if it did, the way people with intelligence even below the average have mastered the tricks and complications of gasoline engines would seem to indicate that this should be no bar. Within a decade a large army of humdrum people, many of whom no one ever thought could learn to drive a nail, have turned themselves into skilled mechanicians for the pleasure of running an automobile. A man who can master a gasoline engine ought to be able to master anything mechanical.

Dick approached his new enterprise knowing even less than I, but he had right at hand the published experience of others and knew enough to utilize it whenever it squared with intelligent reasoning. A man can go far without personal experience today if he knows how to use the experience of others.

The first thing the boy did was to sheathe the barn on the inside, leaving it open at the top. An opening on the outside near the sill allowed the fresh air to enter there, come up on the inside and enter at the top. Flues near the floor drew out the impure air. Nothing could be simpler, and nothing, so far as Dick's experience has gone, could work better.

The next thing the boy did was to have the barn swept down from roof to floor, and then he went to work on the cement floor. In the barn proper he had the cement put on over the floorboards, these being sound. The cement was not smoothed off, but left rough so as to afford a footing. In remodeling his stalls Dick used the published experience of an old dairyman-a practical farmer who evidently had

(Continued on Page 65)

# AN AMERICAN VANDAL

## The Deadly Poulet Routine—By Irvin S. Cobb

T WAS at a small dinner party in a home out in Passywhich is to Paris what Flatbush is to Brooklyn-that the event hereinafter set forth came to pass. Our host was an American who had lived abroad a good many years; and his wife, our hostess, was a French woman as charming as she was pretty and as pretty as she could be.

The dinner was going along famously. We had the hors-d'œuvres, the soup and the hareall very tasty to look on and very soothing to the palate. Then came the

fowl, roasted, of course—the roast fowl is the national bird of France-and along with the fowl something exceedingly appetizing in the way of hearts of lettuce garnished with breast of hothouse tomatoes cut on the bias.

When we were through with this the servants removed the débris and brought us hot plates. Then, with the air of one conferring a real treat on us, the butler bore round a tureen arrangement full of smoking-hot string-beans. When it came my turn. I helped myself—copiously—and waited for what was to go with the beans. A pause ensued—to my imagination an embarrassed pause.

Seeking a cue I glanced down the table and back again. There did not appear to be anything to go with the beans. The butler was standing at ease behind his master's chair-ease for a butler, I mean-and the other guests, it seemed to me, were waiting and watching. To myself I said:

"Well, sir, that butler certainly has made a J. Henry Fox Pass of himself this trip! Here, just when this dinner was getting to be one of the notable successes of the present century, he has to go and derange the whole running schedule by serving the salad when he should have served the beans, and the beans when he should have served the salad. It's a sickening situation; but if I can save it I'll do it. I'll be well bred if it takes a leg!"

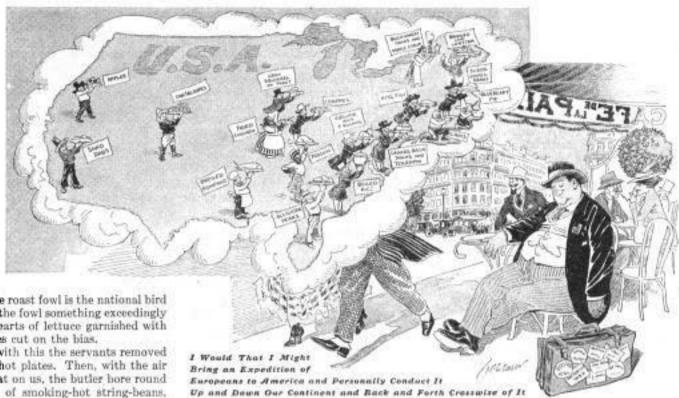

## The String-Bean Path to Social Glory

So, WEARING the manner of one who has been accus-tomed all his life to finishing off his dinner with a mess of string-beans, I used my putting iron; and from the edge of the fair green I holed out in three. My last stroke was dandy, if I do say it myself. The others were game too-I could see that. They were eating beans as though beans were particularly what they had come for. Out of the tail of my eye I glanced at our hostess, sitting next to me on the left. She was placid, calm, perfectly easy. Again addressing myself mentally I said:

"There's a thoroughbred for you! You take a woman who got prosperous suddenly and is still acutely suffering from nervous culture, and if such a shipwreck had occurred at her dinner table she'd be utterly prostrated by now-she'd be down and out—and we'd all be standing back to give her air; but when they're born in the purple it shows in these big emergencies. Look at this woman now-not a ripple on the surface-balmy as a summer evening! But in about one hour from now, Central European time, I can see her accepting that fool butler's resignation before he's had time to offer it!"

After the beans had been cleared off the right-of-way we had the dessert and the cheese and the coffee and the rest of it. And, as we used to say in the society column down home when the wife of the largest advertiser was entertaining the collected beauty and chivalry of the community, "at a suitable hour those present dispersed to their homes, one and all voting the affair to have been one of the most enjoyable occasions among like events of the season." We all knew our manners-we had proved that.

Personally I was very proud of myself for having carried the thing off so well; but after I had survived a few tables d'hôte in France and a few more in Austria and a great many in Italy, where they do not have anything at the hotels except tables d'hôte, I did not feel quite so proud. For at this writing in those parts the slender, sylphlike stringbean is not playing a minor part, as with us. He has the

best spot on the bill at the evening performance-he is a headliner. So is the cauliflower; so is the Brussels sprout; so is any vegetable whose function among our own people is largely scenic.

Therefore I treasured the memory of this incident and brought it back with me; and I tell it here at some length of detail because I know how grateful my countrywomen will be to get hold of it—I know how grateful they always are when they learn about a new gastronomical wrinkle. Mind you, I am not saying that the notion is an absolute novelty here. For all I know to the contrary, prominent hostesses along the Gold Coast of the United States-Bar Harbor to Palm Beach inclusive—may have been serving one lone vegetable as a separate course for years and years; but I feel sure that throughout the interior the disclosure will come as a pleasant surprise.

The directions for executing this coup are simple-all the deadlier because they are so simple. The main thing is to invite your chief opponent as a smart entertainer; you know the one I mean—the woman who scored such a distinct social triumph in the season of 1912-13 by being the first woman in town to serve tomato bisque with whipped cream on it. Have her there by all means. Go ahead with your dinner as though naught sensational and revolutionary were about to happen. Give them in proper turnthe oysters, the fish, the entrée, the bird, the salad. And then, all by itself-alone and unafraid-bring on a dab of

Wait until you see the whites of their eyes, and aim and fire at will. Settle back then, until the first hushed shock has somewhat abated—until your dazed and suffering rival is glaring about in a well-bred but flustered manner, looking for something to go with the beans. Hold her eye while you smile a smile that is compounded of equal parts-superior wisdom, and gentle contempt for her ignorance; and then slowly, deliberately, dip a fork into the beans on your plate and go to it.

Believe me, it cannot lose! Before breakfast time the next morning every woman who was at that dinner will either be sending out invitations for a dinner of her own and ordering beans, or she will be calling up her nearest and best friend on the telephone to spread the tidings. I figure that the intense social excitement occasioned in this country a few years ago by the introduction of Russian salad dressing will be as nothing in comparison.

This stunt of serving the vegetable as a separate course was one of the things I learned about food during our flittings across Europe, but it was not the only thing I learned-by a long shot it was not.

For example I learned this—and I do not care what anybody else may say to the contrary either-that here in America we have better food and more different kinds of food, and food better cooked and better served than the effete monarchies of the Old World ever dreamed of. And, quality and variety considered, it costs less here, bite for bite, than it costs there.

Food in Germany is cheaper than anywhere else almost, I reckon; and, selected with care and discrimination, a German dinner is an excellently good disner. Certain dishes in England-and they are very certain, for you get them at every mealare good, too, and not overly expensive. There are some distinctive Austrian dishes that are not without their attractions either.

Speaking by and large, however, I venture the assertion that, taking any first-rate restaurant in any of the larger American cities and balancing it off against any establish-ment of like standing in Europe, the American restaurant wins on culsine, service, price, flavor and attractiveness.

Centuries of careful and constant press-

agenting have given French cookery much of its present fame. The same crafty processes of publicity, continued through a period of eight or nine hundred years, have endowed the European scenic effects with a glamour and an impressiveness that really are not there, if you can but forget the advertising and consider the proposition on its merits.

Take their rivers now—their historic rivers, if you please. You are traveling-heaven help you-on a Continental train. Between spells of having your ticket punched or torn apart, or otherwise mutilated; and between spells of getting out at the border to see your trunks ceremoniously and solemnly unloaded and unlocked, and then as ceremoniously relocked and reloaded after you have con-ferred largess on everybody connected with the train, their customs regulations being mainly devised for the purpose of collecting not tariff but tips—between these periods, which constitute so important a feature of Continental travel-you come, let us say, to a stream.

## Puny Creeks With Historic Names

IT IS a puny stream, as we are accustomed to measure streams, boxed in by stone walls and regulated by stone dams, and frequently it is mud-colored and, more frequently still, runs between muddy banks. In the West it would probably not even be dignified with a regular name, and in the East it would be of so little importance that the local congressman would not ask an annual appropriation of more than half a million dollars for the purposes of dredging, deepening and diking it. But even as you cross it you learn that it is the Tiber or the Arno, the Elbe or the Po; and, such is the force of precept and example, you immediately get all excited and worked up over it.

English rivers are beautiful enough in a restrained, wellmanaged, landscape-gardened sort of way; but we Americans do not enthuse over an English river because of what it is in itself, but because it happens to be the Thames or the Avon-because of the distinguished characters in history whose names are associated with it. Hades gets much of its reputation the same way.

I think of one experience I had while touring through what we had learned to call the Dachshund District. Our route led us alongside a most inconsequential-looking little river. Its contents seemed a trifle too liquid for mud and a trifle too solid for water. On the nearer bank was a small village populated by short people and long dogs. Out in midstream, making poor headway against the semi-gelid current, was a little flutter-tailed steamboat panting and puffing violently and kicking up a lather of lacy spray with its wheelbuckets in a manner to remind you of a very warm small lady fanning herself with a very

large gauze fan, and only getting hotter at the job. In America that stream would have been known as Mink Creek or Cassidy's Run, or by some equally poetic title; but when I found out it was the Danube—no less—I had a distinct thrill. On closer examination I discovered it to be a counterfeit thrill; but, nevertheless, I had it.

By the same token I also found out that day why they call the Danube the Blue Danube; for yellow is one of the component pigments of blue, and this stream had enough yellow in it to turn a whole ocean blue if properly mixed with enough green. And the Americans aboard that train could have supplied the greenness, too, and never missed it; they would have had plenty left.

What applies in the main to the scenery applies in the main to the food. France has the reputation of breeding the best cooks in the world—and maybe she does; but when you are calling in France you find most of them out. They have emigrated to America, where a French chef gets more money in one year for exercising his art-and gets it easier-than he could get in ten years at home-and is given better ingredients to cook with than at home.

The hotel in Paris at which we stopped served good enough meals, all of them centering, of course, round the inevitable poulet rôti; but it took the staff an everlastingly long time to bring the food to you. If you grew reckless and ordered anything that was not on the bill it upset the entire establishment; and before they calmed down and relayed it in to you it was time for the next meal. Still, I must say we did not mind the waiting; near at hand a fascinating spectacle was invariably on exhibition.

At the next table sat an Italian countess. Anyhow they told me she was an Italian countess, and she wore jewelry enough for a dozen countesses. Every time I beheld her, with a big emerald earring gleaming at either side of her head, I thought of a Lenox Avenue local in the New York Subway.

However, it was not so much her jewelry that proved such a fascinating sight as it was her pleasing habit of fetching out a gold-mounted toothpick and exploring the most remote and intricate dental recesses of herself in full view of the entire dining room, meanwhile making a noise like somebody sicking a dog on.

The Europeans have developed public toothpicking beyond anything we know. They make an outdoor pas-

time and function of it, whereas we pursue this sport privately. Over there, however, a toothpick is a family heirloom and is handed down from one generation to another, and is operated in company ostentatiously. In its use some Europeans are absolutely gifted.

### Beware of the Oyster

THIS particular hotel, in common with all other first-class hotels in Paris, was forgetful about setting forth on its menu the prices of its best dishes and its special dishes. I take it this arrangement was devised for the benefit of currency-quilted Americans. A Frenchman asks the waiter the price of an unpriced dish and then he orders something else; but the American, as a rule, is either too proud or too foolish to inquire into these details. At home he is beset by a hideous fear that some waiter will think he is of a mercenary nature; and when he is abroad this trait in him is accentuated.

So, in his carefree American way, he orders a portion of a dish of an unspecified value; whereupon the head waiter slips out to the office and ascertains by private inquiry how large a letter of credit the American is carrying with him, and comes back and charges him all the traffic will bear.

As for the keeper of a fashionable café on a boulevard or in the Rue de la Paix-well, alongside of him the most rapacious restaurant proprietor on Broadway is a kindly, Christian soul who is in business for his health-and not feeling very healthy at that. When you dine at one of the swagger boulevard places the head waiter always comes, just before you have finished, and places a display of fresh fruit before you, with a winning smile and a bow and a gesturewhich, taken together, would seem to indicate that he is extending the compliments of the season and that the fruit will be on the house; but never did one of those intriguing scoundrels deceive me.

Somewhere, years before, I had read statistics on the cost of fresh fruit in a Paris restaurant, and so I had a care. The sight of a bunch of hothouse grapes alone was sufficient to throw me into a cold perspiration right there at the table;

and as for South African peaches, I carefully walked round them, getting farther away all the time. A peach was just

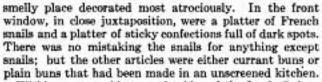

She Wore Jewetry Enough for a Dones Counterses

mistake on my part, one financial and the other gustatory. They were not particularly flavorous oysters as we know oysters on this side of the ocean. The French oyster is a small, copper-tinted proposition, and he tastes something like an indisposed mussel and something like a touch of

> biliousness; but he is sufficiently costly for all purposes. The café proprietor cherishes him so highly that he refuses to vulgarize him by printing the asking price on the same menu.

A person in France desirous of making a really ostentatious display of his affluence, on finding a pearl in an oyster, would swallow the pearl and wear the oyster on his shirtfront. That would stamp him as a person

However, I am not claiming that all French cookery is ultra-exorbitant in price or of excessively low grade. We had one of the surprises of our lives when, by direction of a friend who knew Paris, we went to a little obscure café that was off the tourist route and therefore-as yet-unspoiled and uncommercialized. This place was up a back street near one

the Story of the Flood Only Two Animals Emerged From the Ark

H'atent w

Within were marble-topped tables of the Louis-Quince period and stuffy wall-seats of faded, dusty red velvet; and a waiter in his shirtsleeves was wandering about with a sheaf of those long French loaves tucked under his arm like golfsticks, distributing his loaves among the diners. But somewhere in its mysterious and odorous depths that little bourgeois café harbored an honest-to-goodness cook.

He knew a few things about grilling a pig's knuckle—that worthy person. He could make the knuckle of a pig taste like the wing of an angel; and what he could do with a skillet, a pinch of herbs and a calf's sweetbread passed human understanding!

TERTAIN animals in Europe do have the most delicious diseases anyway-notably the calf and the goose, particularly the goose of Strasburg, where the pâté de foie gras comes from. The engorged liver of a Strasburg goose must be a source of joy to all-except its original owner!

Several times we went back to the little restaurant round the corner from the market, and each time we had something good. The food we ate there helped to compensate for the terrific disillusionment awaiting us when we drove out of Paris to a typical roadside inn, to get some of

that wonderful provincial cookery that through all our reading days we had been hearing about.

You will doubtless recall the description, as so frequently and graphically dished up by the inspired writers of travelogue stuff-the picturesque, tumbledown place, where on a cloth of coarse linen—white like snow—old Marie, her wrinkled face abeam with hospitality and kindness, places the delicious omelet she has just made, and brings also the marvelous salad and the perfect fowl, and the steaming hot coffee fragrant as breezes from Araby the Blest, and the vin ordinaire that is even as honey and gold to the thirsty throat. You must know that?

We went to see for ourselves. At a distance of half a day's automobile run from Paris we found an establishment answering to the plans and specifications. It was shoved jam-up against the road, as is the French custom; and it was surrounded by a high, broken wall, on which all manner of excrescences in the shape of tiny dormers and misshapen little towers hung-like Texas ticks on the ears of a quarantined steer. Within the wall the numerous ruins that made up the inn were thrown together any fashion, some facing one way, some facing the other way, and some facing all ways at once; so that, for the housefly, so numerously encountered on these premises, it was but a short trip and a merry one from the stable to the dining room and back again.

Sure enough, old Marie was on the job. Not desiring to be unkind or unduly critical I shall merely state that as a cook old Marie was what we who have been in France and speak the language fluently would call la limite! The omelet she turned out for us was a thing that was very firm and durable, containing, I think, leather findings,

with a sprinkling of chopped henbane on the top. The coffee was as feeble a counterfeit as chicory usually is when it is masquerading as coffee, and the rin ordinaire had less of the rin to it and more of the ordinaire than any we sampled elsewhere.

Right here let me say this for the much-vaunted rin ordinaire of Europe: In the end it biteth like a serpent and stingeth like an adder—not like the ordinary Egyptian adder, but like a patent adder in the office of a loan shark, which is the worst stinger of all the adder family. If consumed with any degree of freedom it will put a downy coat on your tongue next morning that will cause you to think you inadvertently swallowed the pillow in your sleep. Good domestic wine costs as much in Europe as good domestic wine costs in America—possibly more than as much.

The soufflé potatoes of old Marie were not bad to look on, but I did not test them otherwise. Even in my own country I do not care to partake of soufflé potatoes unless I know personally the person who blew them up.

So at the conclusion of the repast we nibbled tentatively at the dessert, which was a pancake with jelly, done in the image of a medicated bandage but not so tasty as one of those. And then I paid the check, which was of august proportions, and we came sadly away, realizing that another happy dream of youth had been shattered to bits. Out of the whole meal only the tablecloth had been as advertised. It was coarse, but white like snow—like snow three days old in Pittsburgh.

Yet I was given to understand that was a typical rural French inn and fully up to the standards of such places; but if the manager of a roadhouse within half a day's ride of New York or Boston or Philadelphia served such food to his patrons, at such prices, the sheriff would have him inside of two months; and everybody would be glad of it too—except the sheriff. Also, no humane man in this country would ask a self-respecting cow to camp overnight in such outbuildings as abutted on the kitchen of this particular inn.

I am not denying that we have in America some pretty bad country hotels, where good food is most barbarously mistreated and good beds are rare to find, but we admit our shortcomings in this regard and we deplore them—we do not shellac them over with a glamour of bogus romance, with intent to deceive the foreign visitor to our shores. We warn him in advance of what he may expect and urge him to carry his rations with him.

## Deep Breathing Applied to Spaghetti

IT IS almost unnecessary to add that old Marie gave us veal and poulet rôti. According to the French version of the story of the Flood only two animals emerged from the Ark when the waters receded—one was an immature ben and the other was an adolescent calf. At every meal except breakfast—when they do not give you anything at all—the French give you veal and poulet rôti. If at lunch you had the poulet rôti first and afterward the veal, why, then at dinner they provide a pleasing variety by bringing on the veal first and the poulet rôti afterward.

The veal is invariably stringy and coated over with weird sauces, and the pould never appears at the table in her recognizable members—such as wings and drumsticks—but is chopped up with a cleaver into cross sections, and strange-looking chunks of the wreckage are sent

to you. Moreover they cook the chicken in such a way as to destroy its original taste, and the veal in such a way as to preserve its original taste, both being inexcusable errors.

Nowhere in the larger Italian cities, except by the exercise of a most tremendous determination, can you get any real Italian cooking or any real Italian dishes. At the hotels they feed you on a pale, sad table-d'hôte imitation of French cooking, invariably buttressed with the everlasting veal and the eternal pould rôti. At the finish of the meal the waiter brings you, on one plate, two small withered apples and a bunch of flyspecked sour grapes; and, on another plate, the mortal remains of some cheese wearing a tinfoil shroud and appropriately laid out in a small, white, coffin-shaped box.

After this had happened to me several times I told the waiter with gentle irony that he might as well screw the lid back on the casket and proceed with the obsequies of the deceased. I told him I was not one of those morbid people who love to look on the faces of the strange dead. The funeral could not get under way too soon to suit me. That is what I told him.

In my travels the best place I ever found to get Italian dishes was a basement restaurant under an old brownstone house on Forty-fourth Street, in New York. There you might find the typical dishes of Italy—I defy you to find them in Italy without a search-warrant. However, while in Italy the tourist may derive much entertainment and instruction from a careful study of table manners.

In our own land we produce some reasonably boisterous trenchermen, and some tolerably careless ones too. Some among us have yet to learn how to eat corn on the ear and at the same time avoid corn in the ear. A dish of asparagus has been known to develop fine acoustic properties, and in certain quarters there is a crying need for a soundproof soup; but even so, and admitting these things as facts, we are but mere beginners in this line when compared with our European brethren.

In the caskets of memory I shall ever cherish the picture of a particularly hairy gentleman, apparently of Russian extraction, who patronized our hotel in Venice one evening. He was what you might call a human hazard—a golfplayer would probably have thought of him in that connection. He was eating flour dumplings, using his knife for a niblick all the way round; and he lost every other ball in a concealed bunker on the edge of the rough.

There is also a popular belief to the effect that the Neapolitan eats his spaghetti by a deft process of wrapping
thirty or forty inches round the tines of his fork and then
lifting it inboard, an ell at a time. This is not correct.
The true Neapolitan does not eat his spaghetti at all—he
inhales it. He gathers up a loose strand and starts it down
his throat. He then respires from the diaphragm, and like
a troupe of trained angleworms that entire mass of spaghetti uncoils itself, gets up off the plate, and disappears
inside him—en masse, as it were—and makes him look like
a man who is chinning himself over a set of bead portières.
I fear that we in America will never learn to siphon our
spaghetti into us thus. It takes a nation that has practiced
deep breathing for centuries.

Under the head of European disillusionments I would rate, along with the rin ordinaire of the French vineyard and inkworks, the barmaid of Britain. From what you have heard on this subject you confidently expect the British barmaid to be buxom, blond, blooming, billowy, buoyant—but especially blond.

On the contrary she is generally brunette, frequently middle-aged, in appearance often fair-to-middling homely, and in manner nearly always abounding with a stiffness and hauteur that would do credit to a belted earl, if the belting had just taken place and the earl were still groggy from the effects of it.

Also, she has the notion of personal adornment that is common in more than one social stratum of women in England. If she has a large, firm, solid mound of false hair overhanging her brow like an impending landslide, and at least three jingly bracelets on each wrist, she considers herself to be well dressed, no matter what else she may or may not be wearing.

Often this lady is found presiding over an American bar, which is an institution now commonly met with in all parts of London. The American bar of London differs from the ordinary English bar of London in two respects, namely—there is an American flag draped over the mirror, and it is a place where they sell all the English drinks and are just out of all the American ones. If you ask for a Bronx the barmaid tells you they do not carry seafood in

stock and advises you to apply at the fishmonger's second turning to the right, sir, and then over the way, sir—just before you come to the bottom of the road, sir.

If you ask for a Mamie Taylor she gets it confused in her mind with a Sally Lunn and sends out for yeastcake and a cookbook; and while you are waiting she will give you a genuine Yankee drink, such as a brandy and soda or she will suggest that you smoke something and take a look at the evening paper.

If you do so smoke something, beware—oh, beware!—
of the native English cigar. When rolled between the
fingers it gives off a dry, rustling sound similar to a
shuck mattress. For smoking purposes it is open to the
same criticisms that a shuck mattress is. The flames smokder in the walls and then burst through in unexpected
places, and the smoke sucks up the airshaft and mushrooms on your top floor; then the deadly back draft comes
and the fatal firedamp, and when the firemen arrive you
are a ruined tenement.

Except the German, the French, the Belgian, the Austrian and the Italian cigar, the English cigar is the worst cigar I ever saw. I did not go to Spain; they tell me, though, the Spanish cigar also has the high qualifications of badness. Spanish cigars are not really cigars at all, I hear; they fall into the classification of defective flues.

Likewise beware of the alleged American cocktail occasionally dispensed, with an air of pride and accomplished triumph, by the British barmaid of an American bar. If for purposes of experiment and research you feel that you must take one, order with it, instead of the customary olive or cherry, a nice boiled vegetable marrow. The advantage to be derived from this is that the vegetable marrow takes away the taste of anything else and does not have any taste of its own.

### England's National Flower

IN THE eating line the Englishman depends on the staples. He sticks to the old standbys. What was good enough for his fathers is good enough for him—in some cases almost too good. Monotony of victuals does not distress him. He likes his food to be humdrum—the humdrummer the better.

Speaking with regard to the whole country I am sure we have better beef uniformly in America than in England; but there is at least one restaurant on the Strand where the roast beef is just a little bit superior to any other roast beef on earth. English mutton is incomparable, too, and English breakfast bacon is a joy forever. But it never seems to occur to an Englishman to vary his diet. I submit samples of the daily menu:

LUNCHEON
Roast Beef
Boiled Mutton
Potatoes | Boiled
Cabbage | Boiled
Jam Tart
Custard
Cheese
Coffee
TEA!

DINNER
Boiled Mutton
Roast Beef
Cabbage
Potatoes
Custard
Jam Tart
Coffee
Cheese

I know now why an Englishman dresses for dinner—it enables him to distinguish dinner from lunch.

His regular desserts are worthy of a line. The jam tart is a death-mask that went wrong and in consequence

> became morose and heavy of spirit, and the custard is a soft-boiled egg which started out in life to be a softboiled egg and at the last moment when it was too late—changed its mind and tried to be something else.

In the City, where lunching places abound, the steamer works overtime and the stewpan never rests. There is one place, well advertised to American visitors, where they make a specialty of their beefsteak-and-kidney pudding. This is a gummy concoction containing steak, kidney, mushroom, cyster, lark—and sometimes W and Y.

Doctor Johnson is said to have been very fond of it; this, if true, accounts for the doctor's disposition. A helping of it weighs two pounds before you eat it and ten pounds afterward. The kidney is its predominating influence. The favorite flower of the English is not the primrose but the kidney. Wherever you go, among the restaurants, there is always somebody operating on a steamed flour dumpling for kidney trouble.

The lower orders are much addicted to a dish known—if I remember the name aright—by the

HRISTMAS DAY had had a softening effect on Mrs. Boyer. It had opened hadly.

It was the first Christmas she had spent away from her children, and there had been little of the holiday spirit in her attitude as she prepared the Christmas breakfast. After that, however, things happened.

In the first place, under her plate she had found a frivolous chain and pendant which she had admired. And when her eyes filled up, as they did whenever she was emotionally moved, the doctor had come round the table and put

both his arms about her.

Too young for you? Not a bit!" he said heartily. "You're better looking than you ever were, Jennie; and if you weren't you're the only woman for me anyhow. Don't you think I realize what this exile means to you and that you're doing it for me?'

"I-I don't mind it."

"Yes, you do. Tonight we'll go out and make a night of it, shall we? Supper at the Grand, the theater, and then the Tabarin, eh?"

She loosened herself from his arms.

"What shall I wear? Those horrible things the children bought me -

"Throw 'em away."

"They're not worn at all."

"Throw them out. Get rid of the things the children got you. Go out tomorrow and buy something you like-not that I don't like you in anything or without ——'

"Frank!"

"Be happy, that's the thing. It's the first Christmas without the family, and I miss them too. But we're together, dear. That's the big thing. Merry Christmas."

An auspicious opening, that, to Christmas Day. And they had carried out the program as outlined. Mrs. Boyer had enjoyed it, albeit a bit horrified at the Christmas gayety at the Tabarin.

The next morning, however, she awakened with a keen reaction. Her head ached. She had a sense of taint over her. She was virtue rampant again, as on the day she had first visited the old lodge in the Siebensternstrasse.

It is hardly astonishing that by association of ideas Harmony came into her mind again, a brand that might even yet be snatched from the burning. She had been a bit hasty before, she admitted to herself. There was a woman doctor named Gates, although her address at the club was given as Pension Schwarz. She determined

to do her shopping early and then to visit the house in the Siebensternstrasse. She was not a hard woman, for all her inflexible morality, and more than once she had had an uneasy memory of Harmony's bewildered, almost stricken face the afternoon of her visit. She had been a watchful mother over a not particularly handsome family of daughters. This lovely young girl needed mothering and she had refused it. She would go back, and if she found she had been wrong and the girl was deserving and honest, she would see what could be done.

The day was wretched. The snow had turned to rain. Mrs. Boyer, shopping, dragged wet skirts and damp feet from store to store. She found nothing that she cared for after all. The garments that looked chic in the windows or on manikins in the shops, were absurd on her. Her insistent bosom bulged, straight lines became curves or tortuous zigzags, plackets gaped, collars choked her or shocked her by their absence. In the mirror of Marie Jedlicka, clad in familiar garments that had accommodated themselves to the idiosyncrasics of her figure, Mrs. Boyer was a plump, rather comely matron. Here before the plate glass of the modiste, under the glare of a hundred side by side with a slim Austrian salesgirl who looked like a willow wand, Mrs. Boyer was grotesque, ridiculous, monstrous. She shuddered. She almost wept.

It was bad preparation for a visit to the Siebensternstrasse. Mrs. Boyer, finding her vanity gone, convinced that she was an absurdity physically, fell back for comfort on her soul. She had been a good wife and mother; she was chaste, righteous. God had been cruel to her in the flesh, but He had given her the spirit.

"Madame wishes not the gown? It is beautiful-see the embroidery! And the neck may be filled with chiffon."

"Young woman," she said grimly, "I see the embroidery; and the neck may be filled with chiffon, but not for me! And when you have had five children, you will not buy clothes like that either."

When She Could Hear the Jinging of the Runners She Stid the Tree Branch Out Across the Track

All the kindliness was gone from the visit to the Siebensternstrasse; only the determination remained. Wounded to the heart of her self-esteem, her pride in tatters, she took her way to the old lodge and climbed the stairs.

She found a condition of mild excitement. Jimmy had slept long after his bath. Harmony practiced, cut up a chicken for broth, aired blankets for the chair into which Peter on his return was to lift the hoy.

She was called to inspect the mouse cage, which, according to Jimmy, had strawberries in it.

"Far back," he explained. "There in the cotton,

But it was not strawberries. Harmony opened the cage and very tenderly took out the cotton nest. Eight tiny pink baby mice, clean washed by the mother, lay curled in

It was a stupendous moment. The joy of vicarious par-entage was Jimmy's. He named them all immediately and demanded food for them. On Harmony's delicate explanation that this was unnecessary, life took on a new meaning for Jimmy. He watched the mother lest she slight one. His responsibility weighed on him. Also his inquiring mind was very busy.

"But how did they get there?" he demanded.

"God sent them, just as he sends babies of all sorts."
"Did he send me?"

"Of course,"

"That's a good one on you, Harry. My father found me in a hollow tree.'

"But don't you think God had something to do with it?" Jimmy pondered this.

"I suppose," he reflected, "God sent daddy to find me se that I would be his little boy. You never happened to see any babies when you were out walking, did you, Harry?"

"Not in stumps—but I probably wasn't looking." Harmony brought in her violin and played softly to him, not to disturb the sleeping mice. She sang, too, a verse

that the Big Soprano had been fond of and that Jimmy loved. Not much of a voice was Harmony's,

but sweet and low and very true, as became her violinist's ear.

"Ah, well! For us all some sweet hope lies Deeply buried from human eyes,

she sang, her clear eyes luminous,

"And in the hereafter, angels may Roll the stone from its grave away!"

Mrs. Boyer mounted the stairs. She was in a very bad humor. She had snagged her skirt on a nail in the old gate, and although that very morning she had detested the suit, her round of shopping had again endeared it to ber. She told the portier in English what she thought of him, and climbed ponderously, pausing at each landing to examine the damage.

Harmony, baving sung Jimmy to sleep, was in the throes of an experiment. She was not smoking; she was experimenting. Peter and Anna had smoked together and it had looked comradely. Perhaps, without reasoning it out, Harmony was experimenting toward the end of establishing her relations with Peter still further on friendly and comradely grounds. Two men might smoke together; a man and a woman might smoke together as friends. According to Harmony's ideas, a girl paring potatoes might inspire sentiment, but smoking a cigarette-

never!

She did not like it. She thought, standing before her little mirror, that she looked fast after all. She tried pursing her lips together, as she had seen Anna do, and blowing out the smoke in a thin line. She smoked very hard, so that she stood in the center of a gray nimbus. She hated it, but she persisted. Perhaps it grew on one; perhaps, also, if she walked about it would choke her less. She practiced holding the thing between her first and second fingers, and found that easier than smoking. Then she went to the salon where there was more air, and tried exhaling through her nose. It made her sneeze.

On the sneeze came Mrs. Boyer's ring. Harmony thought very fast. It might be the bread or the milk, but again — She flung the cigarette into the stove, shut the door and answered the bell.

Mrs. Boyer's greeting was colder than she had intended. It put Harmony on the defensive at once, made her uncomfortable. Like all the innocent falsely accused she looked guiltier than the guiltiest. Under Mrs. Boyer's searching eyes

the enormity of her situation overwhelmed her. And over all, through salon and passage, hung the damning odor of the cigarette. Harmony, leading the way in, was a sheep before her shearer.

"I'm calling on all of you," said Mrs. Boyer, sniffing. "I meant to bring Doctor Boyer's cards for every one, including Doctor Byrne."

"I'm sorry. Doctor Byrne is out."

"And Doctor Gates?"

"She-she is away."

Mrs. Boyer raised her eyebrows and ostentatiously changed the subject, requesting a needle and thread to draw the rent together. It had been in Harmony's mind to explain the situation, to show Jimmy to Mrs. Boyer, to throw herself on the older woman's sympathy, to ask advice. But the visitor's attitude made this difficult. To add to her discomfort, through the grating in the stove door was coming a thin thread of smoke.

It was, after all, Mrs. Boyer who broached the subject again. She had had a cup of tea, and Harmony, sitting on a stool, had mended the rent so that it could hardly be seen. Mrs. Boyer, softened by the tea and by the proximity of Harmony's lovely head bent over her task, grew slightly more expansive.

'I ought to tell you something, Miss Wells," she said.

"You remember my other visit?

"Perfectly." Harmony bent still lower.

"I did you an injustice at that time. I've been sorry ever since. I thought that there was no Doctor Gates. I'm sorry, but I'm not going to deny it. People do things in this wicked city that they wouldn't do at home. I confess I misjudged Peter Byrne. You can give him my apologies, since he won't see me."

"But he isn't here or of course he'd see you."

"Then," demanded Mrs. Boyer grimly, "if Peter Byrne is not here, who has been smoking cigarettes in this room? There is one still burning in that stove!"

Harmony's hand was forced. She was white as she cut

the brown-silk thread and rose to her feet.
"I think," she said, "that I'd better go back a few weeks, Mrs. Boyer, and tell you a story, if you have time to listen."

"If it is disagreeable -

"Not at all. It is about Peter Byrne and myself, andsome others. It is really about Peter. Mrs. Boyer, will you come very quietly across the hall?"

Mrs. Boyer, expecting Heaven knows what, rose with celerity. Harmony led the way to Jimmy's door and opened it. He was still asleep, a wasted small figure on the narrow bed. Beside him the mice frolicked in their cage, the sentry kept guard over Peter's shameless letters from the Tyrol, the strawberry babies wriggled in their cotton.

"We are not going to have him very long," said Harmony softly. "Peter is making him happy for a little while."

Back in the salon of Maria Theresa she told the whole story. Mrs. Boyer found it very affecting. Harmony sat beside her on a stool and she kept her hand on the girl's shoulder. When the narrative reached Anna's going away, however, she took it away. From that point on she sat uncompromisingly rigid, and listened.

"Then you mean to say," she exploded when Harmony had finished, "that you intend to stay on here, just the two of you?"

"And Jimmy."

"Bah! What has the child to do with it?"

"We will find some one to take Anna's place." "I doubt it. And until you do?"

"There is nothing wicked in what we are doing. Don't you see, Mrs. Boyer, I can't leave the boy."

"Since Peter is so altruistic, let him hire a nurse."

Bad as things were, Harmony smiled. "A nurse!" she said. "Why, do you realize

that he is keeping three people now on what is starvation for one?"

"Then he's a fool!" Mrs. Boyer rose in majesty. "I'm not going to leave you here." "I'm sorry. You must see

"I see nothing but a girl deliberately putting herself in a compromising position and worse."

"Mrs. Boyer!"

"Get your things on. I guess Doctor Boyer and I can look after you until we can send you

"I am not going home-yet," said poor Harmony, biting her lip to steady it.

Back and forth waged the battle, Mrs. Boyer assailing, Harmony offering little defense but standing firm on her refusal to go as long as Peter would let her remain.

"It means so much to me," she ventured, goaded. "And I earn my lodging and board. I work hard and-I make him comfortable. It costs him very little and I give him something in exchange. All men are not alike. If the sort you have known are—are different——"
This was unfortunate. Mrs. Boyer stiffened. She

ceased offensive tactics, and retired grimly into the dignity of her high calling of virtuous wife and mother. She washed her hands of Harmony and Peter. She tied on her veil with shaking hands, and prepared to leave Harmony to her fate.

"Give me your mother's address," she demanded.

"Certainly not."

"You absolutely refuse to save yourself?"

"From what? From Peter? There are many worse people than Peter to save myself from, Mrs. Boyeruncharitable people, and-and cruel people."

Mrs. Boyer shrugged her plump shoulders.

"Meaning me!" she retorted. "My dear child, people are always cruel who try to save us from ourselves.

Unluckily for Harmony, one of Anna's specious arguments must pop into her head at that instant and demand

expression.
"People are living their own lives these days, Mrs. Boyer; old standards have gone. It is what one's conscience con-demns that is wrong, isn't it? Not merely breaking laws that were made to fit the average, not the exception."

Anna! Anna!

Mrs. Boyer flung up her hands.

"You are impossible!" she snapped. "After all, I believe it is Peter who needs protection! I shall speak to him."

She started down the staircase, but turned for a parting volley.

"And just a word of advice: Perhaps the old standards have gone. But if you really expect to find a respectable woman to chaperon you, keep your views to yourself."

Harmony, a bruised and wounded thing, crept into Jimmy's room and sank on her knees beside the bed. One small hand lay on the coverlet; she dared not touch it for fear of waking him-but she laid her cheek close to it for comfort. When Peter came in, much later, he found the boy wide awake and Harmony asleep, a crumpled heap beside the bed.

"I think she's been crying," Jimmy whispered. "She's been sobbing in her sleep. And strike a match, Peter; there may be more mice."

### XVIII

MRS. BOYER, bursting with indignation, went to the Doctors' Club. It was typical of the way things were going with Peter that Doctor Boyer was not there, and that the only woman in the club rooms should be Doctor Jennings. Young McLean was in the reading room, eating his heart out with jealousy of Peter, vacillating between the desire to see Harmony that night and fear lest Peter forbid him the house permanently if he made the attempt. He had found a picture of the Fraulein Engel, from the opera, in a magazine, and was sitting with it open before him. Very deeply and really in love was McLean that afternoon, and the Fräulein Engel and Harmony were not unlike. The double doors between the reading room and the reception

Harmony, a Bruised and Wounded Thing, Crept Into Jimmy's Room

room adjoining were open. McLean, lost in a rosy future in which he and Harmony sat together for indefinite periods, with no Peter to scowl over his books at them, a future in which life was one long piano-violin duo, with the candles in the chandelier going out one by one, leaving them at last alone in scented darkness together-McLean heard nothing until the mention of the Siebensternstrasse roused him.

After that he listened. He heard that Doctor Jennings was contemplating taking Anna's place at the lodge, and he comprehended after a moment that Anna was already gone. Even then the significance of the situation was a little time in dawning on him. When it did, however, he rose with a stifled oath.

Mrs. Boyer was speaking.

"It is exactly as I tell you," she was saying. "If Peter Byrne is trying to protect her reputation he is late doing it. Personally I have been there twice. I never saw Anna Gates. And she is registered here at the club as living in the Pension Schwarz. Whatever the facts may be, one thing remains, she is not there now."

McLean waited to hear no more. He was beside himself with rage. He found a "comfortable" at the curb. The driver was asleep inside the carriage. McLean dragged him out by the shoulder and shouted an address to him. The cab bumped along over the rough streets to an accompaniment of protests from its frantic passenger.

The boy was white-lipped with wrath and fear. Peter's silence that afternoon as to the state of affairs loomed large and significant. He had thought once or twice that Peter was in love with Harmony; he knew it now in the clearer vision of the moment. He recalled things that maddened him: the dozen intimacies of the little ménage, the caress in Peter's voice when he spoke to the girl; Peter's steady eyes in the semi-gloom of the salon while Harmony played.

At a corner they must pause for the inevitable regiment. McLean cursed, bending out to see how long the delay would be. Peter had been gone for half an hour, perhaps, but Peter would walk. If he could only see the girl first, talk to her, tell her what she would be doing by remaining

He was there at last, flinging across the court-yard like a madman. Peter was already there; his footprints were fresh in the slush of the path. The house door was closed but not locked. McLean ran up the stairs. It was barely twilight outside, but the staircase well was dark. At the upper landing he was compelled to fumble for the bell.

Peter admitted him. The corridor was unlighted, but from the salon came a glow of lamplight. McLean, out of breath and furious, faced Peter.

"I want to see Harmony," he said without preface.

Peter eyed him. He knew what had happened, had expected it when the bell rang, had anticipated it when Harmony told him of Mrs. Boyer's visit. In the second between the peal of the bell and his opening the door he had decided what to do.

"Come in."

McLean stepped inside. He was smaller than Peter, not so much shorter as slenderer. Even Peter winced before the look in his eyes.

"In the kitchen, I think. Come into the salon."

McLean flung off his coat. Peter closed the door behind
him and stood just inside. He had his pipe as usual. "I came to see her, not you, Byrne."

"So I gather. I'll let you see her, of course, but don't you want to see me first?

"I want to take her away from here."

"Why? Are you better able to care for her than I am?" McLean stood rigid. He had thrust his

clenched hands into his pockets.

"You're a scoundrel, Byrne," he said steadily. "Why didn't you tell me this this afternoon?"

"Because I knew if I did you'd do just what you are doing."

"Are you going to keep her here?" Peter changed color at the thrust, but he kept himself in hand.

"I'm not keeping her here," he said patiently. "I'm doing the best I can under the circum-

"Then your best is pretty bad."

"Perhaps. If you would try to remember the circumstances, McLean—that the girl has no place else to go, practically no money, and

"I remember one circumstance, that you are living here alone with her and that you're crazy in love with her."

"That has nothing to do with you. As long as I treat her -

"Bah!"

"Will you be good enough to let me finish what I am trying to say? She's safe with me. When I say that I mean it. She will not go away from here with you or with any one else if I can prevent it. And if you care enough

about her to try to keep her happy you'll not let her know you have been here. I've got a woman coming to take Anna's place. That ought to satisfy you.'

"Doctor Jennings?"

"Yes."

"She'll not come. Mrs. Boyer has been talking to her. Inside of an hour the whole club will have it-every American in Vienna will know about it in a day or so. tell you, Byrne, you're doing an awful thing.

Peter drew a long breath. He had had his bad half-hour before McLean came; had had to stand by, wordless, and see Harmony trying to smile, see her dragging about, languid and white, see her tragic attempts to greet him on the old familiar footing. Through it all he had been sustained by the thought that a day or two days would see the old footing reëstablished, another woman in the house, life again worth the living and Harmony smiling up frankly into his eyes. Now this hope had departed.

"You can't keep me from seeing her, you know," McLean persisted. "I've got to put this thing to her. She's got to choose."

"What alternative have you to suggest?"

"I'd marry her if she'd have me."

After all Peter had expected that. And, if she cared for the boy wouldn't that be best for her? What had he to offer against that? He couldn't marry. He could only offer her shelter, against everything else. Even then he did not dislike McLean. He was a man, every slender inch of him, this boy musician. Peter's heart sank, but he put down his pipe and turned to the door.
"I'll call her," he said. "But, since this concerns me

very vitally, I should like to be here while you put the thing to her. After that if you like ——"

He called Harmony. She had given Jimmy his supper

and was carrying out a tray that seemed hardly touched.
"He won't eat tonight," she said miserably. "Peter, if he stops eating what can we do? He is so weak!"

Peter took the tray from her gently.
"Harry dear," he said, "I want you to come into the

salon. Some one wishes to speak to you." "To me?" "Yes. Harry, do you remember that evening in the

kitchen when-"Yes, Peter."

"You are sure you know what I mean?"

"Yes."

Do you recall what I promised?"

"That's all right then. McLean wants to see you." She hesitated, looking up at him.

"McLean? You look so grave, Peter. What is it?" "He will tell you. Nothing alarming."

Peter gave McLean a minute alone after all, while he arried the tray to the kitchen. He had no desire to play atchdog over the girl, he told himself savagely; only to eep hirnself straight with her and to save her from IcLean's impetuosity. He even waited in the kitchen to ll and light his pipe.

McLean had worked himself into a very fair passion. le was intense, almost theatrical, as he stood with folded rms waiting for Harmony. So entirely did the girl fill his cistence that he forgot, or did not care to remember, how nort a time he had known her. As Harmony she dominated is life and his thoughts; as Harmony he addressed her hen, rather startled, she entered the salon and stood just uside the closed door. "Peter said you wanted to speak me.

McLean groaned. "Peter!" he said. "It is always Peter. ook here, Harmony, you cannot stay here."

"It is only for a few hours. Tomorrow some one is oming. And, anyhow, Peter is going to Semmering. We

now it is unusual, but what can we do?"
"Unusual! It's—it's damnable. It's the appearance of

he thing, don't you see that?"

"I think it is rather silly to talk of appearance when here is no one to care. And how can I leave? Jimmy seeds me all the time -

"That's another idiocy of Peter's. What does he mean

y putting you in this position?" "I am one of Peter's idiocies."

Peter entered on that. He took in the situation with a glance, and Harmony turned to him; but if she had expected Peter to support her she was disappointed. Whatever decision she was to make must be her own, in Peter's troubled mind. He crossed the room and stood at one of the windows, looking out, a passive participant in the scene.

The day had been a trying one for Harmony. What she chose to consider Peter's defection was a fresh stab. She glanced from McLean, flushed and excited, to Peter's impassive back. Then she sat down, rather limp, and threw out her hands helplessly.

"What am I to do?" she demanded. "Every one comes with cruel things to say, but no one tells me what to do."

Peter turned away from the window.

"You can leave here," ventured McLean. "That's the first thing. After that -

"Yes, and after that what?"

McLean glanced at Peter. Then he took a step toward

the girl.
"You could marry me, Harmony," he said unsteadily. "I hadn't expected to tell you so soon, or before a third person." He faltered before Harmony's eyes, full of bewilderment. "I'd be very happy if you-if you could see it that way. I care a great deal, you see."

It seemed hours to Peter before she made any reply, and

that her voice came from miles away.

"Is it really as bad as that?" she asked. "Have I made such a mess of things that some one, either you or Peter, must marry me to straighten things out? I don't want to marry any one. Do I have to?"

'Certainly you don't have to," said Peter. There was relief in his voice, relief and also something of exultation.

"McLean, you mean well, but marriage isn't the solution. We were getting along all right until our friends stepped in. Let Mrs. Boyer howl all over the colony; there will be one sensible woman somewhere to come and be comfortable here with us. In the interval we'll manage, unless Harmony is afraid. In that case -

"Afraid of what?"

The two men exchanged glances, McLean helpless, Peter triumphant,

"I do not care what Mrs. Boyer says, at least not much. And I am not afraid of anything else at all."

McLean picked up his overcoat. "At least," he appealed to Peter,

you'll come over to my place?' "No!" said Peter.

McLean made a final appeal to Harmony.

"If this gets out," he said, "you are going to regret it all your life."

"I shall have nothing to regret," she retorted proudly.

Had Peter not been there McLean would have made a better case, would

have pleaded with her, would have made less of a situation that roused her resentment and more of his love for her. He was very hard hit, very young. He was almost hysterical with rage and helplessness; he wanted to slap her, to take her in his arms. He writhed under the restraint of Peter's steady eyes.

He got to the door and turned, furious.

"Then it's up to you," he flung at Peter. "You're old enough to know better; she isn't. And don't look so damned superior. You're human, like the rest of us. And if any harm comes to her

Here unexpectedly Peter held out his hand, and after a sheepish moment McLean took it.

"Good night, old man," said Peter. "And-don't be an ass."

As was Peter's way, the words meant little, the tone much. McLean knew what in his heart he had known all along-that the girl was safe enough; that all that was to fear was the gossip of scandal-lovers. He took Peter's hand, and then going to Harmony stood before her very erect.

"I suppose I've said too much; I always do," he said contritely. "But you know the reason. Don't forget the reason, will you?"

"I am only sorry."

He bent over and kissed her hand lingeringly. It was a tragic moment for him, poor lad! He turned and went blindly out the door and down the dark stone staircase. It was rather anticlimax, after all that, to have Peter discover he had gone without his hat and toss it down to him a flight below.

All the frankness had gone out of the relationship between Harmony and Peter. They made painful efforts at ease, talked during the meal of careful abstractions, such as Jimmy, and Peter's proposed trip to Semmering, avoided each other's eyes, ate little or nothing. Once when Harmony passed Peter his coffee cup their fingers touched, and between them they dropped the cup. Harmony was flushed and pallid by turns, Peter wretched and silent.

> Out of the darkness came one ray of light. Stewart had wired from Semmering, urging Peter to come. He would be away for two days. In two days much might happen; Doctor Jennings might come or some one else. In two days some of the restraint would have worn off. Things would never be the same, but they would be forty-eight hours better.

> Peter spent the early part of the evening with Jimmy, reading aloud to him. After the child had dropped to sleep he packed a valise for the next day's journey and counted out into an envelope half of the money he had with him. This he labeled "Household Expenses" and set it up on his table, leaning against his collar box. There was no sign of Harmony about. The salon was dark except for the study lamp turned down.

> Peterwas restless. He put on his shabby dressing gown and worn slippers and wandered about. The portier

"I Am Leaving Him, Peter, for Always"

had brought coal to the landing; Peter carried it in. He inspected the medicine bottles on Jimmy's stand and wrote full directions for every emergency he could imagine. Then, finding it still only nine o'clock, he turned up the lamp in the salon and wrote an exciting letter from Jimmy's father, in which a lost lamb, wandering on the mountain side, had been picked up by an avalanche and carried down into the fold and the arms of the shepherd. And because he stood so in loco parentis, and because it seemed so inevitable that before long Jimmy would be in the arms of the Shepherd, and, of course, because it had been a trying day all through, Peter's lips were none too steady as he folded up the letter.

The fire was dead in the stove; Peter put out the salon lamp and closed the shutters. In the warm darkness he put out his hand to feel his way through the room. It touched a little sweater coat of Harmony's, hanging over the back of a chair. Peter picked it up in a very passion of tenderness and held it to him.

"Little girl!" he choked. "My little girl! God help me!

He was rather ashamed, considerably startled. It alarmed him to find that the mere unexpected touch of a familiar garment could rouse such a storm in him. It made him pause. He put down the coat and pulled himself up sharply. McLean was right; he was only human stuff, very poor human stuff. He put the little coat down hastily, only to lift it again gently to his lips.

"Good night, dear," he whispered. "Good night,

Harmony.'

Frau Schwarz had had two visitors between the hours of coffee and supper that day. The reason of their call proved to be neither rooms nor pension. They came to make inquiries.

The Frau Schwarz made this out at last, and sat down on the edge of the bed in the room that had once been Peter's and that still lacked an occupant.

Mrs. Boyer had no German; Doctor Jennings very little and that chiefly medical. There is, however, a sort of code that answers instead of language frequently, when two or three women of later middle life are gathered together, a code born of mutual understanding, mutual disillusion, mutual distrust, a language of outspread hands, raised eyebrows, portentous shakings of the head. Frau Schwarz, on the edge of Peter's tub-shaped bed, needed no English to convey the fact that Peter was a bad lot. Not that she

resorted only to the sign language.
"The women were also wicked," she said. "Of a man what does one expect? But of a woman! And the younger one looked-Herr Gott! She had the eyes of a saint! The little Georgiev was mad for her. When the three of them left, disgraced, as one may say, he came to me, he threatened me. The Herr Schwarz, God rest his soul, was a violent man, but never spoke he so to me!"

"She says," interpreted Doctor Jennings, "that they were a bad lot-that the younger one made eyes at the

Herr Schwarz!" Mrs. Boyer drew her ancient sables about her and put a

tremulous hand on the other woman's arm.
"What an escape for you!" she said. "If you had gone there to live and then found the establishment-queer!"

From the kitchen of the pension Olga was listening, an ear to the door. Behind her, also listening, but less advantageously, was Katrina.

"American ladies!" said Olga. "Two, old and fat."
"More hot water!" growled Katrina. "Why do not the

Americans stay in their own country, where the water, I have learned, comes hot from the earth.' Olga, bending forward, opened the door a crack wider.

#### The Mexican Muddle

THE European criticism of President Wilson's Mexican policy is that it at once involves a radical extension of the Monroe Doctrine and a refusal to acknowledge the responsibility that even the old doctrine logically implied.

"His whole Mexican policy," says a critic by no means unfriendly to this country, "is based on the new principle that the United States is entitled to say who shall and who shall not be the president or the government of any given Latin-American republic"; and if he assumes the right to shape the government he ought to assume responsibility for it.

Americans realize that this is not a fair statement of the case, for all that President Wilson asserted was the undoubted right to refuse recognition to a certain government. Yet we can hardly blame Europeans if they are a bit more at sea as to what the Monroe Doctrine implies than we ourselves are.

When Villa shot the Englishman Benton, for example, it was quickly pointed out that the United States supplied Villa with arms and at the same time used its influence to prevent Huerta from securing funds abroad with which to fight him; hence it ought to have some control over Villa or accept some responsibility for him.

As one result of the Mexican muddle, both ourselves and foreigners may know just what the Monroe Doctrine now means. If that doctrine were reduced to definite terms that placed responsibility for Latin-American governments on the United States we think public opinion in this country would reject it.

# Infancy of Agriculture

In the closing years of the eighteenth century an English parson named Malthus sat down in his study and figured out that a majority of mankind must always be poor, because population, unless restricted by poverty, disease and war, would inevitably increase so fast that the earth could not produce food for it.

For the better part of a century that doctrine was accepted as gospel. There were Malthus' figures to prove it—population increasing in a geometrical ratio and food increasing at most in only an arithmetical ratio; result: billions of people with nothing to eat but themselves.

This comes to mind on looking over a recent bulletin of the Department of Agriculture, which shows that continental United States contains more than a billion acres of tillable land, of which little over one quarter is now in crops. Besides, there are more than three hundred and fifty million acres not now under cultivation that are usable for pasture or fruit culture.

Turning to the detailed table, you find that in such banner agricultural states as Iowa, Illinois, Indiana, Kansas and Nebraska not more than half the tillable land is now in crops. New York and Pennsylvania have about twentynine million acres of tillable land and but little over one-third of it is in crops.

And on the three hundred-and-odd million acres of tilled land we get an average of twenty-nine bushels of corn to the acre when we should have at least sixty bushels, fifteen bushels of wheat when we should have thirty, and so on. No doubt the United States alone could supply food for at least half the population of the globe.

There is no ascertainable limit to the productive powers of the globe. The only limit is in human intelligence. The true rule is that if intelligence advances in an arithmetical ratio the earth will respond in a geometrical ratio.

# Uncharitable Charity

IT IS an interesting sign of the times that that peculiarly brutal enterprise—the oldstyle grandstand charity ball—has gone out of vogue. Only two decades ago it was considered rather meritorious to spend some hundreds of thousands on jewels, gowns, flowers, wine and music in order that a few thousands might be produced to feed the hungry.

In effect, the affluent benevolently invited the needy to come over and watch them squander their money. It was like asking in a crew of starvelings to see one gorge himself with the most expensive food and then take the slops—with a blessing.

An unregenerate charity ball may linger on here and there, but we do not hear of them any more. Their disappearance is significant of a big change in public opinion. If our impressions of public opinion are trustworthy, only twenty years ago it was pretty generally considered meritorious for a rich man to give anything to the destitute—a pure act of grace on his part.

Nowadays it is considered only an imperfect act of justice. It is more and more realized that there are great inequalities and maladjustments, from which many people suffer unjustly and by which others unjustly benefit. We are not acquainted with any single scheme that seems likely to trim the balance just right; and obviously the more or less haphazard handing down of doles is a very bungling, ineffectual attempt at trimming it.

What used to be regarded as charity is now generally looked on as only a makeshift attempt to square an account, the true balance sheet of which nobody can yet cast. We no longer dance over our charity, but regard it with very grave dubiety and allow its practical details to be administered by trained specialists.

### Manners Maketh Man

DO YOU know the origin of etiquette—just why, for example, you are expected to wear a particular kind of coat on a particular occasion, and eat your pumpkin pie with a fork instead of with a knife or spoon? You may think it is because there is some peculiar, inherent appropriateness in the prescribed action; but that has nothing whatever to do with it.

Etiquette was and still is invented by people absolved from the necessity of working for a living; and its only purpose is to afford a constant, indubitable sign that its inventors can afford to waste their time in learning nice ceremonials and pretty conventions. You are expected to put on a certain kind of coat at one P. M. and another kind at six P. M.—solely because certain elegant loafers wished to prove ocularly that they had nothing to do except change their coats.

So with every one of the prescriptions about greeting, parting, eating, calling, and what not. Their original purpose was to prove that the leisure class which invented them had no useful employment for its time, hence could squander it in practicing etiquette.

Some years ago Professor Veblen wrote an acute and highly amusing book on the subject, in which he pointed out that "in the last analysis the value of manners lies in the fact that they are the voucher of a life of leisure"; and "the pervading principle and abiding test of good breeding is the requirement of a substantial and patent waste of time."

So when you hasten home from the office to change your coat or worry lest you use the wrong fork you are really trying to demonstrate that you are a loafer.

#### Rebellion at the Top

REBELLION is an odd business for aged and affluent gentiemen, yet they are about it very seriously in England just now. The new solemn league and covenant published the other day, which is tantamount to a threat of civil war if the Home Rule Bill passes Parliament, is signed first of all by Lord Roberts, aged eighty-two. Admiral Sir Edward Seymour, aged seventy-four, follows. Other eminent signatories are Lord Balfour of Burleigh, aged sixty-five; Lord Halifax, aged seventy-five; Dean Wace, aged seventy-eight; the Duke of Portland, aged fifty-seven. Rudyard Kipling, aged forty-nine, is a comparative infant among these houry insurgents.

Apparently they mean it too. In this country civil war was hardly discussed more earnestly and extensively in 1776 and 1860 than it is now in the more or less United Kingdom. Partly this impassioned talk of armed resistance is a revolt against democracy. Wealthy and conservative citizens can hardly hope to rebel successfully because

their taxes are increased, or because their hereditary was can no longer block progressive legislation; but Home Ruk furnishes them with an issue on which they can safely express all the resentment radical budgets and parinmentary reform have generated.

A good many sober-minded Englishmen believe that Ulster will actually fight. There is a deep-planted rate prejudice fed by three centuries of oppression of the large majority by a small minority. Armed rebellion by articized against democracy would be a strange spectacle in the twentieth century.

# The Competing States

PAPERMAKING is a continuous industry, the milk generally running through the week without intermission. Continuous industries mean either three shifts of eight hours each or two shifts of twelve hours each. What the latter means was described as follows by the conmittee of stockholders of the Steel Corporation, of which Stuyvesant Fish was chairman:

"We are of opinion that a twelve-hour day of labor followed continuously by any group of men for any considerable number of years means a decreasing of the efficiency and a lessening of the vigor of such men."

In confirmation of that opinion William B. Dickson writes in The Survey:

"And I will further state that, in my judgment, a large proportion of the steelworkers who from early manhool work twelve hours a day are old men at forty."

At the last session of the Massachusetts Legislature the Progressive party introduced a bill limiting work in paper mills to eight hours a day. It was defeated; and one of the arguments used against it was that it would drive the paper industry out of that state and into other commonwealths which permitted a twelve or thirteen hour day.

Probably the argument was unsound, but it shows how competition across state lines may retard labor.

### The Lawmakers

IN THE absence of authentic records we feel privileged to assume that when the ancient Saxon Witenagemot covened, its venerable members debated how high the color on a bock of beer ought to be, and whether whiskers should be braided—and then raised the dog tax ten per cent and went home.

At this writing parliaments, to which the collective welbeing of a considerable part of the human race is theoretically relegated, are in session. At London they are debating a handsome increase in naval expenditure. At Paris they are worrying over a budget that is swollen to unwielty proportions by military items. At St. Petersburg the Curhas laid before the faithful representatives of his subjects a splendid scheme for increasing the peace strength of the army by some four hundred thousand men.

The Berlin cable brings an optimistic thrill, for just at the moment the Reichstag is listening to a report on the feasibility of telephone connection with England—a bit of good human sense which stands out like a spotlight against the dreary ground of other parliamentary proceedings.

Incidentally a distinguished foreign novelist addresses to the world at large a passionate inquiry as to what parliaments mean by frittering away their time on empty statemanship, when shoals of preventable human misery lie under their noses.

We move to lay the inquiry on the table and proceed with the bill to erect a lighthouse in every arrondissement.

### **Bogus Aristocrats**

If WE were going to chisel a monument to Democrary probably we should choose for the subject John Bright heroically refusing to don court dress in order to be presented to Queen Victoria when he became a cabinet member. The courtiers understood the importance of the point much better than did Bright's friends, who counseled him to yield the point.

All his life he had fought for democracy as he understood it—it was that which gave him his power. And when he had so far won that his inclusion in the cabinet was a political necessity, the courtiers took it for granted he would cheerfully ape their dress and manners, be delighted at such social favors as they showed him and in unofficial life generally try to make a bogus aristocrat of himself.

Plain people would long ago have possessed the earth if they could have kept the positions they won. The trouble has been that a plain person, on winning a position of importance, has immediately tried to become a fancy person. Too often triumphant democracy has been nothing more than truckling, pinchbeck aristocracy. It goes much deeper than mere clothes. The snobbery that is almost inveterate in human nature gives those who have grabbed the best places a great power to defend their position.

So long as success comes humbly to the side door for their certificate that it is success, they have not a great deal to fear. Even at our own beloved capital a careful observer may see examples of the practical power of snobbery.

# Who's who-and why

# Serious and Frivolous Facts About the Great and the Near Great

# A Very Plain Man

THERE are about two hundred and two thousand people in the Fourth Congressional District of Georgia, and Judge Adamson knows them all well enough to call them by their first names-and does so call them, whether men or women. The judge is an institution in that Fourth District, guaranteed under the Handshaking and Hello-Bill Act of 1897, serial number nine, and is warranted to remain in office as long as he desires.

Just now the judge is somewhat on view, inasmuch as he is chairman of the Interstate and Foreign Commerce Committee in the House of Representatives, and is engaged in the pleasing pastime of trying to write one of Mr. Wilson's antitrust measures as Mr. Wilson would have it written-provided, of course, Mr. Wilson were taking any active part in shaping the legislation proposed, further than shaping, reshaping, ordering, insisting on, supplying ideas and language for, and a few other little details of management of similar nature which show that it is the evident determination of Mr. Wilson to allow Congress to do exactly as he pleases in the matters aforesaid.

The judge has toddled up to the White House with his bills and toddled back again without them on several occasions; but the time will come-the time will come, mark you!-when he will carry away with him the exact measure that the Democratic majority in the House will vociferously demand and as vociferously pass as an expression of the untrammeled and well-considered opinion of the said majority touching on the subject in question-couched, it may be, in the well-known scholarly language of the President and containing his matured convictions on the subject, punctuated by him and revised-but in all other respects untrammeled and undictated as aforesaid.

It is not of that phase of the judge's activities that I desire to speak. Those come to him in his capacity as chairman of this great committee. What I intend to celebrate is not the gifts of colleagues, not the outcomes of seniority of service, not the rewards of politicsthough they may have helped in securing such recompense. It might easily have occurred that some other than the judge attained the chairmanship of the Committee on Interstate and Foreign Commerce; that some other was intrusted with the preparation of the trade commission bill, or fondly imagined himself to be thus intrusted.

Indeed, many another might have done most of the things the judge has done, and received identical meed for services thus faithfully and diligently performed; but none other-nary one-has the judge's gift.

It is a gift! A less discriminating commentator might call it a tendency, a trend or trait; but not so with this

discerning delineator.

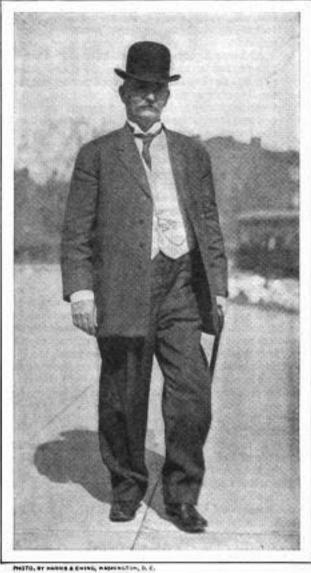

A gift, a bestowal by Dame Fortune, a present from a fairy godmother, the happy faculty of making friends and keeping them friendly! It is not much of a trick to make a friend or to make friends. Simple and superficial methods will begin that sort of thing. The real test comes in keeping friends, and the touchstone of value is in using them after you have kept them.

Take the proof set forth by the judge: The last time he ran for Congress down in that Fourth Georgia District he received every vote cast in the primary and every vote cast at the election. Now there may be cavil at this, because, as is well known, white Republicans are so rare in some parts of Georgia that the traveling circuses usually have one as a sideshow exhibit; and black Republicans do not bother with the ballot for fear they may be bothered.

# His Name on the Payroll in Indelible Ink

'OT much of a trick in the circumstances, I hear these carpers say; but wait a minute! Even if there is no chance for Republican opposition, when a man has been in Congress for sixteen or eighteen years—even from a Georgia district—it often happens that another Democrat rises up to contest for the nomination with him on the broad, general theory that the incumbent has been there long enough, and that some others or another of the patriots infesting the district should have a chance at the pie, power and perquisites.

Not so with the judge. He has shaken every hand in that district so many times that each hand, is an instrument for casting a pleasant ballot for him on election and primary occasions-each male hand, that is-and each female hand is a further instrument for expediting the proud possessors of the male and voting hand ballotboxward. The judge is the greatest handshaker we have.

regre, or nature a fivine, respective, b. c.
You'll Never Catch Him Without His Make-Up

He has shaken hands up and down, hither and yon, catercornered and allemande left, crisscross and serpentinely, from one side of that district to the other, from top to bottom, lengthwise, slantwise, and in all other directions; and the result is the result, to wit: Judge William Charles Adamson, in Congress for nine terms and with a license to stay there in perpetuity from his admiring and glad-handed constituents.

The judge is a wonder! He is close to the soil. You observe him and you observe a statesman of the old schoolsimple, genial, plain, unassuming and successful. Simple, I said. Well, on reflection I withdraw that. The judge is simple, of course; but they will never have to give him anything for it—that is, he is simple, but it is not catching. He has not a very bad case of it. His simplicity, I should say, is of that highly useful variety that impresses others without repressing himself. He is an incomplex and uncompounded person, but he retains his seat in Congress; an artless and unsophisticated statesman, but he has been on the Government payroll continuously for some eighteen years, and his name is written there in indelible ink.

Judge Adamson is plain—a plain man; and he has cashed in on it to a marked extent. The judge has a complete mastery of the science of being one of the common people. There is not a man in Congress who can tie him in it. There is not a man to whom the judge cannot give a handicap of a wool hat and a two days' growth of beard, a hundred handshakes and a start of twenty-four hours, and win by eighty per cent of the delighted suffrages of an equally plain constituency.

He does not believe in frills. No frills for the judge—not a furbelow! You'll never catch him without his make-up. See him coming down the street, a plain—an exceedingly plain-man! Note the ample and artless trousers. Observe the favorite white vest. Sturdy folks, those Georgians of the Fourth District-averse to dudes and dudishness; but not more so than the judge-not more so.

You can depend on it that the proportion of the antipathy of the judge for such frivolities is in exact ratio to that of his constituents. The mere fact that he is a congressman does not entitle him to put on airs or pressed trousers; and the merer fact that he does not put on airs does entitle him to be a congressman. And there you are!

The judge is a genial person and a neighborly. He considers first names as most important in social intercourse. No formal Misters for him! If your name is William the judge makes haste to call you Bill, in order that you may know he is your friend. Every William in his district he calls Bill, and every Henry, Hank; and, by the same token, every other William calls him Bill. Thus is perfect equality maintained and the judge retained.

William C. Adamson was born in Georgia, at a town called Bowdon, and, as he puts it, "spent his youth alternately in working on the farm and in hauling goods and cotton between the markets and Bowdon." is a college at Bowdon—or was—and he was graduated from that, studied law and went to practice at Carrollton. where he has since lived. He was a judge of the city court of Carrollton for some years, whence he derived his title, but when he went to Congress, in 1897, he abandoned the practice of law and devoted himself to statesmanship. He knew he never would have to practice law again. He knew his people and they knew him. No such friendly, genial, kindly person will be deserted at the polls by any set of Georgians whatsoever.

He is a marvel! He has a remarkable memory for names and faces, never miscalls a constituent, and has stored away in his head something pertinently pleasant to say to all those who vote for him. He is a useful legislator, well liked by his colleagues, and has an excellent record, both for floor and committee work.

And as a practitioner of the Hello-Bill-slap-on-theback-how's-the-folks school of politics he is the admired of all admirers-a plain man-a very plain man-but quite successful at it withal.

# Editor for a Day

WHEN Lord Northcliffe, the English publisher and peer, was plain Mr. Harmsworth, Joseph Pulitzer permitted him to be editor of the New York World for one day in order to exemplify the Harmsworth contention that the New York papers are too big. The tabloid World, famous in newspaper circles, was the result.

Harmsworth called the staff into consultation. Henry N. Cary, then news editor, suggested, as a joke, that all members of the staff should appear that night in full evening regalia. Everybody consented with one exception-one man refused. Harmsworth came down in a sack suit. He was astonished at the display of evening suits and sniffed the moth-ball smell from afar. He asked mildly whether the World editors and reporters appeared thus clad as a usual thing, and was solemnly assured they did. The only person dressed like Harmsworth was the editor, who would not fall in with the joke.

Also, the only man Harmsworth took back to England with him was the man who was clad like himself.

# Overdressed

WHEN Sir Thomas Lipton began business he had a very small shop in a very mean street. He had only business enough to admit the employment of one small and ragged boy to help him.

Business prospered a bit, and Lipton, thinking to make things smarter, bought a new suit of clothes for the boy.

Next day the boy did not come to work, nor the next. Lipton went to see his mother. "How is it Willie hasn't been at the shop for two days?" he asked. "Is he sick?"

"No, he isn't sick," the mother replied, "but he's got some good clothes now and has taken another job. You see, with all those new clothes we didn't think he should waste himself on such a poor little place as yours."

# A Safe Background

AMAN rather untidy in his personal habits was discussing the question of a new waistcoat with a friend. "What color would you advise?" he asked the friend. "Why," said the friend, "I'd get one of soup color!"

### The Stone Age

WHEN State Senator Cal Stone, of St. Paul, was in the passenger department of the Northern Pacific Railroad he wrote many bitter letters to the passenger department of the Great Northern.

Suddenly he was made general passenger agent of the Great Northern. As he came in to take his new desk the man he succeeded handed him an immense file of papers.

"Now — dod gast you!" he said to Stone — "sit down here and answer your own letters!"

# BEYOND THE LIMIT By Samuel G. Blythe

HOSE who are compelled to eat in restaurants—the great legion of diners-out-will understand when I say those haricols de Lima nouseaux are the guilty parties. You see, it was this way: I felt impelled to eat, and I incautiously entered one of the nine or ten feeding places in a New York hotel. No New York hotel-that is, if it is any hotel at all-but has nine or ten feeding places. They are scattered round in all sorts of unsuspected spots-food ambushes, so to speak. You may resolutely pass half a dozen of them, persisting in your determination not to pay more than six dollars for a dollar and twenty-seven cents' worth of sustenance; but human nature is weak. It is impossible to get past all of them. Before you have reached the ninth the hat-check pirate has grabbed youand you are lost.

The hotel men know this. If there was but one restaurant room in a big hotel-if there was but one place to be evaded-they would not sell any food save a few breakfasts in the rooms-and that reminds me: It is not so long ago that I went up to the room of a friend in a New York hotel one morning.

"Let's have some coffee," I said. He thought that would be good. So we telephoned, or punched a button, or did something to attract the attention of the noble Swiss who reigned on that floor; and the noble Swiss leisurely came and wrote down the order: "2 kof, mit rols."

He stood round for quite a time, tentatively shoving forward a breakfast card and suggesting smelts and sausages and other things; but we were firm. So, after about an hour, he brought in the coffee and rolls. He had dishes enough to serve a wedding breakfast, and napery and spoons and forks, and a few silveroid covers-and all thatwhich he arranged. Then he lifted one of the covers and displayed four brownish-gray rolls and poured out some heavy black stuff which he said was coffee. The check was ninety cents for the rolls and coffee, one cup each.

# The Price-Current of Prunes

OVERCOME by a fit of recklessness I told him to go back and bring me some prunes. Along about noon he strolled in with five well-preserved prunes displayed on a dish that was evidently designed to hold prunes. It is, of course, superfluous to add that it was not designed to hold many prunes; but, up to the limits of its capabilities, it was a fine prune-holding dish. The brown juice contrasted rather fetchingly with the dull glow of the silver. Also, the prunes contrasted more than fetchingly with the check. There were five prunes, and the hotel felt it could afford to part with them for forty cents.

That roused my curiosity. If this gilded mausoleum could afford to sell five prunes for forty cents, how many prunes could other institutions of similar import afford to sell for the same money? Once I gained a great quantity of knowledge and had many enlightening experiences trying to get a hard-boiled egg in Europe. It was not half the adventure this was. I have ordered prunes in every city of any size from Boston to San Francisco. The average price of prunes is six for a quarter at the big restaurants. You get four for a quarter in San Francisco; but that is easily explained by the fact that the best prunes in the world are raised a few miles from that city. You see, the San Francisco purveyors know the inestimable worth of prunes and charge for them accordingly.

However, five prunes for forty cents, added to four slim rolls, two pieces of pale and frozen butter, and two cups of what passes current for coffee along Fifth Avenue, made up a satisfying breakfast-forty for the prunes and ninety for the coffee-satisfying to the men who run the hotel, at

As I was saying, they must have more than one place to eat in these big hotels. So they stake out as many as they can find nooks for, and call them the rose room, and the Looie-Quarts room, and the Grecian room-and so on; and if you do not fall for one you inevitably must fall for another, whereby the hat-check boy gets you, and the head waiter lets you sit just behind the biggest serving-table in the place, so the soup can splash gently on you as the waiters dip it up-not your own soup! Oh, no!

It is not good form for a waiter to spill your own consommé de volaille à la McGinnis on you. He spills on you some of the soup belonging to the banker from Omaha, who sits right where every waiter and every captain and every head waiter, and the impresario and the general manager-and all the rest—can and do bump into his chair as they hasten to and fro with the grub for the leading merchant of Macon, Georgia.

It is a remarkable circumstance that the rule and practice of all big hotel restaurants and all other big restaurants is to jam in the tables so closely that the waiters must bump into your chair or jump over the table. It makes no difference whether the hotel has fourteen eating places. As soon as the come-ons show signs of diminution in numbers some of the rooms are closed and the tables jammed together in those that are left open.

It would be entirely outside all ethics of feeding people, according to the big-city idea, to allow the feeders to be comfortable. The first precept in all fashionable eatingplaces is to put the tables so close together that a sinuous black cat could not get through between the chairs without squeezing her sides; and then leave the rest to Providence and the waiters who do you the favor of bringing your high-priced food to you.

That is not what I had in mind however. What I have set down thus far is merely the canapé for the thoughts and emotions that rose within me when I scanned the menu card. I started to say: When I conned the menu-but it was not the menu that was conned; I was.

I read: "Haricots de Lima nou-reauz-\$1.75." The dollar mark is mine. On the bill it was 1.75, but I inserted the legal-tender mark so nobody might think it meant one and seventy-five one-hundredths bushels—or something like that. "Captain," I remarked casually,

as if haricots de Lima nouscaux were an article of my daily diet, "I take it from this that this hotel is wholesaling Lima beans."

"Pardon, m'sieu," he said; "I do not understand."

"Why," I continued easily, for the captain had been at great pains to put me on terms of perfect equality with himself, and had himself pulled back my chair-which is going some, I want to tell you, in that particular hotel, where the headest of the head waiters never speaks to any person who does not have a certified check for a million dollars pinned to his necktie when he comes in-"Why," I proceeded, "I note that you are disposing of Lima beans-noureaux-for one-seventy-

"Per portion," murmured the

"And," I essayed, "it is a wellknown economic Inct from my viewpoint, that all the Lima beans in the world-noureaux, nouvelles, printemps, or carrying weight for age-are not worth a dollar and seventy-five cents."

"Ah, but, m'sieu," earnestly said the captain, "these are hothouse Lima beans. You will have some yes?"

Hothouse Lima beans! And, back in the old days, one of my jobs, after the garden was made, was to get the Lima beanpoles out of the woodhouse, resharpen them and stick them up in the center of the hills where the beans were planted, thereby wasting an afternoon that might have been devoted to some manly sport. Oh, where—as George Evans used to say-Oh, where has my Lima bean? He or she-what is the gender of a Lima bean?-has been to New York; and you may well believe it when I tell you that those restaurant keepers in New York can do more than that with the common things.

Did you ever tackle any mousse of fish, riche sauce?you know, the fish the gentleman did not eat yesterday moussed nicely-and it can be obtained for a dollar-for a simple, hundred-cent dollar; or an epigram of lamb, with peas—just peas, mind you, out of the can—not fresh green peas—for one-fifty? That is not an epigram—it's a jest.

Those hothouse Lima beans started a train of thoughtthose and the further discovery that it was possible at that moment to get a small specimen porgy, fried, for seventyfive cents. I did not see any on the bill, but I reckon if a fried porgy costs seventy-five cents they must keep the pompano in the safe and cut coupons off them. And pommes de terre frites might have been obtained for forty cents—fried potatoes for forty p. p. But who would be so plebeian as to order fried potatoes in a place like this-or like twenty other places I could mention-who, indeed, when it is possible to get asperges sertes for one-fiftyasparagus tips, which approximate waiters' tips in expensiveness-unless you intend to remain out of that place

In the course of many years of wandering across and up and down the world I have met numerous persons who have had their own methods of extracting money from the general public; and among the lot are several who are engaged in taking away increment by high-financing food.

#### Tournedos on the Toboggan

OF LATE-for the past year or two, say-it has been my rather bored lot to hear these gentlemanly pirates bewail the sad tendency of the times as demonstrated by the tremendous increase of cheap eating-places in their various cities. They cannot understand why it is their former patrons, who used to be happy to pay half a dollar for half a dozen slices of concombres, now go to a white-enameled shop and pay ten cents for a dozen slices of cucumbers. The demand for tournedos sautés Alsacienne, at two dollars

a tournedo, has fallen off, and many persons are eating roast mutton at twentyfive cents a slice. I can understand it, and so can any person who has given the matter consideration. It is not that times are tighterand times are tighter; it is because the restaurant keepers, not only in New York but in the other cities, have overplayed their hands. There is not a big restaurant in any big city in the United States where the prices are not absurd. And the fault is not with the restaurant keeper either. It rests solely and entirely with the restaurant patrons. They Play for the Women, and the Women Lead the Mon In

They have allowed it. No one can blame a man who has something to sell and who tries to get as much for his merchandise as he can. That is the basic law of commerce. Wherefore it is always the province of the intending buyer to get his article as cheaply as possible. If he allows the high charge once he is fastened to it forever.

Take this food business: All restaurant charges in all of the high-plane restaurants in this country are based on the restaurant charges in New York. And who stood for the restaurant charges in New York? The folks from the other cities that copied the New York prices. Any person who has seen it work out, as I have, knows that when the man from outside comes into New York he takes what is given to him and pays what is asked; so the New Yorkers began to jack up their prices.

The visitor noticed the increases, but did not protest. He felt that a protest would mark him as a visitor—as a yap—as a rube. So it might, with the waiters; and there

It Would be Entirely Outside All Ethics of Feeding People to Allow the Feeders to be Comfortable is no person in the world so afraid of any other person as a visitor to New York is afraid of a waiter. He shrinks from incurring the displeasure of those haughty foreigners who serve him his food. He feels it a personal humiliation to have a captain in a dining room seowl at him; and if a head waiter sneers or otherwise displays his disapproval the visitor shrivels and shrinks, and hastily orders two or three other expensive dishes just to show he is no jay and no piker, and is accustomed to these customs.

That is one of the most curious of the human idiosyncrasies—the shivering fear of the disapproval of a waiter! It is all predicated on the false self-value most of us place on ourselves. We are all of us arrant egoists inside—and many of us outside—and we grow faint at the idea of doing or saying anything in public that will mark us as not thoroughly informed and city-broke.

A man may be stern, exacting in his business, fearless, important, self-assertive—and all that—but when a waiter shows by his actions that he—the waiter considers this patron of the place where the waiter works not of the proper class, not thoroughly informed as to the way things are done in a big city—in short, a hayseed—he will throw money away in an effort to correct this impression in the mind of the waiter, or this impression that he fears is in the mind of the waiter—not in the minds of those near him or who know him, but in the mind of the waiter!

### The Cowardice of the Free-Born Rich

IT IS an odd sort of cowardice. Why does a man—free-born, successful, mayhap rich—submit to the tyrannics of a man in the box office of a theater, for example—to his insolence and his scorn and his general air of What-do-you-amount-to? Why does the average patron of a restaurant stand for the hat-check abuse, for the cab abuse, for the extortionate-food abuse, for the annoyances of crowding, for the annoyances of squeaky music, for the annoyances of slipshod service? Because he is afraid his revolt will mark him as a person who does not understand how things are done in big cities—though in his inner self he understands intimately how he is being done.

It is all predicated on the last analysis of our civilization. We do what anybody and everybody else want us to do, instead of doing what we want to do and have an individual right to do—because we fear a reflex that will stamp us as not being wise. The contempt of a waiter, to the average patron of a restaurant, is something to be avoided at whatever cost of personal humiliation.

Well, the men who run a lot of the restaurants in New York were not long in finding out that their patrons, largely from out of town, were human rabbits when it came to protesting against whatever ideas they might think up and put in practice on them. They soon discovered that a man from the West or the South, or from the Northwest or Southwest, would rather pay ten dollars for a two-dollar duck than to intimate, even by the raising of his eyebrows when he saw the check, that he was not perfectly well aware that all the sophisticated better classes pay ten dollars for ducks. Snobbery and weak egoism, you see—and played on by the restaurant men.

So the headiest of the head waiters fixed it up, and began to elevate the prices. I have sat in those restaurants and watched items on bills-of-fare jump ten and fifteen and twenty-five cents at a time until the present range was reached. Now the prices are preposterous and the restaurants are beginning to feel the results of that situation; albeit when you talk with a restaurateur he tells you the increase in prices is solely due to the increase in the sums he is forced to pay for the raw material—and that makes you laugh.

I know a place in New York—a big place—where they marked a price of seventy-five cents a portion for strawberries early in the season, when the strawberries came from the Far South and were rare—and green but worth that to any simpleton who would buy them.

Well, by a curious inadvertence the price for strawberries remained at seventy-five cents almost all summer, when strawberries were selling in the market, at retail, for ten or fifteen cents a quart; and a portion of them at this place was about ten berries. They found they could get away with it, and they did. Far be it from a man to proclaim himself a jay by protesting.

The fact that strawberries appeared on this menu at seventy-five cents a portion was the proof that was what strawberries should cost a portion in the best circles. I ordered some without looking, one day, and incurred the grave and sneering displeasure of a bunch of waiters, captains, head waiters and omnibus boys by refusing to pay; but they cut the price to thirty cents after the owner had been brought in. The trouble was not worth the saving of forty-five cents, but the fun was worth forty-five dollars. You cannot blame the

purveyors. They simply have taken advantage of the weakness of the human rabbits with whom they deal. And the out-of-town foodsellers early followed the New York lead. In the past five years prices in the leading restaurants in all the big cities of this country have advanced tremendously. I myself have watched the price of a single anemic squab progress from sixty cents to a dollar and a quarter in a restaurant where I am compelled to eat now and then, and the high cost of food has been the excuse; but I happen to know the man who sells this place the squabs, and I asked him about it. He said he was getting the same price for his squabs when they were retailed at one-twenty-five as he got when they cost sixty cents served.

So it has come about that, from one end of this country to the other, there has swept a vast increase in restaurant prices. New York adopted the French cuisine years ago. Then New York, finding that the out-oftowners, who make up the bulk of their patronage, would stand for heavy increases, began the heavy increasing. The out-of-New-York restaurant keepers took their cues from New York just as they took their imitation French cuisine and their imitation French on the bills-offare. They did not want to make it uncomfortable for the man from home who went to New York and

There is No Person in the World So Afraid of Any Other Person as a Visitor to New York is Afraid of a Waiter

planked down four dollars for a roast capon; so they slapped roast capon—chapon, you understand—on at four-fifty. And there you were!

From the Atlantic to the Pacific the restaurants have been tucking it on—tucking it on; and now the reaction has come. The men-who-were-afraid-they-might-bethought-jays reached their limit. I know a chap who has plenty of money and who was the host at a little dinner in a New York restaurant. He wanted some fish; and the head waiter—or the captain—suggested: "The turbot is

very fine."

Conceding, as I do, that any man who will buy turbot in England ought to be put under restraint, words fail when it comes to designating a man who will buy turbot in New York. My friend knew all about that imitation of a fish. He had eaten it in its native lair—eaten it and commented on its marvelous resemblance in taste to library paste; but he did not want the head waiter to think he was not used to buying turbot four times a day and he nodded in a sophisticated manner and said: "All right."

Well, they charged him twenty-five dollars for that mess—mess is used advisedly—of turbot, which served him right. But that is not the point. He had bluefish and kingfish, and all kinds of fine fresh American fish, to pick from; but he let that head waiter sting him for turbot. Probably the head waiter laughed. If he did not he has no sense of humor. It is a wonder to me he did not stick

# -It Fills Itself-

while you count four The CONKLIN is the simplest of

all fountain pens in both operation and construction.

You can fill it from any inkwell in four seconds. That is the speed limit in filling.

Dip your Conklin in any inkwell, press the little "Crescent-Filler" with the thumb and - pen is filled! Surely, this is the acme of simplicity and ease.

him for English sole and saw off American flounder on him-but he did not. And this chap quit right there.

That is what has been happening. The men-who-did-not-want-to-be-thought-jays have decided it does not make such a heap of difference to them as they thought if a Swiss waiter or an Alsatian captain or a Greek omnibus does think they are jays; and they are eating at the cheaper places. Not all of them of course. You can still find in any big restaurant, in any city, chaps who will pretend that truite de yama-no uchi, at one-fifty an uchi, shows more class than trout—just trout—for fifty cents; but their numbers are decreasing.

The keepers of the big restaurants are howling; but let them howl! There will

always be some of the weak-minded for them; but a good many of us have passed rapidly to the side streets and are doing

fairly well, thank you!

Contemplate the big hotels of this country, where the bulk of the restaurant eating is done—the bulk of the carte-du-jour stuff—and, speaking of carte du jour, I ate once in a gilded hotel in the West—one of those with pillars of imitation onyx which look as though they had been made of castile soap—where the manager had copied a bill-of-fare from a New York restaurant. He had it all down—potages, poissons, en-trées, rôtis, légumes and all the rest; but the carte du jour got past him. It was first on the bill; and he evidently thought it was some sort of a canapé, rare and expensive, for he had it down on his card: Carte du jour-\$1.25-.75.

#### Loafing-Places for Idle Women

Please excuse the digression. I was about to observe that the big hotels will worry along for a time, because most of the big hotels in this country are not conducted for the men any more, but are run almost exclusively for the women—the stall-fed, exclusively for the women—the stall-led, club-crazy, bridge-playing, nonproducing kind of women—who grab all of father's salary and spend it on themselves. It is not so very long ago that the hotels in this country were places for men. There was a small parlor upstairs or somewhere where women could go and where they were expected to go; and the men had the rest of it.

Now the men are shunted off to one side and the hotels are conducted for the women. They flock in at luncheons; sit during the afternoons; are there to din-ner—and the men are second-fiddlers. If you don't believe it go into any big hotel and observe the size of the men's restaurant as compared with those where the women

So they will go along for a time yet; for some women never know times are hard and never think prices are high. Why should they? The men are producing and they are having a good time. The gentle-men who run the restaurants and hotels know the value of the women. They pay scant heed to the men and cater to the female of the species. There is a chance somebody may get some of father's money besides the hotelkeepers if they leave it to father; so they do not.

They play for the women, and the women lead the men in; and the men pay a dollar for a hunk of a tough guinea hen, and two dollars if they serve a minute specimen of alleged ham with it and call it Guinée d la Virginie, or whatever they may think will excuse that other dollar. And the restaurant keepers will tell you they are not making a cent and would be compelled to go out of business if it were not for the bar.

If it were not for the bar! There's the good old faithful friend! That is the place of man's tribute to the affluence of the hotelkeeper and the rest. Only the most advanced of the women have invaded the bar-as yet-not that the fair ladies do not consume their share of the goods the bar holds, but that they have their own places for so doing.

The bar! Ah, yes, the bar! They buy bottled whisky for about sixty or seventy cents a bottle, and they figure to sell seventeen drinks out of a bottle at twenty or twenty-five cents a drink. A very distinguished boniface in New York once told me his bar profits were two hundred and fourteen per cent-and I should think that was conservative.

We are getting them, though, fellow citizens who must perforce eat in restau-rants—we are getting them! The prices at this particular moment, having reached the height where they cease to be anything but absolutely absurd, are trembling. They are shivering and shaking. The restaurant keepers must keep their places open; and you will observe what I have observed-a gradual tendency to let down. It will not come until it is forced by empty chairs and

No restaurant man, and no other sort of selling man, ever cut his price on anything until he was forced to do so. specialty has been raising prices. The aggregated worms of food-consumers are beginning to turn. They are slipping unostentatiously into the smaller places on the side streets. They are responsible for the street and increasing number of bright great and increasing number of bright, clean, comfortable restaurants where a lamb chop does not cost so much as a diamond

Presently the restaurant men will be back within reason. I have observed a tendency to lower luncheon prices. Dinner prices will follow. I doubt not that, within a short time, one will be able to get eight prunes for a quarter instead of four. I know a place where a wedge of apple pie costs thirty cents. Think that over! I will bet a dozen apple pies against a chocolate éclair that within a year a wedge of apple pie in that same place will cost not more than fifteen cents—and in each case the real worth is a dime.

What would you say to a small dab of cold rice pudding for the same thirty cents? You will say Pish-tush! to it within the twelvemonth, for the restaurant prices of this country are beginning to topple. The string is played out. The middleman and the cold-storage man—and the rest of them—are being placed in a position where they will inevitably get what is coming to them; and the producer at one end and the consumer at the other may gather a benefit or two. At any rate the producer can be no worse off than he has been, and the consumer may be aided.

The consumer—poor chap!—consumes and is consumed. Just at present he is hopefully waiting for results from the new tariff—hopefully is the word. He has risen and formed the Society for the Boycott of Extortionate Eggs; but that will not last

long.

They will let eggs down and we shall go back to our breakfasts. Then they will back to our breakfasts. shove eggs up again, having experience with movements of this kind in the past. Eggs are permanent institutions, and societies for the boycott of them merely the ephemera of the passionate moment.

### Must Have Been Advance Copies

There are interesting features to eggs, however, aside from their price. I met an indignant lady at the market last December. She was there for the purpose of saying a few things to the egg merchant. As I gathered the facts in the case, she had been buying strictly fresh eggs of this egg purveyor. To prove that the strictly fresh eggs were strictly fresh—they cost seventy-live cents a dozen, they were so abso-strictly-lutely fresh—the eggs were dated—not by the hen, of course, but by the honest hen-owner—that is, when the lady bought an egg on the fourteenth she was handed an egg which had neatly printed on its shell, by means of an impeccable rubber stamp, the legend: "Laid December thir-teenth." That was the incontrovertible proof that this egg had been but one day in this vale of sorrow and deceit.

The eggs in controversy—though the egg-dealer had not much to say—were bought on the nineteenth of the month. They reached the house intact and dated. Desiring to take some liberties with an egg that evening, this lady opened the box. I am well within the facts when I state that she was both astonished and indignant to read on each egg: "Laid December twenty-second."

You see, this predicated the unique possibility that the eggs were laid three days after she bought them. They were strictly fresh eggs in futuro, so to speak. The official egg-dater had used the wrong stamp or the egg-merchant had opened the wrong box of strictly fresh ones. It was a contre-temps; but it reminded me of the con-noisseur who was buying a bottle of priceless old brandy. There was the date on the label of the bottle—1814.

"Are you sure this is 1814 brandy?"

asked the purchaser.

"Well," replied the vender, "the label says so; but I don't know the printer." However, more power to the Society for the Boycott of Extortionate Eggs, and

# Wilson Bros Athletic Union Suit Licensed under the

Klosed-Krotch Patents

NEVER a bind or chafe in this perfected garment. Never a gap or roll or bunch-up in the patented, permanently closed crotch. Separate openings front and back. Freedom, coolness, lightness — ideal for sultry days. The only athletic union suit of this kind licensed under the Klosed-Krotch patents. Nainsook to silk — \$1.00 up for men; 50 cents up for boys.

> Other furnishings bearing the Wilson Cores mark of quality include Shirts, Gloves, Hosiery, Suspenders, Neckwear, Handkerchiefs, etc.

# Wilson Bros Combinette Shirt

Licensed under the Klosed-Krotch Patents

Another Wilson Bros. specialty is this one-piece outing shirt made with the same patented closed crotch as described above. Stays smoothly draped. No tail to "work out." Variety of fabrics and make-ups—\$1.50 and more. At your furnisher's.

Chicago

more power to the Society for the Preven-tion of Useless Christmas Giving; and more power to all other societies with similar aims. The pirates who have been selling us food and other necessaries have had up the black flag long enough and deserve punishment; and they are in a fair way of

It is largely our own fault. Take that question of Christmas gifts: We went through it a few months ago, and we are in a position to sit back and size up the spasm in a somewhat philosophical manner. They were all on hand—the elevator boys, and the janitor, and the charwomen, and the bellboys, and the clerks, and the cook, and the servants, and the chauffeur, and the superintendent, and the manager, and the clothespresser, and the shoeshiner—and everybody else, from bishop to barber expecting a remembrance and remember-ing all their expectations. You recall them—lined up with avaricious eyes and rapacious hands—all the greedy procession of those who appraised you by the value of what you gave, not by the spirit in which you gave.

The analogy is well defined. It is exactly the same with our indiscriminate Christmas giving as it is with the countrymanor the city man, either—who dreads the waiter's ill opinion. The vast, needless, oppressive Christmas-destroying orgy of giving that has grown up in this country is not the result of the spread of a holiday spirit. It is the result of our own timidity, our own egoism, our own self-conceit. We are afraid not to be on a par with-or a bit beyond—our friends and relatives; so we gave last Christmas more than we could afford to give because others were giving more than they could afford to give, and because we did not have the faint courage that was required to tell the army of Christmas holdup men there was nothing

Still, the signs of the times are hearten-ing. The Society for the Prevention of Useless Christmas Giving helped some the past season; and it will help more. We ob-serve waiters that were formerly bumping into chairs in closely packed restaurants moving with ease between the tables, because there are fewer of the tables occupied. A good many men have discovered they can exist without alcohol. We are slowing down. There is a glimmer or two of light ahead.

The limit of this kind of thing has been reached and exceeded. It will be a hard task for the American spender to reform himself; but there are indications that he intends to try. And if he sets himself to it his reform will not only be personal but it will reform the gougers also.

# Heat Magazines

HEAT magazines are now being built— to be a substitute for stoves. The par-ticular purpose for which they have been designed is to use electricity to store up heat in the hours when the demand for electric power is small and when consequently elec-tricity may be supplied at a very greatly reduced rate. This is usually between mid-night and five o'clock in the morning, when few electric lights are being used, few motors are in use, and most of the great plant at the electric power house is idle.

Then during the hours of daylight and evening the heat magazine can be made to give out its warmth. The magazines are big

steel boxes about the size of a large stove. In the center is the apparatus to turn electricity into heat and round this are masses of metal that absorb the heat. These are built to withstand heat up to one thousand degrees. All round these heat-storage blocks is very heavy insulation to keep the heat in—in the same way that the heat is kept in a fireless cooker.

When it is desired to have the magazine give out its heat a damper is opened and a passageway thus provided for air to enter the magazine, become heated and pass out into the room. The damper can be used also to regulate the amount of heat coming out.

Electricity is ordinarily much too expensive for housewarming use, but it is coming into practice in some localities where the power is cheap. Some villages on irrigation projects in the West now depend on electricity for their heat, as power developed at the irrigation plant is plentiful, but has only a limited market, thus making the price low. A late development in Norway-the home of cheap electricity—is the heating of churches by electricity.

# A World-Full of Children

# Gain Much of Their Vitality from Luscious Quaker Oats

For 25 years, tens of millions of children have been

brought up on Quaker Oats.

They have gained from it energy and vim - better brains and nerves and bodies. The delightful flavor has led them to love it and to eat it in abundance. We figure that five million children each morning breakfast on this food of foods.

Stop and think what this dish has contributed to their sturdiness and strength.

That could never have been so were it not for this flavor. It is this taste and aroma which win the children to the food you know they need.

# OUT-OF-DOORS

# The Inconnu-What It is Not

WHO of sporting tastes has not from his boyhood read of the voyages of the sarly explorers of the sub-Arctic regions—Hearne and Pond and Mackenzie, and those others who went North before there were even those chartographic bluffs that now pass as maps of that far-off country? And which of us, so reading, has not retained some vague remembrance of the mysterious animal known as the inconnu, found in the auna of that land?

Such, at least, was my own youthful experience. Later on, passing from callow youth, when I had ceased to read of early coyageurs and was trying to pay for a dress sult on the installment plan—which fully occupied my mind for some years—I still retained a hazy idea that somewhere up North there was an animal which Sir Alexander Mackenzie had been unable to place and which he had called the what-is-it or the unknown or the inconnu. In my trusting soul I hoped one day to meet an

or the unknown or the inconnu. In my trusting soul I hoped one day to meet an inconnu, whatever it might be.

It never occurred to me at that time to look in the dictionary or the encyclopedia to learn about this mysterious critter. Never, indeed, until long after I had first met the inconnu in mortal combat did I consult the encyclopedia. Since that time I have never touched my forelock, as was once my wont, whenever passing in front of my encyclopedia—because, in good sooth, the encyclopedia knows no more about the inconnu than any of the rest of us.

All the way north from the edge of the

All the way north from the edge of the Rocky Mountains in the Athabasca system we heard the swarthy voyageurs—you yourself would be swarthy if you used soap no oftener than they do—speak in hushed tones of the inconnu, which, they said, we were sure to meet in our dangerous voyage in the extreme Northern country.

Each time they spoke of it I grasped my trusty rifle tighter, resolved to sell my life as dearly as possible if attacked by one of these ferocious creatures. We had men with us who had killed big game all the way from New Zealand to New Jersey; but none of them had ever met the inconnu.

On deck at night, under the paling Northern sun, we held councils of war, discussing questions of proper equipment; and new to that land we resolved to do our best to uphold the traditions of American sportsmanship, though then under the British flag, which, of course, has more traditions than any other in regard to sport. In plain United States, we resolved to give any inconnu a run for its money if it ever locked borns with us. At that time we thought it had borns.

#### Fishing With Field-Glasses

Time passed and we saw no inconnu, though we gumshoed round the camp every night looking for tracks. We got to Fort MacMurray and still had seen none. Most of the population of Fort MacMurray bears the name of Loutit, on account of an active ancestor who arrived there some years ago and established a family tree that is still growing; but not even any of the Loutit family, which covers several degrees of latitude, had ever seen an inconnu there. Neither, though we kept a sharp watch day and night with field-glasses, did we discover any inconnu all the way down the river to Lake Athabasca.

No one at Chippewyan had ever heard of an inconnu in that neighborhood. We began to think we had been made victims of a cruel hoax, and we rechristened the inconnu as the bull-connu, classifying it with the jokes about the handle of a valve or the insects among the type that are shown to the cub compositor in a printing office.

the cub compositor in a printing office.

When we reached Smith's Landing, at the Falls of Great Slave River, the plot began to thicken. We were told that sixteen miles below, at the foot of the rapids, we should surely find the inconnu; but though we oiled up our guns and prepared for the "imminent deadly breach," we did not see the said inconnu according to schedule.

"You'll see one before long if you keep on going north," said the captain of our steamboat.

We did not see him, however, though we kept on going north. We passed into Great

Slave Lake and inquired at Fort Resolution whether the inconnu had gotten that far south on its annual migration; but there was nothing doing either there or at Fort Rae, according to the best obtainable reports. We had, in fact, arrived at Hay River—where there is no hay—before, by the merest accident, I first met an actual inconnu.

In all this time on the river steamboat we had been, as one may say, almost on the point of mutiny over the kippered herring and tinned salmon, which made a good part of the bill of fare; and at Hay River, in a fit of desperation, I chartered an Indian boy and rowed about four miles to run some nets which he or somebody else owned, and which might or might not contain some fish not as yet contained in tin cans.

which might or might not contain some fish not as yet contained in tin cans.

Arrived there, the said Indian youth casually began to unload from the nets into the boat a bunch of fish that left me helpless with amazement. This was on the reefs at the edge of Great Slave Lake, near the mouth of Hay River. The boy, with whom I had been unable to establish any sort of lingual understanding, began to pull out suckers, whitefish and jackfish—which we call pike—until our leaky skiff looked as though it were getting ready to sink at

any moment.

I heard him thumping at something in the net, and he casually hauled over the gunwale a twenty-five-pound lake trout—repeating the act an instant later with yet another and larger one. Also, he uncoiled several whitefish that would be worth, at city retail prices, about fifteen dollars each. Still he was not content.

#### The Points of the Conny

After a time he flung behind him into the boat a long, silverish-looking fish, which I saw at once was a whitefish—and later saw that it was nothing of the sort. It was not a salmon or a sucker or a whitefish or a pikeperch, or like any one of them—but a good deal like all of them

In short it was an inconnu. All the specimens of inconnu we took from these nets—I have often wondered whose nets we really were running—were stiff and dead, with their mouths wide open, though none of the other fish taken in the gill-net were dead. My attention being thus called to the mouth of the fish, I found it to be almost square, with a sort of projecting rim, so that it stuck out in front of the fish's countenance, something like the mouth of the sucker—only it was larger and more directly east of the fish's face.

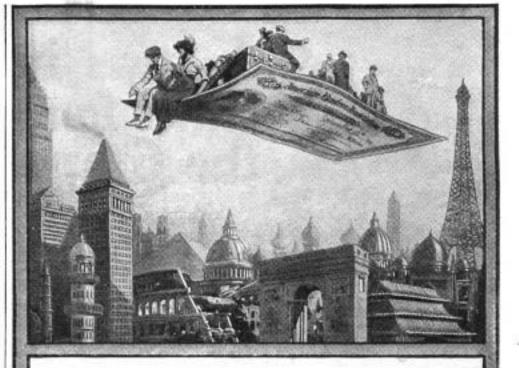

Each of the specimens we had ran eight or nine pounds, being small, as I found later. The tail was not square, like that of any of the salmon family, but forked. Yet, to my astonishment, I found the fatty little caudal fin that is supposed to be distinctive of the salmon family. The body was not the shape of a salmon, but more like that of a giant whitefish, somewhat flattened, the general lines being those of the pike-perch, or walleyed pike, except that the mouth is quite different—also the head and everything else. Naturally I could not name this fish at the time, though I examined it with curi-

Naturally I could not name this fish at the time, though I examined it with curiosity. Thus far I had been unable to diagnose the parentage of my companion, whether French, Scotch or English—I could never get used to a half breed who says "cawn't" instead of "can't"; but, having tried him in French, Spanish, Cree, Chippewyan and Blackfoot, I concluded to try English, knowing that he was a mission boy. "What in blazes do you call this thing?"

I asked him.
"That?" said he. "Why, that's a conny.

Now conny is IIudson Bay for inconnu.
I sat and gazed at this creature for some time. It did not look dangerous, but, rather, quite decidedly mild, especially as it was dead—the only dead fish taken in the net. It had a reminiscent sort of look, like some of the jokes in the Sunday newspaper.
"I have seen your face before," you say

"I have seen your face before," you say sometimes when you meet a gentleman who will not tell you his name. I had never seen this face before; and neither had the artist who made its picture in the encyclopedia—a portrait that resembles the inconnu about as much as an art photograph of a dramatic

# Travel on "A.B.A." Cheques

They will relieve you from the risk of carrying large amounts of cash, will simplify your calculations in foreign currency, will free you from the annoyance and expense of exchanging money at frontiers. Read the reasons why

# "A.B.A". American Cheques

# are the safest and handiest travel funds:

"A.B.A." Cheques will make your money matters as simple as though you carried American bills engraved with their values in the currency of the various nations,

They are as safe to carry as your own check book, because your counter-signature is required to make them good and because they may be replaced if lost or stolen.

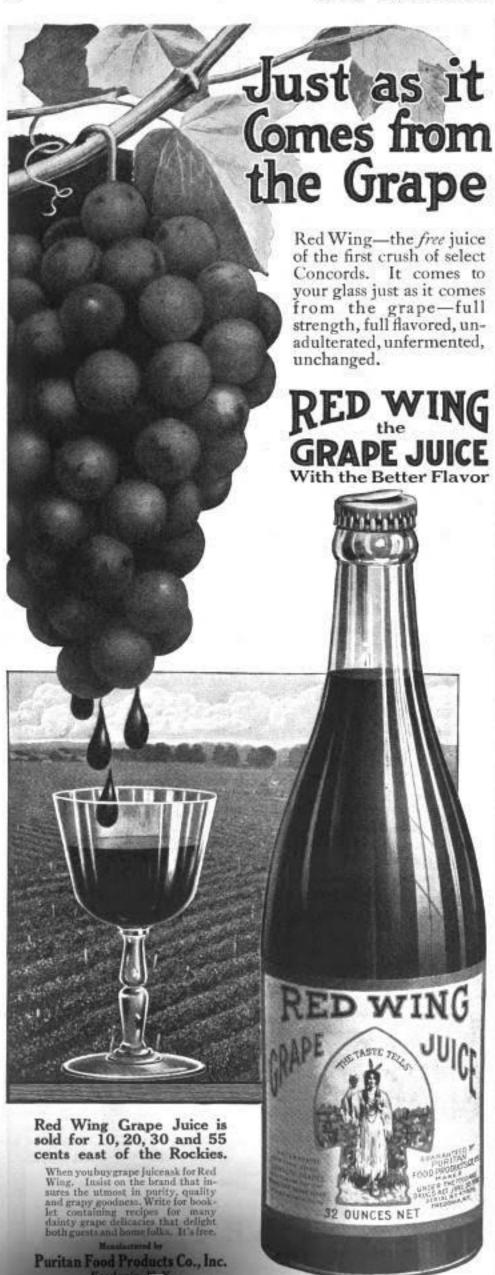

"A.B.A." Cheques are accepted by hotels, railway and steamship lines generally, and by the best shops throughout the world, exactly like the currency of the country. They may be cashed at 50,000 banks; your counter-signature will identify you.

"A.B. A." Cheques are the only travelers' cheques issued by thousands of American banks under authority of the great American Bankers Association. They are engraved and printed on counterfeit-proof paper, with every safeguard known to modern banking. They are protected against crooks by the William J. Burns Detective Agency.

"A.B.A." Cheques are the only travelers' cheques which can be accepted, under the law, in payment of U. S. customs duties.

# Get them at your Bank

celebrity looks like the same celebrity before breakfast. Even so, the picture is quite as accurate as the context that goes with it in the average encyclopedia.

with it in the average encyclopedia.

We paddled back to our steamship and displayed our fish, much to the joy of the kippered passengers. The deckhands, the purser, the captain, the soldiers, villagers and others all leaned over the rail of the steamboat and looked at our mysterious strangers and said: "Conny, huh?" After that I felt the report did not lack confirmation. It was thus that one of my boyhood's dreams came true. We had met the inconnu and it was ours!

We ate the inconnu then and many times afterward, far above the Arctic Circle. It has not the taste of the salmon at all. Served often on the same table with white-fish, we found that after a time we gravitated toward the dish of whitefish, which is more delicate, though also fat. There is perhaps a slight richness or oiliness in the taste of the inconnu.

One is apt to eat rather too much of it at first, especially if one has undergone a preparatory course of kippered herring. None the less it is an excellent foodfish, and as such it is put up by thousands and hundreds of thousands in the Far North; also, as food for dogs. I saw many great specimens of this fish, split open along the back—like your wife's party gown—as they always open fish in the North, and hung out to dry round Indian camps.

#### Not a Salmon, But Scrappy

At Fort McPherson I saw two taken from one net that I thought would weigh forty pounds apiece; and I have heard they go to sixty pounds

Sixty pounds.

The inconnu is not a salmon, but it is more of a sporting fish than any but the Atlantic salmon. It strikes the trolling bait freely, is not shy, and puts up quite a scrap in spite of its squarehead look. It was one of the regrets of our Northern trip that we had no flyrod along with us. I would gladly have given a hundred dollars for a flyrod during one evening's sport with Arctic trout and grayling on the streams of the Rocky Mountains about a hundred miles south of the Arctic Ocean—there is no angling like

it in any country I have ever seen.

And again, I would have given a like sum for half a day's sport with a good casting rod and proper lures at any of several localities we saw where the inconnu was present in full force. We took these fish on rude tackle—that is to say, others did. I would not give a snap to take game fish in any way but on a good rod, giving them a sporting chance and myself sporting experience as well. In short, the inconnu has never received the full meed of praise that should be his.

The conny lives for the one purpose of poking his head into a gill-net, so that you may eat him; he even relieves you of the trouble of killing him and you always find him dead. He is the most amiable of fishes.

At Fort McPherson, which is thirty miles up the Peel River, a tributary of the Mackenzie, we found the connies quite abundant; and we then heard of different localities in the neighborhood where the natives had always found them in regular supply.

Such a place we found on the Husky River, one of the delta branches of the Mackenzie, at the mouth of a little creek leading back into some inland lakes. We did not learn that the connies ever

We did not learn that the connies ever went into the lakes; but here at the mouth of this little creek they were schooling in thousands, and we were told that this was always held to be a certain fishing place by the natives who travel up and down that river. The scene here was much like that of a salmon run in the salt water a day or so before the fish move up into some freshwater stream.

Here, however, there was no salt water; nor did the fish jump free into the air, but kept the surface churned up in hundreds of waves, where only their backs and shoulders showed. They were supposed to be feeding on minnows; but we could not see any minnows, though the fish often broke within a few feet of us, apparently feeding.

When we made our encampment at this

When we made our encampment at this spot we were hungry, as every one in the North is all the time; and when one is short

of grub in the North he goes after connipossible. We had no net with us and fishing rods or any bait. Fortunately, ur some sneaking sort of notion that we mi have trolling for lake trout, I had to along, against all counsel, a few assosizes of trolling spoons; and these we put into commission, lacking anytibetter.

One of the party tried to use a du willow rod; but he was clumsy himself, used to fishing, and so lost several fish struck directly at the side of the boat, other fisherman was a trapper who live that country.

He caught six or eight fine connies stout hand line and spoonhook simple throwing the spoonhook out as far a could and pulling it in hand over h It was a crude method, but it worked.

A gill-net set across that stream at time would either have been torn to p or taken out full of these great fish, admiration for the conny rose very tinetly; and it was then that, above things, I honed, sighed and pined for thing in the most remote manner rebling a fishing rod and reel. Then and I forgave the conny for looking like a sa a whitefish and several other fishes a it is not.

Many a man takes down a good sala; handing out solemn stuff about vomen supramaxillaries and palatines, becau is pretty sure no one is going to call hi his statements; but none of these go men in their recorded works, albeit about ated to meet the needs of the encyclopa tells us about the personal habits of inconnu or attempts to explain the sinister that seems to prevail in its fa

### Not a Stenogus in Sight

In appearance the fish did not in the resemble a salmon that has come out water, reached its spawning ground dropped back. It is a bright, clean color; the scales are rather coarse, most those of the whitefish than of the sa which, of course, scarcely seems to scales at all. Even in the muddy was up the Mackenzie River it retains this look—though the Athabasca, the Slave and parts of the Mackenzie are; the dirtiest waterways of the world.

The inconnu seems to survive sed. So far as known, it never is found so that is to say, upstream—beyond the rapids of the Great Slave River, be Fort Smith and Smith's Landing, seems a sort of dividing line between things and wild things, when it cor that; between known things and the known; between us and the inconnu Well, anyway, we saw the insteaded it in its den, and survived.

As to the inconnu itself, it has no and exact portrait at present extant; to date, so far as known. Much as I cit, there was never any camera wher was any inconnu—except once, whresults were not wholly satisfactor good enough to show the facial cont the fish and the size it sometimes a So far as known, this is the only photo of the inconnu to find its way out.

The great aim in the life of the fish to be to enshroud itself in gill-ne mystery. We are obliged to leave it possession of the field and holding do reputation and its name.

Bob Davis, of New York, has caught an inconnu. Sam Blythe has seen one. Kermit Roosevelt has photographed one. Indeed, this is the time the species has ever been scient described. We should protest its classification under the name Its stenodus Mackenzii. Mackenzie his stenodus or stenogus at all.

# *A WOMAN FREE-LANCE*

(Continued from Page 14)

criminal were run in his place, and none of us knew the difference until afterward. This was not the designed deception of "the yellow"; but if a hero persists in dying at the very last moment when a paper is going to press on the very day when a war and an election and a train wreck are straining hereves to the breaking point, you must not blame the printers' devil Johnny too severely if, when he comes rushing in for the picture plates, he picks out Holmes the criminal for Holmes the scientist.

Because we were one of the very last of the Middle Western papers to change hand setting for the type machine we prided ourselves on freedom from typographical

ourselves on freedom from typographical errors. In fact there were times when we were almost ready to offer a five-dollar goldpiece to any one who could find a typographical error in our morning edition. All right! Behold the pride that goes before a fall. We took on one type machine as an experiment. It set solid lines. If there was an error of one letter in a line the whole line had to be reset. At the last minute one line had to be reset. At the last minute one afternoon the news was telephoned in that a certain hyphenated, generous spender would donate a certain generous figure to would donate a certain generous figure to put up a monument for two heroes "who lost their lives in the Indian War." The proofs were dashed in—Generous-Spender's name was misspelled. That would never do! In the absence of the head proof reader, who was in the composing room running his eye over the galleys of type, I put the hyphen and the letter in Generous-Spender's name; but, trusting to the city editor and proofman being out in the composing room. I did not go out to see the posing room, I did not go out to see the correction. Here is what that type ma-chine did when the corrected lines came out in the paper:

"Mr. Hyphenated Generous-Spender will denote spzg89-ryxt, [etc., etc.] to the heroes who lost their livers in the Indian War."

We had an elaborate gentleman who did a column on society called Social Salad; and we had a little man picked up from somewhere who arranged, stole or made up the weekly page on recipes and plum pud-dings. Whatever became of the people who ate the plum puddings I don't know. I gradually slipped into the habit of coming down at nine-thirty in the morning and writing my editorial till eleven; then helpwriting my entorial till eleven; then help-ing to edit the telegraph in the rush from eleven to two-thirty—no time for lunch; then, if there were more of rush, all hands would turn in and read the proofs till three or three-thirty. The pace was a wild scramble from the time of entering the office. The hours were short; but it was the kind of work you took home in your the kind of work you took home in your thoughts and had in mind at your meals and slept with overnight; for the editorial writers were supposed to look up their data the night before. Was it worth while—I mean worth while for the average woman? Put it wider still: Was it worth while for the average man? Your successful banker, railroad man, engineer, doctor, wholesaler. railroad man, engineer, doctor, wholesaler, also takes home his business in his thoughts at night and sleeps with it and eats with it, though he may swear he doesn't; but at forty-five your business man—if he is suc-cessful—has a security, a fastness against want, a certainty of tenure. His value is in proportion to his experience. Is that so of the average successful newspaper worker, especially the woman worker?

# Work for Honest Owners

We were a corporation paper-that is, we were owned by a corporation rated as one of the ten richest in America. By that do not think that we came down hat in hand every day and licked the hand that fed us, or beguiled an innocent public into mistakes for the sake of that corporation. We didn't. Except during election-time we did not know we were owned by a corporation. During elections we were sup-posed to shout for the "grand old party." If the man who stood for the "grand old party" chanced to be malodorous to the public, then we were allowed to write on economics in China and Peru. The cor-poration owned that paper for the purpose of pushing the country and defending itself from blackmail legislation. There were times when we attacked the corporation itself, when its policy seemed a discrimination against our territory. Because we were owned by a rich corporation we did what not another paper west of Chicago could do at that time-we refused to boom or advertise the fake mining schemes that successfully broke out from Nevada and Colorado to Klondike. I am setting these facts down because corporations have been so roundly "cussed" for the past ten years, and it is well to give even the devil his due.

A newspaper exists solely by virtue of the confidence inspired in the public. The minute it forfeits that its value to the cor-poration is lost. The most deeply we ever sinned against the public was in connection with a man put in as governor by the "grand old party." He used to come into our office and write interviews with him-self lauding a well-known gold mine to the self lauding a well-known gold mine to the skies. It was a mine then paying one thou-sand per cent dividends; and as he always put his opinions in "quotes" as his own we did not feel our blood-guilt till we saw those interviews reproduced in the leading commercial journals of London and New York as coming from our representative governor. Then we began to make inqui-ries. Engineers let us into the suspicion that the mine with ten-cent shares then selling at \$1.85 might be a pocket that would peter out any day. Two of us went in to confer with the chief, who had succeeded the old

#### A Puff and a Crash

You will remember his characteristics of ambition but no ability. He didn't snub us. He squelched and squashed us. What us. He squelched and squashed us. What were we—lay critics, greenhorns, outside dunderheads—to put our office opinions up against experts? Did we expect the paper to offend the party because Governor So-and-So was blowing off some innocent self-advertising? Anyway the governor had gone to New York. The thing was over. We couldn't prove the vein would fail. We'd have a libel suit on our hands if we touched the thing; and so on and so on. touched the thing; and so on and so on. But, alas, the damage was done! A huge international corporation had been formed in New York and London to take over that group of mines and railroads. Shares jumped to \$2.85. If I remember correctly the figure paid was twenty millions good cash, not water. That mine never paid a dividend. In two years the vein petered out; and a capitalist of stainless reputation died of a broken heart because his name had misled investors to ruin. Was it corporation

misled investors to ruin. Was it corporation or party that caused our sin?

As far as I can recall there was only one occasion when even an attempt at intimidation was made. It was two years after I had left that staff. That was the era when corporations grew rich buying up for a song blanket charters with land grants attached for the construction of impossible railroads over impossible routes. In a series of special articles for London and New York dailies touching on the opening of the West, which at this time was just beginning to break on us like a dawn, I had mentioned this abuse of blanket railroad charters—the particular abuse was a grant of twelve thousand acres to the mile for a railroad across a swamp, the land not to be picked from the swamp area but from the choicest lands of the country. One night about ten o'clock the chief lobbyist of this corporation, who had been telegraph editor

corporation, who had been telegraph editor on our old staff, called at my home.

"Say," he remarked after friendly preliminaries and reminiscences, "have you done this series of Western development stuff that's been telegraphed everywhere?"

"Certainly. That's no secret."

"Well, it's a curious way to treat old friends. It will cost us \$100,000 to counteract——" mentioning a special on a particularly rotten project for obtaining land grants. grants.

"I'm sorry old friends are hit by it," I answered. "I was not thinking of your people when I wrote it." It might prove a boomerang," he said.

didn't take in what that meant. We have agents everywhere. you know we could damn you with outside

editors if our string of newspapers began to attack your work as inaccurate?" "Is that a threat?" "No, it's a piece of advice from an old friend. You would not be the first we have

It is a mistake ever to fly up in a dispute over matters of fact. Something within me felt like a fuse burning near dynamite.

"I wish you hadn't said that," I answered; "for I have nothing to lose, and on your testimony you have a good deal."

He left awkwardly, and I went upstairs and what I wrote about blanket charters left no manner of doubt as to what was meant. This article I sent out in duplicate, one copy to New York, one to London.

one copy to New York, one to London.

Three weeks later I met my old friend on the street. He stopped me. "Say," he said, "I'm sorry about the other night. I told them if they had any more dirty messages to deliver they could do it themselves."

selves."

Whether he had been sent to tell me to be good, and had blundered into the threat, or had been sent to make the threat and was now blundering out of it, I don't know. I mention it as an instance of the fact that the craftiest corporations do not seek by white and bludgeon.

work by whip and bludgeon.

work by whip and bludgeon.

But all this reflects only one side of newspaper work. Corporation organ as we were we fought the usual battles for children, for purer civics, for the punishment of crime, for the help of the needy. All the legislation for children's aid, delinquency courts and guardianship of unfortunate children resulted from the visit of two listle become sulted from the visit of two little beggar girls to the office one night at ten to beg money to buy drink for their mother. The money to buy drink for their mother. The men of the staff told them to come back next morning. I went with them to their home—if a one-ply board shanty without a floor in the section of the city known as "hell's kitchen" could be called a home. The conditions were unprintable. It was a den of a gang of nine, including one woman, and there were eight children besides. The entire gang lived on the children's begging. When I went back to the office we all hammered it out.

The empty, silly midsummer season was on, when the wires yearly grind out the same old fakes of "the man who swallowed the small alligator," "the eagle that swooped down on the farmer's sleeping baby," "the baby found with a snake in its lap." Just as regularly as news would flag,

baby," "the baby found with a snake in its lap." Just as regularly as news would flag, these perennial old lies would come over the wires. We all talked it over in the reporters' room. Why not play up the kids and kill the snakes and the eagles and the alligators? We did—not in solid chunks and sermons, but in editorial notes and human stories and little paragraphs used as fill-ins for articles that ran short of a column. We didn't make it a big-headline campaign. We just kept peppering hot shot into public complacency—a story today, a police paragraph tomorrow, a ten-line editorial on what the public was paying for crime and how much cheaper it would be to save the kids. The mayor called a public meeting. That winter the local legislature passed its first delinquency-court and children's-aid acts; and the year before I left that city, as secretary of something or other, I signed a guardian's permission for the marriage to a prosperous farmer of the eldest of those little girls found in "hell's kitchen." sermons, but in editorial notes and human

# The Hungry Unemployed

In all big cities where there is an influx of workers, men and women, there is an hour on a newspaper when you can pretty nearly read tragedy in hungry eyes. It is the hour before the main edition comes off about two in the afternoon and between twelve and one at night. Then the out-of-work nondescripts crowd in to read the "want ads" before the paper goes out to the general public. In our go-as-you-please office they used to wander upstairs to read the "want ads" in the proofs. When they were men some of the staff would turn them over to the city charity departments or the labor unions; but to me there never seemed a proper clearing house for the women—a place of cooperation and quick action to stand between the girl and the park bench. A man can sleep on a park bench all night and come off with but slight damage except to self-respect. A woman can't. When she reaches the park-bench stage she is on an edge from which she may drop into a hole in the river or the abyss. Send a girl who is hungry and out of work to a charity organization, where she has to wait for the secretary to see the treasurer and the treasurer to see the president, and before red tape has run its endless round almost anything may happen.

I have tried it again and again with girls

who came to us, and have come away from

charity with a lump in my throat and a fury of contempt in my soul. "Unfathomable is the stupidity of the good." There are thousands, there are tens of thousands of unen-listed women able to help, who want to help, but will not give either their funds or their presence to charity organizations where ninety per cent of the funds go to job-holders' salaries and ten per cent to the needy. There are thousands, there are tens of thousands of self-respecting women who deserve help and will not ask for it, and can he helped only through the cooperation of the strong with the weak. Lady Bountiful, feeding out charity at the end of a fortyfoot pole to sniveling nakedness and want, is a figure past forever in the world of work except as a caricature of the Christ creed. What is wanted is a Sisterhood of Service to sing together, to play together, to co-operate, to help, to march shoulder to shoulder to whatever this enforced economic revolution in woman's world may lead. Where it will lead neither you nor I know, but we are on the march. Let us march together! It is in the vacation unions, trades unions, consumers' unions under the civic federations now springing up in every city in the United States that the great hope lies; but at that time there was literally not such a cooperative union of women in the United States.

Here is one example of the need: One night—I forget what it was that had kept us all on the rasp till six o'clock, probably a trainwreck, murder or something-I was sitting in my cubbyhole of an office among the line cuts of the famous and the infamous, when I heard the stairs creaking to the measured slow tread of a step that I did not recognize. The grimy urchin who kept guard at the wicket had gone. The reporters had come in for their night assignments and dispersed. The presses were thump-thumping below, but with not half so tired a pound as our own heads and hearts. I had sat down to write my editorial for the next day, so that I could rest at home in-stead of work that night. With thoughts about as fluid as black-strap sirup in win-ter I was thinking up some far-away sub-ject, when a vital, live subject swooped down

without my recognizing it. The slow, dead step stopped opposite my cubbyhole and a woman's voice asked: "Are you ——?" calling me by my Christian name. I thought it some social self-advertiser who had failed to boom her wares over the telephone wire, and without turning asked what I could do for her. She came in and leaned heavily against the top of the high

### When Life is Not Simple

"I'm working as a hired girl and waitress in —" she said, naming one of the lowest dives in "hell's kitchen," just opposite the Union Station where the immigrant trains came in and out. I looked up to see a woman of twenty-five or six, hollow-eyed woman of twenty-five or six, hollow-eyed with emaciation and worry, but well dressed and unmistakably well born. "I've been there three months. I came on a colonist excursion with my mother from the East, expecting to find a position teaching; but my certificates were not good for your schools. I placed my mother in the old ladies' home; and this was the only work I could get."

She told me her duties were to rise at four in the morning, when the first immi-

four in the morning, when the first immi-grant trains passed, and sell fruit to travel-ers that rushed from the cars to the little fruitshop that acted as a blind for the gambling joint in the rear. The place was kept by an Assyrian of the lowest type. After the first trains passed she scrubbed the whole establishment, then she cooked the breakfast for a family of five who slept in one room above.

Then she was supposed to stand on her feet behind the fruit counter till twelve at night, when the last train passed. For these services she received four dollars a How she had escaped harm I do not know-probably because she was needed to keep a respectable front to the joint. The place where she worked was unsafe for a man after dark. I looked over her certificates, enough to see they were authentic, though I missed her name.

"How did you happen to come to me?"

I asked.

I knew a good many gamblers of a re-spectable sort in that wild hurly-burly era; but I didn't think that any frequenting that low joint would know me. It seemed a passenger on the through Pullman that day had run across to buy fruit and asked

how such a respectable woman happened to be in such a place. She had told him in gasps. He had rushed out mumbling be wan gasps. He had rushed out mumbling be we sorry he was going right through; then, just as he jumped on the train, he turned base and called over his shoulder: "See naming me by my first name; "she'll see a girl in trouble through hell if she has to go down for her." She gave me a minute description of the man. I have not the remotest idea who he was. Sometimes, when with or consciousness of the stream of vita power that flows from the God of the Us seen, it takes a lifting kick, or a slap on the back, or a lash of need to jolt us back into contact with the hidden energy. But sometimes by a quip or quirk of fate we get a rose unexpectedly tossed in the face, and it brings back the fragrance of the mornin garden to our soul. This unexpected com pliment tossed in my face by a total stran ger at a moment when I had been tired enough to heave brickbats brought a feeling of sudden lift to the let-down energies tha you can explain in only one way—a tapping of unseen reservoirs. I thought a minute We had fought for and elected the Ph. D. at the head of educational affairs in the local government.

I went into another room and called him up by telephone at his house. I asked if he were ready to do as he had been done by. He laughingly answered, "Yes." "Then I am sending a woman to you by the next car passing your house, and I want you to come across," I answered.

#### When the Lesser Gods Laugh

I sent her off with two street-car tickets and a line on a reporter's pad. Then I for got all about her and wrote an editorial or The Evil Effects of French Realism on Our American Idealism. I hope the lesser got whom the Indians call "the delight makers didn't laugh. It is we who are the clows, not the delight makers among the gods. Here was realism that was idealism right under my hand, and I hadn't sense to recognize it. That is typical of much of woman in newspaperdom! She is working the old dead sawdust and punk while life is outweing to come up under her life is quivering to come up under her hands. Next day at noon—in the rush, of course, when A. D. T. messenger boys were piling in telegraph stuff and printers' devils were shouting for copy—a head poked into my cubbyhole door. "I've got a job," called a face—not the emaciated face of called a face—not the emaciated face of yesterday, but a face with the morning hope of the rose in its glow. "I've got a school at \$50 a month, and I'm leaving by the noon train." I followed her to the stairs.

"Good luck," I called, and I don't know her name to this day.

And now is there anything in newspaper work for a woman, or is it a Barmecide Feast? In this life, can women drink the full cup that all human beings crave? Is

full cup that all human beings crave? Is it a structure built up from foundations, or is it a door from somewhere to somewhere else? Is it a job or a vocation, an incident or an accident? However this may be, there is no candle that singes the wings of more moths. Yearly, out of the seminaries, out of the universities, out of the homes, out of quiet retreats where no one dreamed the journalistic lure could reach, come armies of recruits to what they call newspaper life. Is it the artistic they seek? There is no calling where life must be reproduced in replica to swifter order with no time for art. Or is it just a plain job, an ultimate vocation, where you will take out just what you put in? Do the hosts coming realize that success is a result, not an aim. in this life, and that the road up must be a training-in all the way, at hard, driving, unflagging pace? Do girls and women longing vaguely to be journalists think of that? Granted that the joy is in the game. and that newspaper work may become the gamiest and most absorbing kind of game, the question is: Having learned, is the game worth the candle? Always it is a vocation where the risks

are great, the pay moderate, the tenure uncertain, the hours excessive, the pressure high and constant, with no future, no place for age. If one goes into newspaper life seeking glamour, big wages, easy earnings, security, there can be only disappointment and a throwback of hopes. If one goes into the life seeking service, to do work that counts, to be grilled into fitness for work that counts, one will find what Rhodes, what Tennyson, what King Arthur, what all other workers have found: So much to

do, so little done.

# Daily Bathing a Joy!

JAP ROSE

The "Bubble Bath" Soap

JNLESS you are using this delightful soap you cannot fully enjoy your daily bath, so necessary to complete health. JAP ROSE is essentially a bath soap—it lathers instantly

and freely in hard or soft water, and rinses quickly, leaving an invigorated "clean all over feeling," with the knowledge of perfect cleanliness.

Ideal for shampooing - making the hair fluffy and glossy.

Sold for 10c the cake by good dealers everywhere.

JAMES S. KIRK & CO., CHICAGO

After the both use JAP ROSE "Face and Body" Toilet Talcum Powder.

In automobile springs there is more to consider than comfort.

Remember, the front wheels get the first bump, and the motor gets the full shock, unless cradled on proper springs. Detroit Springs save the motor, the frame, shaft and transmission. They take the jars, the thrusts, the twists, caused by uneven roads.

They will never fail, for they have received worse mechanical shocks in severe tests at the factory.

Detroit Springs are guaranteed for two years not to settle, crack or break.

# Specify Detroit Springs

for your next car. They impart long life to your car mechanism and comfortable, safe riding to your family and friends. Look for the lubricating cups. They identify the genuine.

# Detroit Springs are Self-Lubricating

Near the ends of each leaf are depressions stamped in the steel and filled with a long-lived lubricant which is spread between the leaves as they rub upon each other. This prevents squeaking and reduces the wear of the spring. You will never know what real comfort and security mean until you experience the gentle "swing" of Detroit Springs.

Write for free illustrated book, "From The Ore To The Motor Car," telling the interesting fact story of Detroit Springs.

Detroit Steel Products Co. Boulevard Detroit, Mich.

# THE LAME DUCK

# Views of an Innocent Bystander

Washington, D. C,

DEAR JIM: Notwithstanding the wellknown claim that a new broom sweeps
clean, and that a deal from a fresh pack
makes futile whatever stacking of the
cards has been done previously, I have the
honor to report that the System is still
working here in Washington and most of
the ramifications thereof.

the ramifications thereof.

The System, as I have explained to you, is made up of the permanent persons in the executive departments of this Government. It is composed of the men who stay on the job regardless of shifts in party control, of patriots and politicians—like army officers, for example, or naval officers, who are in for life and who hold the bureau posts in the War Department and the Navy Department—the chief clerks and others who run the other departments regardless of the entrances and exits of the chesty cabinet members who think they are personal con-ductors of their branches of the business of the nation, but who are merely passengers,

and are not riding first-class at that.

I am reminded of this by an incident that recently occurred in one of the great departments—it would not be fair to say which one, for similar instances are occurring in all departments all the time, and there would be neither use nor usufruct in singling out this secretary as a distin-guished goat. They are all more or less goats, Jim; but it so happens that the in-stance I have in mind whereby a cabinet member was made a goat of is so perfect an illustration of this condition that it seems worthy of relation.

As everybody knows who is experienced in the ways of cabinet ministers, a cabinet minister is an exalted personage who is a member of the president's advisory board and who is intrusted with the direction and management of a certain proportion of the

executive business of the country.

Personally I have been apprised of the claims and characteristics of, say, a hundred of these eminent citizens; and not one of them was different from another. In-variably as each newcomer vocally took the oath of office he swore—mentally, at the same time—that he would run his department himself; that he would be the Su-preme Snark of his snarkdom, the boss of the entire works. And that was fitting and excellent; but the trouble was the new-comer didn't know. He wasn't informed. He did not understand about the System, which is a perfectly logical outgrowth of our style of government.

### The Mysterious Letter

Take the army, for example, or the navy, or any of the rest of them; but take the army—and there's nothing personal in the taking to the distinguished New Jersey jurist who is now our chief war overseer. A new secretary of war is appointed. He lasts one year or two years, or mayhap four years. Meantime the highly political soldiers who must make up his technical and administrative forces are there for life. They were there before he came and they will be there when he goes away. Naturally they have plans and policies of their own. Naturally, too, the civilian is at their mercy. Naturally, for the third and last time, they keep him in exactly that position.

The soldiers may be jealous of one another—and are; and there may be a great amount of politics of one kind and another in the army—and there is; but when it comes to putting over their own plans on new secretary of war is appointed. He

comes to putting over their own plans on the civilian secretary they are a unit. Then their teamwork is admirable. He is an episode. They are institutions. And this is observed as regards the rear admirals in the navy and in all other branches of the executive service. The System, the brook and the conservation of Jim Ham Lewis are the three things that go on forever.

It so happened not long ago that the secretary of one of the departments, a cabinet minister of renown, had a plan for increasing the efficiency of a certain branch of his department. It did not work out. There were reasons why the things he wanted done could not be done-and he felt impelled to abandon his quest.

He is a persistent person—this cabinet member-and he decided that if his plan was not feasible another plan might help. He wanted to establish a new grade of public service; but as he couldn't, he felt that he might get a portion of the results he was striving for by increasing the number of the men in a coordinate branch—that is, though he was not given his new service, he felt he could get some results by doubling the number of the men who did work along somewhat similar lines.

It was a scheme all his own. He didn't bother to consult with any of his numerous bureau heads about it. He simply called in his personal stenographer and dictated a letter to the committees in Congress having his departmental matters in charge, recommending that the force of these corre-lated persons be doubled. As he couldn't get new workers, he desired and recom-mended enthusiastically the increase of what he had, and felt that he had done a good

The letter went to the committees and was received and filed for discussion and action. Four or five days later the committees of the House and Senate received another communication from this cabinet member, regularly signed and official which recommended specifically that no increase be made in the force the original recommendation had so strongly urged should be doubled. This communication said nothing about the first communication. As they showed, when placed side by side, the cabinet member had recommended one thing one day, and then, a few days later, had recommended exactly another thing without withdrawing the first another thing without withdrawing the first recommendation or referring to it.

# The Sign-Here System

Committees in Congress are wise. They have been dealing with the System for years. The men in charge of these partiular committees laughed when they compared the two letters. The chairman of one of them called on the secretary.

"Mr. Secretary," he said, "which recommendation do you desire us to follow in the matter of that increase in the so-and-si force?"

"Which recommendation?" the secretary exclaimed. "Why, I have made but one recommendation, and that was that the force should be doubled."

force should be doubled."
"Pardon, Mr. Secretary; but you have
made two recommendations touching on

that subject."
"Not at all!" the secretary replied tartly. "Not at all! I have made but one

communication to you on the subject. I want the force doubled."

"Then," said the chairman, "why did you send us a letter recommending that no increase should be made at this time?"

"What letter?" roared the secretary.

"I have sent you no such letter."

The chairman laid the two letters before

The chairman laid the two letters before The chairman laid the two fetters before the secretary. He read one and then the other. Both were regular. Both were signed by him. Both were official. Neither had the slightest reference to the other. As they read, he asked for a certain thing one day and then, a few days later, asked that what he had asked for the first time should not be done, and gave no explanation.

what he had asked for the first time should not be done—and gave no explanation. "I know nothing about this second rec-ommendation," said the secretary, grow-ing a bit purplish in the face. "How did you get it?"
"From you, of course. Isn't the signa-ture yours?"

The accretant examined the signa-

The secretary examined the signature. It was undeniably his. "How do you account for it?" he gasped.
"Why," answered the chairman, "they have put one over on you. It's simple enough."

And so it was. Not knowing that the secretary had written the original letter, but knowing he had such an increase in mind, the System, which was opposed to such an increase as the secretary advocated. had a recommendation for no increase prepared, slipped into a mass of official letters and passed along to him. It was in official

thumb the place for signature and said, "Sign here!" the secretary signed; and he never would have been the wiser if it had not been that he had taken a little initiative himself and had written a previous letter of his own volition instead of according to the instructions of the System.

The committee chairman left the secretary in a haze. He is trying to find out what happened to him. He will not be successful. The same thing has happened to other secretaries times without number, and the same thing will happen to him again. He will resolve to read everything he seems and will do so for a day or true he signs and will do so for a day or two. Then he will find that is impossible, and the System will go gayly along in the same old way. Whenever it is advisable to slip one over on him, said one will be slipped over; and this will be the case in all other depart-

Every man wants all the power he can get, even a president! For example, have you! by any chance looked over that bill, recently signed, providing for a government railroad in Alaska? One doesn't need to go much further than the title to learn how rapidly we are centralizing things. The title of that bill is:

"An Act to authorize the President of the United States to locate, construct and oper-rate railroads in the Territory of Alaska,

and for other purposes.'

It would seem that when it comes to railroad building, at an initial expense of thirty-five million dollars, the man who has the authority to "locate, construct and operate" such a road has about all there is; and an examination of the bill shows that to be the case. Under the terms of the bill the President is to select the name for the road; employ everybody connected with the work; designate army or navy officers as engineers; fix all rates of wages to be paid; locate the route; pick out terminals; make the schedule of rates; make the regulations for running the road; lease it if he likes; build and maintain telegraph and he likes; build and maintain telegraph and telephone lines; locate town sites, and do everything else in connection with it save raise the money, which is to be provided by the Treasury. He is to hire and discharge, receive reports, and—to make it good in case any little delegation of power and authority was overlooked—"to do all necessary acts and things in addition to those specially authorized in this Act to enable him to accomplish the purposes and objects of this Act."

#### A Dent in a Spotless Record

As nearly as I can make it out, about all they do not permit and require the Presi-dent to do is to take tickets on the trains and act as flagman. It is, of course, a tremendous tribute to the President, for the road might easily have been built by the road might easily have been built by a board, or by the secretary of the interior and a commission; but it is also a remarkable exemplification of the process of centralizing that is in progress and to which I thus call your attention.

I'd like to lay a small wager that Ambasador Walter H. Page, who has hitherto represented us so jocosely at the Court of St. James, never makes another joke so

St. James, never makes another joke so long as he may live. We are keenly humor-ous, we Americans, but only in an unofficial

capacity.

The fact is, a public man who makes a joke makes at the same time a dent in his and an arrangement out; and an record that he never can push out; and an ambassador who makes a joke may as well look for a convenient weeping willow tree on

which to hang his harp.

Poor Walter Page! He doubtless won-ders what hit him; but if he had reflected he would have been as serious as Porter J. McCumber, which is the most serious thing there is. Imagine an ambassador making a joke to Englishmen about the Panama Canal and the Monroe Doctrine, with thirty-one senators preparing to go before the people this year, and some of them in states where the Mexican troubles are vital and the repeal of free canal tolls a local issue, to say nothing of a big bunch of

representatives in the same case.

After this, no doubt, Ambassador Page will confine his public speaking to the recital of such cheerful sentiments as: "This world is all a fleeting show, for man's illusion given!" and so on.

Do you suppose there is any connection between the report that Mr. Roosevelt received three thousand dollars for a speech in Brazil and the appropriate that Mr. Rryan

Brazil and the announcement that Mr. Bryan is going to take a trip down that way next However, farewell, BILL.

# How Much Interest Should I Pay?-By Roger W. Bakeon

"UNEASY lies the head that wears a crown." If any body of men in this country ever arrives at this opinion it will be the new Federal Reserve Board, charged with the duty of both preventing infla-tions and extending accommodation to the business men of the United States.

If interest rates become abnormally low and securities consequently abnormally high, accompanied by gold exports, these men will be blamed; while if money rates become abnormally high and securities ab-

normally low, accompanied by gold imports, these men will likewise be wholly blamed. To hope that business will reach an ideal condition wherein buyers and sellers, loaners and borrowers, producers and consumers shall all be happy, is too much to expect. Consequently the Federal Reserve Board will always be stormed either by one side or the other of the surgent mass of humanity whose activities we barbarously style business.

Unlike the Aldrich Bill the checking of business under the new Currency Law is not performed automatically, but rather is left to the judgment of the Federal Reserve Board. Whether or not this is wise de-pends, of course, on the character and judgment of these men. There is no reason why they cannot perform as good service as—
yea, even better service than—the automatic checks suggested by Mr. Aldrich.
On the other hand there is no reason

why these men cannot permit our currency to be expanded, with an accompanying era of inflation, which Senator Root, while shutting his eyes and looking into the future, is reported to anticipate as follows:

"Every one is making money. Every one is growing rich. It goes up and up, the margin between cost and sales continually growing smaller as a result of the operation of inevitable laws, until finally some one whose judgment is bad—some one whose capacity for business is small—breaks; and as he falls he hits the next brick in the row, and then another and another—and down

comes the whole structure!
"That, sir, is no dream. That is the history of every movement of inflation since the world's business began; and it is the history of many a period in our own coun-

"If we enter on this career of inflation we shall do it in the face of a clearly discernible danger, which, though clearly recognized, will result in a dreadful catastrophe. Gold always leaves the country in which the amount of currency exceeds legitimate re-quirements of business."

# The Reserve Board's Power

Though the Federal Reserve Board can do much to cause lower interest rates, increase credit facilities, and bring about the inflation times Senator Root suggests, yet I feel that the Federal Reserve Board will be limited by the very gold movements to which Senator Root refers.

In other words, for once I do not believe our great senator is logical. The Federal Reserve Board can lower money rates and cheapen credit by permitting an excess of currency to be issued; but no Federal Reserve Board can make water run uphill. Gold always leaves the country of high prices or low money rates, and goes to the coun-try of low prices and high money rates. The Federal Reserve Board will be in a position to hamper or develop the business interests of this country; but it can never stop the operation of natural economic laws.

Now as this era of inflation of which Senator Root dreams comes about, gold will be rapidly leaving the country; and as the Federal Reserve Board must have a forty per cent reserve in gold to protect the in-flated currency, this means that it must either stop the outward flow of gold or reduce the outstanding currency.

To do either it will be necessary to increase interest rates, contract business and return again to the simple life. Thus, though the new currency system will not have the automatic checks Mr. Aldrich desired, yet the Federal Reserve Board will have natural law, expressed in the flow of gold, to contend with, which, though slow in effect, should prevent any such abnormal inflation as certain bankers fear.

During the past ten years rates on time money have varied from four to six per cent on the choicest loans for the best borrowers, with minimum during the past year of about six per cent; though the average borrower has been obliged to pay much more—if he could obtain the money at any price. Practically speaking the average borrower has been unable to obtain money at any price in many instances. When money has been applied for at the local bank the cashier has sadly replied: "Mr. Jones, we are very sorry, but we have no funds to loan at this time."

Now these kindhearted cashiers can no longer give this excuse, but must either come out frankly and tell Mr. Jones they think his note is not good, or they must obtain for him the funds from the Regional Reserve Bank. This should soon be a great boon to business; and when the present era of depression has been completed, to counterbalance the previous era of pros-perity, this country should enter into an-other era of exceedingly good business, with a considerable upturn of our normal line of

In other words there is no doubt in my mind that the new Currency Act will result in lower average interest rates on commercial loans.

There is, however, one warning I desire to give to the small business man, for whom I have been writing in this weekly during the past few months—namely: Do not allow this decrease in interest rates to be absorbed by the lower interest rates to absorbed by the large interests before it reaches you.

### Tariff Reductions Absorbed

In some studies I have been making of the results of the recent new tariff I find there has been a distinct reduction in wholesale prices of woolens, machinery, and various other articles on which the tariff has been reduced; but that this reduction is being absorbed mostly by the middlemen and there has been little decrease in retail

I have before me several instances where duties have been lowered from twenty-five to fifty per cent of the articles' cost, with a reduction of less than ten per cent in the price the consumer has to pay. This is owing to the fact that the consumers are unorganized and unable to force prices

In the same way, unless you small busi-ness men stand up for your rights and insist on a lower money rate from now on, big business may absorb the principal advan-tages of the Currency Act without those advantages sifting down to the small mer-

chant.

In order to help such small business men I have recently made an examination of the rates of interest average investments are paying our banks at the present time. In addition to studying the investments owned by the banks of which I am an officer I have also studied the investments of other institutions, especially a great life-insurance company that has invested during the past year about fifty million dollars under most careful restrictions. First, it will be inter-esting to notice how this money has been divided—that is, the various forms of investment sought. I find that eight-fortieths was invested

in state and municipal bonds representing twenty-two states, thirty-four cities, ten counties and several school districts, with a net return of 4.78 per cent interest. Seven-fortieths was invested in the bonds of countries and cities outside the United States and Canada, and these paid 4.40 per cent interest. Nine-fortieths was invested in the choicest railroad bonds, which paid five per cent interest. Fifteen-fortieths was invested in mortgages on business property, which paid 5.58 per cent interest. fortieth was invested in farm loans, which paid 5.50 per cent interest.

Taking all these loans and investments together, an average rate of only five and one-tenth per cent was obtained the past year; while, considering the total assets of nearly one billion dollars invested during the past decade, there is found to be an average interest return of about four and one-half per cent; in fact the insurance company above referred to submits the

(Orlors can be placed through your dealer,

following table, as showing the interest return of all its ledger assets on December

\$311,949,214.47 bonds-4.19 % . . . . . . . 83,022,625.44 Policy loans—5% Premium notes—5% 133,507,619.52 4,598,039.71 Mortgage loans, including farm mortgages—4.97% 152,970,898.44 State and municipal bonds-4.04 % 53,177,784.79 Miscellaneous bonds−6.67 % Stock received from reorganizations. 284,046.88 9.196,586.10 Real estate owned -4.36% . . . Cash-2.50% . . 7,140,755.82

In plain English this means that, though the small business man has been paying six per cent, and the average reader of this weekly has probably been paying more—in some cases perhaps seven, eight, ten or twelve per cent—yet the average rate received from all outstanding investments the past year has been only about four and one-half per cent; while the average of new investments has been about five and one-tenth per cent— which, moreover, is abnormally high. Of course, owing to the additional expense involved in handling small loans, banks are justified in charging a somewhat higher rate to the small business man than to the muchhated bigger interest.

The large borrower is economically entitled to the same consideration as the large buyer; but the above figure of five and one-tenth per cent includes the interest received from the biggest and strongest concerns as well as from the smallest; consequently it is an average rate, and not either a minimum or maximum.

Under the new Currency Law this average rate should be lowered. At any rate this is my opinion after making a careful statistical study of the situation at the

in the student's eyes what he did not like,

and under his peaceful pilgrim's robe his steel muscles tightened with anger. The student chattered, braggart-fashion. He was from Paris, where he studied. "My brother wished much to study," said the girl, eyes and heart ahead with the

said the girl, eyes and heart ahead with the crawling column.

"Latin, rhetoric, didactics, astronomy!"
His manner was lordly. "Save in rhetoric I did well. The rhetoric examiner disliked me—an affair of a woman. But he will give no further trouble."

He paused for a question, but received none. "I slit his throat for him," he ob-served, and fell to whistling. The girl

edged away from him toward the palmer.

She was very weary. The dust choked her, and the road, packed hard with many feet, bruised through her sandals. Once she staggered. The student slipped a quick arm about her; his voice took on the deep note of men that woo.

"Come come wisters:" he said softly.

"Come, come, mistress," he said softly.
"I am strong. Lean on me." He drew her
to him. The next instant the palmer's staff

to him. The next instant the palmer's staff took him sharp on the shoulder.

"Our Lady!" he cried, and whirled.
One of the groups of swaying women turned and watched. A cluster of country folk gaped. All was not holiness then among these pilgrims! Here was to be trouble. But trouble there was not just yet. The student glared, then laughed.

"I do no battle with the holy palm!" he said. "If you think I fear, see this!" He stripped up a sleeve, baring a mighty arm. "And this!" He held up a dagger. The women drew back. The girl did not flinch. "Good sirs," she said, "if I am to make ill will it were better that I travel alone." To the student she turned, chin high. "You mean well, that I know; but the good

mean well, that I know; but the good father here will accompany me. We have traveled all day peaceably."

The student took his dismissal furiously,

bowed, swinging his cap almost to the dust, and going ahead joined the group of evil women. Laughter floated back to the palmer and the girl making their silent way. But although the student gibed there was no mirth in his eyes.

FOR two days the child had trudged to rest on some shady bank, making little bursts of speed to catch up again. As he grew tired his white banner with its red cross trailed in the dust, and once he forgot it and must retrace his stone a weary way.

it and must retrace his steps a weary way.

Nevertheless the flame in his young eyes
was unquenched. There was sunlight, food
in plenty, the freedom of the road. At any time, also, they might reach the Holy City. Like many of the others at each hamlet he inquired:

"Is this Jerusalem?"

"A little farther on," was the reply.
"Mary, Mother of God, keep you."

The column was long, kaleidoscopic in its changes. Those who were first, growing weary, became last. The stronger ones forged ahead, remained in the van, set a pace that thinned the line to attenuation. The boy sang lustily, eyes toward the south; sang even while he limped, while the banner trailed in the dust; sang even when, on awaking from his sleep on a bench in the marketplace, he had found his wallet

But on this second night he was very tired and they had not yet reached the Holy City. The way seemed long. The purple shadows of twilight rose out of the east, even while the hilltops were still golden-yellow with the sunset. At home the cours would be lowing at the gates, and the cows would be lowing at the gates, and his sister would be placing the supper bowls. Word went down the line that they would sleep by the roadside, no village being near. What, then, of the Old Man of the Mountain? Of the King of the Assassins, who lived in the hills of Lebanon, and whose emissaries struck down in the dark those who were on their way to the Tomb?

The line hesitated, closed up on itself, stopped. The road ran through a ravine with uncleared forest on either side. Although the day had been breathless-hot the valley that night was cool, almost cold. Here and there brushwood fires sprang up. The elders, hangers-on, rat-eyed cutthroats, did rude cooking, warmed themselves, drank, and being filled to repletion spread

themselves about their fires and slept. Outside the sodden ring of their bodies the children crept up as near as they dared, to

warm themselves.

The boy had courage. Fire was comforting and there were wolves in the forest. Also he was too young to dread rebuff. So, one group being safely asleep, he stole inside to the very fringes of the blaze and sat down. All record him in the abandon of down. All round him in the abandon of sleep lay the scum of Europe. He sat by the fire, not uncontented, and the red cross over his heart glowed in the firelight. Soon he yawned. He bent over, painfully un-laced his sandals, yawned again. Then he dropped back and slept. An hour or so later the student, roused by a weight on his right arm, opened his eyes. The fire was low and the night breeze in the valley chill. The boy had crept up to him for warmth and lay with his head on the student's outstretched arm.

"Deus!" grumbled the student, who had studied Latin, and slept again.

The night was not silent. Murder, robbery and wanton cruelty were abroad that night. Two miles away, at the head of the sleeping column, lay ten-year-old Nicolas, the General of the Holy Ghost, surrounded by an escort of princelings, of noble chil-dren and a scattering of monks. Here it

The girl searched through half the night. Twice the palmer's staff saved her from mischief. It was only when at last she succumbed to sheer exhaustion that he drowsed uneasily, his back to a tree. Gradually the occasional outcries died away. The night grew weary of sinning. The darkest hour before the dawn found all silent save for the graphing of underlying. silent, save for the crackling of underbrush under stealthy, padded feet, the groan of some sleeper who found the earth a hard

Twenty thousand children slept under the stars that night. Within a month sev-enty thousand would be on the way—thirty thousand, under twelve-year-old Stephen of France, doomed to shipwreck and slavery, not one to return; twenty thousand more leaving bereft the homes of Germany. Seventy thousand in all, dying for an ideal, doomed before they started. "For the cause of God and without price."

At dawn the student roused. A woman who lay near was watching him from under

who say hear was watching him from under half-closed lids.

"So!" she said. "Is our lion tamed? He who slit the throat of the examiner! He whose sport it was to grease the feet of slaters to see them fall! Behold!"

The student had turned surly overnight.

He slid his arm from under the sleeping

He slid his arm from under the sleeping boy's head and sat up.

"Let the child sleep," he said churlishly.

"Save your clack for later in the day. If you rouse him you will find if the lion has become a bleating sheep."

He towered over her. It was early summer dawn, no sun yet and still cool. Purple night still edged the sky. The camp slept. From under her lids the woman looked up at him.

at him.
"Come!" she said. "Last night you loved me."

For answer he kicked the embers of the

For answer he kicked the embers of the fire together with his foot, and then, stooping, covered the boy with his cloak. The woman eyed the cloak covetously. "Loved you!" The tone was contemptuous. He looked down at her, at her untidy hair, at her sprawling figure. Then he deliberately prodded her with his foot. "The cloak is to remain over the boy," he said with a threat in his voice. Then he took his great height and heavy shoulders.

took his great height and heavy shoulders off into the morning mists.

The children were weary and slept late. The sun had lifted over the lip of the horizon before the camp was fully awake. But long before that time the palmer had opened his eyes on the morning. First of all he prayed; then with a hand on the girl's shoulder he roused her.

"Now is the time to search, daughter," he said. "Later on, with all in motion, it will be difficult."

A very little bread was all they had for food, with water from a spring that having had the night to settle was fairly clear. A half mile to the east ran the Rhine, but few there were of the weary young Crusaders who made the extra half mile that morning. The girl renewed her search with the courage of a new day. Surely now she would

(Continued on Page 49)

(Continued from Page 46)

find him. She ate but half of her bread, saving the rest for fear he hungered. The palmer had bruised a foot and must save himself for the day's journey. So she wan-dered alone along the line, looking, making

dered alone along the line, looking, making plaintive inquiry.

"He is but a babe," she said over and over, "and his hair is the color of mine. Also he carries a banner. He stands very straight for one so small, and when he speaks he looks straight in your eyes."

She found him after all quite by accident. For a wretch of a camp follower caught her in his arms and would have kissed her, when he was clutched from behind and whiled.

he was clutched from behind and whirled through the air. Where he had been stood

"By Our Lady!" he said to her sav-agely, "know you not that you court insult? Aye, and worse. Yesterday you were well guarded!"

"I do but seek my brother," she replied with a new meekness.

"Then come. He elbowed his way through the circling crowd that had gathered and she followed. By the dying embers of a fire, wrapped in a cloak, the boy was sitting contentedly eating. Beside him on the ground was an iron pot of new milk. As they approached, the woman of the early morning was bending

over the pot thirstily.
"But a taste, little son!"

"Why, it is not mine. But if you

The student growled in his throat and the woman took herself off. "Little brother! Little brother!" cried the girl, and fell on her knees beside him.

He took her arrival with the easy acceptance of childhood; must show her his sandals, worn already, and one blistered foot; offered her milk, which she took; must tell her of the King of the Assassins. And finally having exhausted his store of news, must have word of home; of his geese; of the house dog; of his mother last of all. All the while the student stood by, silent, almost sullen, watching the glint of the girl's hair

in the early sun.

It was only when the young Crusaders got slowly under way again that the girl fell to marveling about the milk, and how the student had found the child.

"He looks like you, mistress," he replied shortly. "As for the milk, I found it close at hand—an undiscovered herd."

What he did not say was that he had

at hand—an undiscovered herd."

What he did not say was that he had tramped far through the mists, had stolen the kettle from a sleeping farmhouse, had been soundly kicked by the first cow he had attempted to milk. Vastly ashamed was the student that morning—he, the slitter of gullets, the free of foot, the rake, to saddle himself with a child and a girl! For saddled he was, and bridled too. The boy clung to him: the girl, failing to voice her

clung to him; the girl, failing to voice her gratitude, speaking it with her eyes.

Not that he stayed with them. During the long day's march he remained always behind them, a hundred feet, a hundred yards, but in plain sight, towering over the children, occasionally with the woman of the morning, who fewered on him but more children, occasionally with the woman of the morning, who fawned on him, but more often surrounded by little ones. He drove them on roughly, he frightened them with hideous tales, he sang French songs that luckily they did not understand. But now and then a straggler, no longer responding to the scourge of his oaths, found himself visited up and carried in great arms.

picked up and carried in great arms.

Except in the matter of fatigue the going was comfortable. They followed the Rhine along the west bank, save here and there where a cut across country saved a detour. And these cross-country excursions were painful. The drought continued. Away from the river they suffered for water. And hamlets were scattered. Famine threatened the countryside, which found itself called on to feed an army and had not food for itself. At St. Goar, where the river loops west-ward to receive the Main, they struck into sun-dried plains again, crossed the Nahe, traveled by Limburg, Trifels and Selz, and so back to the welcome Rhine again and

The cut-off had taken several days. The sight of the Rhine again was received with shouts. Once more small throats, now parched, rose to the song of the Crusade, so earnest, so ironic:

"Fair are the meadows, Fairer still the woodlands Robed in the blooming garb of spring; Jesus is fairer, Jesus is purer, Who makes our saddened hearts to sing." The palmer did not rejoin the girl and the child. Perhaps he felt that, having brought them together, they no longer needed him. He plodded along, now in the van, now in the rear of the procession, head on breast, in the selfish absorption of the religious fanatic. And yet, were one near, rengious ianatic. And yet, were one hear, one saw how his eyes watched from under the broad hat; how, apparently seeing nothing, he missed nothing. The girl was left wondering, rather hurt; and yet, had she known it, not one night did she and the child sleep beyond his ken. He slept little, mostly he watched. And it was the student he watched. he watched.

A strange quartet, that: The student, untamed, savage, primitive, making a thou-sand plans in the day and thwarted by the sand plans in the day and thwarted by the palmer's red-fringed eyes at night; the child with his gray robe and flaming cross, his weary feet and eyes set ahead for the kingdom of God; the girl, full of tender motherings, strong of heart, deep-breasted and sun-warmed, led on by no dream of the Sepulcher and its rescue, but lightening the hunder of the dreamers; and always near burden of the dreamers; and always near, threatening, praying, the pilgrim in his gray habit, with the dusty-green cross of the palm.

So far the column was practically intact. few weaklings had fallen out and turned disheartened faces homeward. Their places were more than filled by the idlers and scamps of the villages through which they passed, and by childish recruits. But now disintegration began. Towns were fewer; the road often hardly a path. The student, bringing up the rear, could neither flog nor curse courage into some. The one cry was: "The sea!"

"And when you reach the sea, little brother? There is much water."
She was bathing his tired feet in the river. He gazed out at the shrunken stream.
"More than here in the Rhine?"
"Much more."

"HE will turn it back," he asserted, undaunted. "HE prepares already. That is why there is no rain."

She bent over and kissed him. And as

once before: "Brave words, little brother!" she said, and fell silent.

They were camping in a town that night and the child wandered back alone through the twilight. The girl sat on the bank, depressed. There was much talk of the mountains now. Soon they would leave the river and cross into Hochbergund. It was were clad for summer. She held up the child's sandals and looked at them. They were worn through. Many things made her low-spirited. Rapine and robbery persisted; the honest burghers of the hamlet behind her had caught a thief that day and hanged him on a hasty gallows. Only the night before one of the wild barons had ridden down from the hills with his men and made a raid on the camp. It was said that thirty children had been carried off into

The river slid past her feet. Warm as the day was, the water was chill, being fed by icy tributaries from the mountains. The girl shivered and looked up. The student was standing beside her. "Alone at last!" he said. "You are cautious, mistress."

cautious, mistress

"Why should I be cautious who have nothing to fear?'

'Are you so certain of that?" "I am on God's errand. He will care

for me."
"There have been others that He did not—care for!"

Now to the girl this tall youth was no menace, but a protection. Had he not brought milk to the boy, and had she not seen him again and again with weary children in his arms?

"If I am not worthy for Him to care for I am not afraid. Are you not here? Why are you ashamed of being kind?"
"Eh? Kind—I?" He was taken aback, horrified. If it were overheard! If

it should get about! He—kind!
"Deus!" he said suddenly. "How beautiful you are!"

A new instinct of coquetry stirred in the girl, flushed her. After all the student was a man, and comely, and could she not read

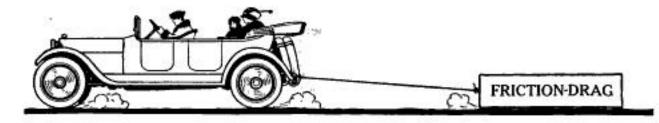

his eyes?
"I am glad if I am—not unpleasing. He had lounged above her on the bank. Now he sat down beside her and slid a hand over both of hers as they lay in her lap.
"My lady of the gold hair!" he said
through his teeth, and closed his hand like

(Continued on Page 52)

# "Give me a quart of oil"

This careless request may bring costly penalties

The garage man comes out.

The motorist says, "Give me a quart of oil."

His "quart of oil" is poured into the crank-case, or reservoir. The car goes on.

No doubt the motorist thinks he has amply protected the 1500-odd parts of his motor.

Far from it. One of the surest ways to invite friction-drag and motor trouble is to say, "Give me a quart of oil."

# "Give me a quart of Oil" invites Loss of Power

Escape of explosion past the piston rings, loss of compression and loss of power frequently result from oil of incorrect body. The power-loss is felt most on heavy roads

is felt most on heavy roads and on the

You can get full compression—complete power—only by using oil whose body suits your motor. Correct body is seldom secured by saying, "Give me a quart of oil."

# "Give me a quart of Oil" invites Scored Cylinder Walls

Scoring frequently results from oil of low lubricating quality. Often, also, the oil's body is too light. Then the cylinder walls have no protecting film.

Scratching results.

Too often the blame can be traced straight to "Give me a quart of oil."

# "Give me a quart of Oil" invites Wear of Bearings

The problem of bearinglubrication is far from simple. Bearings differ widely in type and size. The oiling systems which supply them also differ. Adjustments vary.

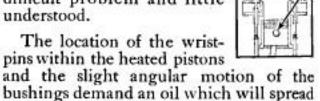

Both the quality and body of the oil must suit these conditions. For every oil that suits your motor bearings, you will find many which will cause undue friction. An almost sure start toward bearingtrouble is, "Give me a quart of oil."

# "Give me a quart of Oil" invites Wear of Wrist-Pins

Wrist-pin lubrication is a difficult problem and little understood.

tween the pins and bushings.

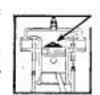

Quick damage will come if the oil fails to meet these conditions. To encourage wrist-pin troubles prematurely, it is only necessary to say, "Give me a quart of oil."

readily, yet maintain the proper film be-

# "Give me a quart of Oil" invites Carbon Deposit

Guesswork won't eliminate this trouble.

Both the *quality* and the *body* of the oil must be considered.

Suppose the body is too light for the piston clearance. The oil then works too freely into the combustion chambers. In burning, excess carbon accumulates unless the oil's ash is light and naturally expelled through the exhaust.

An easy road to carbon trouble is, "Give me a quart of oil."

# "Give me a quart of Oil" invites Noise

Noise is often a sign of worn parts—resulting from friction.

It may be a dull "thump" at every revolution of the main shaft. It may be

# A guide to correct Automobile lubrication

Explanation: In the schedule, the letter opposite the car indicates the grade of Gargoyle Mobiloil that should be used. For example, "A" means "Gargoyle Mobiloil A," "Arc." means "Gargoyle Mobiloil Arctic." For all electric vehicles use Gargoyle Mobiloil "A." The recommendations cover both pleasure and commercial vehicles unless otherwise noted.

"knocking" of worn wrist pins. It may be "hissing" within the cylinders. It may be "knocking" caused by excessive carbon deposit.

When a comparatively-new car pounds and racks its way along the roads it is seldom necessary to ask what brought on premature old age. Generally it is undue friction - resulting from incorrect lubricating oil. A way to invite premature noise is an off-hand request, "Give me a quart of oil."

# "Give me a quart of oil" increases Maintenance Cost

If the oil's quality is low, a larger quantity is necessary to maintain a film.

If its body is incorrect, you have incomplete protection for the moving parts.

In either case excessive friction-drag results. Fewer miles are obtained from each gallon of gasoline. Your fuel and repair bills mount up.

This common waste is the frequent result of "Give me a quart of oil."

# "Give me a quart of oil" reduces Second-Hand Value

What fixes the selling price of a used car? (1) The condition of the motor. (2) The condition of the chassis. (3) The condition of the body.

The motor is the vital part of the car. The motor condition therefore, is most important.

At a recent sale in New York City, second-hand cars of uniformly prominent makes were auctioned off. The bodies were in good condition. The prices of the cars originally ranged from about \$2000 to \$5000. The selling price in some cases was as low as \$100.

Why? Because the motors and other moving parts were badly worn.

Was the wear due to long service? No. The age of most of these cars disproved that. Premature wear was evident.

It is safe to say the owners of these cars had used the common expression—"Give me a quart of oil." They paid a high price for their carelessness.

# How to secure the correct oil for your car

D<sup>O</sup> not say "Give me a quart of oil."

You want an oil whose body is correct and whose quality is best suited to the requirements of your motor.

Ask for that oil and get it.

Below we print, in part, our Chart of Automobile Recommendations.

This Chart is the result of the most farreaching and thorough study of automobile lubrication that has ever been made.

It was prepared by a company whose authority on scientific lubrication, for every class of machinery, is recognized throughout the world—The Vacuum Oil Company.

It was prepared after a careful analysis of the motor of each make and model of American and foreign car.

For a number of years this Chart has

been the standard guide to correct automobile lubrication.

The superior efficiency of the oils specified has been thoroughly proven by practical tests.

Make a note of the grade of Gargoyle Mobiloil specified in this Chart for your car. Then make sure that you get it.

You will then give your motor oil of body and quality which will yield you the fullest power, the greatest freedom from friction, and the greatest pleasure in motoring.

If your car is not listed below, send for our complete Chart of Recommendations.

In buying Gargoyle Mobiloils, it is safest to purchase in original barrels, halfbarrels, and sealed five-gallon or one-gallon

Look for the red Gargoyle on the container.

On request we will mail a pamphlet on the Lubrication of Automobile Engines. It describes in detail the common engine troubles-and gives their causes and remedies.

The various grades of Gargoyle Mobiloils, purified to remove free carbon, are:

> Gargoyle Mobiloil "A" Gargoyle Mobiloil "B" Gargoyle Mobiloil "E" Gargoyle Mobiloil "Arctic"

They can be secured from reliable garages, automobile supply houses, hardware stores, and others who supply lubricants.

For information, kindly address any inquiry to our nearest office.

# Walk for health, and pleasure, too

The Doctor says, "You need exercise; walk!" But walking can do you no good if it utterly exhausts you.

It is not the use of your muscles that tires you. The jar of your entire weight coming down thousands of times on your hard leather heels, shakes and shocks your sensitive nervous system and soon wears you out.

You should wear O'Sullivan's Heels. They are easy, springy cushions of new live rubber. They absorb the shock and jar of pounding along on hard sidewalks and stony roads.

With O'Sullivan's Heels you can walk far with comfort and pleasure. You can come home refreshed and benefited instead of fagged out in body and mind.

O'Sullivan's Heels are invisible and last twice as long as leather. Wear them on the shoes you work in, walk in and dance in.

O'Sullivan's Heels cost but 50 cents a pair, attached. All shoemakers and shoe dealers will attach them to your shoes when you buy them, or at any other time. If you prefer, send us 35 cents and a tracing of your heel, and we will mail you a pair. O'Sullivan Rubber Co., 131 Hudson St., New York City.

# **Hullivani** HEELS of New Rubber

For Men, Women and Children

(Continued from Page 49)

a vise over hers. Now for the first time she read his eyes and saw the madness there, felt his burning breath on her face. The next moment she was in his arms. She fought like an animal for freedom, bit, scratched, struggled. She did not hear the palmer's approach, but she felt the arms about her relax, saw the student put his hand to his head and reel, and knew the palmer's staff had struck a terrific blow.

Then a knife flashed and the nalmer went Then a knife flashed and the palmer went down. The student stood staring, while a red smear crept out and touched the graygreen cross. Nay, the dagger had gone through the cross itself. Desecration, sacrilege, to have killed a holy man and profaned the cross!

Those were emotional days. Men's passions ran high and uncurbed. Religion was a thing of superstition and fear, of sinning and penance. The palmer did not move. Down on his knees went the student, his great bulk quivering with remorse, and crossed himself, muttering. The girl leaned faint, against a tree. From the town be-hind came the sound of the children singing

in the marketplace.
"You have killed him," she said dully.
"He was my good friend and you killed him."

him."
"Now by Our Lady, this I swear," said
the student on his knees: "To go myself to the Tomb; to take no more in vain the Holy Name; to assist all those who make the pilgrimage; to brawl no more." He hesitated, glanced from the girl to the palm cross with its red stain. "To touch no woman's hand, to kiss no woman's lips, until I have first kissed the Tomb."

He rose, stood very straight.
"You need not fear me now, mistress.
have sworn."

The swift summer darkness had fallen. The girl, white to the lips, made her way back to the village and house where she lodged. She was dazed with the swiftness of it all. Even the boy, drowsing on a bench, noticed her pallor. She evaded him; covered him against the night wind, chill from the mountains, but did not go to bed the mountains, but did not go to bed herself. She must work out this puzzle of

The village settled at last, save for those in the church, where thin candles guttered in their sockets. Parents prayed for the children that they would lose on the mor-row. Near the altar a tall youth, no longer

row. Near the attar a tail youth, no longer trembling with fright, but now resolute, knelt and asked for strength.

He was the last to leave the church. He had scorned a lodging, being content to roll himself in his cloak and sleep, as did others, in the marketplace. But before that he made his way along the twisting street to where the girl was lodged, and having found the house, he knelt very humbly in the the house, he knelt very humbly in the darkness and kissed the hollowed doorstep.

WAS a day of quick changes of heart. The fervor of religion was in the air. To the earlier Crusaders the capture of the Sepulcher had meant battle, more than piety; the clash of ax against shield and armor, rather than the contest of religion against irreligion.

Constantine had placed his sword above the cross. But the sword had failed. The Crusade of the Children was a reaction. What war had not done faith might do.

The student's change of heart was not unusual. Many like him, who had joined in a spirit of adventure, or those who left in a spirit of adventure, or those who left home to escape poverty and wretchedness, ended by becoming zealots. Even the oaths of the time were colored by the prevailing spirit. Men swore by the Cross, by the Virgin, by the Blood of Christ. Changed as he was, old habits were hard to overcome. Many a wicked song the stu-dent started and broke off singing; many a quarrel he courted; many an oath died on his line. But although women wooed him.

his lips. But although women wooed him with their eyes, these he did not see. The girl become an obsession nov rarely spoke to her; never, by his vow, so much as touched her.

The procession had lost all form by now. One by one the bodyguard of the little Nicolas sickened or died. They were in Hochbergund and nearing the Alps. The weather, as they climbed, grew colder. At night they gathered round fires. Each morning saw those who did not waken, but remained behind. Small mounds dotted the wayside where there were kindly country folk to dig graves.

The student was a natural leader. He pleaded hard that the unfit be weeded out

and sent back. But as by now there was no order, so there was no authority. Little Nicolas, bereft of all of his advisers except a few fanatics, fell back into the ranks. Sick, he could hardly travel. The lines of small dead bodies increased—two thousand unburied on the plateaus before the Alps were reached.

And still the camp followers hung on. And still the camp followers hung on.
They had traveled so far—surely Italy was
very close. It were better to go ahead than
to retrace those weary miles—Italy, with
sun again and green valleys and grapes on
the vines. A day, two days perhaps, and
then warmth again.

The palmer had not been missed. A
pilgrim more or less when thousands were

pilgrim more or less when thousands were dying—who would notice, or noticing, care?

When they came in sight of the snow-covered peaks at last the army cheered with childish cries. But the student sought out the girl and stood before her. "I pray you, mistress, go back," he said. "This way lies death."

"Death lies behind also."

"Look ahead, mistress! Think you many will live through that snow and ice—clad for summer and their garments torn to rags?"

She turned and looked back along the way they had come, much as on that day, only a month before, she had turned at the lip of the moor and gazed at the scar

lip of the moor and gazed at the scar across it.

"It is so far!" she said piteously. "To suffer as we have and then to fail! Besides, the boy—he will not give up now."

"Listen!" He bent toward her. "Go back, as I pray you. All my life is yours, mistress. Let me take the boy. I am strong. When he is weary I will take him on my shoulder. If there is food he shall be fed." He pointed up at the peaks ahead, covered with ice. "Look and think!" he cried. "Can he cross that alone or with you?"

But she could not bring herself to leave

But she could not bring herself to leave him, nor would the boy go back. He raised haggard eyes to the mountains and

shook his head.
"I go to Jerusalem to the grave of Our Lord," he said obstinately. "Besides, great silly, we do not cross the top of the mountains. These are ways which are known."

She gave up then and sought out the student. She found him on a rock harangu-

ing a crowd of hangers-on, fifty or so.
"Men," he was crying, "these be but
children on a holy errand! What we are, we know; what they are, we have seen. Over beyond these mountains lie warmth and safety. Would you die here of hunger and cold and see these little ones die? Or would you earn remission of sins, would

would you earn remission of sins, would you share the glory of this great emprise?" They answered with a cheer: gimlet-eyed thieves from Nieder-Lothringen and the lower Rhine; bearded cutthroats from Friesland; ox-eyed, stupid serfs from Franken and the Black Forest. Something in the man got their confidence, almost their respect, certainly their fear. The only organization of the Crusade was effected then; fires were ordered; an attempt made then; fires were ordered; an attempt made to separate the children into bands, each with a captain; forage of the surrounding country decided on.

decided on.

The girl stood by and listened. Surely all would be well. Strong men had taken hold. The student saw her and came to her, his heart in his eyes.

"Now at last have I hope," he said. "Many will die, but some will live. What think you of my—accomplices?"

"God does his work sometimes with crooked instruments," she quoted.

"And with none more crooked than I."

'And with none more crooked than I,"

he replied humbly. He listened while she told him of her decision to keep on, of the boy's dogged faith; he was the more resigned, that now for the first time there was to be some attempt at order.

"If only it come not too late, mistress,"

But it came too late. The children had and would brook In vain their whilom murderous leaders tried to enforce order.

Snow-water and bread was what they were living on by now, and each day's prog-ress pitifully slow. The girl was growing gaunt, with hollow cheeks and strained eyes. The child's hands, as he spread them to the fire at night, were clawlike, with broken and bleeding knuckles. There was ice all about them; the nights were winter-cold. Worn out, hungry and half-clothed, the children wandered from the path into side valleys and lay down to sleep that knew no waking.

The route was by the Mont Cenis Pass. Many tragic armies have crossed the Alps, but none so pitiful as this—an army of pygmies against a giant, weakness against strength, tender flesh against ice and snow, dizzy childish heads against crevasse and

On the third day in the mountains the boy was ill. His indomitable spirit kept him moving until nightfall. Rumor had it that Nicolas was dead and that another boy had secretly replaced him. The student was far away at the head of the column, frantically marshalling, ordering, always on the verge of the blasphemous oaths he had forsworn.

At the dizzy crossing over the chasm of the Reuss, where the children must crawl along a yard-wide shelf and then on to a foul and shaking four-foot bridge, he stood

foul and shaking four-foot bridge, he stood for hours on the brink of death, passing small shivering Crusaders to a Friesland cutthroat, who led them over the abyss.

The girl realized that night that she could not go on. The boy tottered, must be carried over the bridge. When her arms gave out he was done, could go no farther, lay down with pinched white nose and quick breath. The column struggled by. There could be no fires for there was no wood, nothing but snow.

Most of the hangers-on had turned back, but the woman who had lain at the campfire that first night and watched the student

fire that first night and watched the student from under heavy lids was still desperately making way, in rags now and gaunt—a death's head instead of a fille de joie. As she passed the student by the bridge she stopped and looked at him, all the mockery gone from her eyes.
"I think this is the end," she said.

"I think this is the end," sne said.
"For many, aye; not for all."
She hesitated, eyes on his, put out a cold hand in the semi-darkness. He started back, his oath in mind.
"No?" she said without bitterness. "It is but farewell."
"I have sworn."
She shrugged her shoulders, drew her

She shrugged her shoulders, drew her rags about her in the icy wind, went on a step or two, faced about on the ledge.
"It is the girl with the gold hair?"
"Ave mistress"

"Aye, mistress."

The waiting children crowded behind her. The Frieslander swore in his native tongue. She moved on with her swaying walk. The children followed her.

The girl sat on the ground with the child in her arms. His brave gray gown and red cross were swathed in her cloak, but she did not feel the cold. To her, with her burden, came the woman was not be the student. and stood looking down. There was no darkness, although it was night; in the snowlight the two women looked at each

other.

"Is the child ill?"

The girl denied it flercely.

"Only weary. Rest and food and a fire—
O God, for a fire!"

"Give him to me and move about. Will
it avail the boy if you freeze?"

"It were cruel to disturb him."

The woman bent over and uncovered

The woman bent over and uncovered

the small face.
"It will not disturb him," she said

quietly.
So she took the gray figure and the girl stamped her stiffened feet. In an hour, two hours, came the student, driving, scourging, calling, and would have passed them, but

the woman called and he turned aside.

"The boy sleeps," cried the girl eagerly.

"Tomorrow he will be well again, and the sun is warm."

The woman uncovered the boy's face

without a word.
"Well indeed, little brave-heart!" said
the student, and took off his cap.

They buried him in the snow in a shal-low grave, the best they could do. They wrapped round him the white banner, and the student found a gilt cross in the path, and set it upright to mark the spot, all hastily, for the children were wandering into perils

of crevasse, of ice and cold.

The girl was dazed. After a time she begged to be taken home; she had left her mother alone and had failed besides. The student was distracted.

Now that you have come so far, mistress -

"I must go back." His oath forbade him to touch her, but

he longed to take her in his arms.

"The way back is long and full of perils."
"Not if you are with me," she said pitifully. "You are strong. I shall not be afraid—with you."
His gaunt face went white.

"Mistress," he said with gentleness,
"God knows that I wish to go with you,
since go you must. My love for you is my
life. But here be many children who need
help, and you are but one."
"How great a love!" sneered the woman,
standing by. He wheeled on her.
"Aye, great indeed! For, if I live, I will
bring her a man for husband."

bring her a man for husband."
"Bleating!" said the woman. "Bleat-

The student heard her not at all. He stood before the girl in the starlight and

"Sorrowful mistress," he said, "I shall go to the Sepulcher as I have vowed and there do penance for the thing you know of. And after that I shall come back to you—if it be months or years. I pray you, keep me in your heart."

But the girl looked toward the gilt cross

and the new grave.

Easter morning in the village on the Rhine. The scar across the moor is long healed; the geese wander in sober pro-cession over the new grass, still pale from its earth-bleaching. In the marketplace are sunlight and the voices of children.

Other scars are in the healing. There is comfort in the spring sun, hope in the rousing earth. Europe still mourns her children and will not be comforted, but other children have come, are growing.
There is again the laughter of their voices through the streets. But at night sometimes they nod by the fire and hear tales of their brothers and sisters who went to rescue the Sepulcher, and how none returned save one girl; of the sea that did not turn back; of the King of the Assassins, who captured those that lived and sold them into slavery; of mountains reared by the powers of evil into a barrier of ice to prevent the passage of the Cross.

Easter morning and five years later.

The fruitseller sat outside his door in the

sun. He had been to early mass, and now sat alone while his dinner cooked over the fire within. Priests and clerks, having finished the elaborate service, had retired for rest and food. The fruitseller basked

and knew his friends by their step.
"He is risen!" he said to each passerby.
"He is risen indeed!"

So at last the girl came and sat on the bench by his side. She was not much changed; her riotous beauty was quieter,

"Alone, daughter?"

"I am always alone now, father."

"True. I had forgotten. The boy went to the Holy Land, as I did—only I came back, but blind."

The fruitseller was childish now and remembered things only for a day.
"He never got to Jerusalem," said the girl
patiently. "I left him in the mountains."

"There was a palmer—something about palmer, daughter. And a—student." The girl had told the story over and over,

but she never lost patience.

"Aye, a palmer and a student. They quarreled and the palmer was stabbed. The student went on, full of grief to have slain a holy pilgrim."

The old fruitseller rubbed his hands

together and chuckled.
"The student made a yow. I remember

The palmer was a fierce, red-bearded man; I knew him. And this student loved you—it all comes back to me—a big man, you said. Think you, daughter, that he still lives?"

"He has never returned, Father Nicholas."

"Ah, but it is a weary way." The old man yawned. "You loved him, too, I think

you said."
"I do not know. Perhaps it is not love. But I watch and wait, and when I am trou-bled I think of him. He was very strong." "I have forgotten—did you come back

alone?" A woman was with me, but she-left me. When she was warm and fed again she

was different. She was always singing and

her."
"I know the sort," said the old man drowsily. "One such I remember, always and swaying as she singing or laughing and swaying as she walked. I was mad about her. But somewhere—she was taken prisoner—or was it

a fever—I—forget——"

His head drooped forward and he slept in the sun, the swift sleep of age.

Came in mid-afternoon of that Easter Sunday, riding hot-foot along the arched lanes and clad in soft leather, the young

Don't have worn spots on your floors

You won't have them—if you use a finish made especially to stand hard knocks. That is what

Kyanize is. We want to send you some to try for yourself.

Put it on your floor or stairs where the greatest wear comes. When it is dry, walk on it, jump on it, drag furniture across itgive it the hardest kind of tests. Then wipe it off with a damp cloth, and note the smooth, hard, uninjured surface.

Cleaning won't make them tidy-

they need new coats.

Will you refinish a chair if we give you the Kyanize?

Same offer applies to Canada.

Try it on a table or chair. Kyanize is the most beautiful, durable, sanitary finish made, for furniture and interior woodwork. Use it when house cleaning. Make your woodwork and old furniture look like new.

Kyanize requires no stirringdries quickly and hard. Doesn't get sticky, peel or scratch white. Water easily keeps it clean.

Fill in the coupon below, mail it to us with ten cents for a fine Chinese bristle brush with which to do the finishing, and we will send you, without charge, postpaid, a full quarter-pint can, containing enough Kyanize for a chair or table, or a floor border in a small room. If you are not perfectly delighted with the result, we'll return the 10 cents you paid for the brush.

uanize For floors and all Fill in the coupon now and mail it today woodwork Check the Cheek the color you wish:

Clear, Light Oak, Dark Cok,

# Teach the Children to Use Dioxogen

Perhaps not more than one "hurt" in a hundred may have serious consequences but the ONE! Prevention of one case of blood poisoning is worth a life-time of care. Dioxogen prevents infection—keeps the little hurt from growing big. Put the Dioxogen bottle where the children may use it for all accidents.

# Dioxogen

is the pure Peroxide of Hydrogen. It does its purifying work by the liberation of oxygen-nature's great purifier.

Always ask for Dioxogen by name. Look out when a common peroxide is offered you because it's "cheaper"—cheapness means impurity.

Cheap peroxides are "preserved" with acetanilid—the poorer they are the more they require it. Without it they would not "keep" to reach the druggists' shelves.

With acetanilid they keep longer, but it also makes them rank and gives them that objectionable taste and smell that may have made you dislike all peroxides.

Look at the label before you buy. Dioxgen contains no acetanilid. keeps without it. Ask your druggist for a bottle of Dioxogen today.

THE OAKLAND CHEMICAL CO. 98 Front Street

> A two-ounce sample bottle of Dioxogen will be sent postpaid on request if you have never tried it.

overlord of the domain. As he rode he looked from side to side, over vineyards, meadow and woodland. The old baron, his uncle, had died. So far as his eye could see, the smiling and bride-decked earth belonged to him.

And in the village there was a girl—a creature of fire and snow, of high chin and slim hands, of black-fringed eyes, of unbelievable haughtiness. As he rode the young

baron swore at a memory and smiled.
"The little cat needs her claws cut!" he muttered.

A pleasant day and pleasant thoughts. Peaceful times had come. His villeins paid their tribute of service and feudal dues, in exchange for the protection of the overlord. And no protection was needed. His men grew fat from no fighting and much ale, but also-crops were fat, and oxen, and women decked themselves.

So he rode into the marketplace. The fruitseller roused at the horse's clatter over

the paving stones.

"He is risen!" he called.

But the overlord did not hear him, or was

intent on his thoughts, which were of the girl, and pleasant. He did not reply.

He rode through the sunny street and stopped inside the gate, at the house with the iron-bolted door. Bending from his horse he rapped hard; but only the old house-dog answered.

house-dog answered.

The young baron was impatient. Who was this girl to defy him? She was within. The house-dog, soothed by a touch, was barking no more.

The street was empty and silent. The young folk walked in pairs by the river, arm in arm, and the elders slept. The overlord bent close.

"What avails it to hide, Cold Heart?" he demanded.

he demanded.

The girl within made no reply. Only she loosed the dog and put a hand to her throat.

"My house is lonely," he wooed through the heir on

"My house is lonely," he wooed through
the door. The dog snarled and the hair on
his back lifted. "I too am lonely. Beauty
like yours, mistress, should be a jewel set
in fine gold. And behold, here am I, ready
to furnish the setting."

Soft words availed nothing. He lost
patience, hammered at the door with the
gilt handle of the knife he wore, swore if she
did not admit him to come that night with
his men and carry her to the castle. His

did not admit him to come that night with his men and carry her to the castle. His voice rose with his gorge. The drowsing elders wakened, peered from behind shutters, curiosity urging against fear.

And to his anger came the girl's quick-breathing rage. The same blood spoke in them both. She bent down over the dog and whispered in his ear. Then very softly she drew the bolts. A whirlwind flew at the mare; she reared, plunged, almost flung her rider to the flags. Swearing furious oaths, beating at the dog, hauling on the reins, the overlord, center of battle, went down the street. Easter peace was broken—worse. The girl knew what it meant. The village had before this been taxed not only of cattle, pullets and wine, but of its women. A

pullets and wine, but of its women. A tramp of horses' feet in the night, it meant; a demand and a refusal; then all the devils of hell turned loose in the quiet street.

The dog came back and whined at the door. She admitted him, her mind elsewhere. The town held no refuge for her. It dared not risk the baron's displeasure. There was left to her only flight, and this There was left to her only flight, and this

time no friendly palmer to guide her way.

A cloak, bread and cheese, as before, a trifle of money, the dog to free for neighbors to feed. When she was ready the early spring twilight had fallen. She left by the near-by gate, slipping out under cover of darkness and locking it behind her. Then she flung the great key far and smiled. Pursuit would not come by this direction. She went toward the river. She had a mind if things went wrong to end there.

mind, if things went wrong, to end there.

By the bank she turned south to a ford
she knew of. Beyond it lay the moor with
the healed scar and the hills. There was hiding in the hills, and the river flowed close.

She had made good speed. It was not yet of the castle would open and the horsemen guest rooms may be rented for a brief period.

file out, dark deeds requiring darkness. In that hour night would come and she would be alone. Her thoughts, like her feet, moved

be alone. Her thoughts, like her feet, moved swiftly.

"My love for you is my life," the student had said. Had he then no more life that he had left her to this? His arms, steel to protect her, where were they? He who could have led her through the hills to safety, was he buried in the gray desert?

"Our Lady of Mercy," she prayed, "thou whose Son today rose from the tomb, thou who knowest the sadness of death, send me help."

A solitary horseman rode out behind on the plain. The baron was impatient; the search was on early. The girl stared from her ambush, hand to throat, as earlier. The river—

As she turned toward the hills he was coming toward her. She was afraid to believe the truth, looked away, looked back again, was hot and cold, dropped on

A miracle!" she said, with folded hands. And having prayed, rose.

As for the student, he saw only a woman, tall and slim against purple shadows. As he neared her he paused, stared.

Her eyes on his in the darkness, she gave him the salutation of the day tremulously.

"He is risen." "He is risen indeed," he said gravely.

Then he knew her and held out his arms.

The lonely horseman surveyed the plain, cantered back to the bridge, swearing soundly. The village was in an uproar. Old Nicholas had been knocked down by a horse and lay dead in his house. The coverlord of the towngate was gone. The overlord bit his nails and shouted furious directions. The clerk had locked himself in the church. Up and down through the streets horses

raced, houses were searched.

But in the hills was Easter peace.

"I have been to the Sepulcher as I vowed," said the student, "and there I have done penance for the thing you know of.
And now I have come back to you, mistress.
All these years I have held you in my heart.
And you?"
"I also, although I knew it not."

# Flat Transformations

THE latest apartment-house marvel is an apparatus for turning the kitchen into a dining room as soon as dinner is cooked, and turning the dining room back into a kitchen when the dinner is finished and dishes must be washed. This brings the apartment down to two rooms successfully, for which the dining worm is being word as for while the dining room is being used as the kitchen any guests may remain in the living room, which is really the bedroom, with a bed that can be concealed by folding it into the wall or into a couch.

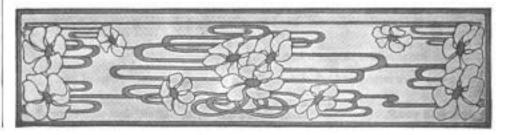

The apparatus is a big piece of furniture occupying one side of the dining-room kitchen. When the room is used for a dining room the device becomes a buffet, with mirror, china closets, and so on. When the room becomes a kitchen the device is opened up and discloses a concealed gas stove and a sink, as well as compartments for uten-sils and cooking materials and boards for mixing and kneading.

Another new device could be used in connection with the combination room. This is a dumb-waiter refrigerator. When the refrigerator is not needed it drops down through a shaft to a cool basement, and it is iced while in the basement. The luxurious apartment houses are having added to them every day greater collections of machinery. Among the recent installations are washing

machines, drying closets, and garbage in-cinerators attached to the gas stoves.

Another new idea in the more elaborate apartment houses is auxiliary guest rooms.

In each building a few rooms completely furnished are kept separate from all the regular apartments. Then if any of the regular residents wish to entertain more

# WHAT IS THE MONROE DOCTRINE?

(Concluded from Page 9)

vast, nebulous protectorate, imposing obli-gations on this republic of which Monroe never dreamed! It is supposed to be our duty to put down rebellion in Southern states, to see that they maintain law and order, pay their debts and keep themselves

tidy.

Mr. Olney told Lord Salisbury that the United States Government was sovereign on this continent. Mr. Taft is reported to have said that our boundaries extended to Terra del Fuego. Mr. Roosevelt spoke of "chronic wrongdoing" in discussing South-ern affairs. And we read in the public prints that our ambassador to England, in a speech at the Savage Club, has expanded the Monroe Doctrine still further:

"We now have developed subtler ways of taking their lands. There is the taking of their bonds, for instance. Therefore the third proposition is that no sort of financial control can, without the consent of the United States, be obtained over these weaker nations which would, in effect, control their government."

The ambassador may be incorrectly quoted, but the idea is a possible construction. Must we, then, not only keep our brother tidy, and police him, but also un-dertake to say in what bank he shall dis-count his notes of hand? Have we, then, in fact, shouldered the obligations of a benef-icent protectorate? Could foreign governments find out today exactly what our idea of the Monroe Doctrine is? Could they find out, also, what song it was the sirens sang or what name Achilles took when he hid himself among the women?

#### The Future of the Doctrine

After the reign of the man of business the Southern republics began to doubt our good faith when we spoke of the Monroe Doc-trine. They said it was a doctrine of petulant and insatiable imperialism; that it was a cover for an established policy of conquest, and the like.

The world was no longer sure we were satisfied with our own. Southern peoples felt they were no longer safe in their insti-tutions or their lands. It is vain for a great Executive, moved by high ideals, to de-clare that the American Republic will never again acquire another foot of territory by

conquest. They could reply to that as a great English judge who pronounced a principle of law was replied to: "Do you expect to live forever, that you lay down a rule of conduct for these islands for all time?" The man of high ideals might not always remain at the head of the American states. remain at the head of the American states. The man of business might again take it

over for his money-getting uses.

What are we to do with the Monroe

Doctrine?

Writers lacking the responsibility of a decision advise us to abandon it and—like the lawyer—permit our brother to go to the devil in his own way! A mass of criticism from these Southern countries is presented to influence us. The dangers attending the enforcement of the Doctrine are assembled, and innumerable collateral arguments, fanciful and unique—as, for instance, the fact that Buenos Aires has some three thousand taxicabs, one thousand more than New York with her five million people!

Old, time-honored things are held just now in very light esteem—our religions are said to be myths; our institutions anti-quated devices; our very selves bacilli. Not even the multiplication table remains to It is said to be founded on the untenable hypothesis that things will remain unchanged long enough to be counted—a postulate so false that it never could have occurred to anybody who realized that the universe is in a state of perpetual flux!

If we have stultified the great Doctrine that Monroe pronounced, what is there to

do? Two avenues are open to us:

We can contract the Monroe Doctrine
into a clear, well-defined policy of exclusive national interest—that is to say, we can define it from the point of view of our own interests and safety, excluding every other consideration. We should then abandon the great, noble, altruistic policy that Adams, Jefferson and Monroe formulated, and substitute for it the common policy of

There is another alternative. There are in South America three stable and efficient governments-well established, and as competent to be regarded as powers as any. These are the republics of Argentina, Brazil and Chile, commonly known in our current discussions as the A-B-C govern-

It has been suggested more than once that the United States join these stable governments of the South in some well-defined alliance looking to the maintenance of the Monroe Doctrine, in order that the presence of their own brethren might be an earnest of good faith when we found it necessary to interfere in Southern affairs.

This suggestion has cogent arguments to support it. It would get rid of the idea of an American protectorate, which seems to be firmly seated in the half-Latin mind.

It would banish the bogy of imperialism.

On the other hand, there are difficulties to be met. Would these countries be willing to form such an alliance?—and on what basis? Who should decide as to the nations to be included and those to be excluded? Would the United States have a controlling voice in such an alliance? What should be the voting status of the countries in this league when they came to determine a policy? Would the United States be subjected to foreign entanglements through the acts of these associate states? Might she be intrigued into the abandonment of policies yital to her safety? And finally, could there be any harmony in a congress of races so dissimilar—from nations of such unequal

There is a great principle in this idea, but it is one to be adopted only after long reflection.

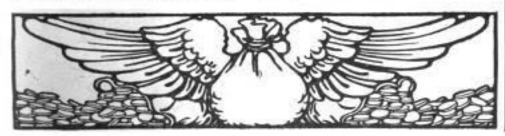

As one thinks about it, however, the aggestion again and again returns: Why suggestion again and again returns: Why not go on as we began, defining this Doc-trine as Monroe defined it in his message, and by a broad and generous statesmanship restore ourselves to the confidence and respect of the world?

# Aëroplanes and Ice

AEROPLANES for sighting icebergs and icefields, to enable a ship to steer clear of them, are being seriously considered by a Norwegian steamship company that has many difficulties from ice. The steamers of the line ply to Siberian ports by an Arctic Ocean route, which is badly blocked by icefloes in some seasons. Under the present method, when floes are sighted by the lookout, the steamer has to cruise back and forth until it finds a way through or round the floes, and much time is thus lost.

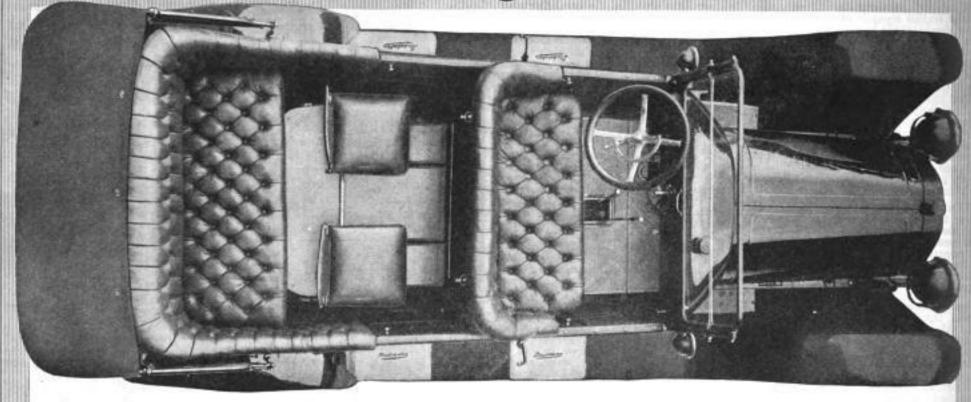

The proposal is to have an aëroplane on each steamer and to have one of the crew trained to fly. When ice is sighted the aëroplane would go up and the airman could in many instances see that in a certain direction the water was clear, or perhaps even determine the entire extent of the floes. His report would then enable the captain to fix the shortest route round the obstruction.

Methods of launching an aëroplane from the deck of a vessel are still imperfect and other obvious difficulties appear; but the has the idea in mind and hopes company it may find it feasible.

# *AN AMERICAN* VANDAL

(Continued from Page 22)

euphonious title of Toad in the Hole. Toad in the Hole consists of a full-grown and fragrant sheep's kidney entombed in an excavated retreat at the heart of a large and powerful onion, and then cooked in a

excavated retreat at the heart of a large and powerful onion, and then cooked in a slow and painful manner, so that the onion and the kidney may swap perfumes and flavors. These people do not use this combination for a weapon or for a disinfectant, or for anything else for which it is naturally purposed; they actually go so far as to eatit! You pass a cabmen's lunchroom and get a whiff of a freshly opened Toad in the Hole—and you imagine it is the German invasion starting and wonder why they are not removing the women and children to a place of safety. All England smells like something boiling, just as all France smells like something that needs boiling.

Seemingly the only Londoners who enjoy any extensive variety in their provender are the slum-dwellers. Out Whitechapel-way the establishment of a tripe dresser and draper is a sight wondrous to behold, and will almost instantly eradicate the strongest appetite; but it is not to be compared with an East End meatshop, where there are skinned sheep faces on slabs, and various vital organs of various animals disposed about in clumps and clusters.

I was reminded of one of those Fourclusters.

I was reminded of one of those Four-teenth Street museums of anatomy— tickets ten cents each; boys under fourteen not admitted. The East End butcher is not only a thrifty but an inquiring soul. Until I had viewed his shop I had no idea that a sheep could be so untidy inside; and as for a cow—he finds things in a cow she herself

did not know she had.

Breakfast is the meal at which the Englishman rather excels; in fact England is the only country in Europe where the natives have the faintest conception of what a regular breakfast is—or should be. Moreover it is now possible in certain London hotels for an American to get hot breakfast is and is water at breakfast though bread and ice-water at breakfast, though the English round about watch him with undisguised horror as he consumes them, and the manager only hopes that he will have the good taste not to die on the premises.

#### The Tasty Penny Stamp

It is true that, in lieu of the fresh fruit an American prefers, the waiter brings at least three kinds of particularly sticky marma-lade and, in accordance with a custom that dates back to the time of the Druids, spangles the breakfast cloth over with a

spangles the breakfast cloth over with a large number of empty saucers and plates, which fufill no earthly purpose except to keep getting in the way.

The English breakfast bacon, however, is a most worthy article, and the broiled kipper is juicy and plump, and does not resemble a dried autumn leaf—as our kipper often does. And the fried sole, on which the Englishman banks his breakfast hopes, invariably repays one for one's undivided attention. The English boast of their fish; but, excusing the kipper, they have but three of note—the turbot, the plaice and the sole. And the turbot tastes like turbot, and the plaice tastes like fish; but the sole, when fried, is most appetizing.

but the sole, when fried, is most appetizing.

I have been present when the English gooseberry and the English strawberry were very highly spoken of, too, but with me this is merely hearsay evidence; we reached England too late for berries. Happily, though, we came in good season for the green filbert, which is gathered in the fall of the year, being known then as the the fall of the year, being known then as the Kentish cobnut. The Kentish cob beats any nut we have except the paper-shell pecan. An English postage stamp is also much tastier than ours. The space for licking is no larger, if as large-but the flavor lasts.

As I said before, the Englishman has no great variety of things to eat, but he is alwayseating them; and when he is not eating them he is swigging tea. Yet in these regards the German excels him. The Englishman gains a lap at breakfast; but after that first hour the German leaves him, hopelessly distanced, far in the rear. It is due to his talents in this respect that the average Berliner has a double chin running all the way round, and four rolls of fat on the back of his neck, all closely

clipped and shaved, so as to bring out their full beauty and symmetry; and he has a figure that makes him look as though an earthquake had shaken loose everything on the top floor and it had all fallen through

phalia ham.

Your true Berliner eats his regular daily meals—four in number and all large ones; and in between times he now and then gathers a bite. For instance, about ten o'clock in the morning he knocks off for an hour and has a few cups of hard-boiled coffee and save sweet sticks postary with coffee and some sweet, sticky pastry with whipped cream on it.

Then about four in the afternoon he

browses a bit, just to keep up his appe-tite for dinner. This, though, is but a snack—say, a school of Bismarck herring and a kraut pie, some more coffee and more cake, and one thing and another—merely a recliminary to the real food, which will be preliminary to the real food, which will be

coming along a little later on. Between acts at the theater he excuses between acts at the theater he excuses himself and goes out and prepares his stomach for supper, which will follow at eleven, by drinking two or three steins of thick Munich beer, and nibbling on such small tidbits as a few links of German sausage or the upper half of a raw Westphelia ham.

There are forty-seven distinct and sep-arate varieties of German sausage and three of them are edible; but the Westphalia ham, in my judgment, is greatly over-rated. It is pronounced Westfailure with the accent

on the last part, where it belongs.

In Germany, however, there is a pheasant agreeably smothered in young cabbage which is delicious and in season plentiful.

The only drawback to complete enjoyment of this dish is that the granning and averiof this dish is that the grasping and avari-cious German restaurant keeper has the confounded nerve to charge you, in our money, forty cents for a whole pheasant and half a peck of cabbage—say, enough to furnish a full meal for two tolerably hungry adults and a child.

#### A Lost Ambassador

The Germans like to eat and they love a hearty eater. There should never be any trouble about getting a suitable person to serve us at the Kaiser's court if the Administration at Washington will but harken to the voice of experience. To the Germans the late Doctor Tanner would have been a distinct disappointment in an ambassaa distinct disappointment in an ambassa-dorial capacity; but there was a man who used to live in my congressional district who could qualify in a holy minute if he were still alive. He was one of Nature's noblemen, untutored but naturally gifted, and his name was John Wesley Bass. He was the champion eater of the world, specializing particularly in eggs on the shell, and cove oysters out of the can, with pepper sauce on them, and soda crackers pepper sauce on them, and soda crackers on the side.

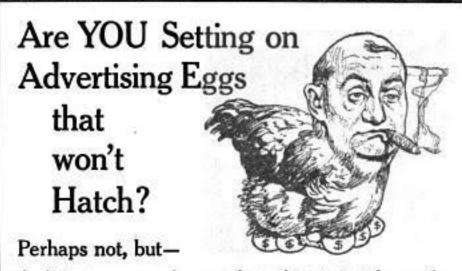

I regret to be compelled to state, how-ever, that John Wesley is no more. At one of our McCracken County annual fairs, a few years back, he succumbed to over-ambition coupled with a mistake in judgment. After he had established a new world's record by eating at one sitting five dozen raw eggs he rashly rode on the steam merry-go-round. At the end of the first quarter of an hour he fainted and fell off of a spotted wooden horse and never spoke again, but passed away soon after being removed to his home in an unconscious condition.

I have forgotten what the verdict of the coroner's jury was-the attending physi-cian gave it some fancy Latin name-but among laymen the general judgment was that our fellow townsman had just naturally been scrambled to death. It was a pity, too—the German people would have cared for John Wesley as an ambassador. He would have eaten his way right into their

However, I am not decrying the abilities Judge Gerard is not only a gentleman of parts and a born diplomat, but he knows

mighty well how to order a dinner. We have the word of history for it that Vienna was originally settled by the Celts, but you would hardly notice it now. On first impressions you would say that about Vienna there was a noticeable suggestion a perceptible trace-of the Teutonic; and this applies to the Austrian food in the main. I remember a kind of Wienerschnitzel, breaded, that I had in Vienna; in fact for the moment I do not seem to recall much else about Vienna. Life there was just one Wiener-schnitzel after another.

don't be too sure unless you know how to test the eggs by holding them up to the light.

# Non-Skid Guarantee vs. Non-Skid Theory

To place the right value on our guarantee that these tires will not skid on wet or greasy pavements, you must clearly grasp this absolute distinction:

It is not on the mere projections of the tread that we rely, as we do not believe that projections pure and simple can improve the hold of a tire on an unyielding, smooth surface.

It is the Sealed Suction Grip on the slippery surface continuously exerted by the strong elastic Vacuum Cups that makes the slightest slip or slide impossible.

This exclusive principle of

# PENNSYLVANIA Oilproof VACUUM CUPTIRES

represents the difference between Vacuum Cup safety-reality and ordinary non-skid theory.

Vacuum Cup Skid safety lasts with the tire. As the center cups wear down the reserve cups at the sides begin service equally dependable.

4,500 miles guaranteed as a minimum—Records of upward of 12,000 miles are more frequent than adjustment claims. Absolutely oilproof-Vacuum Cup Tires have also this exclusive distinction—the greatest tire saver ever achieved.

Dealers Everywhere

In order to spread sweetness and light, and to the end, furthermore, that the ignorant people across the salted seas might know something of a land of real food and much food, and plenty of it and plenty of variety to it, I would that I might bring an expedition of Europeans to America and

personally conduct it up and down our con-tinent and back and forth crosswise of it.

And if I had the money of a Carnegie or a Rockefeller I would do it, too, for it would be a greater act of charity than building public libraries or endowing public baths. I would include in my party a few delegates from England, where every day is Ali Soles' Day; and a few sausage-surfeited Teutons; and some Gauls, wearied and worn by the deadly pould routine of their daily life—and a scattering representation from all the other countries over there.

In especial I would direct the Englishman's attention to the broiled normano of

man's attention to the broiled pompano of New Orleans; the kirgfish fillet of New York; the sand-dab of Los Angeles; the Boston scrod of the Massachusetts coast; and that noblest of all pan fish-the fried crappie of Southern Indiana. To these and to many another delectable fishling would I introduce the poor fellow; and to him and his fellows I fain would offer a dozen apiece of Smith Island oysters on the half shell.

And I would take all of them to New

England for baked beans and brown bread and codfish balls; but on the way we would visit the shores of Long Island for a kind of soft clam which first is steamed and then is esteemed. At Portsmouth, New Hampshire, they should have a live broiled lobster measuring thirty inches from tip to tip and fresh caught out of the Piscataqua River.

Vermont should come to them in hospitality and in pity, offering them buckwheat cakes and maple sirup. But Rhode Island would bring a genuine Yankee blueberry pie and directions for the proper consumpfork, you raise a crusty, dripping wedge of blueberry pie in your hand to your mouth, and you take a first bite, which instantly changes the ground-floor plan of that pie from a triangle to a crescent; then you take a second bite, and then you lick your fingers-and there isn't any

# Doesn't Your Mouth Water?

Down in Kentucky I should engage Mandy Berry, colored, to fry for them some spring chickens and make for them a few

pones of real cornbread.
In Creole Louisiana they should sample crawfish gumbo; and in Georgia they should have 'possum baked with sweet potatoes; and in Tidewater Maryland,

terrapin and canvasback; and in Illinois, young gray squirrels on toast; and in South Carolina, boiled rice with black-eyed peas; and in Colorado, cantaloupes; and in Kansas, young sweet corn; and in Virginia, country hams, not cured with chemicals but with hickory smoke and loving hands; and in Tennessee, jowl and

And elsewhere they should have their whacking fill of prairie hen and sucking pig and barbecued shote, and sure-enough beefsteak, and goobers hot from the parching box; and scrapple, and yams roasted in hot wood-ashes; and hot biscuit and Parker House rolls—and the thousand and one other good things that may be found in this our country, and which are

distinctively and uniquely of this country. Finally I would bring them back by way of Richmond, and there I would give them each an eggnog compounded with fresh cream and made according to a recipe older than the Revolution. If I had my way about it no living creature should be denied the right to bury his face in a brimming tumbler of that eggnog—except a man with a drooping red mustache.

By the time these gorged and converted pilgrims touched the Eastern seaboard again any one of them, if he caught fire, would burn for about four days with a clear blue flame, and many valuable packing-house by-products could be gleaned from his ruins. It would bind us all, foreigner and native alike, in closer ties of love and confidence, and it would turn the tide of travel westward from Europe, instead of eastward from America.

Let's do it sometime-and appoint me conductor of the expedition!

# my son

(Continued from Page 19)

used his head more than a good many farmers. Here is where cleanliness would count more than anywhere else. The idea was to have a coment floor drained by a gutter, and then to arrange the cows in such a manner that they should be kept lined up on this gutter. The courtest themselves were on this gutter. The gutters themselves were made from six inches deep on the shallow end to eight inches on the deeper end. The stalls were so arranged as to fit each cow and keep her in place. They were from three feet to three and a half feet wide and were divided by a swinging partition. This was hinged in the center. The milkman, when going in to milk, unfastened the fastening and swung milk, unfastened the fastening and swung it back against the cow behind him. This gave him plenty of room, and when swung in place again kept the cow within bounds. A chain hitched behind the cow just over the edge of the drop kept her from backing out of place.

The manger was made adjustable to the length of the cow. A continuous cement manger ran the length of the stall. An adjustable piece of lattice work hung from the center of this, and could be moved back and forth and so adapted to the length of each cow. The object of the whole arrangement, or has been send a warmen to be the continuous and the continuous transfer. ment, as has been said, was merely to keep the cows lined up on the gutter, which left the cows lined up on the gutter, which left the stall proper sweet and clean. It doesn't seem possible that so obvious a device should have awaited for years the intelli-gent thought of one man, but the situation is even worse than that. Though the device is so obvious and though it has been pub-lished to the world, it is not in general use even today. Go through the stables of this country and you'll find even now the fixed stall, often undivided, where the cow wallows all day and sleeps in her own filth during the all day and sleeps in her own filth during the night. Ninety per cent of them are as they always were and will undoubtedly remain unchanged for the next hundred years. This device is simple, does not require a large investment, saves labor, saves the cow, saves the milk, saves the barn—and yet it

remains unused.

Hadley looked it over after it was done.

"It's purty enough," he said, "but what's the use of it?"

I explained in detail the use of it.

"Mebbe you're right," he said; "but
we've got along without them things a good
many years, and I reckon most of us can a
few years longer."

few years longer."

"Maybe you can," I said; "but it's only a matter of a few years when the world is going to get along without you."

He accepted that statement philosophically.

"I reckon so," he said. Windows were put in at the rear of the stall and one in each end, letting in for the first time since the barn was built a flood of sunlight, the cleanest, sweetest God-given agent the farmer possesses. It warms, it quickens, it strengthens, it cleanses. No other toilers on the earth are given with such liberal prodigality such an asset as farmers are given in sunlight. And yet they fall to use it. They shut it out of their soil; they shut it away from their orchards; they shut it out of their stables: they shut they shut it out of their stables; they shut it out of their homes and their lives. It is worth millions of fine gold to them, and yet they have not learned how to use it. With sunlight and water a world was created;

with sunlight and water it is maintained.

Dick says I'd better scratch out all this
or people will think I'm trying to be a poet.

The sunlight makes even the poets.

WITH a stable clean to start with and VV so built as to be easily kept clean, the boy was ready for his cattle. The remod-eling had cost him a trifle over nine hundred

Dr. Barney watched the remodeling of the barn with as much interest as though he were doing it himself. Dick had sub-mitted to him the plans and he had heartily

endorsed them. His advice from the first had been to keep the plant simple. "There's no need of making it either complicated or expensive," he said. "The minute you make it complex it is all the harder to keep clean, and every added item of expense must be added to the cost of the milk. In talking with farmers round here I've found the chief worry of those who are ready to make a change is the fear that it's going to cost a lot. When they're only get-ting four cents a quart for their milk I don't much blame them, though the added

expense of producing clean milk isn't half

what they think it is.

Four cents a quart delivered at the sta-tion was what the few farmers who did raise milk in Brewster received. Those who sold to the creamery when it was run by out-siders received about the same. This same milk was sold by the contractors for eight and nine cents a quart, which meant that the producer received on an average of less than fifty per cent of the amount paid by the public for the milk. There is something wrong here. And the farmer pleading for a fairer share is the one blamed by the pub-lic for the increased cost of living. He risks his capital, works from twelve to fourteen hours a day-and does it cheerfully if he's a live farmer-and receives only about thirty-five per cent of the price paid by the public for his product. If, to keep him in the business, the contractor does pay him a cent more for an eight and a half quart can, the contractor turns round and raises the price to the consumer a cent a quart, which is eight and a half cents a can. The growl which follows is leveled at the farmer. When the boy was ready to buy his small herd he was confronted with the debatable

question of whether it was better for him to invest in fancy stock or in grade cows—that is, cows without a registered pedigree. He decided on the latter, and for the following reasons: The initial investment would be smaller, which would cut down the initial cost of his milk to the consumer; grade cows raised locally would be much less of an experiment for an inexperienced dairy-man than high-bred cows requiring more ex-pert care; and, finally, it seemed both more interesting and profitable to raise the standard of his own cows by careful breeding.

This matter of breeding is one of the most fundamental factors of successful dairying, and yet it is one of the most neglected next to the care of the cattle themselves. The pure-bred dairy bull is often the keystone to the whole business. The results are so manifest that there isn't even a chance for argument about it. They are as patent as the result of irrigating desert land or proper fertilization of barren lands. And the principle is much the same. Yet a recent inspection of over a hundred farms in one New England state revealed the fact that only twenty-seven per cent of farmers raising dairy cows used pure-bred bulls. In many cases beef breeds were being placed at the head of herds used for nothing but the production of market milk. That's like trying to raise trotting horses by mating them with draft stallions, as the man who made the report said.

Dick bought four Holsteins, three Ayrshires and five Jerseys. Barney preferred milk from a mixed herd. He bought them on their records of being good producers, although that information was somewhat vague, as no records had been kept. He paid an average of seventy-five dollars a cow for them, on the condition that every cow should be submitted to the tuberculin test before being paid for.

The tuberculin test consists simply of injecting into the cow a preparation derived from tubercle-bacilli. If the cow is at all tuberculous she responds by a rapid rise of temperature; if she is sound no effect at all follows and the injected bacilli are quickly eliminated. As a result of this test one of the cows was instantly discarded by Barney. The reaction was slight and the cow looked to be in ideal physical condition. The owner protested that the test wasn't fair and that

the cow in question was one of the best producers in his herd.

"It ain't right," the owner objected.

"What isn't right?" demanded Barney.

"To give a cow like that a bad name. It will get round town that you said the cow

was sick."
"You bet it will get round town," said
Barney. "If that cow isn't buried within a
week she'll be the best-advertised cow in this neighborhood. Talk about rights-what right have you to shift your misfortune to the shoulders of little children? Take your medicine like a man and kill the beast. It's a kindness to her, to the rest of your herd and to the whole town. You'd be the first to kick if the fish man, to save his

purse, sold you his tainted fish, wouldn't you?"

"That's different," said the man.

"Not a mite. That cow's milk is poi-soned even though you can't smell it. After you've killed her I'll come up here and

"Branded with the Devil, but fit for the Gods."

prove it to you, or I'll pay for the cow myself if I can't."
"I'll take ye up on that," said the man

without hesitation.

The evidence Barney showed that man wasn't pretty to look at, but it was convincing. He insisted on the spot that Barney submit the rest of his herd to the test, and though Barney was not a veterinarian he knew how to do it and did it. As a result that farmer received some advertising, but it was different from the kind of advertising he would have received if he had kept the cow. That cow, dead, paid him five times over. Barney was always as eager to spread the news of decent conditions as he was of

The fact that Barney took this work on his own shoulders gave the other doctors in town an opportunity to dub him a "Vet." It reached my ears that one of them de-clared that such work wasn't dignified and lowered the standard of the profession. But Barney never was much concerned with his dignity. He'd do his best for a sick horse or dog or cow as quick as he would for a sick person. Such gossip only made him length

"Lord bless you!" he said to me. "I've cured a whole neighborhood by curing a cow and I've cured a whole family by curing the dog."

Whenever he was called in to treat one of

Whenever he was called in to treat one of the family he regularly inspected the barn and all the livestock.

"If there's anything sick round the place, even the cat, I want to know it," he used to tell folks.

When Dick finally drove home his herd and had them installed in his barn he was

the proudest farmer in Brewster.
"I don't know whether there's going to
be any money in them or not," he said to
me, "but after all I've read and after all I've seen it's worth the price just to have those clean beasts in clean quarters. It's going to be worth something to use that milk myself and to know that others are using it."

I liked to hear the boy talk like that. He was in no position to conduct his enterprise as a purely philanthropic enterprise, and had no intention of so doing. He was entitled to a fair return on his investment and I had no doubt but what he would receive it; but after all if a business man gets from his business nothing but a money

return he doesn't get much.

Why, even in the contracting business, which is a matter of bricks and stones and not of flesh and blood, I got a tremendous amount of satisfaction in helping a man build well. And though sometimes I wasn't allowed to do the work as well as I would have liked, I always refused to do absolutely poor work, no matter what the profit in it was for me or how little the responsibility was my own. I lost one or two jobs, but even from a money point of view that policy paid me and paid the men who used me. A Carleton job stood for something and still stands for something. When all is said a man today can make himself felt back of his business, even back of a steam back of his business, even back of a steam shovel. And that counts as much for the man as his business.

(TO BE CONTINUED)

### The Lateat on Wheela

TWO-WHEEL car that balances itself A TWO-WHEEL car that balances used exactly the same as a bicycle rider does—by turning the front wheel slightly toward the side on which a fall is threatened—has been built by a British scientist. It would be possible on this principle to make a mechanical toy bicycle rider that could ride in a straight path and keep its balance as easily as a living rider, and by the same method.

Power is applied to the back wheel of the car. Above the front wheel is placed a gyroscope. If the car starts to fall over to one side the force of the gyroscope pulls the to use the analogy of a bicycle handlebars and the front wheel turns just enough to

In actual operation such safety motions are very slight, as they are in bicycle riding after the rider has learned the knack of bal-ancing. Two-wheeled automobiles have been suggested by this new gyro car, though the first example is a railroad model.

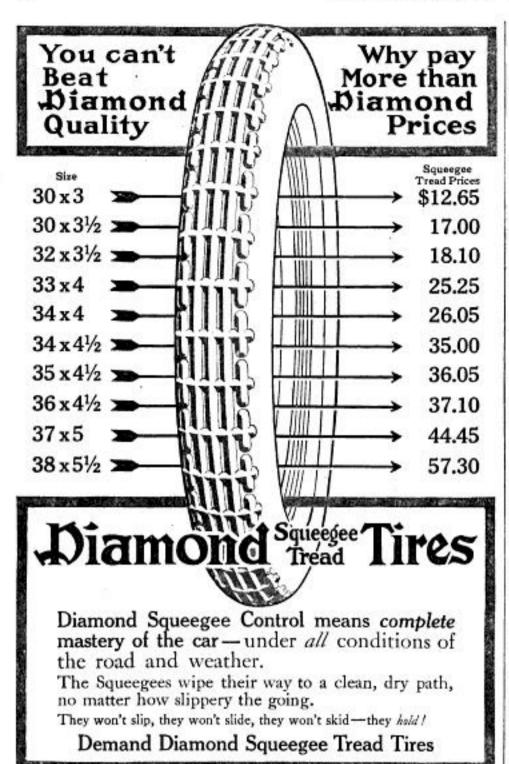

# When Money

THE live man does not content himself with wondering where it's coming from. He Wants He looks around for that spare-time occupation which will yield him the largest return.

Thousands of young men — and young women — are securing the extra money they need by acting as the representatives of The Saturday Evening Post, The Ladies' Home Journal and The Country Gentleman in their off-hours. THE CURTIS PUBLISHING COMPANY, PHILADELPHIA, PENNSYLVANIA

# THE STREET OF SEVEN STARS

(Continued from Page 25)

"Sh! They do not come for rooms. They inquire for the Herr Doktor Byrne and the others!"
"No!"

"Of a certainty."

"Then let me to the door!"
"A moment. She tells them everything

"A moment. She tells them everything and more. She says—how she is wicked, Katrina! She says the Fräulein Harmony was not good, that she sent them all away. Here, take the door!"

Thus it happened that Doctor Jennings and Mrs. Boyer, having shaken off the dust of a pension that had once harbored three malefactors, and having retired Peter and Anna and Harmony into the limbo of and Anna and Harmony into the limbo of and Anna and Harmony into the limbo of things best forgotten or ignored, found themselves, at the corner, confronted by a slovenly girl in heelless slippers and wearing a knitted shawl over her head.

"The Frau Schwarz is wrong," cried Olga passionately in Vienna dialect. "They were good, all of them!"

"What in the world ——"

"And, please, tell me where lives the Frāulein Harmony. The Herr Georgiev eats not nor sleeps that he cannot find her."

Doctor Jennings was puzzled.

Doctor Jennings was puzzled.

"She wishes to know where the girl lives," she interpreted to Mrs. Boyer. "A

man wishes to know."
"Naturally!" said Mrs. Boyer. "Well,
don't tell her."

Olga gathered from the tone rather than the words that she was not to be told. She burst into a despairing appeal in which the Herr Georgiev, Peter, a necktie Peter had forgotten, open windows and hot water were inextricably confused. Doctor Jennings listened, then waved her back with a

"She says," she interpreted as they walked on, "that Doctor Peter—by which I suppose she means Doctor Byrne—has left a necktie, and that she'll be in hot water if she does not return it."

Mrs. Boyer sniffed.
"In love with him, probably, like the others!" she said.

PETER went to Semmering the next morning, tiptoeing out very early and without breakfast. He went in to cover Jimmy, lying diagonally across his small bed amid a riot of tossed blankets. The communicating door into Harmony's room was open. Peter kept his eyes carefully from it, but his ears were less under con-trol. He could hear her soft breathing. There were days coming when Peter would stand where he stood then and listen, and

find only silence.

He tore himself away at last, closing the outer door carefully behind him and lighting a match to find his way down the staircase. The portier was not awake. Peter had to rouse him, and to stand by while he donned the trousers which he deemed necessary to the dignity of his position before he opened the street door.

before he opened the street door.

Reluctant as he had been to go, the change was good for Peter. The dawn grew rosy, promised sunshine, fulfilled its promise. The hurrying crowds at the depot interested him: he enjoyed his coffee, taken from a bare table in the station. The horizontal morning sunlight, shining in through marvelously clean windows, warmed the marble of the floor, made black shadows beside the heaps of hand luggage everywhere, turned into gold the hair of a toddling baby venturing on a tour of distoddling baby venturing on a tour of dis-covery. The same morning light, alas! revealed to Peter a break across the toe of one of his shoes. Peter sighed, then smiled. The baby was catching at the bits of dust that floated in the sunshine.

Suddenly a great wave of happiness overvhelmed Peter. born of nothing, but for the instant that it lasted Peter was a king. Everything was well. The world was his oyster. Life was his, to make it what he would—youth and hope and joy. Under the bestific in-fluence he expanded, grew, almost shone. Youth and hope and joy—that cometh in

the morning.

the morning.

The ecstasy passed away, but without reaction. Peter no longer shone; he still glowed. He picked up the golden-haired baby and hugged it. He hunted out a beggar he had passed and gave him five hellers. He helped a suspicious old lady with an oilcloth-covered bundle; he called the guard on the train "son" and forced a grin out of that dignitary.

Peter traveled third class, which was quite comfortable, and no bother about "Nicht Rauchen" signs. His unreasonable cheerful-ness persisted as far as Gloggnitz. There, with the increasing ruggedness of the scenery and his first view of the Raxalpe, came recollection of the urgency of Stewart's last message, of Marie Jedlicka, of the sordic little tragedy that awaited him at the end

of his journey.

Peter sobered. Life was rather a messafter all, he reflected. Love was a blessing, but it was also a curse. After that he sat back in his corner and let the mountain scenery take care of itself, while he recalled scenery take care of itself, while he recalled the look he had surprised once or twice in Marie's eyes when she looked at Stewart It was sad, pitiful. Marie was a clever lit tle thing. If only she'd had a chance!— Why wasn't he rich enough to help the one who needed help. Marie could start again in America, with no one the wiser, and make

her way.

"Smart as the devil, these Austria:
girls!" Peter reflected. "Poor little gutter
snipe!"

The weather was beautiful. The sice

of the previous day in Vienna had been deep snowfall on the mountains. Th Schwarza was frozen, the castle of Liechter stein was gray against a white world. .
little pilgrimage church far below seeme snowed in against the faithful. The third class compartment filled with noisy skiin parties. The old woman opened her of alarh hundle and telephone for the class compared to the control of the control of the class of the cl cloth bundle, and taking a cat out of a bo

inside fed it a sausage. Up and up, past the Weinzettelwand an the Station Breitenstein, across the highe viaduct, the Kalte Rinne, and so at last

The glow had died at last for Peter. It did not like his errand, was very vaguindeed, as to just what that errand might. He was stiff and rather cold. Also I thought the cat might stiffe in the oldoor but the old woman too clearly distruste him to make it possible to interfere. An how he did not know the German f either cat or oilcloth.

He had wired Stewart; but the latt was not at the station. This made hi vaguely uneasy, he hardly knew why. I did not know Stewart well enough to knowhether he was punctilious in such matter or not: as a matter of fact he hardly know him at all. It was because he had appeal to him that Poter was there if heir or to him that Peter was there, it being on necessary to Peter to be needed, and he w anywhere.

The Pension Waldheim was well up t mountains. He shouldered his valise a started up—first long flights of steps throu the pines, then a steep road. Peter climb easily. Here and there he met grou coming down, men that he thought proceed a sweaters. He watched for Marie, there was no sign of her.

He was half an hour, perhaps, in reaching the Waldheim. As he turned in at legate he noticed a sledge, with a dose people following it, coming toward hin It was a singularly silent party. Pet with his hand on the doorknocker, watch its approach with some curiosity.

It stopped, and the men who had be following closed up round it. Even the Peter did not understand. He did not derstand until he saw Stewart, limp a The Pension Waldheim was well up t

derstand until he saw Stewart, limp a unconscious, lifted out of the straw a carried toward him.

Suicide may be moral cowardice; bu requires physical bravery. And Marie not brave. The balcony had attracted 1 it opened possibilities of escape, of unce ing regret and repentance for Stewart publicity that would man an account publicity that would mean an end to situation. But every inch of her soul craven at the thought. She crept out of and looked down, and as often drew be shuddering. To fall down, down on to tree tops, to be dropped from branch branch, a broken thing, and perhaps e not yet dead—that was the unthink: thing, to live for a time and suffer!

Stewart was not ignorant of all went on in her mind. She had threate him with the balcony, just as, earlier in winter, it had been a window-ledge which she had frightened him. But t was this difference, whereas before he drawn her back from the window slapped her into sanity, now he let alone. At the end of one of their qua-

leurance of the law excuses no man

she had flung out on to the balcony, and then had watched him through the opening

Stewart spent every daylight hour at the hotel, or walking over the mountain roads, seldom alone with Anita, but always near her. He left Marie sulking or sewing, as the case might be. He returned in the evening to find her still sulking, still sewing.

But Marie did not sulk all day, or sew. She too was out, never far from Stewart, always watching. Many times she escaped discovery only by a miracle, as when she stooped behind an oxcart, pretending to tie her shoe, or once when they all met face to face and although she lowered her will to face, and although she lowered her veil Stewart must have known her instantly had he not been so intent on helping Anita

over a slippery gutter.

She planned a dozen forms of revenge and found them impossible of execution. Stewart himself was frightfully unhappy. For the first time in his life he was really in love, with all the humility of the condi-tion. There were days when he would not touch Anita's hand, when he hardly spoke, when the girl herself would have been outraged at his conduct had she not now and then caught him watching her, seen the wretchedness in his eyes.

The form of Marie's revenge was unpre-meditated after all. The light mountain snow was augmented by a storm; roads were plowed through early in the morning, leaving great banks on either side. Sleigh-bells were everywhere. Coasting parties made the steep roads a menace to the pedestrian; every up-climbing sleigh carried behind it a string of sleds, going back to the

hind it a string of sleds, going back to the starting point.

Below the hotel was the Serpentine Coast, a long and dangerous course, full of high-banked curves, of sudden descents, of long straightaway dashes through the woodland. Two miles, perhaps three, it wound its tortuous way down the mountain. Up by the high road to the crest again, only a mile or less. Thus it happened that the track was always clear, except for speeding sleds. No coasters, dragging sleds back up the slide, interfered. back up the slide, interfered.

The track was crowded. Every minute a sled set out, sped down the straighta-way, dipped, turned, disappeared. A dozen would be lined up, waiting for the interval and the signal. And here, watching from the porch of the church, in the very shadow of the saints, Marie found her revenge. Stewart had given her a little wrist

watch. Stewart and Anita were twelfth in line. By the watch, then, twelve minutes down the mountainside, straight down through the trees to a curve that Marie knew well, a bad curve, only to be taken by running well up on the snowbank. Beyond the snowbank there was a drop. fifteen feet, perhaps more, into the yard of a Russian villa. Stewart and Anita were twelfth; a man in a green stocking cap was eleventh. The hillside was steep. Marie negotiated it by running from tree to tree, catching herself, steadying for a second, then down again. Once she fell and rolled a little distance. There was no time to think; perhaps had she thought she would have weakened. She had no real courage, only desperation.

As she reached the track the man in the green stocking cap was in sight. A minute and a half she had then, not more. She looked about her hastily. A stone might serve her purpose, almost anything that would throw the sled out of its course. She saw a tree branch just above the track and dragged at it frantically. Some one was shouting at her from an upper window of the Russian villa. She did not hear. Stewart and Anita had made the curve above and were coming down at frantic speed. Marie stood, her back to the oncoming rush of the sled, swaying slightly. When she could hear the singing of the runners she stooped and

slid the tree branch out across the track. She had acted almost by instinct, but with devilish skill. The sled swung to one side up the snowbank, and launched itself into the air. Marie heard the thud and the silence that followed it. Then she turned and scuttled like a hunted thing up the mountainside.

Peter put in a bad day. Marie was not about, could not be located. Stewart, suffering from concussion, lay insensible all day and all of the night. Peter could find no fracture, but felt it wise to get another opinion. In the afternoon he sent for a doctor from the Kurhaus and learned for the first time that Anita had also been hurt-a broken arm.

#### "I'm proud of my home and neighborhood"

People who are exceedingly particular about their home decorating are amply repaid in their great enjoyment of home. There's justifiable pride and satisfaction in the home decorated inside and out with "High Standard" paints, varnishes and enamels, because you know they are the finest quality.

is scientifically made of selected materials-proportioned as carefully as a druggist's prescription. It withstands the weather, holds its color, outlasts other paints, and leaves a good surface for repainting.

is the most beautiful and artistic of finishes for walls and ceilings. The dull, flat-tone colors are wonderfully rich and delicate. It is fadeless, washable and not easily scratched or marred. Ideal for stenciling.

#### The Lowe Brothers Company

485 E. Third Street, Dayton, Ohio

Jersey City Chicago Kansas City Minneapolis

LOWE BROTHERS, Ltd., Toronto, Canada

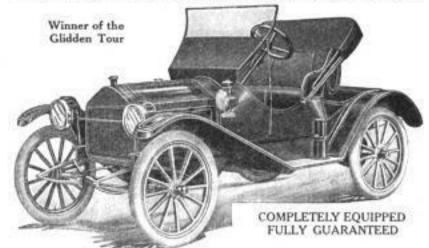

The METZ "22" everything you want in a strictly first class car of the

roadster type — stylish, speedy and wonderfully economical in operation. It is a thoroughly practical car, built to give enduring satisfaction. It saves you money when you buy it, and every hour you

run it. It won the last Glidden Tour, competing with cars that cost from five to ten times as much - the

three cars comprising the METZ team being the only cars that held perfect scores, without time extension or additional allowance of any kind, for the entire eight days of the contest.

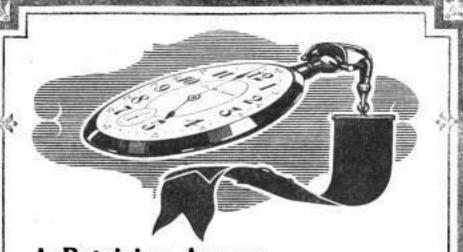

The gearless transmission of the METZ "22" is one of the big features of its construction. It has no clutch to slip, no gears to strip — thus doing away entirely with gear troubles. Its equipment includes four-cylinder water-cooled motor, Bosch magneto, fullelliptic springs, extension top, wind shield, artillery wheels, best quality

Goodrich clincher tires, 5 lamps, horn, tools, etc. It travels 28 to 32 miles on one gallon of gasoline, makes 5 to 50 miles per hour on the high speed, and is a splendid hill climber.

New illustrated Catalog "E" now ready. Representatives wanted in every city and town. Write for special terms.

METZ COMPANY, WALTHAM, MASS.

### A Patrician Among Fine Watches

Emerson once said, "Every man passes his life in the search of a perfect friend."

You can consider your search ended, once you become possessed of a South Bend Chesterfield Watch. For no friend will mean more to you, no friend have a firmer hold on your affections than this handsome trustworthy watch.

The Chesterfield is a true aristocrat in appearance; a slim, thin-model watch, the very feel of which gives you joy.

And as its reliability demonstrates itself through the passing years, your pride in it develops into real affec-tion. For in the Chesterfield you obtain not only princely appearance but what is rarely found in thin-model watches, utter time-exactness. The production of Chesterfield Watches is limited. We do not make them hastily, but we make them well. We recommend the Chesterfield to you who desire the pride and pleasure of knowing that the watch you carry is the best of its kind. The prices range from \$100 down.

"Not serious," said the Kurhaus man. "She is brave, very brave, the young woman.
I believe they are engaged?"

Peter said he did not know and thought very hard. Where was Marie? Not gone surely. Here about him lay all her belong-

ings, even her purse.

Toward evening Stewart showed some improvement. He was not conscious, but he swallowed better and began to toss about. Peter, who had had a long day and very little sleep the night before, began to look jaded. He would have sent for a nurse from the Kurhaus, but he doubted Stewart's

ability to stand any extra financial strain, and Peter could not help any.

The time for supper passed, and no Marie. The landlady sent up a tray to Peter, stewed meat and potatoes, a salad, coffee. Peter sat in a corner with his back to Stewart and ate ravenously. He had had

nothing since the morning's coffee. After that he sat down again by the bed to watch. There was little to do but watch. The meal had made him drowsy. He thought longingly of his pipe. Perhaps if he got some fresh air and a smoke! He

remembered the balcony.

It was there on the balcony that he found Marie, a cowering thing that pushed his hands away when he would have caught her and broke into passionate crying. "I cannot! I cannot!" "Cannot what?" demanded Peter gently.

watching her. So near was the balcony

"Throw myself over. I've tried, Peter. I cannot!"

"I should think not!" said Peter sternly.

"Just now when we need you too! Come in and don't be a foolish child."

But Marie would not go in. She held back, clinging tight to Peter's big hand, moaning out in the dialect of the people that always confused him her story of the day, of what she had done, of watching Stewart brought back, of stealing into the house and through an adjacent room to the balcony, of her desperation and her cowardice.

She was numb with cold, exhaustion and hunger, quite childish, helpless. Peter stood out on the balcony with his arm round her, while the night wind beat about them, and pondered what was best to do. He thought she might come in and care for Stewart at least until he was conscious. He could

get her some supper.

"How can I?" she asked. "I was seen.
They are searching for me now. Oh,
Peter! Peter!"

"Who is searching for you? Who saw

you?"
"The people in the Russian villa."

"Did they see your face?"
"I wore a veil. I think not."

"Then come in and change your clothes.
There is a train down at midnight, You can take it."
"I have no money."
This raised a delicate question. Marie

absolutely refused to take Stewart's money. She had almost none of her own. And there were other complications—where was she to go? The family of the injured girl did not suspect her since they did not know of her existence. She might get away without trouble. But after that, what? Peter pondered this on the balcony, while Marie in the bedroom was changing

her clothing, soaked with a day in the snow. He came to the inevitable decision, the decision he knew at the beginning that he

was going to make.

"If I could only put it up to Harmony first!" he reflected. "But she will understand when I tell her. She always understands."

Standing there on the little balcony, with tragedy the thickness of a pine board beyond him, Peter experienced a bit of the glow of the morning, as of one who stum-bling along in a dark place puts a hand on a friend.

He went into the room. Stewart was lying very still and breathing easily. On her knees beside the bed knelt Marie. At Peter's step she rose and faced him. "I am leaving him, Peter, for always."
"Good!" said Peter heartily. "Better

for you and better for him." Marie drew a long breath. "The night train," she said listlessly, "is an express.

I had forgotten. It is double fare."
"What of that, little sister?" said Peter. "What is a double fare when it means life, liberty and the pursuit of happiness? And there will be happiness, little sister." He put his hand in his pocket.

The World's

#### The Other Cheek

another door—then the scurrying of feet down cold stone steps that awakened echoes

in the deserted street.

The cold air stung her flaming cheek; a policeman glanced after her; a drunken sailor staggered out of a black doorway, and her trembling limbs sped faster; a labyrinth of citystreets and rows of blankfaced houses; an occasional pedestrian, who glanced after her because she wheezed and ever so often gathered her strength and broke into a run; then a close, ill-smelling apartment house, with a tipsy gas light in the hall, and a dull hower door that remained closed to her brown door that remained closed to her knocks and rings. The sobs were rising in her throat and the trembling in her limbs shook her as with ague.

A knock that was more of a pound and a frenzied rattling of the knob! Finally from the inside of the door a thump-thump down

a long hallway—and the door creaked open cautiously, suspiciously!

In its frame a pale figure in the rumpled clothes of one always sitting down, and hunched on a pair of silver-mounted mahogany crutches that slanted from her sides

like props.
"Goldie! Little Goldie!" "Oh, Addie! Addie!"

Youth has rebound like a rubber ball. Batted up against the back fence, she bounces back into the heart of a rosebush or into the carefully weeded, radishless radish bed of the kitchen garden.

Mrs. Trimp rose from the couch-bed-davenport of the Bopp sitting-dining-sleeping room, with something of the old light burning in her eyes and a full-lipped mouth to which clung the memory of smiles. Even Psyche, abandoned by Love, smiled a specious smile.

Eddie Bopp reached out a protective arm and drew Goldie by the sleeve of her shirt-waist down to the couch-bed-davenport

again.
"Take it easy there, Goldie. Don't get yourself all excited again.

'But it's just like you say, Eddie—I got the law on my side. I got him on the grounds of cruelty if—if I show nothin' but—but this cheek."

"Sure you have, Goldie; but you just sit quiet. Addie, come in here and make Goldie behave her little self."

"I'm all right, Eddie. Gee! With Addie treating me like I was a queen in a gilt crown, and you skidding round me like a tire, I feel like cream!"

Eddie regarded her with eyes that were

soft as rose-colored lamps at dusk.
"You poor little kid!"
Addie hobbled in from the kitchen.

"I got something you'll like, Goldie. It's hot and good for you too." God alone knew the secret of Addie. He had fashioned her in clay and water, even as you and I-from the same earthy compound from which spring ward politicians and magic-throated divas; editors and plumbers; poet laureates and Polish immi-

grants; propagandists and pieceworkers; single-taxers and suffragettes. He fashioned her in clay; and it was as if she came from under the teeth of a street-car fender-broken, but remolded in alabaster, and with the white light of her staunch spirit shining through—Addie, whose side, up as high as her ribs, was a flaming furnace and whose smile was sunshine

on dew.
"You wouldn't eat no supper; so I made
you some chicken broth, Goldie. You remember when we was studying shorthand at night school, how we used to send Jimmie over to White's lunchroom for chickenette broth and a slab of milk chocolate?

"Do I! Gee! You were the greatest kid, Addie!"

Eat, Goldie—gowan. "I ain't hungry-honest!"

"Quit standing over her, Eddie; you make her nervous. Let me feed you, Goldie."

"Gee! Ain't you swell to me!" Ready tears sprang to her eyes.
"Like you ain't my old chum, Goldie!

It don't seem so long since we were working in the same office and going to Recreation Pier dances together, does it?"
"Addie! Addie!"

"Do you remember how you and me, and Ed and Charley Snuggs, used to walk up and down Ninth Avenue summer evenings eating ice-cream cones?"

Do I? Oh, Addie, do I!"

"I'm glad we had them ice-cream day Goldie. They're melted, but the flave ain't all gone." Addie's face was large an white and calm-featured, like a Bottice

head.
"You two girls sure was cut-ups! Remember the night Addie first introduced under the call for her and the ca Goldie? You came over to call for her an us three went to the waxworks show of Twenty-Third Street. Lordy, how we co

up!"
"And I started to ask the wax police man if we was allowed to go past the rail! They laughed low in their throats, as they feared to raise an echo in a vale tears. "It's like old times for me to tears. "It's like old times for me to a staying all night with you again, Addi It's been so long! He—he used to ge mad like anything if I wanted to see any the old crowd. He knew they didn't kno any good of him. He was always for the sporty, all-night bunch."

"Poor kid!"

"Don't get her to talking about it agai Eddie; it gets her all excited."

"He could have turned me against n own mother, I was that crazy over him. "That," said Addie softly, "was lov And only women can love like that; as women who do love like that are cursed and blessed, while it lasts."

"I'm out of it now, Addis. You won never send me back to him-you won

ever?"
"There now, dearle, you're getti
worked up again; ain't you right he

worked up again, and you again as safe with us?"

"You can nave mine. 1—1 don't need them any more."

"Good-by, Ad—leave the dishes till we come back. I can do 'em swell myself after you two girls have gone to bed."

"Yes. I'll be waiting, Goldie; and we'll talk in bed like old times."

"Yes, yes!" It was as if Addie's frail hands were gripping Goldie's heart and closuing her speech.

clogging her speech.
"Good-by, children!"
"Good-by."
"S'long!"
The night air met them with a whoop, and tugged and pulled at Goldie's hat.
"Take my arm, Goldie. It's some howler, air't it?"

Their feet clacked on the cold, dry pavement, and passers-by leaned into the wind.
"He was a great one for hating the cold,
Eddie. Gee, how he hated winter!"

"That's why he wears a fur-collared cont and you go freezing along in a cheesecloth jacket, I guess."

"It always kind of got on his chest and

gave him fever."
"What about you? You just shivered along and dassent say anything!"
"And I used to fix him mustard plasters

and hot-water bags half the night. When he wasn't mad or drunk he was just like a kid with the measles! It used to make me

laugh so—he'd ——"
She turned away and finished her sentence in the teeth of the wind; but Eddie's arm tightened on hers until she could feel each distinct finger.

'I ain't scared a bit, Eddie."

"For what, I'd like to know! Ain't I

"For what, I'd like to know! Ain't I going to be waiting right here across the street?"
"See! That's the room over there—the dark one, with the shade halfway up. Gee, how I hate it!"
"I'll be waiting right here in front of Joe's place, Goldie. If you need me just shoot the shade all the way up."

shoot the shade all the way up.
"I won't need you."

"Well, then, light the gas, pull the shade all the way down, and that'll mean 'All's well."

"Swell!" she said. "Down comes the shade, and 'All's well!"

"Good!"

They smiled and their breaths clouded between them; and down through the highwalled street the wind shot javelin-like and stung red into their cheeks, and in Eddie Bopp's ears and round his heart the blood buzzed.

Goldie crossed the street and went up the steps lightly, her feet grating the brown stone like fine-grained sandpaper. When she unlocked the front door the cavelike mustiness and the cold smell of unsunned hallways, and the conglomerate of food smells from below, met her at the thresh-old. Memories like needle-tongued insects stung her.

The first-floor front she opened slowly, pausing after every creak of the door; and the gas she fumbled because her hand trembled, and the match burned close to her fingers before she found the tip.

She turned up the flame until it sang, and glanced about her fearfully, with one hand on her bruised cheek and her underlip caught in by her teeth.

Mr. Trimp's room was as expressive as a lady's glove still warm from her hand. He might have slipped out of it and let it lie

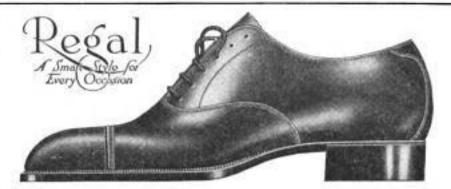

crumpled, but in his own image.

The fumes of bay rum and stale beer struggled for supremacy. The center table, with a sickening litter of empty bottles and dead ashes, was dreary as cold mutton in its grease.

A red satin slipper—an unhygienic-drinking goblet, which had leaked and slopped over full many a paper novel—lay on the floor, with its red run into many pinks and its rosette limp as a wad of paper. Goldie picked her careful way round it. Fear and nausea and sickness at the heart made her dizzy.

The dresser, with its wavy mirror, was

strewn with her husband's neckties; an uncorked bottle of bay rum gave out its last faint fumes.

HIS season, "the simpler, the smarter" is the decree of Fash-L ion. The Oxford, shown above, with the plain-stitched tip invites attention by seeming to avoid it and has the supreme "smartness" of extreme plainness.

#### "ARLINGTON" Corded-Tip Oxford-\$4.50

Russet Calf; semi-slender, receding toe; plain stitched toe-cap (no perforations) with raised or "corded" effect between rows of tip stitching; broad shank; solidly planted heel; invisible eyelets; English cord laces; back seam locked with an "anchor stay"; expressly shaped and steadied to clasp the ankle and hug the heel. Also available in Black Calf.

---- Pocket Watch

## MMMMMM Automobile Timepiece

Let these lines represent the difference in vibration to which the house clock, the pocket watch, and the automobile timepiece are subjected. No mere houseclock differently cased and named, is strong enough to meet strenuous automobile conditions.

Waltham Automobile Timepieces are the first ever manufactured exclusively for motor-cars. Their strength and resistance to excessive temperatures and vibrations are absolutely unique.

Here at last is a timepiece in appearance and service worthy of cars of the highest grade.

Waltham Watch Company, Waltham, Mass.

Manufacturers of the famous Waltham "Riverside" Watches

# Waltham Automobile **Timepieces**

### -won't hurt VALSPAR

IS your front door bright and cheerful? Or is it like many front doors, sad and dull looking?

The trouble with most front doors is the varnish-ordinary varnish will not stand continued exposure to water and weather. There is one varnish that is really waterproof-Valspar. No amount of rain or snow can turn it white, or cause it to chip off.

Make your front door look like new with Valspar. Stress of weather only serves to keep it bright and clean. Try Valspar on your floors and woodwork, and your furniture.

You can wash it with soap and water-it keeps it immaculate. A leaky radiator, a spilled kettle, an overflowing bathtub, need cause no worry, for water can not injure Valspar.

Valspar is the varnish that water will not turn white.

CAMERON TOBACCO CO. Richmond, Virginia nes and 9th Sts.,

She opened the first long drawer with a quivering intake of breath and pulled out a shirtwaist, another and yet another, and a coarse white petticoat with a large-holed embroidery flounce. Then she dragged a suitcase, which was wavy like the mirror, through the blur of her tears, out from under the bed; and as she quickly threw things in, the door behind her opened, and her heart rose to her throat with the sudden velocity of an express elevator shooting up

velocity of an express elevator shooting up a ten-story shaft.

In the dresser mirror, and without turning her head or gaining her feet, she looked into the eyes of her husband.

"Pussy-cat!" he said, and came toward her with his teeth flashing like Carrara marble in sunlight.

She sprang to her feet and backed against the dresser.

the dresser,
"Don't! Don't you come near me!"
"You don't mean that, Goldie."

She shivered in her scorn.

"Don't you come near me! I came—to get my things."
"Oh!" he said, and tossed his hat on the bed and peeled off his coat. "Help your-

self, kiddo. Go as far as you like."

She fell to tearing at the contents of her drawer without discrimination, cramming them into her suitcase and breathing furiously, like a hare in the torture of the chase. The color sprang out in her cheeks and her eyes took fire.

Her husband threw himself, in his shirtsleeves and waistcoat, across the bed and watched her idly. Only her fumbling movements and the singing of the gas broke the silence. He rose, lowered the flame and lay

down again.

Her little box of poor trinkets spilled its contents as she packed it; her hairbrush fell from her trembling fingers and clattered to the floor.

"Can I help you, Goldie-eyes?"

He coughed rather deep in his chest and she almost brushed his hand as she passed to the clothes wardrobe. He reached out

to the clothes wardrobe. He reached out and caught her wrist.

"Now, Goldie, you ——"

"Don't—don't you touch me! Let go!"
He drew her down to the bed beside him.

"Can't you give a fellow another chance, baby? Can't you?" She tugged for her freedom, but his clasp was tight as steel and tender as love. "Can't you, baby?"

"You!" she said, kicking at the sloppy satin slipper at her feet, as if it were a

satin slipper at her feet, as if it were a loathsome thing that crawled. "I—I don't ever want to see you again, you—you—"
"You drove me to it, pussy; honest you

did!

did!"

"You didn't need no driving. You take to it like a fish to water—nobody can drive you. You just ain't—no—good!"

"You drove me to it. When you quit I just went crazy mad. I kicked the skylight—I tore things wide open. I was that sore for you—honest, baby!"

"I've heard that line of talk before. I ain't forgot the night at Hinkey's! I ain't forgot nothing. You or horses can't hold me here!" She wrenched at her wrists.

"I got a job yesterday, baby. Bill made good. Eighty dollars, honey! Me and Cutty are quits for good. Ain't that something—now ain't it?"

"Let me go!"

"Pussy-cat!"

"Pussy-cat!"

"Let me go, I say!" He coughed and turned on his side toward her.

"You don't mean it."

"I do! I do! Let go! Let go!" She tore herself free and darted to the wardrobe door. He closed his eyes and his lashes lay low on his cheeks.

"Before you go, Goldie, where's the mus-tard plasters? I got a chest on me like an ice-wagon."
"Sure, you have. That's the only time you ever show up before crack of dawn."
"He reached out and touched her wrist.

He reached out and touched her wrist.

m hot, ain't I?" She placed a reluctant hand on his brow.

"Fever?"

"It ain't nothing much. I'll be all right."

"It's just one of your spells. Stay in bed a couple of days and you'll soon be ready for another jamboree!"

'Don't fuss at me, baby."

"They're in the washstand drawer." She threw a shabby cloth skirt over her arm and a pressed-plush coat that was gray at the elbows and frayed at the hem. He reached out for the dangling empty sleeve as she passed.

"You was married in that coat, wasn't you, hon?"

"Yes," she said, and her lips curled like burning paper; "I was married in that coat."
"Goldie-eyes, you know I can't get along without my petsie; you know it. There ain't no one can hold a candle to you, baby!"

Yes, yes! "There ain't! I wish I was feelin' well enough to tell you how sorry, baby-how sorry a fellow like me can get. I just wish

it, baby-baby-She surrendered like a reed to the curve of a scythe and crumpled in a heap beside

the bed.
"You—you always get me!"
He gathered her up and laid her head backward on his shoulder so that her face

was foreshortened and close to his.

"Goldie-eyes," he said, "I'll make it up
to you! I'll make it up to you!" And he
made a motion as though to kiss her where the curls lay on her face—but drew back as

if sickened.
"Good God!" hesaid. "Poorlittlebaby!" Quick as a throb of a heart she turned her

eft cheek, smooth as a lily petal, to his lips.
"It's all right, Harry!" she said in a
voice that was tight. "I'm crazy, I guess;
but, gee, it's great to be crazy!"

"I'll make it up to you, baby. See if I
don't! I'll make it up to you."

She kissed him, and his lips were hot and

She Rissed him, and his hips were not and dry.

"Lemme fix your plaster, dearie; you got one of your colds."

"All right, hon."

"Gee! Lemme straighten up. Say, ain't you a messer, though! Look at this here washstand and those neckties! Ain't you a messer, though, dearie!"

She crammed the ties into a dresser drawer dragged a chair into place, removed.

drawer, dragged a chair into place, removed some things from the washstand drawer, hung her hat and jacket on their peg-and lowered the shade.

#### The Next Car

HEADWAY clocks, to indicate to wait-ing patrons how long it will be before a trolley car will come along, are just begin-ning to come into use abroad. On the clock face are the words: "Next car due to leave here in number of minutes indicated." And a hand points to the proper number on the dial. Such clocks could be placed at waiting sheds along the country trolley line, at the ends of lines, or at any points where many passengers are taken aboard. In one design the pointer stops two min-utes at zero, to allow for any slight deviation from the schedule; and then if the car does not come along after the two minutes the

not come along after the two minutes the pointer moves to a notice that the cars are off schedule. In this system the pointer on schedule. In this system the pointer is set by the conductor of each car as he reaches the clock. If the schedule is half hourly, for instance, the conductor of a passing car sets the hand of the clock at thirty minutes. The clock pointer then moves round the dial so that it will get to zero in thirty minutes. In another design, in actual use in England, the setting of the pointer is done automatically by an electrical arrange. done automatically by an electrical arrangement as the car passes, and the only occasions when any attention must be given the clock are times when the schedule is changed to run cars oftener or less frequently.

In the English system the clock is intended primarily for the attention of the motormen or engineers, to let them know how far distant the car ahead of them is, and thus help them keep the cars evenly spaced; but in actual use its information is

sought by passengers.

#### THE FLOODTIDE OF FORTUNE

(Continued from Page 11)

"Smooth as velvet!" replied Jones.
"There wasn't any work to it hardly—just a pleasure jaunt; a regular junket the whole time. Private car!"
"What!" ejaculated Mrs. Jones.
"That's what I'm telling you. Why, what did you think? Do you suppose the great and only Gann is going to travel like ordinary mortals in just a common, ordinary Pullman? Well, I guess not! I hardly think he would have had the nerve to have invited me if he hadn't been prepared to do invited me if he hadn't been prepared to do the thing in the style to which I had been accustomed."

Jones chuckled at this joke and Mrs.
Jones joined in heartily. The children
went into shouts of laughter, whereat
Jones and Mrs. Jones laughed the more.
"Private car," resumed Jones; "private
cook; private porter; and Gann's own
private valet."
"Was he nice to you?"

Was he nice to you?" asked Mrs. Jones

rather anxiously.

"The valet? Well, yes; considering his position, he unbent quite a little."

"Goose! I mean Mr. Gann."

"Treated me like a prince! He's all right, for all that hang-you-don't-you-dareto-presume way he's got. Several times I suspected him of being human. Yes; it was 'Anything you want touch the button!' And the meals we got on that trip! Whew! Game; fish; steaks three inches thick! Say, I never knew there were such steaksand I ate right at the same table with His

"I should think you did!" said Mrs. Jones with a flash in her pretty dark eyes. "The idea!"

"I didn't know but he'd give me a hand-out on the rear platform," said Jones jocularly. "And I met all manner of mag-

"I'm so glad you got that suit," mur-mured Mrs. Jones. "Then you think he

"I know he did. As I say, there wasn't much work to do—not compared with the office; but once or twice I had to hustle. And things came up—matters of business, where I was able to put him right. You where I was able to put him right. You know I'm a sort of a sponge for soaking up information. Of course Gann is considerable of a graven image, but I think he was surprised; and when we got through one evening he gave a very successful imitation of a smile and said he wasn't missing Pakenham at all."

"Really?"

"Honest! And when we met Gibbons, at Hookerburg, he introduced me quite nicely and began to talk business right away.

away.

"Gibbons raised his eyebrows and sort of looked at me; but Gann said: 'You can talk before Mr. Jones.' You see the confidence with which I am regarded!"

"You could to have said: 'You I am

"You ought to have said: 'Yes, I am paid well to be trusted." "I know that's what I should have said," agreed Jones, smiling: "but I have a foolish streak once in a while and I just kept my head closed. "Papa," said Peter Parkin, "those

puppies ——"
"Parkin!" reproved his mother.
"We stopped at the Gibbons mansion palace in Clydedale. Talk about luxury!
Talk about style!"

"Suppose some day we should be living in luxury!" mused Mrs. Jones. "If Mr. Gann is pleased with you he might give you something better, and then — What a beautiful time you must have had!"
"The darnedest, most uncomfortable."

"The darnedest, most uncomfortable time I ever had in my life!" said Jones. "Here! I want my old coat and slippers-my old slippers. Get off me, you scaramouches Mother, what have you got the cloth laid for? You don't mean to say you're going to feed me! What's for supper?"

I suppose after all the lovely things you've been -

"What's for supper?" reiterated Jones,

embracing her.
"It's—it's Irish stew," faltered Mrs.

John Parkin took his hat from the table, threw it into the air and then dexterously

caught it.

"Hurrah!" he cried. "I thought of
Irish stew. I smelled Irish stew, but I
hardly dared hope for it. Now I'll have a square meal at last. Children, leave my

legs alone! Let's all go out into the kitchen and help mother. There's no place like home. Irish stew!"

The children were in bed at last. John Parkin was back in his Morris chair, smoking his crusted and cracked old brier with a very serious and thoughtful expression of countenance, when Mrs. John came in from Baby Bunting's cot. She seated herself on the arm of the chair and gently removed the pipe from his mouth and laid. removed the pipe from his mouth and laid

"Now tell me!" she said.

John Parkin looked up at her. His face
was still grave, but a twinkle came into his

eyes.

"I suppose I'll have to some time," he admitted. "Well, when we got to the office this morning I was put back on the old job. But I expected that."

Mrs. Jones' face twitched. Then she

smiled. "Of course, dear," she agreed. "Then

John Parkin cleared his throat.

"Mr. Pakenham is dead," he said huskily. "We got word of it last night. Double pneumonia—poor fellow!" He took his wife's hand and held it closely. "I succeed him," he said. "I'm assistant

and confidential secretary to Mr. Gann."

Mrs. John laid her head on his shoulder and began to cry. He soothed her, and when she was calmer he resumed his story how Burleson had been called into Gann's office; and how, after a long conference, he, John Parkin, had been summoned; how Gann had examined him minutely con-cerning structural steel in all its branches and phases, skillfully testing him with hypothetical cases involving questions of judgment as well as information; how Gann had nodded at each reply; and how finally he had pointed to Pakenham's desk and chair and told John Parkin they would be his; how Burleson had congratu-

desk and chair and told John Parkin they would be his; how Burleson had congratulated him and Morphew had shaken his hand—and the other men—
Parkin's voice failed him here.
"Good fellows all!" he said brokenly.
"Not one grudged me the boost! It's a big salary, but Gann says it will be bigger if I'm the man he takes me for."
"Oh, John, what luck!" cried his wife.
"What luck!"
"Is it?" queried John Parkin with an odd, slow smile. Then he quoted:
"There is a tide in the affairs of men.

"There is a tide in the affairs of men Which, taken at the flood, leads on to fortune."

"What fortune is this going to lead us on to, I wonder? Do you know, my dear, I've always counted myself one of the luckiest of men, because, with you and our babies, even in our poverty, I have been one of the happiest! But—what of the shallows and miseries of prosperity, Evvy, darling?"

"I can bear them," said Mrs. Jones, smiling through her tears. "They will be a change from the other sort." She drew his handkerchief from his pocket and wiped her eyes. "John, are you sorry? You take it so calmly and I feel like flying! Hold me, John!"

John held her.

"You see, sweetheart," said he, "this comes on you unexpectedly, while I've positively known for twenty years that something like it was bound to happen. At the same time, I'm pleased," John Parkin concerled. conceded.

He laughed so much that he had to recapture his handkerchief to wipe his own

#### Antiseptic Ice

OXYGENIZED ice is now being manufactured to keep food in refrigerators, with the idea of providing antiseptic effect from the ice, as well as cold. Peroxide of hydrogen is combined with the water during the manufacture of the ice, so that the ice is really made of oxygenated water, the peroxide being incorporated by a special process at just the right stage of the freez-ing. In order to distinguish it from other ice it is proposed to tint it slightly with some harmless coloring matter. It must be kept in the ice compartment of a refrigerator-not in direct contact with the food-and the oxygen has the effect of keeping the entire outfit sweet.

No fading!

Union Suits

Any Style

You probably would see no change in Chalmers "Porosknit." Nor would dealers be likely to discover it.

#### The "Hidden" Quality

The same careful workmanship could be employed in finishing such less-good yarn — and "Porosknit" would still look about the same.

Yet—the durability—the twar would suffer. Something would be lost in softness and elasticity.

So—we take no chances with durability — no risks with the established Chalmers "Porosknit" quality.

Such fine shades in superiority you cannot see. But they account for the inability to duplicate Chalmers "Porosknit." They explain the unfailing satisfaction. They mean unvarying comfort.

Such is the "hidden," extra quality in Chalmers "Porosknit," Guaranteed. The yarn we use is the finest of

long-fibre, combed.

#### Union Suit Comfort

Examine any genuine Chalmers "Porosknit' garment. Take a Union Suit, for instance. Turn it inside out. Notice how strongly the seams are reinforced. They are double-seamed by cover seaming. Note that there are no cumbersome flaps to gape open. Stretch the fabric. See the extra stitches surrounding each ventilating hole. These, with the lockstitch, prevent unraveling.

stitch, prevent unraveling.

The "stretch" in knit goods is entirely one way. But observe the triangular piece in the back of a Chalmers "Porosknit" Union Suit.

See how this piece of fabric is reversed. It runs opposite to the rest, Amsterdam. There, in a new mill, clean as a new pin, "Porosknit" is fashioned and sewn. The atmosphere is bright, clear, healthful. Hygiene at the maximum. Dirt at the minimum.

Countless patented machines knit the high-priced yarn into the celebrated fabric. Then each yard of fabric is aerated with hot, dry, pure air, for extra-cleanness' sake.

Other machines complete the

Buy by this Label

This means full elasticity in the seat up-and-down—as well as across. It gives—at every turn or bend, with no pull, no bulge, no draw.

There can be no "short-waisted" feeling—no "cutting in the crotch." Chalmers "Porosknit" Union Suits

stay buttoned while on. They do not gape between buttons.

Each has a comfortable Closed Crotch. It fits. It stays put.

Chalmers "Porosknit" is made in all styles—for man, for boy. Open in texture, and of absorbent yarn, it keeps you cool by absorption and evaporation of perspiration. Your pores breathe the needed air. Soft yarn eliminates irritation of the skin.

These features you can see and feel. The extreme care in making, you cannot see—unless you come to finishing touches. Then, each garment is ironed individually before packing. See for yourself how pleasing the appearance in the box—at the dealer's.

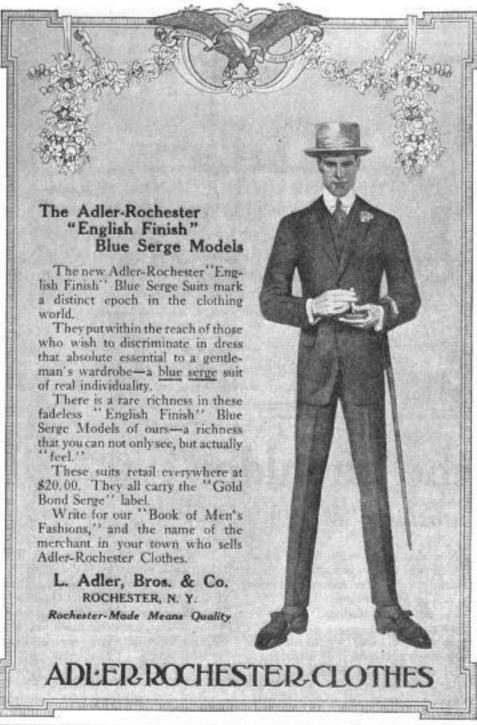

#### No-Limit Guarantee

If you have read what's printed here, you will understand why Chalmers "Porosknit' can be guaranteed unconditionally (a bond with every garment) as follows:

"If any garment bearing the genuine Chalmers 'Porosknit' label, and not stamped 'Seconds' or 'Imperfect' across the label, fails to give you its cost value in underwear satisfaction, return it direct to us and we will replace it or refund your money, including postage."

Insist that the actual label be shown you serve on the garment. For none can duplicate genuine Chalmers "Porosknit"—none.

#### HOW I BECAME A PILOT

(Continued from Page 8)

at anchor and it would stand straight out. The current runs from six to eight knots

His next question was a natural one:

"Can we get in?"

To speak the truth, I didn't know. When one is betwixt devil and deep sea one just goes ahead and does one's best. But I tried to reassure the skipper and the two mates.

Then I set the engines ahead and made for the smoother of that har. the smother of that bar.

We struck in the outer line of breakers we struck in the outer line of breakers and right there the ship was dead. I have never figured out just what happened. I think the skeg of her propeller fetched away and ripped through the bottom. She washed on about a quarter of a mile, with the engineers pumping oil overside to keep the seas from smashing us entirely, and then she sank, while we got away in two boats. boats.

It was a lucky affair all round, but I quit the Columbia. I told mother and father that I had had enough. Of course it's all right now except for the log rafts from Stella; but when I left, that bar was the limit.

Naturally I went to San Francisco; but I found it impossible to get a branch there for the bar. And I didn't want bay and river work. However, I did make a few trips with a friend of mine just to learn the business. It was during this time that I had one of my most memorable experiences.

had one of my most memorable experiences.
The San Francisco pilot schooners lie off
Meiggs' Wharf, where is also the lookout
of the Marine Exchange. I went down to
the exchange on a February day, and met
there a former Columbia River man. He told me that he was now a Golden Gate pilot and invited me to accompany him out in the schooner that night. I agreed, as I not only wished to consult him as to my future but was also incurably curious about all the details of my profession. I about all the details of my profession. I was then thinking seriously of taking command of a coaster, and in that case I must be a pilot for San Francisco Bay.

#### Sunk in Deep Water

Late that evening I boarded a steamer with my friend just off the Farallones. On the steamer was a large company of passengers, including a consul-general of the United States. This gentleman insisted—coming up on the bridge—that his engagements in Washington demanded that he be landed in San Francisco by eight in the

morning.

The captain demurred, as did my friend the pilot. They pointed out that there was a very heavy fog, considerable sea, and, as well, quoted the company's rules as to entering port at night or in a fog.

It was finally agreed between the consulgeneral and the master of the steamer that she should start in at daylight. That would at least be obeying one-half of the company's rule.

company's rule.

I recall very distinctly the conversation between the captain and the pilot next morning. It was not my business at the time nor is it now. Suffice it to say that the captain decided to take his ship in at daylight in spite of the fog. An hour later the steamer was sunk in the deep water inside the Golden Gate, the captain was inside the Golden Gate, the captain was with her, and the consul-general, whose haste had brought about the catastrophe, was drifting out to sea a corpse.

I and my friend the pilot managed to

clear ourselves of the suction of the sinking ship, and with many of the passengers and crew we were picked up by the fleet of tugs and launches that came to our aid.

This was a lesson to me. I determined that I would never, as a pilot, share my responsibility with any one. I had lost one ship myself and I had seen a friend lose another. In both cases we pilots were blameless.

I was now twenty-six years old and had quite a little money laid by. I went home and consulted with my father and mother as to what I should do. My father's advice was to stay on shore and enter business.

My mother did not assent to this,
"You have learned an honorable and
lucrative profession," she insisted. "Would one advise a doctor to give up his practice when he is well established? You like it, you have been trained for it, and it would be unfair to yourself and to others to quit."

OUT MAY AT THE RETURN PROPERTY.

"But where shall I go?" I demanded. "I am done with the Columbia River, for I know that sooner or later I shall lose another ship and possibly lives. I cannot get into San Francisco."

"New York," said my mother promptly.

"New York," said my mother promptly.

"And some day when I come home from
the Mediterranean I shall see you coming
aboard, off Fire Island, and I'll be proud
of you."

I agreed to this and came to New York.

I found that my previous experience had
only a moral pull. I had simply to start
all over again

I arrived in New York just when the old system of separate pilot boats was going out of existence. The New Jersey and New York men had discovered that rivalry was bad all round, and they had formed an association called The Sandy Hook Pilots. They had sold their individual vessels, numbering some thirty, and established two steamers and two schooners, the sailing craft to be used in summer weather, one steamer to deliver pilots, the other to be a take-off ship.

After investigation I was certain that I must enter myself as an applicant for apprenticeship. This meant three to three and a half years doing everything from swabbing decks to managing a yawl. I had commanded big ships. It was a comedown; but I had money and I had learned the lesson of discipline. I went on board the Number 2, the Ambrose Snow, and served three years and one month before I was allowed my apprenticeship. I was then just thirty years old.

I may say that these years were by no means either dreary or unprofitable. I found myself in the company of a self-respecting and capable lot of men, most of whom each handled from ten to fifteen million dollars' worth of vessels a week. I also discovered that everything was arranged by the Board of Commissioners consisting of five persons—three selected by the New York Chamber of Commerce and two elected by the governing officers of the marine insurance companies in New York, usually called by us the underwriters.

#### Drawing Mitten Money

This body is actually in charge of the commerce of the Port of New York. They assign the pilots, conduct the examinations, and keep a strict supervision over every detail of the work of conducting ships in and out.

I really did not get it into my head that these gentlemen had much to do with our business until I came up for examination. This was after I had served eight years as applicant, apprentice and boatkeeper—second mate of a steamer. I never went through so stiff a test. There were two of the commissioners and an old pilot. I thought I knew New York Harbor from Elizabethport to Fire Island Light. My last three months I had steadily piloted vessels in and out under the direction of a full-branch man. But the commissioners seemed to have uncanny insight into the intricacies of the many channels, and the questions they asked me about berthing big steamships would have stumped almost any one.

any one.

When I had passed, the elder commissioner—one of the underwriters' representatives—said: "Captain, you understand that your eighteen-foot license will entitle you to bring in some pretty large craft. Remember one thing: A pilot out of New York is not only under the written regulations, but he is also under that unwritten law that decides what conduct is becoming a pilot."

a pilot."

I was rather burt and showed him my old Columbia River branch. He was interested and made me sit down while he asked me about my experiences. After some conversation he told me that he wished me to keep him posted as to what I was doing and what I hoped to do. I have no better friend at present.

I spent a year taking in vessels under eighteen feet in draft, and then got my twenty-four-foot license. This meant that I had no longer to handle only cargo boats. And my "mitten money" was piling into a

Mitten money is an allowance of four dollars extra for every vessel taken in or out during the winter months. The phrase is a very old one, and its origin, as I understand, is in the fact that a former unwritten law said that a ship should provide mittens for the pilot when the Jacob's ladder was ice-covered.

### **Unseen Forces Behind Your Telephone**

THE telephone instrument is a common sight, but it affords no idea of the magnitude of the mechanical equipment by which it is made effective.

To give you some conception of the great number of persons and the enormous quantity of materials required to maintain an always-efficient service, various comparisons are here presented.

The cost of these materials unassembled is only 45% of the cost of constructing the telephone plant.

#### Poles

enough to build a stockade around California— 12,480,000 of them, worth in the lumber yard about \$40,000,000.

#### Telephones

enough to string around Lake Erie — 8,000,000 of them, 5,000,000 Bellowned, which, with equipment, cost at the factory \$45,000,000.

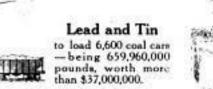

#### Wire

to coil around the earth 621 times—15,460,-000 miles of it, worth about \$100,000,000,000 including 260,000 tons of copper, worth \$88,-000,000.

#### Switchboards

in a line would extend thirty-six miles—55,000 of them, which cost, unassembled, \$90,000,000,

# 205

#### Buildings

sufficient to house a city of 150,000—more than a thousand buildings, which, unfurnished, and without land, cost \$44,000,000.

#### Conduits

to go five times through the earth from pole to pole—225,778,000 feet, worth in the warehouse \$9,000,000.

#### People

equal in numbers to the entire population of Wyoming—150,000 Bell System employés, not including those of connecting companies.

The poles are set all over this country, and strung with wires and cables; the conduits are buried under the great cities; the telephones are installed in separate homes and offices; the switchboards housed, connected and supplemented with other machinery, and the whole Bell System kept in running order so that each subscriber may talk at any time, anywhere.

#### The COUNTRY GENTLEMAN

Five Cents the Copy of all Newsdealers

\$1.50 the Year by Mail

THE CURTIS PUBLISHING COMPANY INDEPENDENCE SQUARE, PHILADELPHIA, PENNSYLVANIA There are many apparent anomalies in the regulations of the Sandy Hook Pilots. Here is an example:

Sec. 2107. For services rendered by pilots in moving or transporting vessels in the Harbor of New York the following shall be the fees: for moving from North to East River, or vice versa, if a seventy-four gun ship twenty dollars, if a sloop of war ten dollars, if a merchant vessel five dollars . .

This rule is in force this year—1914— though the seventy-four gun ship and the sloop of war have long been obsolete: But it illustrates how old our business is, and every now and again we do get a job that would remind one of the time of Columbus. For instance, I had to bring in an ancient Austrian training ship one morning. I think she was about as old a craft as I ever saw, apart from the whaler Mary Snyder. She had single topsails, bows like a butter-boat and anchors with wooden stocks. I sailed her in through Gedney Channel, and when I finally yelled, "Let go!" and the old hook tumbled from the cathead and splashed into the water, I was glad.

Another time I had to bring in an old Norwegian bark called the Nordlyset. She was built in 1857 by a small company of men who, I think, did the work themselves. The skipper was worn out—it was in the dead of winter—and he left her to me. There was no tug and I simply had to get her in, for when I boarded her the ice was a foot thick on her decks and she was getting dangerously down by the head. It is easy to focus the extra weight if you need the figure the extra weight, if you recall that a cubic foot of ice weighs about sixty pounds and that she carried on her decks and rigging approximately nine thousand cubic feet of ice above the waterline. She
was afterward lost in the Bay of Biscay, and
the derelict was picked up by the Glen Line
steamship Glenlochy.

When I got my full branch, which entitles me to handle any size of ship that

enters New York Harbor, I felt very proud. I wrote to my mother that she could now cross to Naples and come back and see her son mounting the ladder off Sandy Hook. By this time I was making very good money, too, and had got married. We had made our home in Brooklyn, and my wife used to say that the two and three days I could spend ashore each week were her Sundays. She was a very religious woman, as most good women are, and I appreciated the compliment.

#### Bringing in the "Lucy"

My first ship under my full branch was the "Lucy"—the Lusitania. She draws ordinarily thirty-one and a half feet. This was her first trip, and it was due to my friend on the board that I had the chance to pilot her inbound.

For some time before her arrival the Cunard people had been making special soundings. They had sent over several of their best skippers to do this, and I was assigned to help them. Under the rules she about here they are the perturbation of the control of the c should have taken the next pilot in rotation, but after the company explained that I had done the soundings and that they wanted me, the association said that I could go out of my turn and pilot her in.

Of all the vessels that I have handled I like the White Star the best. During the Cup Races of 1899 I was bringing in the Cedric, when the Cromwell liner Louisiana came through the fleet of vessels gathered about the starting point. The Cedric was stand-ing full ahead and I thought that I had a clear course to Quarantine. I think the captain of the Louisiana thought the same, for he kept to starboard and I soon saw that I was going to get into trouble in the Narrows. I had never handled the Cedric before and I was cautious. But like all her sisters she proved as easy to manage as a yawl, and the Louisiana's captain afterward told me that when he realized just what I was doing and had to do he was amazed at the way the ship answered.

My chief worry in bringing vessels into New York Harbor is the railroad cardoats. In the first place they are usually in charge of a tug without power to swing them quickly, much less to bring them to stop. In the second place they are very heavy and most of them seem to think the fairway belongs to them exclusively.

One risk we pilots have to run is that of being swamped while boarding a big steamer in ballast. One doesn't mind coming along-side of a laden ship. It doesn't flop over on you. But a light ship may. Captain Arthur

Gridley had an experience of this kind and lives to tell the tale.

He was boarding a tramp when a heavy, sweeping sea took the dory right against the side of the steamer. Then the steamer rolled over until its bilges showed. Under them went the dory. When all was over, Gridley was on the other side, having been considered aleast under the head. carried clear under the keel.

Then occasionally we have other risks to take—such as Daniel Gillespie took once when he brought in a Spanish cruiser. The Maine had blown up some time before, and the captain of the cruiser knew that public feeling was running very high. He refused to allow Pilot Gillespie to take the ship in in the dark. After some dickering the pilots agreed to convoy her in with the station ship New York. Thus an international complication was avoided.

#### The Traffic Squad of the Port

Of course taking ships in and out is mere routine. We are a kind of traffic squad, we pilots. But we have one other duty like the traffic policeman-and that is to rescue those in peril and save life whenever possible. It is in the rules and regulations that we shall never forget to answer signals of distress. Most people think that this work falls on the revenue cutters and the life-saving crews. We do a lot of it, and sometimes we manage to save a few millions for the stockholders of a big line and the underwriters.

Let's just mention a few instances, without going into details:

Ship Commodore T. H. Allen, afire. Carmania, aground in Ambrose Channel, December 7, 1907.

Deutschland, ashore in Gedney Channel, June 4, 1903.

Then we often have to rescue the pas-sengers and crew of excursion boats, and nearly always we have saved the vessel too. The policeman who gets hold of a runaway team and prevents it from killing people usually has his heroic action written up in the papers. We don't, any more than do the life-saving crews. But we don't mind. It is all in the day's work and we

are responsible men.

One question that often comes up is that delicate business of handling a new ship. No one knows just what she will do.

Another risk we have to take is running far out to sea on a chance. In the old days— and we did it off the Columbia River—a trip of three or four hundred miles to pick trip of three or four nundred miles to pick up an incoming ship was nothing to us. Now nothing of the sort is done except in an emergency. Lately we had to go off-shore two hundred miles to pilot in a fleet of foreign warships. The weather was bad, and when we sighted them it was a prob-lem to get aboard. Of course we did, but I shan't soon forget the experience. I looked right into the mouth of one of the barbette guns before I succeeded in catching the

Jacob's ladder and scrambling to the deck.

I am quite satisfied. We charge ships according to their draft, and some vessels, such as the Imperator, pay as much as one hundred and eighty dollars for inward pullotage, and we nearly always get the same one hundred and eighty dollars for inward pilotage, and we nearly always get the same ship out—one hundred and eighty plus one hundred and thirty-one. Of course I don't touch this money myself; it goes to the association. Yet every dollar earned is so much in my pocket. I make a comfortable living and have no complaint. My mitten money—paid from November first to April first—does very well for general expenses, and I find that when the general division is made I am not a poor man.

made I am not a poor man.

When all is said and done I like my job.

It has that element of romance that I longed for when I used to read Midshipman Easy back in Iowa. And on my last trip I found my mother standing on deck when I mounted from the dory.

"I heard you would have your turn on this ship," she said.

"My goodness," said I. "It's two in the morning!"

"Now that you are in charge I'll go to sleep, son," said she.

That is my reward for learning the ways of the sea and being finally intrusted with ten million dollars' worth of property at a moment's notice.

An hour later I had to anchor the big ship on account of fog. I went down to my mother's room. I pulled my fingers down the lattice. There was no answer. I gently opened the door. My mother was asleep. She trusted me. And then I knew that I

had made good.

# \$10,500,000 Worth of Evidence

The combined salaries of all the Presidents from George Washington to Woodrow Wilson would buy only one-third the Master "Sixes" now in use, \$10,500,000 worth. Many of these cars have been driven thousands of miles. 61% of their owners abandoned other cars when they bought Master "Sixes," so they can make comparisons—can speak from experience.

Through these men the fame of the Master "Six" has spread like wild fire. In all sections sales have far outstripped all past records. For unconsciously every Master "Six" owner becomes a Chalmers salesman. Even we did not foresee the nation-wide triumph of the Master "Six," so we will run short at least a thousand cars this season, that's certain.

#### The Man Who Knows

Men bought Master "Sixes" not upon impulse but upon positive knowledge.

Do as these men did; talk with those who own Master "Sixes." They will tell you first, that the resistless sweep of the "Six" is not founded upon a fad, but upon these logical reasons: silence, smoothness and flexibility. They will tell you that these advantages are so real in the Master "Six" that they are forever spoiled for any other car.

You may still think of a "Six" as necessarily a heavy car, costly to buy and expensive to keep. Once that was true. But that day passed with the coming of the Master "Six."

#### What Owners Have Found Out

Owners will tell you that it is heavy enough for the utmost in safety and comfort, yet light enough to be easy on tires and frugal with fuel; that the continuous power of its six cylinders has done away with vibration, and so reduces wear and tear almost to nothing.

Former owners of high priced cars have learned that in the Master "Six" they secure the same six-cylinder luxury without the usual six-cylinder expense.

#### Get the Evidence Yourself

Among the thousands of owners of Master "Sixes," some live in your vicinity. Ask us, or your dealer who these men are. Talk to them. They can give you facts it would be folly to ignore.

Then let our dealer take you on the Chalmers Test Ride. See with your own eyes the beauty of its streamline body. Feel with your own hands the ready response of its supple power. Learn the charm of its luxurious

silence and comfort. Then it will be plain why in half a year men have paid over ten millions for the Master "Six."

### A Master "Light Six"—\$1,800

No longer need those who want six-cylinder luxury, hold back on account of the price. Here's the Master "Six" built on a lighter scale; with the same motor but a smaller and lighter model; yet it shows 30 to 50 horse power and has more speed than you'll ever need.

Light for the sake of economy in tires and fuel; yet with a 126" wheel base for roomy comfort. Graceful in outline, distinguished in appearance; and sold at a price which sweeps away the last reason for doing without a "Six."

#### A Princely Inheritance

This lighter "Six" has all the features which have made the Master "Six" illustrious.

Its small bore and long stroke motor give it the same

flexible power-from a snail's pace to an express train

speed without shifting gears.

The steady pull of its six cylinders gives smoothness of motion, resistless in its charm; a smoothness that cuts wear and tear to the vanishing point. Its lighter weight means added economy in fuel and tires; while its price makes it easy for multitudes to own "Sixes."

#### Strength No Longer Means Weight

Time was when Sixes were heavy to secure comfort and the required margin of safety. So now one marvels

at the sturdy strength of the Master "Light Six."
This is due to the simplicity of the Chalmers design; to heat treated steel with a four-fold margin of safety; to aluminum castings; to drop forgings. With its deep upholstery and sinewy underslung springs, excessive weight is no longer essential to comfort and safety.

Its light weight and low price mean a double saving. A lower cost means economy once; lower up-keep cost means economy every day.

#### Built Up to a Standard, Not Down to a Price

The Master "Light Six" is built throughout to meet a standard, not to fit a price.

Chalmers Motor Company, Detroit

We use the best steel because we must hold up the strength while we hold down the weight. Valves of ordinary steel are cheaper, but our valves of Tungsten steel never warp nor waste power. Our molded oval fenders cost more than flat ones, but they pay for them-selves in added beauty and utility. Every dollar in the price stands for a dollar of real value in the car.

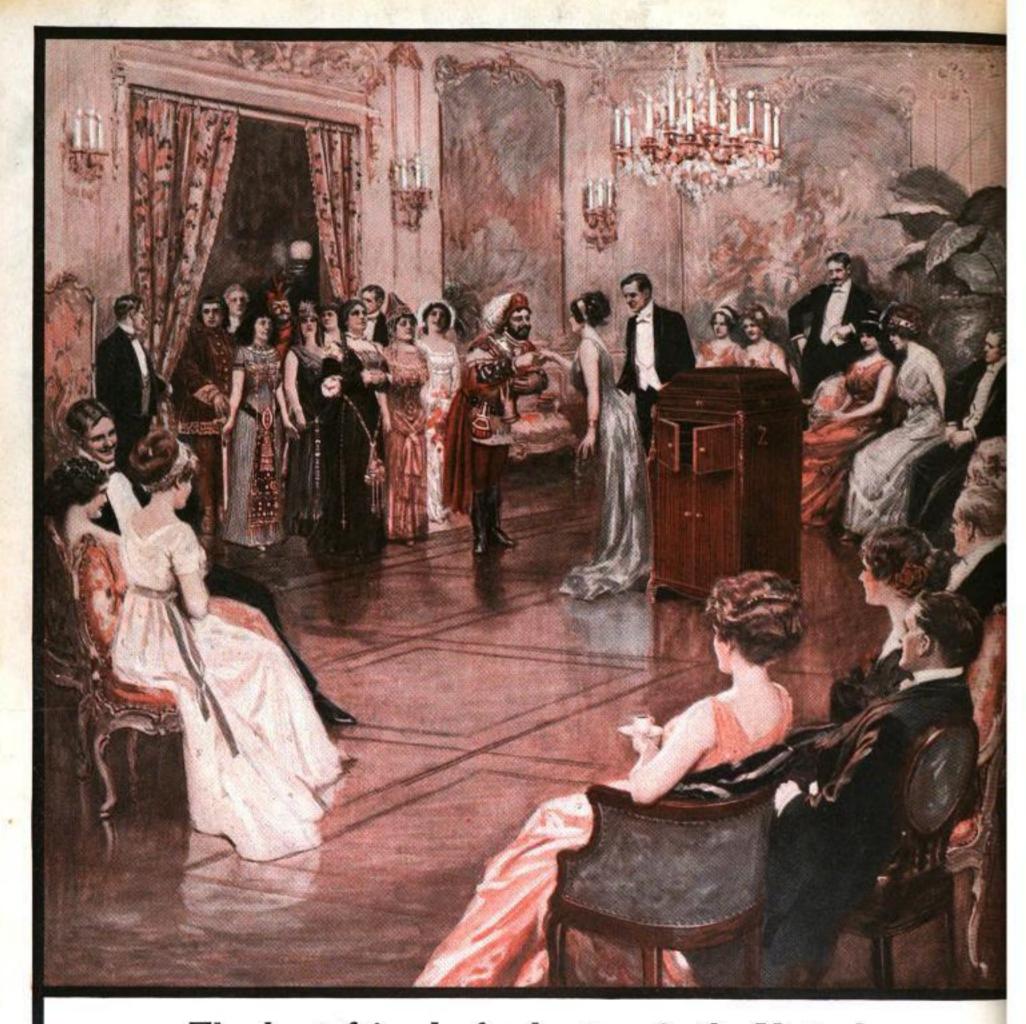

#### The Price is Lower-Not the Quality

The selling price of the "Light Six" is lower than the Master "Six" because the cost is less. The horse power is less because the motor is lighter; the weight is less because the car is a bit smaller.

But it has the same Chalmers-Entz one-motion starter; the same non-stallable Master Motor. Its roomy body is the true streamline type with flush fitting doors and concealed hinges. Tires are carried at the rear leaving the running board clear. Its tapering bonnet, underslung springs and oval fenders give it distinction in any company.

Master "Light Six" Touring Car . Master "Light Six" Coupélet . . \$1800 \$2050 Fully Equipped f. o. b. Detroit.

### The best friend of a hostess is the Victrola

The hostess who has a Victrola never need worry about how the evening will "go".

Is there an awkward moment after the guests leave the dinner table? A Victrola will "break the ice".

Do the young people get tired of general conversation? A Victrola will furnish the latest dance music and set their feet to sliding.

Does someone mention a melody from the latest opera? Let us try it on the Victrola. Always there is the Victrola—the treasure house of entertainment in reserve—never obtrusive but always ready.

Is your home like this? It might be-so easily.

There are Victors and Victrolas in great variety of styles from \$10 to \$200, and any Victor dealer in any city in the world will gladly demonstrate them to you.

# GOVERNMENT TELEPHONES

RACTICALLY all the telephones in England, Ireland, Scotland and Wales are operated by the British Government; but the telephone is a much less extensive and important institution there than it is in the United

For example, the nice little boy in the blue-andsilver uniform who showed me to a room in the London hotel, manfully lugging a bag a full size larger than himself, pointed to a row of pushbuttons on the stand.

"When you want a valet," he explained, "you push this one; when you want a maid you push this one; when you want a waiter you push this one."

On the stand was one of those T-shaped telephones with the topheavy appearance of which the English domestic drama has made American

playgoers familiar.
"But if I want a valet or maid or waiter I can

telephone," I suggested.

The nice little boy regarded me with grave dubiety for a moment. Evidently telephoning for

a servant was a novel idea to him.
"No, sir," he decided; "you must push the

So one discovers immediately that telephones in England are not so universal a means of communication as they are with us. I suppose there is no American hotel with any pretension to smartness that relies on pushbuttons.

When an American would telephone as a matter of course, an Englishman is quite apt to push a button, send a telegram, write a letter or dispatch a messenger. The greatest business institution in the British Isles is, of course, the Bank of England; and the only reference to this institution in the London telephone directory is as follows:

"Putney, 934. Bank of England Sports Club.

In lighter moments Englishmen may telephone; ut when the sports are at work in Threadneedle Street they rely on more time-honored means of communication. To be sure the Bank of England is a peculiarly conservative

establishment. Latterly no stranger may enter its doors except by bringing a satisfactory letter of introduction, and a rosy-cheeked giant in flaming gold-and-scarlet clothes stands at the portal to see that no unvouched-for stranger enters. However, the fact that the bank gets on very comfortably without a telephone shows the comparatively restricted use of that instrument in England.

In January I was talking with the Chicago manager of an extensive business concern that has offices in several cities. The talk was interrupted by a long-distance

telephone call. "How do you find the long-distance service?" I asked.

"Very good now," he replied. "I often get New York in a couple of minutes. If it should be over five minutes twice running I should make a complaint. It frequently happens that I talk with New York, Philadelphia, Detroit and Cleveland-all within half an hour."

"But you have private wires?"

"Not at all," said he. "We simply told the telephone company that the amount of money they got out of us would depend entirely on the service they gave us. It is expensive, of course. Long-distance tolls in this office alone run five hundred dollars a month; but that isn't the point. With a fast, dependable service we can put through business with a speed that makes the toll bills inconsequential. A slow, uncertain service would be a nuisance at any price."

#### Slow Connections and Slipshod Service

DO not mean that getting New York in five minutes is the Chicagoan's average experience. I do mean one can get that kind of service in the United States by insisting on it and paying for it. The main point is that for business purposes the quality of the service is more important than the price.

I remember a good many years ago hearing a broker denounce the telephone company-not because it charged him a hundred and fifty dollars a year for each of his six telephones, but because it did not charge him three hundred dollars and give him twice as fast service.

There is no question that the fast, dependable service possible in the United States is not possible in England. The government telephone system has not got it to sell at

For Business Purposes the Quality of the Service is More Important Than the Price

any price. A month after that Chicago conversation I was in the office of the London manager of an extensive concern and asked him the same question.

"Our English telephone service," he replied very soberly, "is the worst in the world. In talking to coast towns-say, sixty or seventy miles from here-if it is in the morning, when business is light, I expect to get the connection in ten or fifteen minutes. If it is in the afternoon it takes twenty, thirty, forty minutes or an hour. To get satisfactory communication with Paris we have two fixed calls daily—that is, at certain specified times in the day we get the Paris connection; and we save up our talking for those fixed times. Just before you came in I called Liverpool and got the connection in five minutes. Next time it may take fifteen, twenty or thirty.

"The charge here, you know, is for a three-minute talk. Two times out of three, I should say, at the end of three minutes you are cut off without warning. Then it takes longer to get the connection reëstablished than it did to secure it in the first place. The trouble doesn't seem to be with the equipment, but with carelessness at the exchange. You call: 'Regent, seven, four, three, two.' 'Seven, four, two, three, says the operator. 'No, no; seven, four, three, two,' you say. She repeats 'Seven, four, three, two' very deliberately; then gives you Seven, four, two, three!

"The telephone service was never good here," my friend added. "After the government took over the lines it got decidedly worse. Recently there has been an improvement; and finally no doubt the post office will get the service in hand."

#### Government Ownership a Failure

CHOSE this particular manager first, because I chose this particular manager but all of he is an Englishman and a Liberal; but all of the many telephone users I talked with substantially agreed with him. It is true that blaming the telephone is a popular occupation everywhere. I

would undertake to gather a bushel of telephone complaints in New York or Chicago in a day's time; but Americans complain of a good many things Englishmen would accept as quite satisfactory, while Englishmen would regard as intolerable other things that we take rather as a matter of course—and I do not think there is any doubt that the English telephone service is inferior to ours.

In January last, after the post office had been operating the telephones for more than

two years, the Daily Mail inquired editorially:
"Why is it that government ownership management of telephones is practically always a failure? Why is it that for every thousand Europeans there is only one telephone, while for every thousand Americans there are fifteen? Why is it that not one of the many discoveries that have transformed the telephone industry in the last thirty years has emanated from a department of state? Why is it that throughout the length and breadth of Great Britain and the Continent hardly a single efficient long-distance service is to be found?" And so on to the extent of nearly a column.

True, the Daily Mail is an opposition paper and may be prejudiced; but very recently the Evening News has undertaken to tell the London public how to use a telephone.

Its introductory announcement says:

"It was in January of last year that we first discussed the scheme with the authorities of the post office. The showers of criticism that have fallen since that time prove that the public have had very real grievances. On the other hand, the restrictions that are imposed on all government departments in the issue of statements to newspapers have prevented the telephone officials from replying or explaining.

"Now the Evening News has the distinction of being accepted as a medium between the post office and the great London public. . . . The scheme was postponed for a year at the request of the post office, whose hands were full as a result of taking over the National Telephone Company. . . . The post office will permit our special commissioners to have full access, with expert aid, to all mechanical plants, to see the workings of the exchanges, to inquire into matters that have led to complaints from subscribers. . . . Largely, we may say, the telephone problem is a new one in England. It has been neither studied nor used as it should have been, and as it is studied and used in America."

The Evening News, I may mention, claims to have three million readers and is an eight-page paper. At this writing it is giving up two full columns on the editorial page once a week to this new and important matter of instructing the public in the use of telephones,

explaining how mistakes and delays arise, and so on. This strikes me as interesting evidence as to the state of telephone service in London.

No doubt every newspaper reader knows that the British Government took over the privately owned telephone lines; and that fact is often cited as a precedent for the United States-as though for our government to take over the Bell System would be substantially what the British Government did. However, except that each country has a government and a telephone system, there is hardly a point at which conditions in the two countries are comparable.

In the first place the British Government had been in the telephone business for many years. Long before the purchase of the private wires its lines in London were in active competition with those of the National Telephone Company-the concern roughly corresponding to our American Telephone and Telegraph Company, or Bell System.

In 1901 the government made an agreement with the company which contemplated that it should take over the company's lines in London and amalgamate the two competing systems; in fact the year before the government did take over the privately owned lines the post office was operating nearly eighty thousand telephones in London, or over half as many as the National Telephone Company had in that city.

Moreover, a number of cities, such as Hull, Glasgow, Swansea, Brighton and Portsmouth, had municipally owned telephone systems; so years ago public ownership and operation of telephones was a well-established fact

in England.

More important still, the National Telephone Company operated under a license from the British Government. This license was granted in 1881, to run for thirty years; and it provided that at certain periods the government might buy the company's plant and take over its business.

Thus there was always a perfectly simple, definite method by which the government could take possession of the privately owned lines. There could be no denial of this right or any dispute about it, because it was stipulated in the license under which the company did business. And at the end of thirty years the government could put the company out of business by simply refusing to renew its license. In its relations to the government the company was in the position of a tenant with an expiring lease.

#### Great Britain's Comparatively Simple Task

NEED hardly point out how different the situation is in The United States. Our telephone company has no contract relations at all with the Federal Government. Its charters are derived from the several states. It is not dependent on Washington for any of its powers or privileges. In undertaking to buy it, therefore, our government would be in a position very different from that occupied by the British Government when it undertook to buy the National Telephone Company.

In 1905, then, the British Government was already in active competition with the National Telephone Company. There was nothing to prevent it from extending that competition indefinitely. The company's license had but six years more to run. At the end of that period it must go out of business unless the government chose to renew the license, in which case the government could exact such

terms as it saw fit.

Naturally when the postmaster-general announced, in 1905, that he would take over the company's plant and business at the end of 1911, when the license expired, the company had nothing to do but acquiesce—and it had not very much to say about the terms, either. The terms were that the government would pay the value of the existing plant-or of such portions of the plant as it deemed suitable for its use-not at cost price, but at the valuation at the date of the taking over; in other words, at cost, less proper allowance for depreciation. It paid nothing for good will, earning power, value as a going concern, or any other intangible asset.

Of course the company made a protest; but its protest went for nothing. A select committee of Parliament, which considered the subject in 1905, pointed out that "it would be possible to put an end to the existence of the company in ways that would be most unfavorable to the company.' In other words, the postmaster-general was in a position to enforce decidedly harsher terms, because the company, already under governmental competition and with an expiring license, was largely helpless.

The company signed the agreement that its plant and business should be transferred to the government on December 31, 1911; and at midnight of that date the postmaster-general took undisputed possession of the whole property-but without making any payment for it. The little detail of paying was deferred for more than a year.

The terms were that the present value of the physical plant be paid for. The company and the postmastergeneral agreed that the first cost of the plant had been a little more than fifty million dollars-that is, that the materials, freight, labor, and so on, used in constructing the plant came to that much; but beyond that initial

point they differed very widely.

For example, the company claimed over eight hundred thousand dollars as cost of obtaining right of way; the postmaster-general thought two hundred thousand dollars covered that item. The company asked over a million and a quarter dollars for rent of premises, insurance and maintenance of plant until it began producing revenue; the postmaster-general cut out that item altogether. The company claimed over ten million dollars for local engineering and administrative supervision; the postmastergeneral allowed three millions. The company claimed ten million dollars on account of interest during construction, costs of raising capital and expense of obtaining subscribers to its telephone system—on the ground that nobody could set up a going telephone concern without incurring those expenditures; the postmaster-general denied all these claims. The company figured the depreciation on its plant at ten million dollars, and the postmaster-general at over twenty millions.

In short, though the principle on which the plant was to be valued was not disputed, and the original cost of the labor, materials, and so on, was agreed to, the company figured that it was entitled to receive more than a hundred million dollars, while the post office figured that forty-five million dollars was the proper sum-which indicates that there is always opportunity for a wide difference of opinion in valuing a large concern of this sort, even when the basis

of valuation has been agreed on.

As the two were unable to agree, the matter was left to arbitration, as provided for in the stipulations; and the arbitrator was the Railway and Canal Commission, which is another department of the government. This is very much as though our government and telephone company, being unable to agree on the value of the telephone plant, should leave it to the Interstate Commerce Commission. Only the telephone company would hardly do that.

The postmaster-general mentions in his annual report, as though it were a rather remarkable fact, that the arbitration proceedings before the Railway and Canal Commission occupied seventy-four days; and I recall that some English newspapers commented on the circumstance as though legal proceedings continuing for seventy-four days were something extraordinary. At the end of that

period the commission gave a judgment awarding the company sixty-two million dollars, or less than two-thirds of its original claim; and that practically settled it.

I have gone into this at some length in order to show what a simple thing it was for the British Government to take over the privately owned telephone lines as compared with our government's taking over the American lines. In seventy-four days, for instance, the first motion would not have been made in the United States in the first court.

Still more important is a comparison of what the British Government took over. As I mentioned above, it already had about eighty thousand telephones in London, and in acquiring the National Company's system it got about a hundred forty thousand more. It also got about four hundred thousand telephones in England, Ireland, Scotland and Wales, outside of London. In short, measured by the number of telephones, the system the British Government acquired was not a great deal larger than the combined systems of Chicago and Philadelphia. There are four million and a half subscribers to the Bell System in the United States; and the total number of telephones, I believe, is more than ten times the number taken over by the postmaster-general.

#### A Starved and Run-Down System

THE purchase price was sixty-two million dollars, which is a small matter as government finances go. Recently, in recommending government ownership of telephone lines in the United States, Postmaster-General Burleson submitted a report showing that the entire telephone system of the country has a capitalization of approximately nine hundred million dollars, but suggesting that the appraised value of the properties would fall considerably short of that. Yet it is very obvious that the purchase would involve an expenditure beside which the British Government's investment in telephones would appear insignificant.

Quite as important as the financial problem is the further circumstance that the employees of the National Telephone Company at the time of its acquisition by the government numbered eighteen thousand, while the Bell System reports a hundred and thirty thousand employees.

In that connection I may mention that when the postmaster-general announced his intention of taking over the National Company's plant and business he said nothing about taking over its staff. "But the staff," in the words of a contemporary review, "took up the matter energetically, both by direct representation and through members of Parliament," with the result that the postmastergeneral agreed to take over practically the whole staff as government employees. The only exceptions, I believe, were a few higher officers receiving more than thirty-five

hundred dollars a year each.

The government has had the lines two years and a quarter. To be sure that is a comparatively short time. When it announced early in 1905 that it would take over the lines at the end of 1911 the National Telephone Company very naturally stopped making extensions and improvements-or, rather, it kept capital expenditures as low as possible. If a landlord notifies a tenant that the lease will not be renewed the tenant naturally spends no more money on the property than he has to. There is no question whatever that if our Government seriously proposed to purchase the privately owned telephone system, the company that owns it would immediately begin taking out as much money and putting in as little as possible. Inevitably the service would suffer.

Thus the British Government came into possession of a plant that had been starved or meagerly fed. In the language of the postmaster-general, in his report for the

(Continued on Page 69)

In Striking Against a Government the Men Usually Have Public Opinion Against Them

# HEART OF GOLD By Henry Kitchell Webster

THE things you need for holding down a job as ticket seller in a box office are firmness and decision of char-acter. A man comes up to the grilled window and wants a seat in the fourth row for tonight. You spin a stack of tickets under your thumb and extricate one while he gets his money out. Of course it is not in the fourth row, and the moment he looks at it he will see that it is not, because it is marked N7R.

There is no swindle about it, because when he asks you what row the seat is in you tell him it is the thirteenth; and of course if he shoves it back at you and wants his money you will give it to him. However, if you have executed your part of the transaction with enough assurance if you have said thirteenth to him in a sufficiently inhuman, detached sort of way-the probability is he will look at

you as though you were an automatic lunch-vending machine that had just handed him a ham sandwich when he thought he was dropping his nickel for a piece of custard pie; and he will go away puzzled, but harmless.

Of course with regular customers who have learned your name, who push their money in to you and say: "My regular seat, you know, old man!" you can afford to be different-almost human.

It was not a regular customer at the Globe, however, who worked his way up to the head of the line at the ticket window at the particular moment when this story begins. Indeed his preoccupied look suggested that he might not be a customer at all. People sometimes did come up to the box office to see whether they could buy a postage stamp, or to inquire the way to La Salle Street, or to ask for a small eash donation. And many people came asking to be passed into the theater free.

The big, brown-faced, werried-looking young man outside the window did not precisely suggest any of those inquiries—did not look like a fool, or an incompetent, or a beggar, and not at all like a person who expected to get

into a theater without paying his way. Obviously, however, he had more than a seat in the fourth row on his nind, and he had got as far as saying, after a momentary hesitation, "Could you tell me —" when the man behind the grille cut in with a "One? Tonight?" And taking the other's silence for assent, the ticket seller snapped out a ticket to him. "One dollar!" he concluded.

The big young man outside looked rather confused, cast a panic-stricken glance over the file of people who awaited their turn, plunged a hand into his pocket, rang a silver dollar on the glass, took his ticket and left the window.

The ticket seller was aware of him for a while longer standing about in the lobby in an indecisive sort of way, moving up toward the door now and then, but always shying off before he actually handed in his ticket. He had not the air of a person engaged in a struggle with concience-wanting desperately to go in and equally desperstely afraid it was wrong. Neither had he the look of one of those wabbly neurasthenics who never can make up their minds. A rather decisive young man ordinarily, one would have said. Finally, when the ticket seller was beginning to find the problem really irritating, the brown young man gave up his ticket and went in.

Even when he was fairly planted in his seat—and it was by the irony of fate a seat in the fourth row-when the urtain was rung up and the show began, still he refused to act like a regular member of the audience. He paid very ittle attention to what was happening on the stage, except or a look of profound distaste over some of Tom O'Hara's okes, and a deep bronze blush now and then when a section of the chorus came on in costumes that revealed more than hey left to the imagination. He scrutinized the audience s good deal, twisting round in his seat in a way that disinctly irritated his neighbors to right and left. Altogether t was an inexplicable way of acting in a theater.

"I'd like to know what's the matter with that big guy out there?" Tom O'Hara said to Zora Ffoliet as they made

an exit together after one of their scenes. "Did you see him-that big sunburnt rube with the paper

"Could I see anything else?" said Zora vindictively. "Ask an artist to work against a thing like that! They ought to give him a free pass to the Salvation Army and send him on his way."

"What sort of looking rube?" Hazel Dering wanted to know.

Hazel was playing the title part in the piece. She was a slim, black-haired, green-eyed girl - an

m BEUWN ..

ASTRUR WILLIAM

had not been on yet, was sitting on a property cotton bale they used in the second act for two ponies, dressed as pickaninnies—that is to say, in brown tights and tunics of bandanna handkerchiefs-to pop out of. As a seat in the wings it was rather in demand, because it was padded.

dangerous adven-

turess-with the heart

of gold, of course-that

her part called for. She

Hazel did not succeed in getting much of a description of the offending rube from Tom and Zora. She asked for particulars and they gave her indignation. A chump like that had no business to come to the theater! He was spoiling the house.

"But what does he look like?" Hazel persisted.

"He looks," said Tom O'Hara, "like a piece of cheese!" And with that he stalked off downstairs and Zora up, to their respective dressing rooms.

Old George Featherstonhaugh, who was almost as much of a fixture at the Globe as its owner Willy Lord himself, or as Freddy Boldt the stage manager-in his prime he had made a specialty of the bass parts in the Gilbert and Sullivan operas: the Colonel in Patience; Pooh-Bah in the Mikado; the Sergeant in the Pirates; and so on—George leaned back precariously against the cotton bale and

"Why this interest in the appearance of rubes when you have a better-looking man at your leet? bale of cotton and he was at her feet, rather. But he meant no harm. That was old George's way.

"It gives me the Willies every time I hear of one!" said Hazel. "I'm worried about old Keziah."

"For heaven's sake, Hazel, cut it out?" said George Featherstonhaugh. "Worry about somebody else for a change. Worry about me. I need it. I'm getting fat. Have you noticed?"

This was jocular. He had weighed two hundred and forty pounds for the last ten years; but it was easy to understand his good-humored impatience.

Keziah Strong, the wardrobe mistress at the Globe, was a very well-loved old lady, but distinctly, so far as he could

see, nobody to worry about. She was precious old, of course, and with her white hair and the maze of wrinkles that covered her square, competent, kindly, grandmotherly face she ought by all the sentimental laws of the fitness of things to sit by a baseburner in a white little New England cottage, knitting socks, instead of spending twelve laborious hours a day in a theater, taking care of the costumes. A certain amount of concern for her was natural enough. Hazel, however, as George Featherstonhaugh implied, was inclined to run the thing into the ground. She had adopted old Keziah from the first-a friendship that was almost as remarkable a phenomenon as Keziah herself. They lived together in a tiny flat somewhere on the North Side. Hazel's attitude toward her was as fiercely protective as that of a hen to its solitary chick. Woe to the chorus girl who tried to impose on the old lady's good nature-in the way of darning tights, for instance!

Hazel had been a chorus girl herself and there was not one of their tricks she did not know. She had a way of dropping into the wardrobe room two or three times in an evening, like a hawk into a flock

of sparrows. She was reasonably popular among the ponies and the mediums, who average rather ambitious, smart and cleanly in their ways; but among the big, lazy showgirls she was anathema. I do not know why smartness and cleanliness and ambition should vary inversely as the size in a chorus-but they do.

"Put on the reverse English," George advised. "Let Mrs. Strong worry about you."

"What do you mean-worry about me? What's the matter with me?"

The girl had asked the question fiercely. The intensity of the stare her green eyes turned on the big Englishman's face would have disconcerted most men.

"Well, I worry about you," he said placidly. "You haven't looked right to me this winter. You've had that cold of yours for three months. What do you weigh?"

"A hundred and four."

"In that big fur coat of yours?" he asked,
"None of your business," said Hazel; but she reached over and put a hand on his shoulder.

"Look here, Feathers!" she went on. "You forget it! 'm all right—see? So don't try to start anything."

"Right-o!" he said, though not very enthusiastically, at the end of a little silence; and he scrambled up, with her pretended assistance, to a seat beside her on the property cotton bale.

"Blaze away!" he said, puffing. "What's the matter with old Keziah now?"

"It's her son," said Hazel, "her 'boy Newton."

"Well, that's something to worry about all right," George mused, "if he's like some I've known. Why do you suppose it is that the best kind of people like that-and they don't come any better than old Mrs. Strong-have such rotters for children?"

The girl did not look at him, but she gave him a friendly little pat and took up another angle of the subject:

"She's the best there is, all right! You said something then. Look here! What do you know about this? She falls in love with a guy. . ."
"Wait a bit," said George. "Old Keziah, you mean?"
"You bet," said Hazel. "Listen! She waited for him

fifteen years. They were engaged that long-fell in love when they were kids. His mother-she was a lulu, all right—wanted him to go into a bank; but he decided he ought to go to college, and he worked his way through because the old lady wouldn't let him have any money. And then there was a couple of years more when he was studying to be a doctor. He gets through with that, and they are all ready to be married when his mother gets a stroke or goes silly or something, and he has to take care of her. She has a dislike for Keziah and has fits whenever

her name's mentioned. The doc's got a brother who did go into the bank, but he digs out for Boston, and there is nothing doing for Keziah until the woman dies. But she waits all the time-fifteen years-and then they get married. They're married just one year and he dies.

George made sympathetic noises preparatory to speech, but Hazel did not mean to be interrupted just yet.

"No-listen!" she said again. "A month after he dies she has a kid-this boy Newton of hers. Her husband's left her a house with a pretty good yard round it and two thousand dollars of life insurance. Well, then the brother turns up-the one that lit out to Boston. He's married to a swell dame there and he's got all colors of money; and this is what he says: 'Give us the kid. We haven't any of our own. Without him you'll get along all right-ten dollars a month from your insurance, and this house and yard. Think what you'll be doing for the boy! He'll get a swell education, make his friends among the upper classes-all that sort of thing!'

"Well, Keziah tells him to go to hell! 'I'll give him as good an education as you can,' she says. 'He's all of his father that I have left and I'm going to keep him.' So the brother gets sore and goes back to Boston and never lifts

a hand for her.

"And Keziah gets up out of bed and goes to work. She's worked ever since. She says this job of hers in the theater's a cinch—and I guess it is to her. Why, she used to go out sewing all day-every day-for the other women in the town. And, on the side, she ran her house and cooked her meals and took care of that boy of hers-made all his clothes till he was fifteen-and kept a garden and raised chickens and a few pigs. She punched in every morning at five G. M., and from then till she hit the hay at ten she never stopped work. She never touched one cent of that life insurance. That just stayed warm and cozy in the bank, piling up interest.

"Well, and when the kid's twenty years old she pulls it out of the bank and hands it to him. 'There!' she says. 'That's what your father left to you. You can go to Amherst College, where he went; and when you get through you'll have enough left to make a start.' And what does he say? 'I don't want to go to Amherst,' he says. 'I've had enough of this stick-in-the-mud New England. I'm going out West.' And she never makes a holler—gives him

the money and lets him go.

"She sticks round for a while all by herself, working away just the same. And then, all at once, she does a getaway. I never asked her why. Something must have happened, you can see that-maybe her neighbors got nosey and found out something the kid had done out West. It must have been something fierce or she wouldn't have sold her house and her furniture, and come to Chicago all by her blessed old self; never knew a soul here, or thought

she didn't; had an idea, she said, of putting an ad in the paper-Plain Sewing Done.

"And thenwhat do you know about this?-just as she gets off the train she walks right into the boss—there in the station. He's just starting out for the Coast. It seems she knew him when he was a boy. He came from her town himself; and he wants to know what she's doing out here, and she tells him—asks if she can do any plain sewing for him. And he laughscan't you hear him-and gives her a job as wardrobe mistress. She's never been in a theater beforefront or back."

"It would be interesting to know what she thought of us, just at first." George was smiling over the idea. "Some shock, I should say."

"Not a bit," said Hazel. "She's too blessed innocent. Don't you see? She just took us all right in, without stopping to ask whether there mightn't be something wrong with us." She said it a little unevenly. "Gee!" she concluded after a reflective little silence.

"Her kid must be a prize pippin, all right," said George Featherstonhaugh, "to let her work like that. What's he doing?'

Something about mining, Hazel thought. Old Keziah was not very definite about it.

"Grafting on her all the while, I suppose?" George suggested.

"Sure!" said Hazel, "though she keeps it dark from me. She never let me know that she sent him a sou. She's a tight old party with her information. Never told me this story, except a teaspoonful at a time-when she thought I needed it, I guess. And I did, all right-you can take it from me!"

"You're a good scout, Hazel," George said irrelevantly after a little pause while the bustling chorus crowded past them on to the stage to work up her entrance cue.

The girl slipped down from her cotton bale, and the next

moment he alighted heavily beside her.

"I don't know!" she said with a worried shake of the head, reverting to the mystery of the boy Newton's occu-pation and presumptive misdoings. "He's got her goat all right. She gets a letter every Monday morning and it looks to me as if she was scared. She waits for 'em and she don't open 'em for a while, and her old hand shakes so she can hardly do it when she makes up her mind to. And then she presses her old lips together and goes off to the theater and never says a word; but I think she's sort of expecting him to turn up. Every time the doorbell rings or the telephone goes she gives a jump.

George muscled up a big right arm reflectively.
"Well, if he does come," he said, "and starts any rough stuff, just tip me off, will you? I think I could just aboutsettle the hash of that kind of a Johnny."

"He won't have any hash to settle when I get through with him," said Hazel; and then mechanically she uttered the peal of light-hearted laughter that was supposed to prelude her entrance to the stage.

She had no trouble finding the big rube. It would have been impossible to avoid seeing him. He was so big and so unhappy that he stuck out of the audience like a sore thumb. He was spoiling the house-there was no doubt about it. The chill he radiated for half a dozen seats in each direction would have been invaluable in a cold-storage plant, but it was a deadly thing in a theater.

Hazel did not get indignant about it, though, as Tom and Zora had done. She smiled a little inside over the look of cold disapproval with which he regarded her; and when she lighted a cigarette, swung herself up on a table and crossed her legs-as all adventuresses do in all musical

comedies-his look of shocked disgust was something she half liked him for.

The reason for this negative equivalent to liking lay in the conviction which had grown up in her mind that he could not be the person whom, on Keziah's account, she dreaded. A boy who had cheerfully taken all his mother's earnings and skipped to the West would not be acting like that. He would be very dressy, trying to show his class by sitting in the front

row and wigwagging a date with one of the showgirls.

Really I think she might have got it a little straighter than that-might have got some inkling of an idea that there was something to be said for the Western wanderer; that to be the conventionally dutiful and protective grownup son to a strong-bodied, iron-willed, independent old lady like Keziah was no easy job.

Hazel had, of course, no data for his career after his departure for the West. She had never heard of the Colorado School of Mines nor of the profession of mining engineer. She had read in the Telegraph all about the miner who came staggering out of Death Valley

"I'm Tryin' to Figger it Out"

with a million dollars' worth of nuggets, and who tried to blow it all in on the way to New York and back.

Consequently her notion of a miner was of one who lighted dollar cigars with ten-dollar bills, chucked goldpieces to the bellboys at the Waldorf or the Annex; and to a certain sort of the members of her own profession. represented what they would make a first choice of if a fairy turned up and offered them three wishes.

This was Hazel's idea of a miner who had struck it. Until he had struck it he was—see almost any of the Western moving-picture films for her authority—a good-hearted vagrant putting up an ineffectual struggle against temptations of various rather vivid sorts; panhandling his way about among his contemptuously tolerant comrades and given to sentimental, teary memories—reënforced by looks at an old locket-of a lonely, pathetic, white-haired old mother back in God's country.

She, of course, supposes him dead, and lives-in the shadow of a mortgage—on occasional donations from the

kindly villagers.

Then, just as the mortgage is foreclosed and she is being turned out into the street, a noisy party comes joyriding by in an automobile and she recognizes her son that she thinks has forgotten her. It turns out that he has thought her dead, too, and is trying to spend a thousand dollars a day of his newly acquired wealth to drown his grief. So he begs her forgiveness and takes her to live in a palace.

It had annoyed Hazel a good deal that the story of Keziah and her boy Newton would not work out like that. There was no chance for Newton to present the well-worn alibi, because obviously he knew all about his motherwhere she was, at any rate, and presumably what she was doing, as was proved by the letter from him that came every Monday morning, with the same Arizona postmark on it.

Why was he not adventuring about, looking for something? Did he expect a mine to come and climb up into his lap? Well, then, what was he doing year after year? Could it be possible—no, it flatly could not!—that he had struck it rich already?

Hazel, you see, her mineralogical lore being derived wholly from the movies, had never even heard of the sort of mine that was just a big, uncompromising mountain all seamed and fissured with streaks of green rock that had to be dug and blasted out of it-rock which, when ground and slimed and separated and roasted and smelted, produced copper and silver and lead and zinc and other uninteresting elements in varying proportions to the ton; of a mine that wanted money and patience and hard work, and then, insatiably, more money and more patience and more hard work, before it even began to yield up its treasure to you.

A mine, to Hazel, was a little pocket in the rock into which the thirst-parched and half-delirious prospector reached an emaciated arm and began pulling up irregular nuggets about the size of base balls, of pure twenty-four carat gold. The moment before you found it you were penniless-desperate. The moment after you found it you were rich beyond the dreams of a stage multimillionaire. One day you were perishing for a crust of bread-the next you were buying an automobile, a racing stable, and a palace on Fifth Avenue.

So obviously Newton had not struck it. He would not be piking round Obelisk, Arizona-or whatever the name

of the place was-grafting on his mother if he had. Presumably he was too lazy and too worthless to go out into the desert and parch and starve until he found the predestined pocketful of nuggets that Fate had stowed away there for him.

And if he came back without having struck it—what would he come for? Why, of course, because, having got tired of the hardship and the monotony of Obelisk, he hoped to be able to persuade his mother to finance him in some other experiment.

There would be repentance, of course, and a hard-luck story, and then a scientific touch for the old lady's savings-

the whole amount if possible.

At this point in her reflections Hazel ground her teethmentally, that is to say. Actually she was smiling her most beguiling smile on Tom O'Hara, who played the gilded scion of the Newport society swell, and murmuring seductive nothings in his ear. She had played the part two hundred and twenty-five times and, like the other principals, was safe to go through her lines perfectly, so long as she never stopped to think what she was saying. As said, she ground her mental teeth and took a vow that the boy Newton should not get away with that project of his if she could help it. If she could just manage, when he turned up, to see him before Keziah did, she might be able to get rid of him altogether.

The big rube out in front gave her a moment of misgiving during the finale to the first act by reaching down under his seat for his overcoat, indicating thereby that he was not going to be in front for the second act. Could he

be the boy Newton, after all? And was he coming back to see his mother during the intermission? It might be well to play it safe.

She could not stand guard over the stage door herself, because she had to dress; but Bill Flynn, the fireman, was a good friend of hers, and to him she confided her difficulty.

"Bill," she said, "if a big rube in a paper collar comes round here and asks for Mrs. Strong—see?—nothing doing! Don't call her. Call me!"

"I got you!" said Bill.

But Hazel had thought of something. "Don't holler out his name," she

said. "I don't want Mrs. Strong to know he's here."

"Shoot him?" suggested Bill.

This did not mean assassination. When you go to the stage door at the Globe and tell Bill Flynn the name of anybody you want to see, be shouts that name in a voice that penetrates to the remotest dressing room and follows it up with your own. If the distant voice of the object of your visit shouts hack "All right!" Bill tells you to wait. And there you stay in the draughty little vestibule

until some one comes to rescue you or until you contract pneumonia and go away. But if the voice says, "Shoot him!" then Bill with the utmost cordiality tells you to come in and directs you to the dressing room of the person you want.

"Yes," said Hazel after another moment of hesitation, "shoot him along.

Better come with him and see he don't get lost. Anyhow, no matter what he says or does, don't let him get a look into the wardrobe room.'

Then she flew off and dressed hurriedly, keeping her kimono handy to dive into in case the rube came. She did not much expect him; still had a good deal of confidence in her theory that when Keziah's son did turn up he would be a very different sort of person. When the intermission passed without any alarms she considered the incident closed.

A blink through the peephole in the curtain just before they rang up on the second act showed a vacant seat in the fourth row. Hazel grinned at herself for feeling a little sorry that the rube had not stayed long enough to discover that she was not really a terrible adventuress, but had a heart of gold after all.

She was not on at the rise in the second act and scuttled into the wing when they rang up, to wait for her cue, which came in three or four minutes. And so completely had her misgiving about old Keziah gone out of her mind that when the stage door into the alley opened behind her and she heard a man's voice asking Bill the fireman whether Mrs. Strong was there, she spent half a second wondering who it could be that wanted old Keziah. Then she flashed round, saw Bill wigwagging to her, and behind him, in the shadow of the little vestibule, the rube.

WHAT Hazel had not calculated on, you see, was the fact that a man might walk all round the block looking for the right alley to the stage door; and that a man unaccustomed to such things, with a nightmare fear that, after he found the door, if he opened it he might come right spang out onto the stage in full view of the audience, would hesitate away a good many precious minutes before he actually appeared over Bill Flynn's horizon.

Anyhow there he was, asking for Mrs. Strong. And Hazel's cue came in three minutes! She sprang down the few steps that led to the little vestibule and seized the stranger by the arm.

He stared at her in downright horror and turned appealingly to big Bill Flynn.

'It's Mrs. Strong I want," he said. "She's my mother. want to see her right away."

Bill looked doubtful. The average John coming round to the stage door and trying to scrape or claim an acquaintance with a chorus girl had no chance at all with big Bill. He withered them up and blew them out into the alley with the mere breath of his scorn. But this sunburned

young man, who wanted to see his mother and was apparently very much in earnest about it, was another pair of shoes. "I'm No Jarah Bernhardt or Eva Tanguay - or Anybody Like That; But I Guess I Can Jee Old Keziah's Ante All Right"

> Why shouldn't he see her? What was Hazel butting in for anyway? This train of thought the girl read in a flash.
> "Come along!" she said. "I'll take you to her." And

METHUR WILLIAM

she led the way down the stairs at a pace that left the doubtful and still-scandalized rube far behind, "Come along!" she called impatiently, and then looked along the ageway to see that the coat was clear

Luckily the wardrobe room was at the other end and there were no signs of Keziah appearing from it. Her own dressing room was at this end-the next one off the passage-and she swung the door open and motioned to him to go in.

"Wait here," she said. "I'll call her. She'll be here in a few minutes."

He balked in the doorway. To tell the truth, one could not wonder at that; but she gave him a nervous push that sent him in clear of the door and slammed it behind him. Then, two at a time, she took the stairs and got to the head of them just in time to hear her cue. She was nearly a second late and Freddy Boldt, over at the O. P. side, was having a fit. She would have to explain to him later.

She sailed out on to the stage and began giving the audience intimations of the heart of gold that underlay her hard and mercenary exterior. If Newton Strong had been in his seat out in the fourth row perhaps he would have been touched; but, shut up in Hazel's dressing room down below the stage, he was, I think it is safe to say, the most utterly confounded man at that moment inside the city limits.

Twice that evening since his train had reached Chicago he had-he would have said-tested his capacity for surprise to the limit; but both times he would have been

mistaken.

He got the first of these staggering surprises when he rang the bell at a little apartment on the North Side and was told by a Swedish maid-of-all-work that Mrs. Strong was at the theater.

Now they regarded the theater in East Weston simply as one of the wide-portaled vestibules to hell; and, though Newton had more or less shaken off this view-indeed had visited the theater three or four times himself in Denverstill, the notion of his mother's going to such a place was received at first with sheer incredulity. But the calloused indifference with which the Swedish maid stuck to her assertion-"Mrs. Strong ban gone to the tayater"-was

He would have entertained the suspicion that he had not got the right address if a glimpse over the maid's shoulder into the little sitting room had not revealed an old red-plush photograph album that took him back to East Weston with a poignancy that almost hurt.
"I don't suppose you know what

theater?" he said dubiously.

"Ya," said the maid, "Globe Tayster."

She said it with a funny singsong, and he repeated her words to make sure he had it right.

"The Globe Theater? Do you know where it is?"

She shook her head with an expression of amiable vacancy, and then, not having the information he wanted, supplied him with something else that would perhaps do just as well.

"Her ban go all tame." "All the time?" said Newton with a grin. "Do you mean every night?"
"Ya," she said, and nodded.

Of course that was too ridiculous to pay any attention to. However, it is one thing to shake your head when a fly buzzes in your ear, and another thing to get rid of the insect. The buzz-

ing continued all the way downtown, and it connected itself in his mind with occasional passages in her letters that he had not been able to understand-lapses apparently into a slang the source of which he could not imagine.

The posters in the lobby made it difficult to believe that his mother had selected this as a place of entertainment. The only alternative was that she was employed here in some capacity or other. It was equally impossible either way. He thought out his question to the ticket

seller rather carefully in advance; but, as you know, the ticket seller did not give him a chance to ask it and he went inside simply because he did not know what else to do. The fact that no one was buying tickets when he went out

into the lobby at the end of the first act encouraged him to try again. "Could you tell me where I could find Mrs. Strong?" he asked.

"Stage door," said the man inside without losing count of a stack of tickets.

So Newton, hardly believing his senses, explored the llevs of the neighborhood, found the stage big Bill Flynn, was set on, seized and kidnaped by the daring adventuress he had seen on the stage, and was now shut up-for what purpose he could hardly surmise-in the adventuress' dressing room.

To Newton that eight-by-seven dressing room was the most starkly, shamelessly immoral place he had ever found himself in. Hanging from books, thrown over backs of chairs-lying about everywhere-were articles of feminine apparel: garments that had been taken off; garments that were about to be put on—things that were intended to meet the eye and things that obviously were notthings that he, as a modest young bachelor, was ashamed to look at. And not a rag among them all-for his eye

(Continued on Page 48)

# The Trail of the Tammany Tiger

HARLES F. MURPHY succeeded to the leadership of Tammany Hall under particularly trying circumstances. During the Croker régime Murphy had not been considered one of the leaders whom Croker depended on for advice, though he was regarded as one of the best district leaders. His district was known as the Gashouse, and was situated on the

from Fourteenth Street to Twenty-third. He confined his efforts entirely to this district and never mixed much with general politics, except to help keep George B. McClellan in Congress.

He had previously been in charge of the same district for the County Democracy and was one of Maurice J. Power's best lieutenants. Murphy never had much to say, and he was considered by his associates to be an extremely bashful man.

He had started in life as a driver of a bob-tailed street car on the East Side, and afterward became a bartender. At the time he was made the Tammany district leader he owned the saloon.

To give an idea of Murphy's standing I will relate an incident that occurred the night of a minor election during the Van Wyck administration. Murphy's district had done better for Tammany than any other. After the returns were in all the leaders visited the Democratic Club to receive words of approval from Croker. I happened to be seated at the same table as the chieftain when Murphy came in and took an obscure place in the corner of the café. Some one came to Mr. Croker and reported that Murphy's district had done better than the others, and I called attention to Murphy's presence. Croker called out so that everybody present could hear him:

"Charlie, I congratulate you!"

"Thank you, Mr. Croker," answered Murphy, who blushed like a schoolgirl. He really was very much embarrassed by Croker's compliment.

The leadership of Lewis Nixon was almost impossible, though he worked very hard. He was regarded as an outsider and his brilliant record in the navy proved to be of no advantage to him. Tammany would have no man whohad not come up through the ranks from a district leadership. Besides, even Croker's friends believed he was put in the place as a dummy for Croker. Nixon got into a row with Van Wyck's friends, who wanted to make the ex-mayor Grand Sachem of the Tammany Society—the owners of the Tammany Hall building on Fourteenth Street.

#### Murphy in Command

WHEN the meeting to select this officer was held John J. Scannell, Croker's most intimate personal friend among the leaders, made a sensational speech supporting VanWyck. He referred to VanWyck's loyalty to the organization. Then, pointing his finger at a group of men who had held the principal offices under Van Wyck, he said:

"You fellows ought to be ashamed of yourselves. No mayor who ever lived—except Van Wyck—would have had the nerve to appoint any of you chaps to office.

Van Wyck's defeat for Grand Sachem roused a bitter feeling in the organization, and shortly afterward Mr. Nixon resigned the leadership in a fit of disgust. The executive committee of Tammany Hall then formed a triumvirate, consisting of Charles F. Murphy, Louis F. Haffen and Daniel McMahon, to administer the leadership. Former Chief of Police Devery made New York laugh heartily over an interview he gave out on the affairs of Tammany Hall. He said that Tammany Hall was ruled by a sport, meaning Murphy; a joke, meaning Haffen; and a two-spot, meaning McMahon. At the same time Devery announced that he was going to become the leader of the district formerly represented by John C. Sheehan.

The divided responsibility did not work well and after a few months Charles F. Murphy was made the full-fledged leader, largely through the influence of Big Tim Sullivan. Murphy went about his work very quietly at first. One of

By Harry Wilson Walker

Murphy Has No Particular Adviser at the Present Time

his first objects was to form an alliance with William R. Hearst, whom he sent to Congress. There was not very much opportunity for him to display his qualities, because Mayor Low still had a year to serve. Murphy was almost wholly responsible for keeping George B. McClellan in Congress. They were warm personal friends, and it was no secret in Tammany Hall that Murphy had his heart set on electing McClellan to succeed Mayor Low. Murphy put great value on McClellan's name and from the very start was confident he would be elected.

McClellan used to refer to Murphy as "dear old Charlie," and Murphy would blink.

Before he had been leader many months, Murphy induced Bourke Cockran to reënter Tammany Hall; and that brilliant orator became Murphy's closest adviser. It was also prophesied that Cockran would return to Congress for Murphy's district after McClellan had become mayor. The old Croker guard were indignant that Cockran, the bitter foe of Croker, should be taken back into the fold.

Then, to make them still more angry, Murphy began to cultivate former Sheriff James O'Brien, who had tried to convict Croker of murder. There was a general belief that Croker would not be able to control his indignation, and that he would suddenly appear in New York some day in the near future and subject Murphy to the same treatment

he had meted out to John C. Sheehan.

All this time Croker was saying in his English home that he was through with politics forever. Even his old friends doubted this. Finally the time drew near for the nomination for mayor. McClellan had been in Europe for over six months. Murphy was having a trying time with Hugh McLaughlin, the Democratic boss of Brooklyn, who did not like McClellan and opposed him. However, Murphy had enough votes to control the city convention, and after a stormy scene in the convention McClellan was nominated on a ticket with Edward M. Grout and Charles V. Fornes, who were serving respectively in the Low administration as comptroller and chairman of the Board of Aldermen.

These two men had already been renominated on the

ticket with Mr. Low, who was again the Republican and Fusion candidate for mayor. Mayor Low and the Republican organization were indignant that Tammany should appropriate two of their nominees, and Grout and Fornes were forced off the Low ticket. The McLaughlin machine also repudiated the nominations of Grout and Fornes, and for a time the situation was greatly mixed.

the majority he received on Manhattan Island would not be sufficient to pull him through.

Patrick H. McCarren, one of McLaughlin's ablest leaders, bolted the McLaughlin organization and took with him a majority of the leaders. To the surprise of everybody, McClellan carried Brooklyn and had a good majority in the other boroughs, making the total majority about sixty thousand.

McClellan started in as a strictly Tammany mayor, Murphy naming most of the appointees, while McCarren made the selections for Brooklyn. Mayor McClellan appointed a great many personal friends, some of them being old friends of his father, General McClellan. McClellan took a large house on

Washington Square, which up to a few years before had been the center of the aristocracy. The mayor avoided the Democratic Club and did not mix very much with Tammany men, except during office hours.

McClellan had not been in office a month before the preliminary presidential campaign of 1904 was opened. I had learned that Mr. Bryan would not be a candidate and I set to work to boom McClellan, as it was then apparent that the Wall Street Democrats were lining up for Judge Alton B. Parker. I supposed at first that Murphy would be for McClellan and I am sure McClellan thought so too. Murphy, however, announced that he was in favor of the nomination of Grover Cleveland. This was absolutely absurd, because I knew from men like John G. Carlisle and others, who were in close touch with Mr. Cleveland, that he had no thought of running again; and I also knew the National Democracy well enough to realize that he could not be nominated. This was good strategy, however, if Murphy had not been altogether serious, because the brand of Tammany was a source of weakness to McClellan.

I had arranged to start his boom in the Middle West, where the old soldiers who had served under General McClellan, as well as their offspring, were numerous. accompanied the New York delegation to Washington early in February, where the Democratic National Committee was to meet for the purpose of selecting a place in which to hold the national convention. This was Murphy's first appearance in national politics. A committee, of which I was a member, was appointed. When we arrived in Washington-several hours late-there was a terrible

The meeting of the committee had been called for eight o'clock; but as Murphy was snowbound it was decided to hold a routine meeting at nine o'clock. Former Mayor Van Wyck presided at the meeting and Senator McCarren, who was now the undisputed boss of the Brooklyn Democracy, was selected to present the claims of New York before the national committee the next day.

#### A Bunch of Frightened Millionaires

AFTERWARD Van Wyck and myself went to Senator Gorman's house, and when we returned to our hotel we found the Tammany end of the New York delegation almost in a panic. There were several millionaires among them, and these rich men were more alarmed than some of the most humble members of the committee. They said that Murphy had arrived and was in a furious temper. He was reported as having said that it was an outrage and insult that a meeting should have been held without his presence. One of the millionaires was so alarmed that he took the midnight train back to New York, so as to avoid meeting Murphy. We were all about to go to bed when Murphy came over to the hotel and, to our agreeable surprise,

greeted Van Wyck in a most cordial manner. We repaired to the café, where we stayed most of the night. I never knew Murphy to be so talkative. He said he had been annoyed because the meeting was not postponed until his arrival, but that his annoyance was entirely with McCarren, as the Brooklyn man had received a telegram saying at exactly what hour he-Murphy-would arrive, and that he ought to have made that fact known. As pleasant as

Murphy seemed to be, I became convinced that there was strong jealousy existing between McCarren and himself, and I spoke of it afterward to Van Wyck: but he scoffed at the idea. Murphy was exceedingly affable during his stay in

Washington, but he had absolutely no acquaintance with the national leaders; and when I introduced a number of them to him he acted like an awkward schoolboy.

Before we left Washington I learned the secret of the row between McCarren and Murphy; and, though it continued up to the hour of McCarren's death, nearly six years afterward, the origin of it has never been printed to my knowledge. A year previous to this Judge Parker and Senstor Hill had pledged McCarren to Parker's support. McCarren told Judge Parker then that he did not know how McLaughlin would take it, and it might mean that he would have to break with McLaughlin and the Brooklyn organization in order to carry out his promise. Shortly after McClellan's election Murphy told McCarren that Tammany Hall was opposed to the nomination of Judge Parker for president and said he expected the Brooklyn Democracy to join Tammany in opposition.

"I have been pledged to Judge Parker for over a year," answered McCarren; "and unless Judge Parker releases me I cannot very well break my word. However I will explain the situation to the judge, and if he agrees to it I will work with Tammany in national affairs as I have in

local matters."

Meantime McCarren spoke to Judge Parker; but the judge held him to his pledge. It was not until McCarren met Murphy in Washington that he gave him an answer. This was what produced the outburst of anger on the part of Murphy that the committee supposed was caused by their having held a meeting previous to his arrival. The day of the national committee meeting McCarren mixed freely with all the national leaders and espoused the cause of Judge Parker.

Murphy played a very inconspicuous part in the assembly of Democratic statesmen. Through Van Wyck he gave

> out several interviews stating that Tammany believed that Grover Cleveland would be nominated at St. Louis.

The state committee was called to meet at Albany shortly after this for the purpose of arranging an early state convention, and there was a lineup between the Parker and anti-Parker forces. On this occasion Murphy made an alliance with William J. Connors, of Buffalo. Bourke Cockran was the Tammany spokesman. The lineup in the committee was very close, Senator Hill being in command of the Parker forces. Former United States Senator Edward Murphy had remained out of the fight until the morning meeting of the committee. To the surprise of the Tammany

Big Tim Sullivan Was the Most

people he threw his influence to Parker. This was taken as an indication that Croker was not backing Charles Murphy in national politics.

When the state convention was held the delegates were instructed to vote for Parker under the unit rule, though Murphy, through Cockran, fought to the last ditch against those instructions. Just before the St. Louis convention Murphy was carrying on a flirtation with William R. Hearst, who was also a candidate for president.

#### The Murphy-McCarren Unpleasantness

MURPHY did not cut very much of a figure at St. Louis and he returned home disgruntled. Early in the campaign he visited Judge Parker at his country place. Judge Parker explained to the Tammany leader that he wanted all the factions in Greater New York to get together, and that he hoped that Mr. Murphy and Senator McCarren would have a meeting.

At the mention of McCarren's name Murphy lost his

temper and, getting up from his chair, said:

"I will have nothing to do with that man McCarren."

Toward the middle of the campaign Murphy again
visited Judge Parker, and the presidential candidate once
more spoke of the necessity of harmony in Greater New
York. "I want you and Senator McCarren to sit on the
platform together at the Madison Square Garden meeting,"
said Judge Parker.

"I said once before that I would have nothing to do with McCarren," said Murphy. "I will not even sit on the

platform with him."

After the defeat of Judge Parker it was known among McClellan's friends that he was chafing under the Tammany yoke. However there had been no open break with Murphy. McClellan's administration was personally popular and it looked as though he would easily be reëlected.

Meantime the legislature had made the term for the next mayor four years, the same as it was in the case of Van Wyck. In several public speeches McClellan made he talked more like a reformer than a Tammany man; but it was supposed that it was part of the game he was playing. There was no opposition to his renomination, but he surprised everybody by appearing at Carnegie Hall just after he received his renomination, announcing that he was going to be the mayor, and that he would take orders from no one. Very few of the politicians who heard him believed at the time that McClellan meant what he said.

The newspapers had been urging McClellan to follow the example of Mayor Weaver, of Philadelphia. Just before McClellan's nomination I wrote a letter to a New York paper that was continually calling on McClellan to follow Mayor Weaver's example, in which I said that if McClellan got another term he would be an independent mayor, and that he would never do anything that would place a blot on his great name. I submitted a copy of this letter to McClellan before it was printed; so I knew very well he was ready for a break with Murphy.

On account of the great social prominence of the McClellans the mayor was on terms

of intimacy with leading financiers, particularly with Mr. Morgan. I had heard from time to time that Murphy's unexpected calls at the McClellan residence were a source of embarrassment to the McClellans socially. At this time Mrs. General McClellan was living with her son. She was a proud and forceful woman. I have heard it through so many sources that I believe the final break between Murphy and McClellan came after a visit of the former to the McClellan residence about two weeks after McClellan's second election.

According to the story, Mr. Murphy did something which offended both Mrs. General McClellan and the mayor's wife. At all events this was the last visit the Tammany leader ever made to the McClellan home. Immediately after that Murphy left New York and spent some time at a health resort. When McClellan made his appointments, after being inaugurated as mayor the second time, everybody knew that the young mayor and the Tammany leader had parted company and would travel different roads.

McClellan lined up with McCarren, who was known to represent Wall Street interests at Albany. For the next four years Murphy had rather a hard time. He had, with his brother and another relative, engaged extensively in the contracting business. The principal contract was the excavation for the Pennsylvania Railroad Station in New York. He and his associates were frequently embarrassed by orders issued by the McClellan officeholders; and on account of the financial interests' being friendly to McClellan it was very difficult at times for Murphy's firm to borrow money.

McClellan set out to destroy Murphy politically by starting district fights, but he made poor headway. There were two reasons for this—the first being that when Devery was elected district leader Murphy obtained a decision from the Supreme Court declaring that the majority of the executive committee alone could pass on the eligibility of its membership; so that Murphy, having the majority of the executive committee, could keep an unfriendly leader out.

This decision also was sustained by a state convention, which had unseated the Devery delegates. In the second place, even those who did not fancy Murphy's leadership held that McClellan had no moral right to destroy the

political power that had created him. He had not only served several terms in Congress by favor of Murphy but Murphy had elected him twice as mayor. President Wilson and Governor Glynn will not make this mistake.

McClellan also had other embarrassments. William R. Hearst, who ran as an independent candidate for mayor, had a suit demanding that the ballot boxes should be opened and claiming that a recount would show that he—Hearst—had been elected. McClellan made the great mistake of opposing this. Had he insisted on a recount, as it turned out afterward, it would have been shown that he was elected by a safe

William R. Hearst Had a Jult Demanding That the Ballot Boxes Should be Opened

Tammany fell into

plurality. Even had it been shown that Mr. Hearst was elected, McClellan would have been so popular that he could have been elected governor, because Hearst could not under the circumstances have put up a telling opposition.

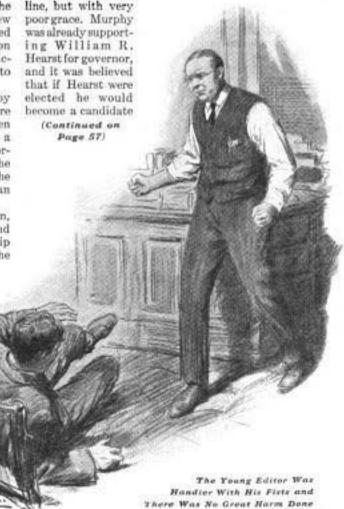

I still continued to hold a city office, Van Wyck, Low and McClellan having refused to accept my resignation, largely on the ground of personal friendship; so I felt myself to be a free agent. Mr. Bryan was making a tour round the world and I saw that he was regaining his popularity. I determined to start a movement to bring about his third nomination for president. Without consulting anybody

I wrote to Mr. Bryan proposing that I should get up a monster reception for him on his arrival in New York the following August. The letter reached Mr. Bryan at Constantinople and I received an answer from him in which he agreed to my plans.

#### A Demonstration for Bryan

THE first anybody knew of them was when they were announced by the press association. The day the anouncement appeared Mr. McClellan sent for me and told me he hoped I would be successful. Inasmuch as the police department would play a great part in the handling of the crowds I announced the fact of the mayor's approval. Murphy immediately showed his hostility and his newspaper organ for months did its best to hold me up to ridicule. I counteracted this by securing a letter from Croker, who by this time had taken up his residence in Ireland. Croker was enthusiastic and immediately I had the support of the old Croker guard.

Another piece of luck was that several Democratic state conventions were held shortly after the announcement of my plans and indorsed Mr. Bryan. At the last minute

### By JOHN FLEMING WILSON JUNK

APTAIN SINGGOLD, ruddy of cheek and white of hair, came into the busy office of the superintendent of the American & Asiatic Line. He seemed disturbed and in doubt whether to pass on to the big desk whence the big company's ships were ruled.

"Good morning, captain!" said a brisk voice. "I

haven't seen you for a long time."

"It is a long time," Captain Singgold confessed. "There isn't much pleasure for a retired skipper in coming down to an office where he's got his mail for forty years and doesn't get it there any more."

The cashier nodded and went on:

"The boss wants to see you, captain. You'd better just step in."

As Singgold passed through the gate the cashier remarked to his assistant:

"Looks as hearty as the day he retired from the service. He's commanded some great packets in his day.'

When he reached the superintendent's desk that official rose and shook the captain's hand very heartily.

"I'm glad to see you," he roared.

Captain Singgold smiled slightly, for the voice of the superintendent was famous across two oceans. It seemed good to hear it again and he looked squarely into the eyes of the big man who had been his superior for so many years.

"Yes, sir; I am glad to see you, captain," the super-intendent went on. "And I'm glad to see you so hearty. I have a command for you-your old one, the Chittagong.'

"But—the rules of the company—I was retired at the age limit. What do you mean?"

For the moment the superintendent seemed embarrassed. To Singgold's amazement, he lowered his great voice to a husky whisper:

"Well, captain, the Chittagong's been retired too. You were commander of her for thirty years and I-I thought you might like to take her to Newport News.

"Sold, sir?"

"No; she's going to be broken up for scrap, captain." There was a long moment's silence. Singgold stared at the dark ceiling. The superintendent fussed with some papers before him. Presently he went on in the same husky whisper:

"You see, the good old packet is unseaworthy. Inspectors refused to pass her without repairs that would cost enough to half build a new one. She's had her day; she's been the boast of the fleet. I hated to do it, but I told the directors that the best thing we could do was to get rid of her. They agreed with me. But no other line is going to run her. We're just going to break her up and sell the scrap. There isn't going to be any disgrace attached to the Chittagong's name after she's run thirty years without a black mark against her. And I said to myself: 'Captain Singgold can take her round.' You know you commanded her from the time she was built until you retired. I thought mebbe you'd like to-to kind of take care of her to the end. The directors agreed, captain."

Singgold's red cheeks grew redder. He passed his clean, brown, capable right hand down his white beard.

"It's kind of you, sir. I'd like to do it."
"Confound it!" roared the superintendent. "This office is no place for sentiment-no place for sentiment, captain. Come outside, sir!"

Out in the echoing pier shed Captain Singgold gazed across through an open door at the lofty fiddlebows of the Chittagong. He saw that she had not been painted after her last voyage, and there was an air of dishevelment about the steamer that had once been the pride of the San Francisco waterfront.

"She'll need a coat of paint," Singgold said quietly.

"Paint?" roared the superintendent. "Paint! What do think you're going on—a yachting tour?"
"She's paid for it," said Singgold. "She came in the

Golden Gate all spick and span. The line ought to let her go out looking better than a coal barge."

"But I won't talk to you another minute. You'll be asking for new awnings and new engines in a minute! You take her just as she is. The company isn't going to spend another cent on that pile of junk. No; I won't listen to you. I'll paint her, but she goes as she is-not a new bit of line; not a new boatcover; not anything more. She's junk.

scrap will bring. I don't want any fancy tugboat fees or salvage payments for her. If she gives out, get out yourself and let her sink. You've no passengers and no freight except some steel scrap out of the fire, that we took for luck and ballast. You'll have your old engineer-Charles Bales; and you'll take as mate a nice chap that's going back into the White Star. Now not another word, captain. Sail five days from now—Sunday."

Singgold swung round and held out his hand.

"I brought her in on a Sunday."

"What the deuce do I care about that?" bawled the superintendent, giving every symptom of intending to strike Singgold. Instead, he shook his hand.

"I'll move my stuff right down," said the new master of

"Chief Engineer Bales is already aboard," the superintendent bellowed. "The chief officer, Mr. Masters, is already at work. I am going to give you three thousand tons of coal and six months' supplies, with a little leeway, Good day, captain! See you Sunday morning!"

Singgold stood motionless for a moment. Then he went up the maindeck gangway and stood in the shadows of his former command for the first time in two years.

Came a grimy officer down the alleyway, who stopped and said:

"Pardon me, sir. Have you business here?"

"I'm Captain Singgold-just appointed master. Itake it you're the first officer?"

"I'm Mr. Masters," was the respectful "Ah!" breathed the

skipper, brushing his beard, "What shape is she in, Mr. Masters?"

"I've got her pretty well cleaned up, sir," returned the young man; "but we're going to sea short of stores. However, under the circumstances I suppose we can't expect anything else. Will you go over her with me, sir? Then I'll have an idea of what you want." He hesitated bashfully and then continued: "I understand you brought her round from the

"Idid. NowI'm going to take her back."

"All right. Paint her!" bellowed the superintendent.

see the chief engineer. I leave the stowing to you."

It struck Singgold that the engine room was strangely "One thing more, captain: she's insured for just what the quiet. The huge machines were motionless-not even the sanitary pump was working; but by the scarred desk beneath the great steam valve a bowed and ancient figure was stooped over the slate. "Hello, chief!" said the captain.

dumped out of the slings."

The engineer turned a seamed face to his old shipmate. "Is that you, Cap'n Singgold?" he rasped. "You see us fixing her up for her last voyage."

I thought she had buckled on me—that was in the typhoon

of November, '91. She is a good seaboat. Have you attended to everything aft?"

"Yes, sir. I'm restowing that scrapiron. It was simply

"Very well," Singgold answered. "I am going in now to

"I'm taking her round," was the quiet reply.

"Pshaw!" said Mr. Bales, laying down his chalk. "You don't say so! You know that fellow Marshall, who was chief of her since you and I were laid off, has scamped everything. If them engines hadn't been kep' as well as I kep' 'em, they'd be lying down and resting. He never put any new bearings in anything. Looks as if these machines had been through a fire. And the superintendent laughs at me when I ask for stuff. Says he: 'You run her round the Horn and that'll be all."

Singgold stared into the shining steel faces and the two old men seemed suddenly fallen into a strange immobility.

High up between the low and intermediate cylinders an oiler tapped irregularly away on a valve.

"Do the best you can, chief," said the captain presently. "Let's help her to make her last voyage without trouble. You keep a good watch below here and I'll con her home. See you Sunday!"

With an alert step the old skipper went up the shadowed ladders to the boatdeck and swung down to his old quarters under the bridge. He opened the storm door and entered. The same swivel chair stood before the old mahogany desk and the same wardrobe rested stiffly against the rear wall. Singgold looked it over quietly and then took off his hat. It was a silent salute to his ship. This done, he

stepped out, closed the door and went down on the pier. He passed through the raffle of freight and out into the bright light of the street.

Mechanically he stopped to buy an evening paper. The first thing that met his

eye when he was seated in the street car that was to carry him to his modest hotel was an item with the headline:

FAMOUS OLD LINER IS THROWN ON SCRAPHEAU

The American & Asiatic Steamship Company has decided not to make the repairs to the Chittagong ordered by the United States Inspectors of Hulls and Boilers last month. The Chittagong has been in the Oriental and Indian trade for thirty years. She was commanded most of that time by Captain Theodore Singgold, now retired on account of age.

The Chittagong will leave for Newport News on Sunday and on arrival there will be broken up for scrap. With her departure San Francisco Bay will lose one of its most interesting features. It will be remembered that in 1898 the liner took General - to the Philippines-and it

brought his body back not long afterward.

Captain Singgold's mind ran back over the thirty years he had commanded the Chittagong. He recalled a hundred names famous on three continents; the faces of lovely women; the hearty laughter of genial men; the handclasp of friends. Also there developed before his eyes the alluring figure of his wife, the pink, curled fingers of their child. And all were gone! He and the Chittagong had lived their brisk and romantic life. Remained

"Taylor Street!" cried the conductor.

Captain Singgold straightened himself and went down the aisle of the car. He looked neither to right nor to left. He stepped off and arrived on the curb. There he paused, with heavily wrinkled brows. What remained? What was left of that strong and proud life he had successfully lived? He bowed his head. "Junk!" he murmured bitterly, and went on up the street to his little hotel.

Sunday morning the Chittagong lay easily in her berth. She shone with fresh paint and her brasswork was gleaming.

From her huge funnel clouds of black smoke poured upward. At her main truck flew the blue peter.

The chief officer met him respectfully at the gangway.

"The superintendent is waiting for you in your cabin, sir.

Thank you, Mr. Masters. You have the ship looking like a bride. Be ready to get your lines in."

In his own cabin the superintendent greeted him with a boisterous:

"Hello, captain!" "Good morning, sir," returned Singgold. "Can you wait until I put on my uniform?"

"Sure!"

With deliberation the captain took his carefully pressed dress uniform out of his locker and attired himself. Then he put his gold-braided cap on his white head and nodded briskly.

"You sail in half an bour, captain," said his superior. "Here's your papers and coal orders, and so on-Now I want to have a minute's chat with you. As I told you,

this is business. We've insured her for one hundred thousand dollars. As scrap she'll bring us a hundred and fifty thousand. See? If you can't make it the whole way to Newport News don't spend any money on salvaging her. Just let her go. Of course I want you to get her in safe and sound; but"—he laid a heavy hand on Singgold's shoulder—"you're more to us than the old Chittagong. Don't risk life! This isn't that kind of a trip. This is a funeral. The corpse is dead anyway."

"I understand perfectly," rejoined the captain, his red face paling slightly. "The two of us came to San Francisco together and we're leaving together. I-I appreciate your

not selling her.'

"Sell her!" bellowed the superintendent. "When I've stood on that pier down there a hundred times and seen you warp her in, with all safe and sound and shipshape? Sell the best packet that ever sailed the seas? Man, don't you remember I took my wedding trip on the Chittagong?"

In the little silence that followed both were staring out the open door at the sparkling bay. Up to them came the rumble of trucks, the harsh cries of officers, the busy noises of the pier. Suddenly the superintendent held out his big hand. Captain Singgold grasped it. They looked into each other's eyes a moment and then the superintendent lifted his hand in salute and went silently away.

"Mr. Masters," said Captain Singgold to the chief officer as he came up, "please get your lines in. Let me have the second mate on the bridge. Ask the third to see that all is clear in the slip."

"Yes, sir," said Masters, and hurried off.

Captain Singgold slowly climbed the bridge steps, went to the engine-room telegraph and pulled the lever to Stand by! Then he went to the end of the bridge and peered down. The lines were being hauled in. The superintendent was standing looking up, open-mouthed, breathing deeply.
"All clear, sir!" came a sharp cry.

"Set the engines half astern," said Singgold to the second officer.

Slowly the Chittagong began to yield to the pull of her propeller and her great bows withdrew from the street combing.

"Good-by!" bawled the superintendent, taking off his stiff hat.

The captain waved his hand and then reached for the whistle cord. Out of the huge brass cylinder roared the steam—once, twice, thrice—Good-by!

Slowly and carefully, as he had done for thirty years, Captain Singgold straightened his vessel out and headed her for Angel Island. She lifted to every beat of her engines a light, buoyant lilt; and her commander's eyes grew dim. He knew now why she had been condemned.

He was stirred from his reverie by the sound of whistles on every hand. San Francisco was bidding farewell to the

"Good, Mr. Halsey," was the response. "It is a long voyage, and Magellan Strait sometimes needs careful navigation. I have always made it a rule that both the chief officer and the second shall work out the day's reckonings separately, and I shall compare them with my own. I will relieve you now so that you can get forty winks before noon. Please ask the third officer to report to me."

When the third officer came on the bridge Singgold scanned him carefully. He was trim of figure, but his face and the wrinkles about his eyes told of hard sea service. When he answered the first question addressed to him the captain nodded his satisfaction. He had good men with him—men that knew the sea and would face it unflinchingly.

At noon the Chittagong was far off Pigeon Point and her course was laid to pass outside the Santa Barbara Islands. Captain Singgold went down and sat at the head of the table, where he had sat for thirty years. The chief officer and the chief engineer sat one on each side of him.

"She's rompin' along, sir," remarked the engineer.

"She sure can travel, sir!" added the mate. "We'll make a quick trip of it."

Captain Singgold stared about the empty saloon and did not answer. Memory was filling all the seats that swung vacantly before him—the girl who had crossed to be married to a man who had died of cholera a week before she reached Hongkong; the little missionary girl who timidly bowed her head at each meal and asked a blessing; the tender face of his wife; the grim visage of Captain Miner, coming home after losing his ship and a hundred passengers; the austere figure of General ——; the slender hands of that woman whom nobody knew or spoke to.

And under it all he felt the unmistakably palsylike tremor of the old Chittagong returning to the place of her birth, honorable in her ending as in her beginning. He

rose, his meal half finished, and went to his room. There he sat him down in his swivel chair.

"It'll be a month to the Horn," he thought to himself, "and forty days from there to Newport News. The weather will be bad down South."

He rang the bell for a steward and sent him to find the chief engineer, who came quietly, handling a bit of waste in his palm - a saturnine figure, indeed.

"Sit down, Charlie," said Singgold gently. "Light your pipe."

"Like old times!" Mr. Bales remarked.

For a long time the two old men smoked in silence, tilted back in their chairs and nodding to the easy pitch of the steamer. Then the chief engineer laughed harshly.

"We're going home in style, cap." Sing-gold grunted and brushed his beard. "Yes, sir," said the engineer; "I've got as chief fireman 'Big Bill 'Mahoney, that came out with us, and

there are six others who made the trip when we brought her round. Boson Tom Allen is with us too. Wonder where the boss managed to pick 'em up.'

The captain leaned forward alertly.

"'Big Bill' with us? And Tom Allen? I didn't notice, Maybe ——"

"It's not accident," said Mr. Bales. "The boss went to some pains to give us pretty much the same old crew that we came out with. The old Chittagong is going home in style."

There was a knock at the door and the wireless operator came in and saluted.

"A message, sir."

Very slowly Captain Singgold opened the envelope and read the words of the message. He studied it for a moment and handed it to the chief. Mr. Bales read it aloud in a slow, harsh voice: SAN FRANCISCO. Office.

Good luck and a successful voyage to the Chittagong and Captain Singgold and Chief Bales and all the officers and crew. Good luck! AMERICAN & ASIATIC.

Memory Was Filling All the Jeats That Joung Vacantly Before Him

ship that had been so long her pride. Singgold glanced back over her. Every bit of gear was in its place. She shone with white paint. The superintendent had done well by her. More than a hundred and fifty times Singgold had conned her down the bay, shining and beautiful. Now, on her last voyage, she was adorned as if a thousand passengers thronged her decks—but there was no one this

Again the captain pulled the whistle cord and once more the great blasts rang out triumphantly in answer to the greetings of the various fleets. The people on a Sausalito ferryboat waved handkerchiefs. An incoming Japanese liner dipped her ensign. But beneath all the clamor Singgold heard that steady pulse of yielding frames.

He swung her until the Golden Gate gleamed dead ahead, and sighed. Suddenly he turned to the second officer and asked harshly:

"What ticket have you?"

"Master's ticket, sir," was the ready response. "I am Halsey-been running in here as mate on sugar boats."

"All right, son," said the captain to the waiting operator. "I'll bring you a message soon. What'll we say, Charlie?"

The chief engineer smiled bitterly.

"Tell 'em 'No flowers'!"

"No," was the slow reply. "They're doing their best by us, Charlie Bales. Now we must think up something to say."

There was a long pause. Then the captain swung round to his desk and wrote, in a large, easy hand, a message, which he handed to his companion.

The chief fixed his smoke-furned eyes on the paper and his harsh voice rasped the words out:

S. S. CHITTAGONG, at sea off Monterey. American & Asiatic,

San Francisco. In behalf of officers and men I present the compliments of the ship and our thanks—from one and all—for kind wishes. SINGGOLD, Commander.

"That'll be polite," the captain said. "You and I have sailed from Pier A for a good many years, Charlie, and they've been good to us. Remember when Ruth died? She wanted to be buried at sea, so—so's she could always be with me; and the boss himself took the Chittagong out beyond the Farralones and gave her honest sea burial. He blew the three whistles himself."

Bales rose and knocked out his pipe. Without a word he strode to the door, opened it and passed into the darkness.

"Poor Charlie Bales!" murmured the whitehaired skipper. "I hadn't ought to 'a' said that, seeing Gertrude ran

off while we were in Hongkong, and he came back to find a For Rent sign on his house. I certainly hadn't better open my fool mouth again. The last kiss she gave him was right in this room here!"

He pressed a button and presently a waiter appeared. To him the captain spoke briefly:

"Tell the boson I want to see him."

Presently entered a grizzled seaman, who saluted and stood at attention.

"Sit down, Tom Allen," said Singgold quietly. "We brought the packet out, didn't

The boson seated himself and answered briefly: "Yes, sir."

"And now the same old crowd is taking her back, Tom."

"She's a good ship yet, sir," Allen said earnestly.

"We're all old," returned the captain.

"You've made about a hundred voyages in the Chittagong with me. I just wanted to tell you I was glad to have an old—an old friend in charge of my crew."
"There's more of us for'ad, sir," said the boson. "There's

Jimmie Snow, as was storekeeper that maiden voyage, and the four quartermasters was all with us, sir; and below in the engine room there is more of us."

"How's the rest of the crew, Tom?"

"Very good, sir. Old-timers, sir. None better, sir."

"All right, boson," said Singgold; and the seaman rose and left the cabin.

When he was gone the captain rose, too, and opened the door that led into the wheelhouse. He went slowly up the steps and peered at the man at the wheel.

Does she steer well?" he demanded.

"Same as she always did, sir," was the reply. "She was always a willin' creature, sir."

For half an hour Captain Singgold stood and watched the run of the dark seas. The great jib-boom rose and fell with rhythmic power and the deck trembled faintly to the trampling of the engines. In the southern sky Venus burned like a lamp. Far inshore the lights of Gardena glowed faintly. Singgold's keen old eyes searched for the loom of Cypress Point, and when he had detected it he went back to his own cabin to sign the reports of mate, steward and engineer.

This done, he studied the rating of the chronometers and then sat down to reverie.

He was roused by the whistle of the tube from the bridge. He reached for it and said:

"What is it?"

"Cypress Point, nine miles on the beam, sir, at eight-thirteen."

"All right," the captain answered, and rose and looked at the barometer.

It had fallen three-tenths; he pursed his lips in surprise and went quickly to the bridge. The third officer was leaning far out over the rail, evidently intent on something

"What is it, son?" the captain demanded.

"Steamer ahead, sir; barely see her masthead light. I think it's the Rose City, sir."

Rapidly the light grew brighter; then appeared the glow of her saloon and deck lights; then the flicker of the port and starboard lights.

"Call the quartermaster!" said Singgold.

In response to the officer's shrill whistle an old man came up the steps. Without turning his head the captain commanded him to tell the wireless operator to get into communication with whatever steamer it was and report

"I'm talking to the Rose City, sir," Sparks reported a minute later.

"Present my compliments to Captain Mason and tell him I wish him a pleasant voyage."

Quickly the big liner ahead forged into full view, foamed abeam, and through the night came the bellow of her three whistles. Singgold answered them with three long blasts and resumed his watch.

"Mason is a young fellow with big commands ahead of him," he thought to himself. "I'm on my last voyage!"

When the Day Was Pully Come the Chittagong Was Plunging Through the Mountainous Jeas at a Good Jixteen Knotz

He sighed. A moment later the wireless operator came on the bridge with another message. Singgold opened it and read its contents by the light in the chartdesk:

Good luck to you, Captain Singgold, and a happy voyage to the Chittagong! Bad weather off Arguello and heavy gale blowing, with heavy sea running. MASON.

"Son," said the old captain, "you must stand an allnight watch tonight. Pick up any news you can find and let me know how things are going round us. Will you please ask the chief officer to step in?"

"Mr. Masters," Singgold said curtly when the mate appeared, "Captain Mason sends a wireless that the weather is bad off Arguello. He says, too, that there is a heavy sea running. Is everything snug?"

"Yes, sir."

Involuntarily both fell silent, listening to the sound of the sea and feeling the wavering tremor of the Chittagong. "She never used to behave this way," said Singgold

presently. "She must be very weak, Mr. Masters." "She is, sir," was the quiet response; "but we'll have it

fairly smooth when we get into Santa Barbara Channel." The captain pondered this; then picked up the speaking tube and called the watch officer.

"Where are we?" he demanded.

"Just off the southerly point of Carmelo Bay, sir," came

"We'll be off Arguello 'bout six in the morning," Singgold remarked. "Of course we could turn the engines up and make it a couple of hours sooner; but-I don't know

"The hull isn't as strong as it used to be," suggested the chief mate

"That is true," was the reply. "Well, you are tired and I won't keep you any longer.

When Captain Singgold entered the chief engineer's cabin Mr. Bales looked up and pointed to the lounge. He sat in full uniform, with his cap drawn over his eyes. He seemed incredibly old and worn and weary.
"How are the machines?" asked Singgold gently.

The engineer looked up and shook his head.

"I daren't turn up more'n eighty-two, cap. Even then

they work on the plates a mite. Worn out!"
"Well, it swings us along twelve knots an hour, and that's fast enough for such a long cruise," was the reassuring response. "Bad weather down below us. Rose City passed the word a while ago."

"I rigged Jim Mahoney's racing gear on her ten years ago, you remember," the chief went on. "Jim's gone; but

his gear is still good."

"Well, I'll handle her myself if we run into a gale of wind," Singgold replied. "She never failed me yet. Remember that gale we rode out off the Hawaiians twenty years

ago? Only the old Chittagong could 'a' stood it."
"I was on the working platform thirty hours running,"
said Mr. Bales slowly. "Ye know I always thought that storm kind of weakened her. She never was so lively after that-not that she didn't do her work all right.'

After an interchange of a few more perfunctory remarks Captain Singgold got up and went out on deck. The wind was very fresh and the great bows were now and then

smothered in foam. It had grown thick and he could see but a little distance. He went to his cabin, donned his oilskins and sou'wester, and mounted the bridge.

"The glass is falling still," he announced to the third mate.

"Sea's rising fast," the officer returned respectfully; "but she is some seaboat, sir. Still, I'll bet there's plenty of weather ahead.'

Until the second officer came on watch at midnight Singgold stood motionless in the lee of the canvas shelter on the weather side. Then he strode uneasily up and down, glancing now at the crested seas, now at the overcast sky. Finally he halted near the second mate and asked abruptly:

"What do you think of the weather, Mr. Halsey?"

"Bad!" returned the officer. "I've traveled this coast a good deal, sir; when she blows from the sou'est like this it means heavy seas and high gales. But we'll soon be inside the channel. We ought to pick up Arguello Light by five o'clock."

"Give her lots of room!" Singgold said curtly. "And when you've opened Conception Light be careful how you haul her in."

"All right, sir. I'll call you when I get the Light."

"Good night, Mr. Halsey," said the captain, and went down to his own cabin.

Presently he lay down, dressed, on the lounge and turned his ruddy face to the polished deckbeams above him. A moment later he was asleep.

The little clock above his desk tinkled eight bells and with sailorly promptness Captain Singgold rose and stretched himself. Then he examined the glass. It had fallen still another tenth during his sleep. He let down the shutter that covered the starboard window and studied the seas that poured out of the darkness, leaped futilely against the Chittagong's side and fumed away into the murk. He felt the surge and trembling of the steamer.

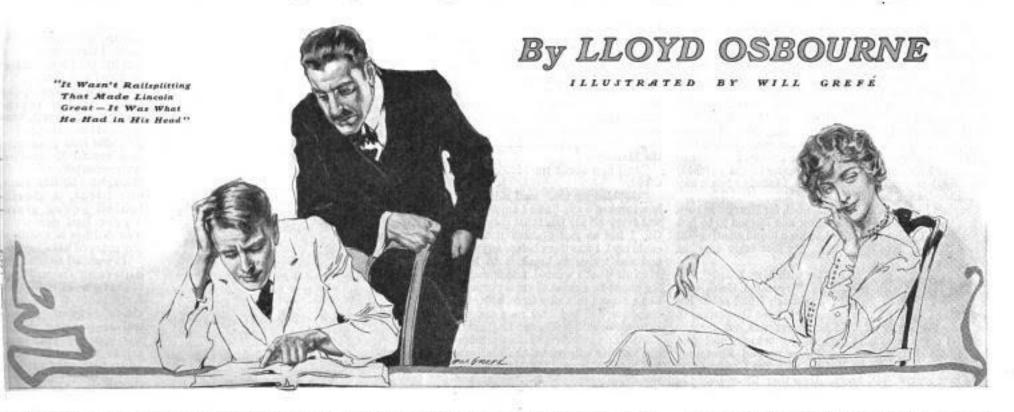

On the bridge he found the second officer had pulled wide of his course.

'Usually a strong inset of the current, sir," he explained. "Good man," murmured the captain, and proceeded to

peer into the darkness ahead. For fifty years he had been scanning just such scenes as now met his eyes-sweeping combers foaming out of the dark, shining seas that slipped swiftly along, huge acres

(Continued on Page 73)

# THE JACKSONBOY

THERE never was a couple that had less interest in busybody societies than Edith and myself; indeed, so far as we knew anything about uplift, we thought the poor were getting much too much of it, and that it was often a name for a lot of oppression. The barons of old were hardly more interfering or tyrannical with their serfs than some of these goody-goody associations that snatch children from their shrieking mothers; dictate with Torquemadalike positiveness about bathing suits and openwork stockings; cut off a man's beer; and arrest people for smoking cigarettes.

Yes: Edith and I were dead against uplift; and that was what made it all the more astonishing we should be captured by Judge Coaxly and the Universal Fellowship League

We should never have fallen had not the furnace got out of order late one winter afternoon, and it became a choice of either going to bed or attending Judge Coaxly's lecture while the plumbers were putting the thing to rights. You see, we could not call on any of our friends in Wickhamhurst because they were all going too. Judge Coaxly had an immense reputation and the news of his coming had crowded our little suburban clubhouse; but Edith and I went merely for the warmth, and were most resentful because it would cost us a dollar each and expose us to a lecture besides. To us it would have been so much jollier to have danced or played cards and spent our two dollars for refreshments; but uplift it had to be or else our polar home.

Judge Coaxly got us at the first lap. He was one of those burning individuals who invariably seem to come from the West and have an infallible recipe for bettering the world. His genial, picturesque presence; his persuasive voice; the glint in his eyes as he denounced the conventional methods of dealing with the poor—all won us as surely as though we were children on the knee of an adored uncle. And his recipe was so simple! It involved no paid secretaries, no charity mongering, no card indexes of deserving cases. Every well-to-do family was to make friends with a poor family—that was the whole recipe in a nutshell. Seven million well-to-do's were to take seven million ill-to-do's under their sympathetic wings.

"Show some human interest in these folks who are socially below you," pleaded Coaxly. "Don't poke them a loaf of bread at the end of a stick, or endow institutions for officials to patronize and bully them. It is not bread these people need a quarter so much as contact with culture, breeding, refinement and gracious tastes. Regard your new family as relations who have come down in the world; try to feel a personal responsibility toward them; belp them all you can to help themselves—and I tell you, my friends, they in their way will help you!"

He drew a most affecting picture of such a humble family whom you had attached to yourself with bonds of steel, and who, in the darkest hour of your life, mutely comforted and supported you. They were so rugged, faithful and devoted that you wondered how you had so long got on without them; and sitting there—on those very hard little folding chairs—you yearned to rise at once and seek them. Edith kept squeezing my hand at every pathetic passage; her pale, pretty face was rapt with attention; again and again she caught her breath as though tears would surely follow. Everybody there was keyed up just the same and swelling with brotherhood and sisterhood.

We walked home in a great glow, inscribed members of the Universal Fellowship League and still under the spell of that entrancing man. We loved humanity and humanity loved us, and it was all too wonderful for anything! I suppose this is how simpler souls feel after a revival meeting—exalted, purified and softened, with a curious sensation of having shed one's grosser nature. We realized how selfish we had been! how stingy with our consideration and sympathy!

Edith said we had put a wall round ourselves and built a little fort of happiness where none might enter except us two—were typical, in fact, of the whole seven million well-to-do's—contemptibly cozy and comfortable while the seven million ill-to-do's were perishing for the lack of a kind word

Bertha, our German girl, let us in, and had a horrid story to tell of the plumber's assistant—the boss had sneaked off as soon as our backs were turned. The assistant had tramped about her kitchen in his dirty boots; had shamelessly proposed to raid the ice chest for beer; had culminated his infamy by trying to kiss her. Bertha had

sprained her thumb in slapping his nasty face, and was altogether quite incoherent with allusions to an immediate return to the "ceety" if we ever left her alone again with a plumber's assistant.

It was hard that she should seem to think it so much our fault and hold us so personally responsible; but of course allowances had to be made for an outraged woman with a sprained thumb, and she undoubtedly had some right to be indignant.

We pacified the invaluable creature, though I shall not deny that our faith in humanity received something of a jar. We decided then and there it should not be a plumber's assistant's family that we would take under our wing. Certainly in my darkest hour the very last person I should care to have about would be this abandoned young man, who usually figured on my bills under the anonymity of labor. Even in my brightest he was never particularly welcome, and I was glad he had had his face slapped by Bertha.

This was only a passing disillusionment, however; we were not going to condemn all humanity on account of one miserable plumber's assistant. We should search for a family more approximating to Judge Coaxly's ideal and one with whom we should have no financial If we had been half inclining to adopt Bertha this little contretemps ended her as a possible candidate. First of all, Bertha was not a family—not yet, at least; and secondly, she did not seem to be the kind of person who would be happy under a wing. She was a little too aggressive and ready to find fault, and if reproved at all would take to her bed with a bad headache and require us to wait on her hand and foot; but as members of the Universal Fellowship League, Edith and I decided to be kinder to her than before and interest ourselves in her point of view. Judge Coaxly had put much stress on that—the point of view.

Up to now ours had been to endure Bertha lest we should go farther and fare worse—it is awfully hard to get servants to stay in the suburbs of New York; but in the light of the new revelation this seemed altogether wrong. As Edith said, we ought to practice on Bertha by way of preparing ourselves to do justice to our real family—the one that, for better or worse, was to accompany us through life and be the prop and comfort of our old age.

I was far too busy to go family hunting myself, having to be at my desk in New York every morning at nine; and, with a long day, that left me fairly spent on my return.

Anyway, even though I had had the leisure of a Fortune's favorite, choosing a family seemed more in a woman's sphere than a man's and I was very willing to turn over the whole matter to Edith; but she demurred a great deal and was not half so sure of her own ability as I was. She said it would be so embarrassing to ring somebody's bell and ask them whether they cared to be adopted!

Judge Coaxly's inspiring eloquence had ignored such homely little details as that. We now thought it a pity he had not been more explicit; he ought to have told us just how to go about it-and, without criticizing the noble man, we wished to goodness he had; but I suppose prophets are never very practical. They enunciate a mighty truth and then hike out to the next place, leaving you to grapple with its application as best you may. Prophets seem always to have been like that—great fellows to get away before you can ask them questions.

Edith and I talked over the available supply of poor families in Wickhamhurst; and after a lot of anxious deliberation our choice seemed about equally divided between Harry Kelp, who drove the omnibus to and from the station, and the Baylers, who kept a little candy and stationery store near the schoolhouse and were the most

estimable kind of German people. Harry was a nice, obliging young American of twenty-five or so, and if his wife and child were anyway as attractive as he was we should be most admirably suited, as they say in registry

So it was arranged that Edith should look up Mrs. Kelp on the morrow, sample the Baylers' newly arrived widowed sister-we were worried about that widowed sister, she had such a wall-eyed look—and generally survey the situation without definitely compromising ourselves. We did not want to be precipitate; it would be so awful to ally ourselves with bonds of steel to the wrong people.

That evening, as I hopped off the train and crowded into the omnibus with the other commuters, I watched Harry Kelp closely for some answering look of understanding. Had a brotherhoodian wave swept us together on life's tumultuous sea or was there the same amount of blue water between us as before? I watched and watched; but, though he was as smiling as ever, I failed to detect any particular change in him.

I confess I was a trifle disappointed, for Harry was such a nice, well-mannered young fellow and seemed to be just in our line. I judged his wife had been found wanting-of course it must have been that. My first eager question to Edith was:

'What did you find the matter with Mrs. Kelp?"

"The matter with Mrs. Kelp?" repeated Edith with an unusual touch of asperity, as though I had asked her something idiotic. "Why, people fell over themselves to get her—the whole of Wickhamhurst was out for the Kelps; I never saw such a push and jostle in my life! And the cold-blooded snobbishness of those people! First, they allowed themselves to be tied up with the Greens-first come first served, you know; then they threw over the Greens for the Wilson Brokaws; and then when Mrs. Allerton Fox came sizzling up in her gorgeous electric, with the chauffeur and footman in mink collars, they called it off with the Brokaws in a way to make you boil. The Kelps are horrid, greedy, self-seeking people, whose only idea is the biggest pocketbook!"

'And the Baylers?" I inquired. Edith threw up her hands.

"Everybody wanted the Baylers!" she cried as though out of all patience at my suggesting anything so unattainable as the Baylers. "There was as crazy a Bayler rush as there was a Kelp rush, though, to do them justice, they were more bewildered than the Kelps-didn't sit there waiting calmly for the highest bid. Bayler's first notion. was that his sister-in-law must have won the hundredthousand-dollar prize in the Würtemberg State Lottery and that we were all coming to call on her. That was some comment on what they really think of us, wasn't it? As though we couldn't call fast enough on anybody with a hundred thousand dollars!"

"Lots couldn't," I observed, forgetting for a moment that I was a member of the Universal Fellowship League and lapsing into a cynicism that would have pained the father of our movement. "I don't know any better social asset in Wickhamhurst than a hundred thousand dollars of United States gold coin, of standard weight and fineness."

'Well, old Mrs. Staples landed them before you could say Jack Robinson," continued Edith, recovering herself sufficiently to give me a hug and a kiss, and putting an arm round me to support me toward the house-it is always a little joke between us that I need such support on my return home, and it is my part to lean on her very heavily and utter little gasps of exhaustion. "I am afraid the Baylers are pretty snobby, too, for they keeled right over when Mrs. Staples put in her application—the fat old jingly thing, covered with diamonds!"

There still remained the McNutts. We had talked of the McNutts vaguery as a possible third choice after the Kelps and Baylers. McNutt was a hardfeatured, slow-moving man, always spattered with cement, who took small contracts for basements and such things, and had the reputation of being very honest and reliable. I had thought of him as rather too old and ruminative and spattery for our new family; and besides, his wife was an immensely stout woman, with a choky way of talking that made me nervous. However, on the idea of any port in a storm, there was much to be said in favor of the McNutts.

"And how about the McNutts?" I asked.

"Gobbled up too," said Edith in a heartbroken way; "and I am afraid it was every bit my fault that they were. Oh, I feel so guilty about it that I could cry! I was there before anybody and was trying to break it to Mrs. McNutt what I wanted, and floundering about in a maze of cross-purposes like a person in a silly farce, when the telephone bell suddenly rang and the Brownlows snapped her up like that!" Edith's fingers conveyed the lightninglike celerity with which the McNutts had been lost to us. "But Mrs. McNutt was awfully kind about it, though, and said if the Brownlows weren't absolutely satisfactory she would give us the next chance."

"I like her nerve!" I said crossly. "Makes an almighty favor of it, does

"Oh, they all do," returned Edith. "Now that everybody has got this

adoption bug and is Coaxlyfying round in automobiles, they stand off with a pussy-full-of-cream expression and know their value."

"Perhaps we mightn't be any better if kings and queens were running after us," I remarked, suddenly remembering my humanitarianism. "We must not blame them if they lose their heads a little."

"Yes; we must try to look at it like that," agreed Edith, still with an air of vexation, "though it is provoking enough to make you want to boil them in oil; but when you are dying to put your hand to the plow it's awful to have no plow, isn't it? To be thirsting to begin and have nothing to begin with! However, I made a start today with Bertha-did all her washing while she sat on the woodbox and told me all her troubles."

"I thought we were going to leave Bertha out of it," I said, not much pleased at the vision of Bertha on the woodbox and my poor little wife doing all the work.

"Oh, it was just for practice," interposed Edith quickly; "and really, do you know—though I do say it myself—it made me feel I was tremendously good at drawing out people. Afterward she went upstairs and wrote a long, long letter to her mother-such a triumph for me, you know, considering they had been alienated for ever so long about sixty-three marks. Oh, if only we could find a family I am sure I could do wonders with it!"

"Don't fret!" I said as she gazed up at me so pitifully. "We'll find a family somewhere if I have to take a day off

"I Made a Start Today With Bertha - Did

and chase one up myself, or set a trap in the back yard and bait it with moving-picture tickets."

On my return late the next day Edith had only failure to report. She looked tired, as well she might be after having scoured the country far and wide and gone without her lunch. Everybody worth having had been snapped up and she had gone from one rebuff to another. At a cemetery, where she thought she had found our ideal, a clovenfooted young gravedigger had demanded five dollars a month as the price of his adoption.

It was all so dismally different from Judge Coaxly's alluring description. Where were those rugged, honest, self-respecting people who clasped your hand across the social gulf? Did they only exist in the FarWest? Was New York entirely outside the rugged, honest, selfrespecting zone? It looked like it, and poor Edith was in despair.

"I am almost driven to consider the Jacksonboy," she said.

"The Jacksonboy!" I exclaimed, bristling at the name, which was one only too familiar in our household.

"Yes, the Jacksonboy," she replied with a shade of belligerency in her voice. "Though I don't suppose for a minute you would ever agree to it.'

The Jacksonboy was certainly a sore point between us. Indeed, the only quarrel of our young married life had been about the Jacksonboy, and we had taken sidespro-Jacksonboy and anti-Jacksonboy-with a passionate ardor that might have wrecked our happy home. It all came about through our losing Robbie, our Scotch collie. He was a prize-bred dog and the kingpin of our existence. Losing Robbie had been a tragedy; any one who loves dogs will understand how we felt-how wholly crushed and heartbroken and bereaved we were.

Well, after two days of hopeless searching, the icemanwith a droop of his eyelid that lingers in my memory yet-said:

"If ever I was to lose a dorg—a valuable, blooded dorg— I should look up that there Jacksonboy and offer him five dollars to find it."

Nothing more could be got out of the iceman than that-only the significant, eyelid-dropping association of the Jacksonboy with missing dogs. We took the iceman's advice and started a still-hunt for the Jacksonboy, who proved to be a slinky-looking individual of about eighteen, with sunburned yellow hair, blue eyes-pretty enough to be a girl's-and an expression of transparent guilt. He

promptly found Robbie the same afternoon and received the five dollars I had promised him, as well as effusions of gratitude from Edith.

My own were much more restrained, for it was as plain as daylight we had been victimized by the young bandit—though I was so glad to get the dog back I forbore to make any comments. It was what happened afterward that brought about the unpleasantness.

Robbie had been brought back without his beautiful collar, which was a new one and a present from Jerry Bartholomew, of the Second National Bank. Naturally we were much put out at losing the collar, and after we out a few wails of indignation and distress the Jacksonboy inquired with an elaborate affectation of casualness whether we cared to offer a small reward for its return.

'Not a cent!" I exclaimed, enraged at this further exaction. "But if you don't return it by nine o'clock, I'll get the constable and have your place searched from top to bottom!"

He looked so terrified at this and his knees knocked together so comically that I gave him another shot.

"I know you stole my dog," I reared; "but I'll be d-d if you are going to steal the

collar too! If it is not here by nine o'clock tomorrow morning I'll have you sent to Elmira, or to one of those boy republics where they put fellows like you in steel cages and feed them on bread and water."

He slunk away, looking very woebegone; and Edith said I had been horribly unkind and unjust, and that if he had been smaller she should have run right after him and kissed him to try and atone for my wicked, horrid, uncalled-for suspicions.

In the transports of getting Robbie back, however, we had no time for quarreling and the subject lay over until the next day—which was Sunday—when the Jacksonboy promptly appeared at the stroke of nine with the collar. He had a cock-and-bull story of having bought it from some street urchins for a dollar, which he rattled off with a greathlessness that was more concerned with Elmira than with the money. I do not think he expected for a moment o be recouped; it was merely that he was badly scared and elt he needed to have some sort of explanation, no matter 10w wild or improbable.

To my amazement Edith accepted every word of it Gospel truth and insisted that I should hand him the iollar. I refused just as heatedly and the miserable thing

leveloped into an out-and-out disgreement, with tears and outbursts and a threatened return to her

Of course it ended by my paying the dollar; but we were left with a soreness and a rankling that were only finally assuaged by my making her a present of a new electric vacuum deaner. Perhaps I was unduly sensitive-I admit it frankly-but the Jacksonboy kept bobbing up between us like Banquo's ghost; and he never bobbed but there was trouble.

I gave Edith the vacuum cleanera thing she had coveted for months to suction the fleas off Robbie withon condition the hated name of Jacksonboy should never be mentioned in our home again. Were she even to say it in her sleep I vowed and declared the vacuum cleaner should disappear forever. It was a peace offering with a thick, strong string to it, and was well worth the money I

It was strange how, after having once discovered there was such a person as the Jacksonboy, he should forthwith become the dominating feature of the landscape. His effeminate, furtive face seemed to meet us whichever way we turned; we could not mail a letter, or drop in at the drug store, or take the most unlikely of walks, but there was the Jacksonboy scurrying to get out of our way.

I invariably scowled at him with the scowliest scowl I could muster at such short notice; while Edith, I regret to say, smiled at him a smile of exaggerated sweetness. I will not pretend I was not annoyed. There is the spirit of an agreement as well as the letter; but she said it was my expression that always made her smile, and that—oh, dear, no!—she had hardly noticed the nameless being at

all, and should not have dreamed of smiling at him! Imagine my feelings now when Edith saidapropos of our new family:

"I am almost driven to consider the Jacksonboy!" I objected with indignation. What! Take that young dog-stealer to our bosom-choose that slinking hobbledehoy and collar-snatcher-enfold in the atmosphere of our cherished home an abandoned loafer whose jobless life was the scandal of Wickhamhurst? It was madness! But, even though he were a model of all the virtues, he was not a family, was he? Judge Coaxly had said families; the whole idea, in fact, was that families should adopt families. Were we members of the Universal Fellowship League or just frantic idiots?

Edith listened with angelic patience. When a woman does that and condescends in addition to a sweet reasonableness, mere man may as well consider himself a goner. It seemed there was a Mrs. Jackson too; so that nothing the great, big, lovely, excited darling said applied at And this Mrs. Jackson was a most worthy, decent, hard-working widow who lived in two little rooms and

earned a humble livelihood by "going out."

She went out for one-seventy-five a day and everybody spoke of her in the highest terms; and if her son was a bit wild and out-of-hand, was it not all our fault-society's fault-for making Mrs. Jackson go out and thus leave him to grow up utterly neglected and uncared for?

And then had he not such beautiful blue eyes that one knew instinctively there must be good in him? Had I ever noticed the Jacksonboy's beautiful blue eyes and the polite way he always lifted his cap? Did I want to see a boy like that grow up into a professional criminal—a boy with such beautiful blue eyes and such nice polite manners? And it was not as though we had any choice. Had she not run her tired legs off and gone without her lunch—all for nothing? Suppose—yes, suppose—he had stolen that collar and had done us out of a dollar, were we to count it against him forever and ever, like the brand of Cain?

The magnanimity of this admission stilled my last protest. It was really very fine of Edith to say that, considering how we had wrangled and disagreed until I bought her the suction cleaner. For her to concede that I might have been right about the collar knocked all my underpinning from under me. What could I do except surrender with the best grace possible? So I said:

"Have it your own way then, my dear. For heaven's sake, get the Jacksonboy if you want him!"

The acquisition of the Jacksons proceeded without a hitch, and on the following Sunday they were both invited

He Saluted Them as Though He Would Never Stop

> to supper at the house. Edith chose Sunday because that was Bertha's afternoon and evening off, and she judged it would be less embarrassing without the maid. Mrs. Jackson was a thin, withered, dreary-looking female, with a long drooping nose and the scanty gray hair one associates with reduced circumstances; but in her rather crushed way she carried off a trying situation with considerable tact and showed an admirable composure. Composure, indeed, was what Mrs. Jackson excelled in. She was the most composed person I ever knew.

> The Jacksonboy, soaped and brushed until he could hardly have recognized himself, and in a state of speechless confusion, tried his best to be neither seen nor heard. He quaked if one looked at him, and had the appearance of expecting-and ardently hoping-that the floor might open and swallow him up; in fact he was far more ill at ease at my table than he had been in selling me back my own dog. Stealing dogs, however, was evidently more in his line than the social graces. He hung on his mother's eye and visibly trembled when he was spoken to.

It was a trying supper for all four of us, though by dint of effort the constraint gradually diminished. After much desultory talk about nothing in particular I gave the conversation a more intimate turn by asking Mrs. Jackson what she intended to make of Benny-Benny was the Jacksonboy's real name, you know, though to Edith and myself it never seemed to suit him so well as the other.

At this she sighed and said she had always hoped he would be a minister like his sainted father in heaven; but, as he did not seem to fancy the idea, she had thought he might perhaps be a lawyer instead. Then she sighed again and said she would be very much obliged if I would tell her how to go about it, and whether it was as easy as she had heard for a bright boy to work his way through the Columbia Law School.

The crass presumption of the woman took my breath away. That she should cherish such dreams for this uncouth, uneducated lad, whose only ostensible occupation appeared to be collecting lost golf balls and selling them back to unscrupulous golfers, struck me as typical of ambitious mothers of a certain sort and of their grotesque conceit and folly. Everybody is so busy telling them that nothing is impossible, and instancing it

with wondrous tales of newsboys risen to greatness, that they have lost all interest in the humdrum occupations Nature has fitted them to fill.

I am afraid I answered her rather shortly and gave a new twist to the subject by asking Benny what he would like to be.

"Aw-work in a moving-picture show," he blurted out. "It must be grand to work in a moving-picture

This impelled me to say something pointed about skilled labor-its splendid independence; its good pay; the opportunities it gave in a thousand directions for young men to better themselves. But my remarks were greeted with a stony silence; Mrs. Jackson's long nose sank as though it were weighted at the end; the Jacksonboy gazed blankly at his

It was plainly not a congenial topic I had begun. Mrs. Jackson murmured something about Lincoln splitting rails. I felt like saying I wished Benny would do something half as useful or honest-but refrained. It was a brightening moment when Edith suggested our playing the phonograph in the sitting room.

There Benny, previously so subdued, covered himself with glory. He loved running the phonograph, and was surprisingly exact and careful in putting in new needles and starting the records on the precise line. Edith was very fussy about her phonograph; and it spoke well for the Jacksonboy that she finally turned it over to him and came and sat down beside me. Our evening for the first time took on a faint semblance of enjoyment; and the Jacksonboy, hunched on the edge of a chair and in a state of silent rapture, watched the machine as though it were the most precious thing in the whole world.

When he touched it, it was with a sort of reverence that seemed to me very affecting; and he looked so poor and shabby and ill-nourished that my heart went out to him. I suppose the music helped to endow him with a

pathetic quality-or perhaps it was the very childishness of his appreciation. At last, when it came time to go, he showed a reluctance that I fear was much more due to leaving the phonograph than to leaving us.

This was the first of several similar Sunday evenings, though at the fourth or fifth Benny arrived alone and explained that his mother was feeling too poorly to come. On the succeeding Sunday Mrs. Jackson was again kept away by an attack of this persistent poorliness, and on my asking some questions about this vague complaint and suggesting that I should telephone to the doctor the truth came out in the most unexpected manner.

"Maw don't hanker much about coming here, if you have to know," confessed the Jacksonboy, writhing with embarrassment. "I guess she finds it too slow or sumpin'. She says you are awful nice people and most awful kind, but that she don't enjoy it and would rather stay home.'

'Edith, listen to that!" I exclaimed. "Mrs. Jackson won't come any more because—we bore her!"

(Continued on Page 42)

# ADVENTURES IN BANKRUPTCY

## In the Underworld of Business—By Forrest Crissey

ANKRUPTCY is a forbidding word to the average business man. Its suggestion is as sinister and unwelcome as that commonly associated with the presence of an undertaker who looks the part. This natural aversion of the struggling man of affairs to anything that hints of failure is in hundreds of cases a most expensive whim—an indulgence as costly as it is human.

"The honest business man," declares a United States judge who has heard hundreds of bankruptcy cases, "knows as little of the conditions of bankruptcy as he does of those of life after death-and he is no more anxious to learn about one than he is to learn about the other.

"Bankruptcy belongs to a grim underworld to which he resolutely shuts his eyes; but the fact remains that if many men now headed straight for the business scrapheap could grasp the vital, vivid lessons that are thrown on the screen in a court like this, they would 'head in' promptly and cheat the professional receiver out of any responsibility on their account. And if the credit men of merchandizing houses were obliged to take a short course in a bankruptcy court the science of dispensing credits would be suddenly thrown into high speed.

"Besides, life in this underworld of business is not so doleful as one might imagine. It has its flashes of humor and its touches of romance-plenty of them-in spite of its grimness. There is no better laboratory on earth in which to study human nature than a bankruptcy court. If credit men, hard-pushed men of business and writers of modern fiction realized how much solid meat for their sustenance is dispensed in the daily grind of the bankruptcy court, our rooms would be crowded and enjoy a popularity beyond that of the most prodigal souphouse. Standing room only! would be the rule. But a certain class of men seem to be obliged to go through bankruptcy themselves and learn from hard personal experience the lessons they might catch from others if they could see the business post-mortems that are conducted here."

#### What the Inventory Showed

THIS shrewd judge might have gone still further and added that bankruptcy is sometimes the beginning of success with business men of a certain type-honest, hardworking strugglers at that. These claims may seem a trifle extravagant to the man who has not been brought into familiar contact with the curious dramas that constantly enliven the routine of the bankruptcy court; but the officials who deal with these matters day after day are quick to recognize such statements as wholly conservative.

A keen young man in the employ of a large trust company doing a heavy receivership business was once sent to

take charge of the assets and affairs of a small dealer in whitegoods, whose creditors had brought bankruptcy proceedings. Though the trust company had been appointed as receiver the dealer had not yet been adjudged a bankrupt. The final hearing was set for five days later.

The young man assigned to make the investigation on which

the findings of the court would be largely based was familiar enough with bankruptcy administration to know that it was a business of surprises; but he had not followed it long enough to be prepared for the peculiar surprise that was in store for him.

"You'll probably find quite a mess over there," he was told; "but don't let them pull the wool over your eyes. You're inclined to be rather sympathetic, and most of those fellows are keen to spot a weakness of that sort and play it to the limit; so don't be fooled by appearances, but dig straight to the bottom and get hold of the

Therefore, as the receiver's agent climbed the stairs and entered the rather dingy room of the troubled dealer in whitegoods, he was prepared to find a paucity of assets and a surplus of tears, and was fully fortified against any draft on his too-ready sympathies. The bankrupt said little, but his appearance was that of a crushed and broken-hearted man. If he were merely playing the part he was certainly a gifted actor, the young man instantly concluded.

"Now," cheerfully suggested the receiver's agent, "let's take a look at your inventory."

He was handed a curiously amateurishappearing document that showed a total of some ten thousand dollars of stock on hand. Keen on the scent for disappearing assets he asked: "Who made out this inventory?" And he was not surprised to learn that it was the work of the gawky youth who was coiled despondently over the bookkeeper's desk.

Then the investigator did a little inventorying on his own account. He had not gone far, however, before he reached the surprising conclusion that there were more goods in the place than the inventory indicated. According to his lights this fact in itself was meat for suspicion; and he promptly telephoned his office and made a requisition for two accountants, who were immediately set to work making an independent inventory, under instructions to use special care and to verify prices by the original invoices.

While this work was going on he dug into the finances of the bankrupt and found that when the dealer-who had been operating on a shoestring basisshipped a hill of goods it had been his habit to hock the bill with a certain financial concern at a discount of fifteen per cent. In addition to this he had borrowed a considerable sum from the bank with which he carried his checking

When the accountants from his own office handed him their completed inventory the investigator gave a gasp of astonishment. It showed stock on hand worth four times the amount indicated by the bankrupt's own inventory! But the investigator kept his amazement to himself and quietly continued his search for the traditional Ethiopian in the

woodpile, for whom the trained bankruptcy official is always on the hunt, no matter how assuring appearances may be. After two days' delving, however, he reached the conclusion that he had found the true condition of affairs.

"This man," he declared to the vice-president of the largest creditor bank, "isn't a bankrupt; he's simply an incompetent along one

line. He knows his goods, how to buy them and how to sell them; but he's a miracle of incompetence when it comes to the accounting end of his business. And he trusts that end of his affairs to a halfbaked youth who has spent a few months in some hurry-up business college. That boy is just a loose-jointed bluff; but he's been able to get away with it simply because his employer is a little more incompetent than himself as an accountant."

The banker was incredulous, but decided to find out the true state of affairs for himself; so he sent his own force of accountants, who made an independent inventory and report. That inventory tallied,

Billy Had Hard Work Not to Leap

From the Jofa

"He Was Jollying Every Customer That Came Into the Place"

almost to a dollar, with the one made by the accountants from the receiver trust company. This time the surprise was on the whitegoods dealer. His banker showed him that he was not a bankrupt, and then added:

"If you had come to me months ago, when you first began to feel the pinch, and had asked me to overhaul your business, you would have saved yourself all this trouble. The scare you've had thrown into you and the wear-andtear you've suffered in the past few months have probably not only taken years off your life, but this thing has hurt your credit. Now I'm going to put a good bookkeeper in your place and he's going to run that end of your business and run it right. Then I'm going to supply you with capital enough to take care of your business and do it at six per cent. You can't afford to sacrifice fifteen per cent on each bill you sell, as you have been doing."

#### Merchants Who Don't Know Where They Stand

FOR a time you give your attention to buying and selling—it's evident you know how to do that—and let the young man look after your finances and your accounts. After we've got things to running smoothly you'll have to learn the financial and accounting ends of your business, so that you can at least understand what is taking place in your own establishment and where you stand. That's the price of the help I'm giving you. If you don't learn it you'll find yourself in the same fix again some time."

This man was never adjudged a bankrupt, and the receiver was discharged. The banker installed a competent young man in the office of the dealer in whitegoods, arranged matters with other creditors, and eventually saw this man become prosperous.

Almost every professional receiver can parallel this case from his own experience, so far as its essentials are concerned. This is especially true of those receivers who are called on to handle the affairs of small merchants. Hundreds of storekeepers are every year forced into the ranks of business failures and have the bankruptcy brand burned into their flanks when they are no more entitled to that punishment than was the dealer in whitegoods.

"There is a large class of men in the retail trade," declares a man who has had years of association with the receivership end of a large trust company, "who run on the principle that all there is to trade is buying and selling. And they are inclined to put the emphasis on selling. So long as they can see a stream of goods going out of their stores they flatter themselves they are on the high road to fortune. Let me give just one example of what we are

continually meeting with in this calling:

"One day I was sent to take charge of the affairs of a retail grocer who had two stores in a thickly settled suburb and did a small neighborhood jobbing business. An involuntary petition had thrown him into the bankruptcy court. I found him at the larger of the two stores waiting on customers. From his appearance I judged he had come in from the country and that he had probably seen service in a crossroads store of a back-town settlement. Anyhow he was a hustler at tying up packages, and he was jollying every customer that came into the place. I delayed posting the receivership notice and taking the store over in order to watch him work for a few minutes.

"A dray drew up at the back door and he remarked to his clerk: 'I'm glad them barrels of confectioners' sugar have come. We need 'em.' Then I broke the news to him and formally took over the store. Even then he did not want to stop handing out goods to customers. His passion for wrapping packages was so strong that he protested sgainst closing the door against customers and giving a little attention to the details of his own financial funeral.

"That man's accounting system belonged to the Stone Age. So far as his accounts with his creditors were concerned his books consisted of three hooks. On the first he stabbed the invoices overdue, or due the first of the next month-and that hook was loaded to capacity! On the next hook were impaled the invoices due a month later.

The third hook was reserved for bills on which he had ninety days' leeway.

"His bookkeeping with his customers was equally primitive. He had a rack in which he kept his duplicate sales slips. That was his only ledger. And his collecting was largely done by his delivery help. Of course I was on the watch—as we always are and must always be-for crooked tricks and clever concealments; but the man instantly impressed me as being honest.

"A crew of invoicers at once went through his stock; and when they had finished and had their figures before me I asked him whether he had any idea of how much stock he had in the

two stores.

"'Nope!' was his frank answer-'can't say that I have. Consid'able, though. I always aim to have what my customers want. It makes me kind of ashamed to have to tell a customer that I can't give him what he wants. Looks as if I hadn't had gumption enough to order it. You see, I've had a good trade and it's kept me so busy sellin' that I haven't had much time to bother with stocktakin'. And anyhow, I always figured that I wouldn't have any more goods on hand simply because I'd taken a lot of time to list them."

#### A Wild Buyer Cured

"I COULDN'T help coming back at him with the remark that he would probably have had fewer goods, by considerable, if he had followed the practice of taking an inventory. Then I asked him why he had ordered the two barrels of confectioners' sugar that had arrived the day the store was taken over by the receiver. His answer was that he couldn't remember having ordered any in a long time and knew that he must be about out of it. His jaw dropped when I showed him that there were twelve barrels of this expensive stuff in the store at the moment when he had placed his order for the two barrels.

"That man had hundreds of dollars" worth of goods in his store that had

never been opened and that were covered deep with other goods—merchandise that he would have denied having in his possession if he had been accused of it.

"Do not think that this man stands alone. There are some grocers—quite a number of them too—on the edges of every large city that make him look like an accomplished accountant and an up-to-date merchant by comparison.

"I know of retail grocers whose only books of account with their customers are the individual passbooks the customers bring to the store when they make purchases. These books are often carried by the children of the customers and are frequently lost.

"What happens then? Unless the merchant and his customer can agree as to the unpaid balance the account is lost and wholly uncollectable. Of course there are many more who are not quite so loose in their bookkeeping as

was this man, who did not bother to take an invoice or to keep a regular set of books; but they still belong to his

"This man had a passion for selling; his whole heart was in that end of his business and in no other. He bought simply because he must have something to sell. Few salesmen ever left his store without an order. As a dump for goods he was a joy to the city salesman for the wholesale house, and he could be loaded up easier than a grain car under an elevator chute. That man had more than enough goods in stock to pay his indebtedness, dollar for dollar-and did so. Of course he was a good outlet and his creditors were anxious to keep him in business. So they threw a good, hard scare into him, saw that a good bookkeeper and a proper system were installed, and then kept a close eye on him.

"If a man of this stamp gets into bankruptcy early enough it will make a success of him. Of course it is hard discipline; but some can be cured of their loose ways by no other means. Bankruptcy has been the beginning of success for many a man of this habit of mind. However, it seems a pity that they will not learn the lesson of all-round merchandizing—of a balanced business administration from the experiences of others. There are thousands of storekeepers in this country that think themselves merchants who could get more good from a course of

There Were Thousands of People, and Ali of Them Jeemed to be Jpending Money Every Minute

object-lesson teaching in a bankruptcy court than from all the trade conventions that are held in a year."

According to Bradstreet's latest report incompetence has come to lead the list of failure causes. It outranks inexperience, lack of capital, unwise granting of credits, speculation, neglect of business due to doubtful habits, personal extravagance or fraudulent disposition of property. As a wrecker of business this element is given a standing of thirty and two-tenths per cent.

Because crookedness-deliberate, well-seasoned and thoroughly matured crookedness-is given last place in the factors outside of those beyond human control that contribute to business failures, it is not well to believe the original Babes in the Wood, or their temperamental descendants, to be naturally fitted to discharge the responsibilities of bankruptcy receivers. Not even the fact that practically every professional receiver frankly declares

most adjudged bankrupts to be genuine bankrupts is sufficient evidence on which to select trusting innocents for the task of conducting post-mortems on business ventures that have suffered a violent or untimely end.

To hear one receiver after another relate experiences of finding an honest struggler suddenly thrown into the bankruptcy mill, only to be shown to be possessed of convertible assets beyond his liabilities and beyond his own expectations, is immensely cheering and well calculated to stimulate a flagging faith in human nature; but the sad fact remains that these same receivers can offset each recollection of this sort with a narrative of remarkable nimbleness of assets that would charm and instruct J. Rufus Wallingford himself.

Perhaps, as the Bradstreet report on bankruptcy in America suggests, only about ten per cent of the failures in business are fraudulent-that is, failures deliberately planned for the purpose of securing fraudulent profits. However, when it is remembered that there are now about fifteen thousand failures in the business year it will be plain that there are plenty of crooked business wrecks to keep the receivers busy.

Again, these specialists in scrapped fortunes admit that there is something in a bankruptcy proceeding that is well calculated to bring out all the dormant cunning and shiftiness in a fairly honest man whose insolvency is not a

deliberate frame-up, but has been thrust on him; his scruples seem to vanish when confronted with the possibility of "saving a little something from the wreck." This element must be reckoned with by the receiver and his agents.

Altogether there is no escape from the conclusion that the humblest task in connection with a receivership is no job for a trusting child or for anybody who is not expecting to cut his eyeteeth on every new case to which he happens to be assigned.

#### Disappearing Assets

THE almost miraculous nimbleness I that assets sometimes attain just before the filing of a bankruptcy petition needs no better illustration than the case of Ivan, a hat-and-cap manufacturer. In his special line Ivan was something of a wonder. His career had a true storybook flavor-at least up to a certain point. He was the soul of industry, and the little cap shop he started in a small loftroom in the Loop district of Chicago grew and flourished at a pace that made him the envy of many competitors.

In a few years Ivan had arrived. He had a credit reputation that was above reproach, and the houses from which he bought his materials regarded him as a good moral risk. The trade spoke of him as a winner, and there was every reason to believe that when he retired from business he would receive the honor of a notice in the journal of the trade under the headline: How the Humble Immigrant Made Good-a notice that he would be proud to send to his relatives and friends, and to preserve for posterity.

Suddenly, however, the edifying career of Ivan took a tangent that terminated in the bankruptcy court. As he stood there beside the attorney for the creditors, praying for the appointment of a receiver for his wrecked business, he was an appealing figure. He had the sympathy of every visitor in the courtroom.

A large trust company was appointed receiver and the officer of that institution on whose shoulders rested the responsibility of administering Ivan's affairs felt the influence of the general sympathy for the poor bankrupt; but he was far too shrewd and experienced in the ways of the underworld of business to allow the good reputation or the appealing figure of the unfortunate bankrupt to prevent him from hurrying instantly to Ivan's factory, to take possession of the assets and get a first-hand insight into actual conditions.

One glance about the stockroom made him gasp. He summoned his assistants and an hour's excited investigation revealed this startling situation: Only a short time before the filing of his petition Ivan had bought more than a hundred thousand dollars' worth of materials, which had been delivered. The most careful search failed to reveal more than three thousand dollars' worth of assets in the factory.

Promptly this son of the White Father was put on the witness stand and called on to explain this startling condition. He could speak only the tongue of the czar, and it was impossible at the moment to secure a really competent interpreter. The grilling on the stand brought small results. The impression gained by spectators in the courtroom was that a dull, bewildered and despondent man, unable to speak a word of English, was being badgered with questions wholly beyond his comprehension. The essence of all that could be extracted from him was that he had manufactured some of the materials; that the remainder of them were in the factory-or if they were not, then he did not know where they were.

When the examination was over, the bankruptcy official was convinced that Ivan was a Tartar in character as well as in blood, and that the vanished assets must be trailed without any help from the bankrupt. No man becomes a skillful bankruptcy executive without developing the instincts of a sleuth to a very practical degree. He soon

learns the value of patient digging.

This official first secured from the bank with which Ivan had a checking account all the canceled vouchers the bankrupt had not himself secured. Among these was one check for a considerable sum that had been cashed by a small hospital in another city.

At once an agent of the receiver was sent to that city to learn, if possible, the connection between Ivan and the hospital. He soon made the interesting discovery that the hospital was owned by a widow who bore a striking resemblance to the bankrupt. She was a shrewd woman who spoke English; and she was at once brought into court, where she admitted that she was Ivan's sister; that she had received the check in question and others also from him; and that they were in payment of loans made to him when he started in business. She needed the money and had forced him to settle. This plausible explanation seemed to settle the matter—at least in her mind—and she left the courtroom with a smile of satisfaction on her face; but the agent was far from satisfied. He returned to his principal and reported:

"She has Ivan's goods or his money soaked away somewhere-I'm satisfied of that. The only thing for us to do is to find out where. If the stock has been turned into cash the money is either buried somewhere about the hospital premises or it's in a box in a safe-deposit vault. She has a checking account in the bank where she cashed the check that gave us the clew, but her balance there is below fifty dollars. And the officials of that bank declare that she

#### The Love · Making Sleuth

has no box in their vaults."

ANOTHER agent—a genial and rather handsome young man—was sent, with instructions to shadow the widow every time she left the hospital and see whether she visited a safe-deposit vault; but the canny widow kept closely indoors and the amateur shadow became tired of skulking about the neighborhood. His spying had yielded only one result—the observation that the widow and her head nurse were evidently fast friends. He at once arranged a commission connection with a house dealing in a certain line of hospital supplies, secured an outfit of samples and learned the lingo of the line.

Then he waited until the widow went out alone, invaded the hospital as a salesman and made the acquaintance of

the head nurse. She was not a beauty, but he contrived to leave with her the impression that he regarded her as a woman of compelling

Before he left, the nurse had accepted an invitation to attend the theater. As a detective and a salesman of hospital supplies the genial Billy was an amateur; but as a lovemaker he held a postgraduate degree. The fact that the head nurse was some eight years older than himself evidently made his attentions doubly flattering.

Their courtship ripened rapidly; and the night when he measured her finger for the diamond ring that he was to secure at wholesale price through a friend of his in Chicago she confided to him the suspicion that her friend, the widow, would probably soon dispose of the hospital-having a snug sum already tucked away in a safe-deposit drawer in the Empire Trust Company's vaults. Billy had hard work not to leap from the sofa when his "fiancée" incidentally mentioned the number of the box.

The next morning the widow was again summoned to the witness stand. Under oath she declared that the contents of the box named did not belong to her, to her brother or to any member of their family.

Billy then took the stand, told his story and secured an order that restrained the custodian of the vaults from permitting any person to open the box in question. Shortly afterward the court ordered the trust company to give the receiver for Ivan's bankrupt estate access to the contents of the box.

It was drilled open, and Billy drew from it twenty thousand dollars in currency, a small jewel bag containing a dazzling collection of unset diamonds, and a package of warehouse receipts for a large number of "cases said to contain eggs." The warehouses from which these receipts were issued were located in a dozen different cities.

Billy promptly visited the nearest one and, on showing his authority, was permitted to open the cases. Every one of them contained bolts of silk and of satin-most of which were not of a quality generally used in the manufacture of caps. Eventually all the egg cases were opened and their contents found to be bolts of expensive fabrics.

Meantime Ivan-the-Industrious had disappeared on a warning sent by his sister. The crafty widow found herself in a difficult position. As she had, under oath, denied any claim to the contents of the safe-deposit box she could not make any attempt to recover the diamonds, the twenty thousand dollars in currency and the warehouse receipts without confessing that she had committed perjury.

Later the court gave the receiver a clear title to these assets, and still later the widow was convicted of perjury and sent to prison. After about three years of absence the fugitive Ivan returned from his retreat in the steppes of Russia, pleaded guilty to the indictment that had been secured against him and took his medicine in the form of a prison sentence.

"This case of recovery of vanished assets," says the official who handled it, "might carry the inference that we're all so foxy that assets can't elude us. Don't you believe it! The crooked bankrupt puts it over on us right along! Sometimes we have rare good luck, but often the real crooks in the game get away with the goods.

"Of course we don't make any noise about those cases. Sometimes the assets are so cleverly manipulated that we don't find it out until long afterward. No doubt there are some instances that never come to light. Others are discovered where it is simply impossible—with all the powers of the United States court back of us-to do anything in the matter of recovery. That statement must seem strange to a layman, but here's a case in point:

"In a thickly settled part of this city, where the inhabitants are working people, a furniture store opened up about two or three weeks before Christmas with a stock that was well selected for that trade. Handbills were distributed from house to house and the prices on the goods were alluring. They did a lively business, selling for cash in every instance; but not a single article went out the door of that store. To every customer making a purchase this explanation was made: 'Your goods will be delivered the night before Christmas. All the delivering is to be done at the same time. We're so busy selling now that we cannot deliver. If we did not do the delivering in this way we could not sell you the goods at the low prices charged. We shall put a tag on the articles bought by you, and the night before Christmas they will be at your door.

"Every article in that store was sold many times overand each time for cash. Some articles were sold twenty times over. At four o'clock on the afternoon of the day before Christmas the proprietors of this establishment filed a petition in bankruptcy. When the receiver arrived to take possession there was not an article of furniture in the place. Having sold every piece repeatedly, they generously concluded to deliver the goods, so far as they could

go, to the customers having the last tags. This helped to make an appearance of an honest intent to deliver. The court was furious; but, so far as recovery was concerned, we were helpless. Nothing could be done on that score.

"For every case of remarkable recovery of assets there are many cases of remarkable disappearance of assets never recovered. Every case of recovery carries its own particular lesson. The point of the Ivan case to me was: Put the principals on record under oath. Let them have their say and frame things up as they please, and let them think they are putting it over. Generally they will tie themselves up in their own rope if you give them the chance. It's hard work to lie consistently if given free swing—and lying under oath is perjury. That is the snare in which most of this kind of crooks are caught."

Occasionally the professional receiver in bankruptcy finds his skill and services in demand in receiverships that, in a strictly technical sense, are not matters of bankruptcy; but to the layman these actions look to be off the same bolt of cloth, and they may be so considered, as far as illustrating the kind of cunning with which the professional

receiver of a large city must contend.

On the outskirts of one of our cities there is an amusement park that has contributed to the history of receiverships one of the most dramatic and illuminating chapters yet written. As a movie melodrama it would show to standing room, and its title should be: The Widow's Stock, or The Small Shareholder's Revenge. In the words of the receiver who played the leading rôle: "It shows how much trouble a small shareholder can make with a little grit and the right sort of legal advice.'

#### The Story of the Amusement Park

AMONG the assets left to a certain widow, by a husband who had consistently nourished a scorn of investments that promised a return of less than twenty per cent a year, were fifty shares of stock in this amusement-park company. His tin box contained many other highly illuminated certificates in remote enterprises that he had considered as sure things, but on which the appraiser of the estate had bestowed the contemptuous name of cats-and-dogs.

The widow might have classed the amusement-company certificates with the other nonproductive securities left by her confiding husband, had she not visited the park on the Saturday afternoon following her discovery that she was a stockholder in that enterprise. The cars running to the park were packed, and the large areas in front of the ornate entrance gates held a howling mob of Saturday pleasureseekers clamoring for tickets. It seemed to the widow that the whole city had suddenly emptied itself at the gates of this big amusement garden.

There was a strange fascination in watching the stream of silver and currency that poured into the windows of the several ticket booths. She held her watch and tried to count the admissions registered in five minutes by one admittance turnstile, but gave it up in despair. The stream moved too swiftly for her. Inside the gaudy stucco walls of the park the crowds seemed even more dense. There were thousands of people, and all of them seemed to be spending money every minute for something. How could all this money be spent in the park, night after night and day after day, and the enterprise still remain unprofitable? It did not seem possible; and after talking with several of the men who were apparently in charge of the

concessions, she reached the conclusion that

it was not possible.

Among her social acquaintances was a lawyer who belonged to one of the leading legal firms of the city. She went to him, showed him her certificates and told her experience. He said that, as his family was out of the city for the summer, he would go to the park that night and the following Saturday and take a look on his own account. He became a chronic attendant. He spotted a ticketseller and a gatekeeper, scraped acquaintance with them when they went off duty, and finally obtained figures on the admission receipts.

These figures outran his own wildest estimates. He was morally certain that the park was enormously profitable and that the only thing necessary to a successful suit was to learn how and by whom the profits were being diverted. The widow was told that he would take her case, pay all the preliminary expenses, and then take as a fee a percentage of what he secured for her.

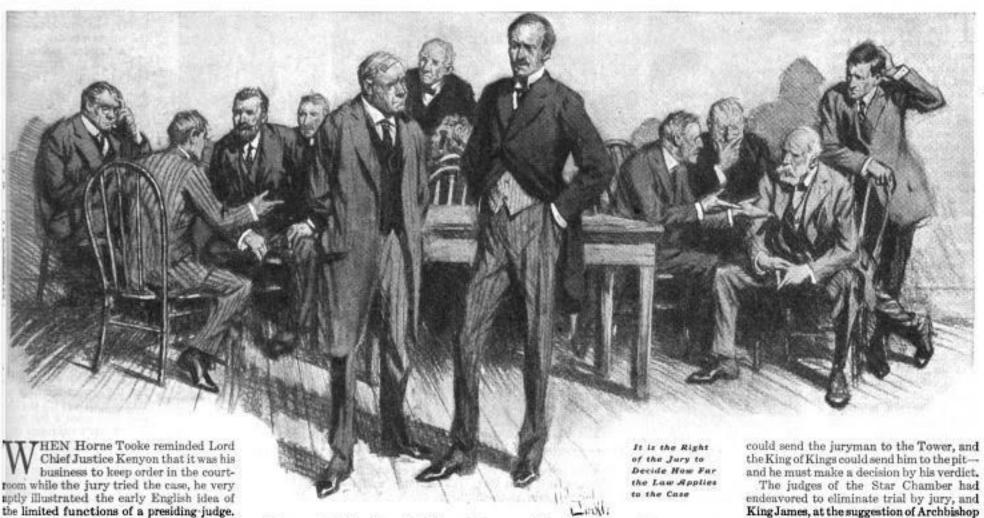

His first and most troublesome task was to secure an authentic list of all the stockholders of the company. He found that fiftyfive per cent of the stock was held by the president, secretary and treasurer of the corporation, and the remaining shares were widely scattered in small blocks among venturous investors who had taken flyers. One by one he gathered these small shareholders into his

(Continued on Page 53)

At Noon He Invited the Accountants to Lunch With Him at the Hotel

# THE JURY AND THE JUDGES

By Melville Davisson Post

The real tribunal of justice was the jury. It was the jury before which criminal and civil cases were heard. Juries were the judges of the facts and they were also the judges of the law. This is true today and it has been true from the beginning. The jury

has been true from the beginning. The judge is a presiding officer whose duty it is to see that trials are conducted in an orderly manner and who is to advise the jury what the law of the land is; but the jury is the supreme tribunal. And when the judge has had his say it is the right of the jury to decide how far the law applies to the case, and what, on the whole, is justice.

"As for the judge and the crier," said Horne Tooke to the jury in his famous trial, "they are here to preserve order; we pay them handsomely for their attendance, and in their proper sphere they are of some use; but they are hired as assistants only; they are not and never were intended to be the controllers of our conduct,"

It ought never to be forgotten that the whole body of people is the source of justice, as the people are the source of authority. We remember that the people are the source of authority because Mr. Jefferson wrote it down for us at Philadelphia in words that—in spite of all the critics from John Adams to Rufus Choate—are unquestionably fine and noble. We have had no great leader, however, to immortalize in any solemn Declaration of Rights the equally great truth that the people are the source of justice.

A narrow patriciate, either elective or appointive, can never be the source of justice in this country. It can never replace the authority of the whole people, no matter to what lengths it may go in the endeavor. The people are beginning to forget this profound truth and they ought to be awakened.

#### The Tyranny of Royal Judges

If ONE goes today into a courtroom he will be impressed with the idea that the judge is the supreme tribunal of justice and that the jury is merely a branch or auxiliary under his direction and control. He dominates them, instructs them and orders them about as though these freeholders were simply upper servants of an imperial bench—when the fact is, these twelve men are the sovereign tribunal, and the judge rather a clerical officer. The superiority which he pretends is assumed and the people have acquiesced in it; but this acquiescence, be it remembered, is the abandonment of a fundamental idea of justice for which the English-speaking people have long contended.

In our indifference we forget the bitter struggle our fathers made to keep the administration of justice in the hands of the people; for while the people were alert and attentive to the matter even the imperial judges of the crown were never able to make the jury subservient to them.

In the trial of Woodfall, the printer of the Morning Advertiser, charged with the publication of a libel against the king, Lord Mansfield tried to force the jury to bring in a verdict of guilty. He said they had only to find whether or not there was a printing and he would say whether it was a libel; but the jury were to be neither coerced nor tricked into a verdict. Having been kept out for hours and carted about from Guildhall to Bloomsbury Square, they brought in a verdict of "Guilty of the printing and publishing only." Mansfield could not sentence Woodfall under that verdict and he had to abandon the prosecution.

Many of our learned lawyers, like Mr. Story, have called on us to admire Lord Mansfield; but when we remember his relentless hostility to the American Colonies the obligation does not seem to lie. He sentenced a prisoner to a year's imprisonment and fined him two hundred pounds for publishing an advertisement seeking a subscription for the following purpose:

To be applied to the relief of the widows, orphans and aged parents of our beloved American fellow subjects, who, faithful to the character of Englishmen, preferring death to slavery, were, for that reason only, inhumanly murdered by the king's troops at Lexington and Concord, in the province of Massachusetts.

And it was Mansfield who was selected to oppose the great Lord Chatham when from the door of death he was carried into the House of Lords to protest against an inhuman and barbarous warfare.

The English juries stubbornly insisted that they were supreme, and that they were the judges of the facts as well as the law in every case. Mr. Pulteney's famous ballad on the Acquittal of the Craftsman shows clearly what the opinion of the country was:

For Sir Philip well knows
That his innuendos
Will serve him no longer
In verse or in prose;
For twelve konest men have determined the cause,
Who are judges alike of the facts and the laws.

The people had no easy time of it, against the imperial judges, to preserve to themselves the right to decide everything in a case. In one of the trials of churchmen for asserting that the king's prerogatives in certain directions were limited, one of the jurymen was said to have lamented: "If I say 'Not guilty' I shall be out of favor with the king; and if I say 'Guilty' I shall be out of favor with the King of Kings!" It was a more difficult position than any one of us in this day is likely to be called on to face. The king

The judges of the Star Chamber had endeavored to eliminate trial by jury, and King James, at the suggestion of Archbishop Bancroft, undertook to try cases himself. But he gave it up, with this immortal comment: "I could get on very well hearing one side only; but when both sides have been heard, by my soul I know not which is

right." Nor was he always successful in packing his bench of judges with servile creatures who would obey him. He said to Chief Justice Jones: "I am determined to have twelve lawyers for judges who will be all of my opinion as to the matter." And Jones replied: "Your Majesty may find twelve judges of your opinion, but hardly twelve lawyers." The wit was lost on James, however, who had trouble enough with juries and did not propose to have any with his judges.

BOOTH

Jones was dismissed the next day and the king packed the bench. And when Coke refused to say how he would decide when the question of the king's prerogatives should come up, and uttered his famous dictum: "When the case happens I shall do that which shall be fit for a judge to do" James took care to see that he did no more of anything as a judge of England.

#### How Junius Shook the Bench

EVEN with the king's creatures laboring to make themselves the supreme administrators of justice, however, the English people waged a stubborn and unending warfare. And they sometimes made themselves desperately felt. Chief Justice Kelynge endeavored to ride them down with a high hand. He forced the grand jury of Somersetshire to find indictments. He abused Sir Hugh Wyndham, who was foreman, saying that the jury were all his servants, and that he would make the best of England stoop.

He fined jurymen one hundred marks apiece because they found a verdict against his inclinations; and he fined and imprisoned a whole jury because, in a trial for murder, they brought in a verdict of manslaughter against his express direction. In open court, and in defiance of the rights of the people, he sneered at Magna Charta, repeating Cromwell's unprintable rhyme in a loud, arrogant voice; but the people were not his servants. They petitioned the House of Commons and moved with such energy against him that Lord Campbell says: "He was abundantly tame for the rest of his days."

And so the fight went on between the people and the judges. The ablest men of England outside of the Inns of Court took it up. Junius shook the bench with his immortal letters:

In contempt or ignorance of the common law of England you have made it your study to introduce into the court where you preside measures of jurisprudence unknown to Englishmen. The Roman code, the law of nations, and the

(Continued on Page 65)

# MY SON By WILLIAM CARLETON

IX

HE only way the average farmer knows whether or not his farm is paying is whether or not he has money enough to meet his store bills. And that after all proves nothing, because the store bills may be too small to represent a fair interest on his total investment or they may be larger than the farm has any right to be burdened with. It's about as primitive as banking money in the cellar wall. Even if the total comes out all right and the farmer makes enough to meet current expenses with a little over, he has no way of telling what details of his farm contributed to this profitable finish and what did not. He raises eggs and sells them for what he can get, but he does not know what they cost him; the same is true of his other products, including milk. This is mere child's play, not business. And farming, as has been said, is a business.

Although business principles may be applied

profitably to every branch of farming there is no branch where they count for more than on the dairy end. A man must know what his milk costs him before he can fix his price. He must know just how much each cow produces in order to weed out the unprofitable cows. He must know whether or not he is getting profitable results from his feed. A set of books is as necessary to the dairyman as a barn.

This has been told the farmer over and over again. The state bureaus of agriculture have preached it; the farm journals have devoted columns to it; the farmers' institutes never meet without describing the necessity of it. The farmer has even been furnished with the best form of record all worked out for him. And yet the system is far from being in general use. A number of the bigger farmers use it, but it is even more important for the small farmer than for his more prosperous neighbor. It's the small farmer upon whom the nation is dependent, and any reform that doesn't reach him doesn't do much good.

Before a cow can be called profitable or unprofitable three things must be known—the total amount of milk she produces in a year; the total amount of fat produced in a year; the cost of the food she consumes in a year. From these facts an important fourth can be calculated—the use the cow makes of her feed as shown by increased or decreased production. Give two cows the same food, and one will respond by giving a larger quantity of better quality milk, while the second will perhaps remain stationary—in which case the second cow must be eliminated.

The result of such a system is accurate knowledge, not only preventing a loss but giving the farmer a solid basis upon which to build up his herd. The following record shows what the difference in producing power between cows may be. The cows were in the same condition and received the same care:

THE PROPITABLE COW PRODUCED IN ONE STAR:					опска	THE UNPHOPITABLE CON PRODUCED IN COME TEAR:
Pounds milk					9775	Pounds milk 3768
Pounds fat .	3				351.2	Pounds fat 182.7
Value					\$173.09	Value \$66.97
Cost roughage					34.12	Cost roughage 30.98
Cost grain .				+	44.67	Cost grain 21.74
Feed cost .					78.79	Feed cost 52.72
Decti					94.20	Profit 14.25

The profitable cow produced milk at a cost of fourteen and six-tenth cents per can; the unprofitable cow produced it at a cost of twenty-five and five-tenth cents. The difference in feed cost between the two does not represent an actual saving on the part of the unprofitable cow, but stands for nothing but inefficiency. The other fixed charges for the two cows were the same. The poorer one was limited in her capacity to convert feed into milk.

The difference in the total profit of the two cows for a year was eighty dollars and five cents, which in a herd of a hundred such cows would mean a difference in profit of eight thousand dollars, which is an item of some importance.

In the face of such facts as these you'll still find farmers who, beyond the general distinction between a good cow

I Guess it Wouldn't Have Jurprised Her Any to Find a Cow Tethered on the Front Lawn

and a poor one or perhaps a fair-to-middling cow, will call a cow a cow and let it go at that. It's too much trouble to weigh the milk; too much trouble to use a tester; too much trouble to jot down the results every day. In a few scattered counties in different states the farmers have organized themselves into dairy-testing associations and hired a man to do the testing. The results in every case have been almost as notable as those following the introduction of the cotton gin among Southern planters. And still the method is far from being in general use.

Dick from the first kept a scorecard for each cow, and the results as indicated later were mighty interesting. In the mean while Barney had told every family that he knew in Little Italy about Dick's determination to furnish them with clean milk. He made clear to them the value of clean milk and said frankly that the boy meant to charge enough to make a fair profit.

"You know what the name Carleton stands for," he told them. "Your men have worked under him a good many years. You've always found him a man you could trust. You can trust his milk and his price. Now as your physician I'm going to prescribe that milk to every household containing an infant. You'd better order it as soon as possible. He has fixed the price to start with at eight cents—the current rate for ordinary milk. He will continue it at this price until he is able to determine the cost, and then will either lower it or raise it as the cost demands."

This was for milk delivered at the door and was no more than they were paying for ordinary milk. Milk of equal quality with Carleton milk would have cost them from twelve to fourteen cents a quart, while some milk not one whit better was bringing twenty cents.

There is little doubt but that Dick could have sold most of his milk right in the village. As soon as people had time to inspect that barn, and when it became known that Barney himself was interested in the project, Dick received requests for it from practically all upper High Street. But the herd was producing at this time only about a hundred quarts a day, and the advance orders from Little Italy alone amounted to one hundred and fourteen quarts. Not only all of Barney's patients but their friends and most of the Carleton gang ordered the milk. It wasn't a month before Carleton's business friends and acquaintances in the city were clamoring for it. That Carleton was raising the milk was all the guaranty they wanted that it was good milk. I don't think anything that ever happened to the boy pleased him more than this.

"There isn't a day," he told me, "but what I get either letters or telephone calls from men who want the milk. They say they don't care what the price is, they must have it. Most of them are men with children. It sort of makes a man feel good to know people will trust their babies with him on the strength of his name, Dad."

It didn't make the boy feel any better than it did me, while Ruth just beamed.

"That's fine for Dick," she said to me. "That's the sort of business success that counts for something." Barney, always a trifle heady, was breathless about the whole situation.

"A hundred quarts isn't a drop in the bucket," he said excitedly. "You need a thousand quarts. You ought to put in a hundred more cows right away. Scour the countryside for them. You owe it as a public duty. Every cow in town ought to be in your charge. You ought to supply the whole city with milk and this whole town as well. It's a crime to refuse any one who wants the milk."

"Just a minute," said Dick. "You'll have me supplying the whole United States next."

"It's a shame you can't," said Barney. "It's a shame the government can't. Talk about government ownership of railroads! Government ownership of cows would save more lives. Let the grown-ups look out for themselves; it's the kiddies who need a fair start. And it isn't railroads they need, but clean milk. It would be a sound and profit-

able economic policy to place every cow in the nation under rigid government control. It would save citizens."

rigid government control. It would save citizens."

"Well, I'm not the government," Dick laughed. "We've made a fair beginning, but we mustn't spoil it all by going too fast. Before I buy another cow or book another order I want to find out what this milk is costing me. If conditions warrant, the business will grow naturally and by itself. We mustn't push it."

Of course Barney saw that the boy was right, but he was an impatient man when he saw a chance for doing good. He nearly wrecked a half dozen charitable organizations with which he was connected because they couldn't keep pace with him. He finally resigned from them all—to their great relief. He himself, however, was disgusted.

"Too much talk," he said.

As a matter of fact the orders Dick already booked had come so fast as to find him unprepared. He really wasn't in a position to handle them. Dick made up his mind, however, that he wouldn't disappoint any one. Those first orders were like a vote of confidence in him, and he determined to fill them at no matter what cost.

Dick had been fortunate in securing in Al Morrison a mighty good youngster to help him. He was a wide-awake lad of eighteen whose ambition was to secure capital enough to start a dairy of his own. Dick paid him twelve dollars a week and put him in charge of the barn. Barney kept track of that lad as though he were one of the herd and took the same precautions with him. But it wasn't necessary, for the lad was clean all the way through.

Al solved the milking problem, and with Dick's help also the bottling question. Then Dick made a deal with the Pioneer Products Company to take the milk to town on the regular morning run which the truck was making with early vegetables. Then the best Dick could do was to make a second deal with a city milk firm having a route in Little Italy to deliver the milk to his customers. He paid them a commission of two cents and a half a bottle. It was too much, but he was lucky to find the firm willing to do it at any price. They wouldn't have done it except for Barney, who argued that the milk was in the nature of a physician's prescription. I guess the milk firm didn't fear active competition anyway with a man who was selling what was practically certified milk for eight cents a quart.

x

IT WAS Barney's desire, with which Dick was in hearty sympathy, to produce a natural milk that should be as clean as pasteurized milk.

"Cooked filth is not so dangerous as uncooked filth," said Barney; "but I don't see any need of having either."

Brewster was not a dairy town, and therefore it did not seem practicable to organize a milk commission for the production of duly authorized certified milk. Nor under the circumstances did it seem either necessary or advisable. The requirements of the commission, though justifiable, seemed altogether too stringent to be borne by one small herd. Their methods cover ninety-seven provisions and call for a board consisting of a veterinarian, a physician, a chemist and a bacteriologist. In establishing their high standard and in an endeavor to cover the whole field every single man and provision is warranted. They are necessary general precautions for the elimination of possible personal irresponsibility on the part of unknown producers.

But Dick's case was a little different. From neither himself nor Barney was there anything to fear on this ground. They meant to furnish a milk which, if not quite up to the ideal standard of certified milk, should be pretty near it. And they meant to produce this at a price as near that of ordinary milk as was possible.

Dick sent for the report of the American Association of Medical Commissions, which is supplied by the government printing office, as are many other papers on the production of clean milk, and studied it carefully. Then he said to the doctor:

"It's all right, but it's too much for us to handle."

"We can handle the spirit of it," said Barney.

"That's what we started out to do from the first. But I guess we'll have to be our own commission."

Now although Dick didn't go as thoroughly into some details as the American Association would have liked, he certainly covered the fundamental features of their system. He had some interesting experiences later on with the City Board of Health, which at first was inclined to view his results with suspicion. To me the most valuable feature of Dick's efforts was that he kept within the bounds of what is possible to the average farmer who hasn't a big plant.

It was no uncommon habit in Brewster for us to pitch down our hay to the cows just before milking-time and to do our milking as they contentedly munched. Now that may make for the peace of mind of both cow and milker, but it is hardly more sanitary than it would be to shake dirt into the milk out of a pepper box. The dust is raised just in time to allow it to settle during the milking period. Though that dust may look harmless enough to the naked eye it certainly looks different under a microscope, especially after it has been allowed to fatten for a few hours in new milk. No matter how clean you keep your barn some dust is bound to come down with the hay. It is just as easy to do the feeding three-quarters of an hour before milking or just after milking. There are plenty of things to do in the meanwhile.

Perhaps the most startling innovation from the viewpoint of Brewsterites was the washing of the udders with warm water and a sponge. Hadley came over one day for the express purpose of seeing this with his own eyes. When Al finished he waited for Hadley's verdict.

"I've gut jest one idee for puttin' the finishin' teches on thet job," he said.

"What's that?" said Al.

"Ye oughter sprinkle 'em with Floridy water."

From Hadley's point of view, which was that of the oldtime farmer who has come to be hardly more than an indifferent onlooker, the process was absurd. To be sure it did away with the ordinary sprinkling of filth which otherwise would be deposited in the milk, but a lot of that could be strained out through cheesecloth and what remained didn't matter. Nothing mattered to Hadley unless it was something he could see, and even then a bug would have to be big enough to bite through cowhide boots to attract his attention. After cleaning the cows the next thing Al did was to clean himself. He washed his hands thoroughly and got into clean jumpers and overalls. He was then ready to milk. The first few streams were always discarded, which again excited Hadley's sarcasm.

"It's too darned bad ye have ter keep any of the pison," he said. "I reckon

the way it'll end with all these new-fangled notions is thet when ye're done milking ye'll pour the whole business down behind the barn."

The pail in ordinary use round town was a common ten-quart tin milk pail, bigger at the top than anywhere else. Looking back, it really seems as though we'd been a good deal more

intent on catching dirt than milk. The pail Dick used had a covered spout. The top of the pail itself was covered with a layer of absorbent cotton placed between two layers of gauze. This made about as perfect a filter as can be devised.

As fast as each cow was milked Dick took the pail and carried it at once out of the barn into the milk room. This was in a small building detached from the barn. It was only a temporary structure, but it was thoroughly screened and clean. Here

the milk was poured into a covered cooler, which consisted merely of a coil of pipes containing cold water. The milk was thus cooled to about forty-five degrees Fahrenheit. After this it was at once put into bottles that had been sterilized by boiling and then chilled. A sterilized paper cap was then adjusted and over this a paper fastened round the neck of the bottle with an elastic. The bottles were then put into cases holding a dozen and surrounded with cracked ice. They were kept in ice until delivered.

Now this was the way Dick began. I don't doubt but that he neglected some of the ninety-seven provisions, but he certainly did obey the gist of them. His cows were clean, his stable was clean, his man was clean. His milk went direct into a clean pail, was cooled within five minutes after milking and went into clean, cool bottles. That's all there was to it. It was too early for the boy as yet to compute the added cost of this method, but it couldn't have been much. Roughly it involved only the remodeling of his barn, which I haven't much doubt was returned to him in the better health of his cattle, which in turn means increased productiveness. It meant extra labor in grooming the cattle, but, as in the first case, this probably meant their better health. The chief added expense came in the cooling equipment, the bottling and the ice.

t than milk. The vered spout. The as covered with a on placed between his made about as e devised.

was milked Dick

At the End of

Two Weeks the

Bacteriologist

The most interesting feature of Dick's new venture was that even at the very start he, an inexperienced dairyman, was able to put into operation as model a dairy as though he had been in the business fifty years. At a cost of not over fifty cents he was able to secure from Washington the most expert advice in the land. None of his new ideas were his own. The chief value of his experience lies in just

this fact: he used only the material which is available to every man who cares to go into this business. The government today is ready to do most anything to help a farmer, except furnish him the capital and actually run his plant. The amazing fact is that farmers won't take advantage of this. It has become a habit with them to ridicule the agricultural department as they do the weather bureau.

Of course it's one thing to know the right way and another to know how to put that right way into operation inexpensively. That's where the personal element comes in. That's where business experience counts. But that business experience need not necessarily be acquired on the farm. In fact that's a pretty poor place, as most farms are managed, to try to acquire it. Dick qualified for his dairy business as a building contractor. He applied to the buying and selling of farm

produce the same principles he applied to the buying and selling of labor. That's all there was to it. Applying these principles it wasn't long before Dick realized that though his dairy might be up to standard as judged by the nature of his produce, his farm as a whole was far from being in running order. It was not yet a unit. He was buying hay, grain and bedding; he was buying his own produce; he would soon be forced to buy dressing.

This condition of affairs was due, not to ignorance but to haste. This is the common mistake of amateur farmers. I've seen it again and again. A man raises chickens without raising their feed; a man raises garden produce without raising feed for his land. The result is always failure. Farming profits in the last analysis go back to the land.

The boy knew his trouble.

"I might have waited until fall," he told me, "and started with a full barn. But that would have thrown the loss I'm bearing now upon the kiddies. I reckon I can stand it better than they can."

I must say I was surprised at the serious way in which the boy accepted his responsibility. If those Little Italy babies had been blood relatives of his he couldn't have taken his duty toward them any more earnestly. This spirit was back of his business from the very beginning. Perhaps his early life among them accounted for this. And yet later on, when his business grew to include a class with whom he had not been thrown into any such intimate contact, he kept exactly this same attitude.

As planting-time came Dick took account of stock. He had about forty acres of land in all. Ten of this consisted of an old orchard which Dardoni had trimmed up with good results. The trees were mostly Baldwins which had been growing for a couple of generations. They had by no means been treated even by Dardoni as well as they deserved, but Dick didn't have much time this first season to put in on them. He couldn't, however, allow so large a per cent of his land to go entirely neglected, so he stopped long enough to plow the whole orchard between the trees. After this he harrowed it with a disk harrow. The apple experts advise a second and even a third harrowing, ending in a cover crop of something like red clover, but the boy didn't feel that he wanted to devote so much time and money to the orchard until he had some evidence that the trees would pay.

As an experiment he did treat one acre in this fashion. Some six acres he sowed at once to clover and two of the remaining acres he dressed and sowed to white beans, keeping his crop well away from the trees. One other acre he sowed in the same way to squash and cabbages. These crops were undoubtedly the best he could have selected. He kept them well cultivated, which in itself counted for the trees as much as for the crops.

Fifteen acres were already in hay and these Dick let alone. The remaining fifteen acres, with the exception of about an acre which he used for his house garden, the boy put into flint corn, using native seed. This was for silage.

His crops that first season were naturally in the nature of an experiment. It's an open question in New England whether or not a man can profitably raise his own grain. The season is so short that almost every year it is a straightaway gamble against the weather. Until the last few years

the effort had ceased almost entirely, but of late there has been a growing sentiment in favor of renewing the attempt. The high price of Western grain has prompted farmers to this.

But one thing is dead certain and open to no debate whatever, namely, that if a farmer doesn't raise his own grain he must raise a crop of something that will give him sufficient return to allow him to purchase grain. He can't sit round, stare at idle land and bemoan the fact that corn has taken another jump. A farmer must purchase his grain out of his land either directly or indirectly. There's no getting round this fact.

Dick was prompted to make the experiment of raising feed corn as a matter of sentiment. His ancestors had succeeded in doing it, and he wanted to try. He found difficulty at the outset in securing good seed. Most of the men in Brewster bought in the open market, and goodness knows where the seed came from. There wasn't a man in town who raised his own or who knew anything about good seeds. On this point the agricultural experts are to a man in favor of having every farmer develop his own seed; but this can't be done in one season and really is more or less of a specialized branch of farming.

The boy worked like a dog that first summer. He was up at four every morning and did almost a full day's work before going to town. He was back on the farm again by half-past five and busy until after dark. But he enjoyed it and Jane enjoyed it. Her housework wasn't troubling her at all, and she was at Dick's heels whether in the field or in the barn. Both enjoyed it with all the clean, strong energy of their youth. They were on a brave adventurethe brave adventure of life. If I had worried at first lest the boy with an easier road than I had might push along

others. And for a full life there's no alternative. Before the end of the summer he had forgotten that his dairy was to be only an experiment. The results of clean milk which Barney reported were so tangible as to leave

it with less spirit, I soon changed my mind. With less of a

struggle for himself he was making more of a struggle for

undertaken.

the boy no choice but to make a success of what he had

DICK was keeping a record of the amount produced daily by each cow and making a weekly test of each cow for the per cent of fat in her product. Even at the end of three months the difference between them was marked, though all were receiving the same rations. Cow Number 3 produced in the first three-months period two thousand one hundred and thirteen pounds of milk containing ninetyone and two-tenths pounds of butter fat. Cow Number 8, in the same physical condition, produced only sixteen hundred and twenty-one pounds of milk and seventy-two pounds of butter fat. That was the margin between the best and the poorest cow of the herd in the same condition. In fact this was the only real comparison Dick was able to make, but it showed up vividly that the chief factor in the creation of a profitable herd lay right here.

Farm management may do something toward the reduction of expense; shrewd feeding and careful buying, either from the land or the market, may do something more; skillful business methods of distribution may be another element of success; but overtopping all of these is the efficient herd. Yet this is probably among small farmers the most neglected end of the business. Cows are kept with

a producing capacity of less than five thousand pounds of milk a year when the same feed and care would keep a cow producing as high as ten thousand. In Denmark, as a matter of fact, these last figures represent the average cow. And these results are obtained by nothing but careful breeding along lines long recognized in the production of sporting animals. The science of breeding to speed in horses has been practiced for centuries; the science of breeding to weight and power in horses is in common practice. Dogs and cocks have long been bred for fighting qualities; cats for beauty. But there is many a farmer who, though willing to admit the wisdom of careful selection in such details, will match any cow he may happen to have to the breeder who happens to be most convenient.

Dick secured the services of a pure-bred registered dairy bull. He used a good deal of thought in making his selection, studying the animals' ancestry and progeny, with their record as producers the chief thing in mind. He felt, and rightly, that the success of his business was dependent upon the outcome.

There is no possible room for debate on this question. It isn't debated among small farmers, it is simply ignored. Ask one of them why he doesn't use some judgment in this matter, and he'll wave it aside with a yawn or allow that it's all right for the man with plenty of money but that he himself can't afford such things. It's the explanation half the time of why the other man happens to have a lot of money and why he himself feels that he can't afford it. Even in Brewster, where in other branches of farming we had made a distinct advance, it took Dick to make the men see the practical value of his methods in dairying.

Incidentally that word "practical" has been a curse to many an old-time farmer. I ran up against it again and again when beginning work in Brewster. The departments of agriculture find it a Chinese wall round the small farmer. Let a man from outside the neighborhood suggest any improvement, and he'll be met by either the cynical smile or the lazy yawn of the "practical" farmer.

And what the deuce is your so-called practical farmer? He's the man who is doing things in the same old practical way his father did and the latter's father before him. And even if he's making a fine practical failure, he prides himself on the fact he's doing it in a practical way. Everything varying one jot from that way is moonshine. The more you hear one of these men boast of the fact that he's practical, the more you may depend upon the fact that this is the last thing in the world he really is. The most practical man in all Brewster was Hadley. And he is today. He'll die a practical man. In fact he practically did so forty years ago.

Dick had some interesting experiences that first summer. One of the doctors from the board of health of the neighboring city secured a sample of Dick's milk from a customer and tested it each day for two weeks for fat, acidity and bacteria. The result was so striking that he doubted his own results and secured a second sample. At the end of two weeks the bacteriologist drank the remainder himself and declared it to be sweet as a nut.

Barney took a bottle of his milk and kept it at a temperature of forty-five degrees for three weeks before he was able to detect the slightest trace of acidity. Now this was the result of nothing but purity. The bacteria count in the milk averaged less than two thousand. In ordinary milk it sometimes reaches five hundred thousand, while even the certified milk commissions permit as high as ten thousand and some commissions allow it to run even higher than that.

One of Jane's friends from town visited her and showed a good deal of dainty concern over the fact that Dick was raising milk. I don't know what she expected, but from what Jane said I guess it wouldn't have surprised her any to find a cow tethered on the front lawn. Now, as a matter of fact, Jane is proud of the whole business and proud of the plant. Down deep in her heart I think she feels that Dick is doing more real good than her banker father. So when the friend let drop some remark about the disagreeable feature of living so near a herd of cows, Jane

"I don't wonder you feel that way. But come out and see the barn.'

Then just for the fun of the thing Jane made her friend close her eyes when near the barn and led her in. The girl

stood within three feet of the cows before she knew she was inside the structure, and then it was the sweet fragrance of hay that told her.

That's the way it should be. There's no cleaner, sweeter animal on a farm than a well-cared-for cow. Not a tenth of the dogs and cats that are given the run of the house are as clean and wholesome or as safe to have round. Personally I'd rather live in Dick's barn with Dick's cows than in a house with some servants I've seen. I'll bet a dollar I'd live longer.

We had a short season that year and Dick's corn crop didn't turn out very well. Before the season was half through he realized he had made a mistake. With the market which the Pioneer Products Company had developed it was evident he would have done better to have centered his efforts on garden produce which he could have turned into cash. The beans and squashes which he planted in his orchard brought him a larger return than his corn. His apples, however, did well that year and were a cash crop. so that on the whole the boy couldn't complain. The net result of the season was good, even though it might have been better.

In the mean while the demand for Carleton milk increased daily until the boy could have sold twice as much as he was producing. Barney was insistent for Dick to double his herd, but the lad shook his head.

"Not yet," he said. "I'm learning something new every day, and before I increase this business I want to be sure of where I stand. If this thing is going to be as big in the end as you want it to be, doctor, it must be built up slowly."

Dick was right. Another man might have got a little bit heady about it, but the boy was sure of himself. It takes a mighty good business man, in my opinion, to be able to keep a steady pull on the reins when a new enterprise like a frisky colt tries to take the bit. Barney would have had a hundred cows by the end of that first summer. The boy proposed to increase his herd only as fast as the herd could increase itself, which was a considerably slower process but also a considerably surer one. And sureness was what Dick was aiming for. He was building this business with the same idea of permanency with which he had constructed his house. The idea back of that gave Ruth and me a tremendous amount of satisfaction, though it appealed to some of Dick's friends as decidedly old-fashioned.

As I read this country's history it seems to me as though that one word "permanency" was until the last few years the note that inspired every American. As a nation we started with a Constitution built for all time; we built our homes solidly and founded our businesses to be harded down from father to son. We married for keeps and built our railroads, not on speculation but as permanent thiroughfares for the nation. Maybe a change was inevitable: maybe it has been for the best; but somehow it pleased both Ruth and me to see the boy harking back to the good

old solid way.

F BARNEY was disappointed because Dick refused to If BARNET was unappointed increase his herd more rapidly, he found some consolution tion in the fact that the boy's experiment was producing a decidedly beneficial effect upon the standard of milk production in the whole town. A man can't do good work along any line without inspiring everybody round him-Sometimes the indirect results of his efforts count for more than the direct results. I saw with my own eyes that

the simpler methods of house keeping practiced by Ruthani Jane were spreading over the village. They themselves were intent only on keeping house for their own to the best of their ability, but as a matter of fact they helped keep house for the whole town.

Really all that Dick was doing was to apply the same principles to the barn. He was keeping house there along the very same lines of sinplicity and cleanliness. The thing that surprised me then and that continues to surprise me is that this should be corsidered an amazing innovation. It's a pretty harsh criticism of the methods into which we have unconsciously drifted when a return to obviously common-sense simple standards by any one should be looked upon in the light of a radical revolution. It's a good deal as though a man who refrained from stealing should be hailed as a hero, and a man who habitually told the truth should be crowned with laurel.

"You Can Trust His Milk and His Price"

# THE STREET OF SEVEN STARS

xx

THE portier was almost happy that morning. For one thing, he had won honorable mention at the Schubert Society the night before; for another, that night the Engel was to sing Mignon, and the portier had spent his Christmas tips for a ticket.

All day long he had been poring over the score. "Kennst du das Land wo die Citronen blühen?" he sang with feeling while he polished the floors. He polished them with his feet, wearing felt boots for the purpose, and executing in the doing a sort of ungainly dance—a sprinkle of wax, right foot forward and back, left foot forward and back, both feet forward and back in a sort of double shuffle; more wax, more vigorous polishing, more singing, with longer pauses for breath. "Knowest thou the land where the lemon trees bloom?" he bellowed—sprinkle of wax, right foot, left foot, any foot at all. Now and then he took the score from his pocket and pored over it, humming the air, raising his eyebrows over the high notes, dropping his chin to the low ones. It was a wonderful morning. Between greetings to neighbors he sang—a bit of talk, a bit of song.

"Kennst du das Land—Good morning, sir the old Rax wears a crown. It will snow soon. Kennst du das Land wo die Citronen—Ah, madam the milk frau, and are the cows frozen up today like the pump? No? Marvelous! Dost thou know that tonight is Mignon at the Opera, and that the Engel sings? Kennst du

At eleven came Rosa with her husband, the soldier from Salzburg with one lung. He was having a holiday from his sentry duty at the hospital, and the one lung seemed to be a libel, for while the women had coffee together and a bit of mackerel he sang a very fair bass to the portier's tenor. Together they pored over the score, and even on their way to the beerhall hummed together such bits as they recalled.

On one point they differed. The score was old and soiled with much thumbing. At one point, destroyed long since, the sentry sang A sharp: the portion insisted on A natural. They argued together over three steins of beer; the waiter, referred to, decided for A flat. It was a serious matter to have one's teeth set, as one may say, for a natural and then to be shocked with an unexpected half tone up or down! It destroyed the illusion; it disappointed; it hurt.

The sentry stuck to the sharp—it was sung so at the Salzburg opera. The portier snapped his thumb at the Salzburg opera. Things were looking serious; they walked back to the lodge in silence. The sentry coughed. Possibly there was something after all in the

one-lung rumor.

It was then that the portier remembered Harmony. She would know; perhaps she had the score.

Harmony was having a bad morning. She had slept little until dawn, and Peter's stealthy closing of the outer door had wakened her by its very caution. After that there had been no more sleep. She had sat up in bed with her chin in her hands and thought.

In the pitiless dawn, with no Peter to restore her to theerfulness, things looked black indeed. To what had she fallen, that first one man and then another must propose marriage to her to save her. To save her from what? From what people thought, or—each from the other? Were men so evil that they never trusted each other? McLean had frankly distrusted Peter, had said so. Or could it be that there was something about her, something light and frivolous? She had been frivolous. She always laughed at Peter's foolishnesses. Perhaps that was it. That was it. They were afraid for her. She had thrown herself on Peter's hands—almost into his arms. She had made this situation.

She must get away of course. If only she had some one to care for Jimmy until Peter returned! But there was no one. The portier's wife was fond of Jimmy, but not skillful. And suppose he were to wake in the night and call for her and she would not come. She cried a little over this. After a time she pattered across the room in her bare feet and got from a bureau drawer the money she had left. There was not half enough to take her home. She could write; the little mother might get some for her, but at infinite cost, infinite humiliation. That would have to be a final, desperate resort.

She felt a little more cheerful when she had had a cup of coffee. Jimmy wakened about that time, and she went through the details of his morning toilet with all the brightness she could assume—bath blankets, warm bath, toenalls, finger-nails, fresh nightgown, fresh sheets, and—final

Very Silently She Closed the Door Behind Her

touch of all—a real barber's part straight from crown to brow. After that ten minutes under extra comforters while the room aired.

She hung over the boy that morning in an agony of tenderness—he was so little, so frail, and she must leave him. Only one thing sustained her. The boy loved her, but it was Peter he idolized. When he had Peter he needed nothing else. In some curious process of his childish mind Peter and daddy mingled in inextricable confusion. More than once he had recalled events in the roving life he and his father had led.

"You remember that, don't you?" he would say.

"Certainly I remember," Peter would reply heartily.

"That evening on the steamer when I ate so many raisins,"

"Of course. And were ill."

"Not ill—not that time. But you said I'd make a good pudding! You remember that, don't you?"

And Peter would recall it all. Peter would be left. That was the girl's comfort.

She made a beginning at gathering her things together that morning, while the boy dozed and the white mice scurried about the little cage. She could not take her trunk, or Peter would trace it. She would have to carry her belongings, a few at a time, to wherever she found a room. Then when Peter came back she could slip away and he would never find her.

At noon came the portier and the sentry, now no longer friends, and rang the door-bell. Harmony was rather startled. McLean and Mrs. Boyer had been her only callers, and she did not wish to see either of them. But after a second ring she gathered her courage in her hands and opened the door.

She turned pale when she saw the sentry in his belted blue-gray tunic and high cap. She thought, of course, that Jimmy had been traced and that now he would be taken away. If the sentry knew her, however, he kept his face impassive and merely touched his cap. The portier stated their errand. Harmony's face cleared. She even smiled as the portier extended to her the thumbed score with its missing corner. What, after

all, does it matter which was right—
whether it was A sharp or A natural? What
really matters is that Harmony, having settled
the dispute and clinched the decision by running over the score for a page or two, turned to
find the portier, ecstatic eyes upturned, hands
folded on paunch, enjoying a delirium of
pleasure, and the sentry nowhere in sight.

He was discovered a moment later in the doorway of Jimmy's room, where, taciturn as ever, severe, martial, he stood at attention, shoulders back, arms at his sides, thumbs in. In this position he was making, with amazing rapidity, a series of hideous grimaces for the benefit of the little boy in the bed: marvelous faces they were, in which nose, mouth and eyes seemed interchangeable, where features played leapfrog with one another. When all was overperhaps when his repertoire was exhaustedthe sentry returned his nose to the center of his face, replaced eyes and mouth, and wiped the ensemble with a blue cotton handkerchief. Then, still in silence, he saluted and withdrew, leaving the youngster enraptured, staring at the doorway.

Harmony had decided the approximate location of her room. In the higher part of the city, in the sixteenth district, there were many unpretentious buildings. She had hunted board there and she knew. It was far from the Stadt,

far from the fashionable part of town, a neighborhood of small shops, of frank indigence. There surely she could find a room, and perhaps in one of the small stores what she failed to secure in the larger, a position.

Rosa having taken her soldier away, Harmony secured the portier's wife to sit with Jimmy and spent two hours that afternoon looking about for a room. She succeeded finally in finding one, a small and wretchedly furnished bedroom, part of the suite of a cheap dressmaker. The approach was forbidding enough. One entered a cavelike, cobble-paved court under the building, filled with wagons, feeding horses, quarrelsome and swearing teamsters. From the side a stone staircase took off and led, twisting from one landing cave to another, to the upper floor.

Here lived the dressmaker, amid the constant whirring of sewing machines, the babel of work-people. Harmony, seeking not a home but a hiding-place, took the room at once. She was asked for no reference.

In a sort of agony lest this haven fail her she paid for a week in advance. The wooden bed, the cracked mirror over the table, even the pigeons outside on the window-sill were hers for a week.

The dressmaker was friendly, almost garrulous.

"I will have it cleaned," she explained. "I have been so busy: the masquerade season is on. The Fräulein is American, is she not?"

"Yes."

"One knows the Americans. They are chic, not like the English. I have some American customers." Harmony started. The dressmaker was shrewd. Many

Harmony started. The dressmaker was shrewd. Many people hid in the sixteenth district. She hastened to reassure the girl.

"They will not disturb you. And just now I have but one, a dancer. I shall have the room cleaned. Good-by, Praulein."

So far, good. She had a refuge now, one spot that the venom of scandal could not poison, where she could study and work-work hard, although there could be no more lessons-one spot where Peter would not have to protect her, where Peter, indeed, would never find her. This thought, which should have brought comfort, brought only new misery. Peace seemed dearly bought all at once; shabby, wholesome, hearty Peter, with his rough hair and quiet oice, his bulging pockets and steady eyes ing Peter forever, exchanging his companionship for that of a row of pigeons on a window-sill. He would find some one, of course; but who would know that he liked toast made hard and plenty of butter, or to leave his bed-clothing loose at the foot, Peter being very long and apt to lop over? The lopping over brought a tear or two. A very teary and tragic young heroine, this Harmony, prone to go about for the last day or two with a damp little handkerchief tucked in her sleeve.

She felt her way down the staircase and into the cave below. Fate hangs by a very slender thread sometimes. If a wagon had not lumbered by as she reached the lowest step, so that she must wait and thus had time to lower her

veil, she would have been recognized at once by the little Georgiev, waiting to ascend. But the wagon was there, Harmony lowered her veil, the little Georgiev, passing a veiled young woman in the gloom, went up the staircase with even pulses and calm and judicial bearing, up to the tiny room a floor or two below Harmony's, where he wrote reports to the minister of war and mixed them with sonnets-to Harmony.

Harmony went back to the Siebensternstrasse, having accomplished what she had set out to do and being very wretched in consequence. Because she was leaving the boy so soon she strove to atone for her coming defection by making it a gala evening. The child was very happy. She tucked him up in the salon, lighted all the candles, served him the daintiest of suppers there. She brought in the mice and tied tiny bows on their necks; she played checkers with him while the supper dishes waited, and went down to defeat in three hilarious games; and last of all she played to him, joyous music at first, then slower, drowsier airs, until his heavy head dropped on his shoulder and she gathered him up in tender arms and carried him to bed.

It was dawn when Marie arrived. Harmony was sleeping soundly when the bell rang. Her first thought was that Peter had come backbut Peter carried a key. The bell rang again, and she slipped on the old kimono and went to the door.

'Is it Peter?" she called, hand on knob.

"I come from Peter. I have a letter," in German.

"Who is it?"

"You do not know me-Marie Jedlicka. Please let me come in."

Bewildered, Harmony opened the door, and like a gray ghost Marie slipped by her and into the hall.

There was a gaslight burning very low; Harmony turned it up and faced her visitor. She recognized her at once—the girl Doctor Stewart had been with in the coffee house.

"Something has happened to Peter!" "No. He is well. He sent this to the Fraulein

Wells." "I am the Fräulein Wells."

Marie held out the letter and staggered. Harmony put her in a chair; she was bewildered, almost frightened. Crisis of some sort was written on Marie's face. Harmony felt very young, very incapable. The other girl refused coffee, would not even go into the salon until Peter's letter had been read. She was a fugitive, a criminal; the Austrian law is severe to those that harbor criminals. Let Harmony read:

Dear Harry: Will you forgive me for this and spread the wings of your splendid charity over this poor child? Perhaps I am doing wrong in

sending her to you, but just now it is all I can think of. If she wants to talk let her talk. It will probably help her. Also feed her, will you? And if she cannot sleep, give her one of the blue powders I fixed for Jimmy. I'll be back late today if I can

Harmony glanced up from the letter. Marie sat drooping in her chair. Her eyes were sunken in her head. She had recognized her at once, but any surprise she may have felt at finding Harmony in Peter's apartment was sunk in a general apathy, a compound of nervous reaction and fatigue. During the long hours in the express she had worn herself out with fright and remorse: there was nothing left now but exhaustion.

Harmony was bewildered, but obedient. She went back to the cold kitchen and lighted a fire. She made Marie as comfortable as she could in the salon, and then went into her room to dress. There she read the letter again, and wondered if Peter had gone through life like this, picking up waifs and strays and shouldering their burdens for them. Decidedly, life with Peter was full of surprises.

She remembered, as she hurried into her clothes, the boys' club back in America and the spelling matches. Decidedly, also, Peter was an occupation, a state of mind, a career. No musician, hoping for a career of her own,

could possibly marry Peter. That was a curious morning in the old lodge of Maria Theresa, while Stewart in the Pension Waldheim struggled back to consciousness, while Peter sat beside him and figured on an old envelope the problem of dividing among four enough money to support one, while McLean ate his heart out in wretchedness in his hotel.

Marie told her story over the early breakfast, sitting with her thin elbows on the table, her pointed chin in her palms.

"And now I am sorry," she finished. "It has done no good. If it had only killed her-but she was not much hurt. I saw her rise and bend over him."

Harmony was silent. She had no stock of aphorisms for the situation, no worldly knowledge, only pity.

"Did Peter say he would recover?"

"Yes. They will both recover and go to America. And he will marry her."

Perhaps Harmony would have been less comfortable, Marie less frank, had Marie realized that this establishment of Peter's was not on the same basis as Stewart's had been, or had Harmony divined her thought.

The presence of the boy was discovered by his waking. Marie was taken in and presented. She looked stupefied. Certainly the Americans were a marvelous people—to have taken into their house and their hearts this strange child if he were strange. Marie's suspicious little slum mind was not certain.

In the safety and comfort of the little apartment the Viennese expanded, cheered. She devoted herself to the boy, telling him strange folk tales, singing snatches of songs for him. The youngster took a liking to her at once. It seemed to Harmony, going about her morning routine, that Marie was her solution and Peter's.

During the afternoon she took a package to the branch post-office and mailed it by parcel post to the Wollbadgasse. On the way she met Mrs. Boyer face to face. That lady looked severely ahead, and Harmony passed her with her chin well up and the eyes of a wounded animal.

"Under the Circumstances I Could Hardly Have Taken Her In"

McLean sent a great box of flowers that day. She put them, for lack of a vase, in a pitcher beside Jimmy's bed.

At dusk a telegram came to say that Stewart was better and that Peter was on his way down to Vienna. He would arrive at eight. Time was very short now—seconds flashed by, minutes galloped. Harmony stewed a chicken for supper, and creamed the breast for Jimmy. She fixed the table, flowers in the center, the best cloth, Peter's favorite cheese. Six o'clock, six-thirty, seven; Marie was telling Jimmy a fairy tale and making the fairies out of rosebuds. The study lamp was lighted, the stove glowing, Peter's slippers were out, his old smoking coat, his pipe.

A quarter past seven. Peter would be near Vienna now and hungry. If he could only eat his supper before he learned—but that was impossible. He would come in, as he always did, and slam the outer door, and open it again to close it gently, as he always did, and then he would look for her, going from room to room until he found her—only tonight he would not find her.

She did not say good-by to Jimmy. She stood in the doorway and said a little prayer for him. Marie had made the flower fairies on needles, and they stood about his head on the pillow—pink and yellow and white elves with fluffy skirts. Then, very silently, she put on her hat and jacket and closed the outer door behind her. In the courtyard she turned and looked up. The great chandelier in the salon was not lighted, but from the casement windows shone out the comfortable glow of Peter's lamp.

PETER had had many things to think over during the ride down the mountains. He had the third-class compartment to himself, and sat in a corner, soft hat over his eyes. Life had never been particularly simple to Peter his own life, yes; a matter of three meals a day-he had had fewer-a roof, clothing. But other lives had always touched him closely, and at the contact points Peter glowed, fused, amalgamated. Thus he had been many people—good, indifferent, bad, but all needy. Thus, also,

Peter had committed vicarious crimes, suffered vicarious illnesses, starved, died, loved-vicariously.

And now, after years of living for others, Peter was living at last for himself-and suffering.

Not that he understood exactly what ailed him. He thought he was tired, which was true enough, having had little sleep for two or three nights. Also he explained to himself that he was smoking too much, and resolutelylighted another cigarette.

Two things had revealed Peter's condition to himself: McLean had said: "You are crazy in love with her." McLean's statement, lacking subtlety, had had a certain quality of directness. Even then Peter, utterly miserable, had refused to capitulate, when to capitulate would have meant the surrender of the house in the Siebensternstrasse. And the absence from Harmony had shown him just where he stood.

He was in love, crazy in love. Every fiber of his long body glowed with it, ached with it. And every atom of his reason told him what mad folly it was, this love. Even if Harmony cared-and at the mere thought his heart

pounded-what madness for her, what idiocy for him! To ask her to accept the half ofnothing, to give up a career to share his struggle for one, to ask her to bury her splendid talent and her beauty under a bushel that he might wave aloft his feeble light!

And there was no way out, no royal road to fortune by the route he had chosen; nothing but grinding work, with a result problematical and years ahead. There were even no legaries to expect, he thought whimsically. Peter had known a chap once, struggling along in gynecology, who had had a fortune left him by a G. P., which being interpreted is Grateful Patient. Peter's patients had a way of living, and when they did drop out, as happened now and then, had also a way of leaving Peter an unpaid bill in token of appreciation; Peter had even occasionally helped to bury them, by way, he defended himself, of covering up his mistakes.

Peter, sitting back in his corner, allowed the wonderful scenery to slip by unnoticed. He put Harmony the Desirable out of his mind, and took to calculating on a scrap of paper what could be done for Harmony the Musician. He could hold out for three months, he calculated, and still have enough to send Harmony home and to get home himself on a slow boat. The Canadian lines were cheap. If Jimmy lived perhaps he could take him along; if not-

He would have to put six months' work in the next three. That was not so hard. He had got along before with less sleep, and thrived on it. Also there must be no more idle evenings, with Jimmy in the salon propped in a chair and Harmony playing, the room dark save for the glow from the stove and for the one candle at Harmony's elbow.

All roads lead to Rome. Peter's thoughts, having traveled in a circle, were back again to Harmony the Desirable— Harmony playing in the firelight, Harmony flushed over the brick stove, Harmony paring potatoes that night in - Harmony! Harmony! the kitchen when he-

Stewart knew all about the accident and its cause. Peter had surmised as much when the injured man failed to ask for Marie.

He tested him finally by bringing Marie's name into the conversation. Stewart ignored it, accepted her absence, refused to be drawn.

That was at first. During the day, however, as he gained strength he grew restless and uneasy. As the time approached for Peter to leave he was clearly struggling with himself. The landlady had agreed to care for him and was bustling about the room. During one of her absences he turned to Peter.

"I suppose Marie hasn't been round?"

"She came back last night."

"Did she tell you?" "Yes, poor child."

line of reasoning easily.

"She's a devil!" Stewart said, and lay silent. Then: "I saw her shoot that thing out in front of us, but there was no time — Where is she now?"

"Marie? I sent her to Vienna."

Stewart fell back, relieved, not even curious.

"Thank heavens for that!" he said. "I don't want to see her again. I'd do something I'd be sorry for. The kindest thing to say for her is that she was not sane."

"No," said Peter gravely, "she was hardly sane." Stewart caught his steady gaze and glanced away. For him Marie's little tragedy had been written and erased. He would forget it magnanimously. He had divided what he had with her, and she had repaid him by attempting his life. And not only his life, but Anita's. Peter followed his

"It's quite a frequent complication, Stewart," he said. "but every man to whom it happens regards himself more or less as a victim. She fell in love with you, that's all. Her conduct is contrary to the ethics of the game, but she's been playing poor cards all along."

"Where is she?"

"That doesn't matter, does it?"

Stewart had lain back and closed his eyes. No, it didn't matter. A sense of great relief overwhelmed him. Marie was gone, frightened into hiding. It was as if a band that had been about him was suddenly loosed: he breathed deep, he threw out his arms and laughed from sheer reaction.

During that afternoon ride, while the train clump-clumped down the mountains, Peter thought of all this. Some of Marie's things were in his bag; her rosary lay in his breast pocket, along with the pin he had sent her at Christmas. Peter happened on it, still in its box, which looked as if it had been cried over. He had brought it with him. He admired it very much, and it had cost money he could ill afford to spend.

It was late when the train drew into the station. Peter, encumbered with Marie's luggage and his own, lowered his window and added his voice to the chorus of plaintive calls: "Portier! Portier!" they shouted. "Portier!"

bawled Peter.

He was obliged to resort to the extravagance of a taxicab. Possibly a fiacre would have done as well, but it cost almost as much and was slower. Moments counted now: a second was an hour, an hour a decade. For he was on his way to Harmony. Extravagance became recklessness. As soon die for a sheep as a lamb! He stopped the taxicab and bought a bunch of violets, stopped again and bought lilies of the valley to combine with the violets, went out of his way to the American grocery and bought a jar of preserved fruit.

By that time he was laden. The jar of preserves hung in one shabby pocket, Marie's rosary dangled from another; the violets were buttoned under his overcoat against the

cold.

At the very last he held the taxi an extra moment and darted into the delicatessen shop across the Siebensternstrasse. From there, standing inside the doorway, he could see the lights in the salon across the way, the glow of his lamp, the flicker that was the fire. Peter whistled, stamped his cold feet, quite neglected—in spite of repeated warnings from Harmony-to watch the Herr Schenkenkaufer weigh the cheese, accepted without a glance a ten-kronen piece with a hole in it.

"And how is the child today?" asked the Herr Schenkenkaufer, covering the defective gold piece with conversation. "I do not know; I have been away," said Peter. He

almost sang it. "All is well or I would have heard. Wilhelm the portier

was but just now here."
"All well, of course," sang Peter, eyes on the comfortable glow of his lamp, the flicker that was the fire. "Auf wiedersehen, Herr Schenkenkaufer."

Harmony Felt Very Young, Very Incapable

"Auf wiedersehen, Herr Doktor." Violets, lilies of the valley, cheese, rosary, luggage—thus Peter climbed the stairs. The portier wished to assist him, but Peter declined. The portier was noisy. There was to be a moment when Peter, having admitted himself with extreme caution, would present himself without so much as a creak to betray him, would stand in a doorway until some one, Harmony perhapsah, Peter!-would turn and see him. She had a way of putting one slender hand over her heart when she was

Peter put down the jar of preserved peaches outside. It was to be a second surprise. Also he put down the flowers; they were to be brought in last of all. One surprise after another is a cumulative happiness. Peter did not wish to swallow all his cake in one bite.

For once he did not slam the outer door, although he very nearly did, and only caught it at the cost of a bruised finger. Inside he listened. There was no clatter of dishes, no scurrying back and forth from table to stove in the final excitement of dishing up. There was, however, a highly agreeable odor of stewing chicken, a crisp smell of baking biscuit.

In the darkened hall Peter had to pause to steady himself. For he had a sudden mad impulse to shout Harmony's name, to hold out his arms, to call her to him there in the warm darkness, and when she had come, to catch her to him, to tell his love in one long embrace, his arms about her, his rough cheek against her soft one. No wonder he grew somewhat dizzy and had to pull himself together.

The silence rather surprised him, until he recalled that Harmony was probably sewing in the salon, as she did sometimes when dinner was ready to serve. The boy was asleep, no doubt. He stole along on tiptoe, hardly breathing,

to the first doorway, which was Jimmy's.

Jimmy was asleep. Round him were the pink and yellow and white flower fairies with violet heads. Peter saw them and smiled. Then, his eyes growing accustomed to the light, he saw Marie, face down on the floor, her head on her arms. Still as she was, Peter knew she was not sleeping, only fighting her battle over again and losing.

Some of the joyousness of his return fled from Peter, never to come back. The two silent figures were too close to tragedy. Peter, with a long breath, stole past the door and on to the salon. No Harmony there, but the great room was warm and cheery. The table was drawn near the

stove and laid for Abendessen. The white porcelain coffee pot had boiled and extinguished itself, according to its method, and now gently steamed.

On to the kitchen. Much odor of food here, two candles lighted but burning low, a small platter with money on it, quite a little money—almost all he had left Harmony when he went away.

Peter was dazed at first. Even when Marie, hastily summoned, had discovered that Harmony's clothing was gone, when a search of the rooms revealed the absence of her violin and her music, when at last the fact stared them, incontestable, in the face, Peter refused to accept it. He sat for a half hour or even more by the fire in the salon, obstinately refusing to believe she was gone, keeping the supper warm against her return. He did not think or reason; he sat and waited, saying nothing, hardly moving, save when a gust of wind slammed the garden gate. Then he was all alive, sat erect, ears straining for her hand on the knob of the outer door.

The numbness of the shock passed at last, to be succeeded by alarm. During all the time that followed, that condition persisted, fright, almost terror. Harmony alone in the city, helpless, dependent, poverty-stricken. Harmony seeking employment under conditions Peter knew too well. But with his alarm came rage.

Marie had never seen Peter angry. She shrank from this gaunt and grayfaced man who raved up and down the salon, questioning the frightened portier, swearing fierce oaths, bringing accusation after accusation against some unnamed woman to whom he applied

Went Down to Defeat in Three Hilarious Games

epithets that Marie's English luckily did not comprehend. Not a particularly heroic figure was Peter that night: a frantic, disheveled individual, before whom the portier cowered, who struggled back to sanity through a berserk haze and was liable to swift relapses into fury again.

To this succeeded at last the mental condition that was to be Peter's for many days, hopelessness and alarm and a

grim determination to keep on searching.

There were no clews. The portier made inquiries of all the cabstands in the neighborhood. Harmony had not taken a cab. The delicatessen seller had seen her go out that afternoon with a bundle and return without it. She had been gone only an hour or so. That gave Peter a ray of hope that she might have found a haven in the neighborhood—until he recalled the parcel post.

One possibility he clung to: Mrs. Boyer had made the mischief, but she had also offered the girl a home. She might be at the Boyers'. Peter, flinging on a hat and without his overcoat, went to the Boyers'. Time was valuable, and he had wasted an hour, two hours, in useless rage. So he took a taxicab, and being by this time utterly reckless of cost let it stand while he interviewed the Boyers.

Boyer himself, partially undressed, opened the door to

his ring. Peter was past explanation or ceremonial. "Is Harmony here?" he demanded.

"Harmony?"

"Harmony Wells. She's disappeared, missing."
"Come in," said Boyer, alive to the strain in Peter's "I don't know, I haven't heard anything. I'll ask Mrs. Boyer."

During the interval it took for a whispered colloquy in the bedroom, and for Mrs. Boyer to don her flannel wrapper, Peter suffered the tortures of the damned. Whatever Mrs. Boyer had meant to say by way of protest at the intrusion on the sacred privacy of eleven o'clock and bedtime died in her throat. Her plump and terraced chin shook with agitation, perhaps with guilt. Peter, however, had got himself in hand. He told a quiet story; Boyer listened; Mrs. Boyer, clutching her wrapper about her unstayed figure, listened.

"I thought," finished Peter, "that since you had offered her a refuge-from me-she might have come here.

"I offered her a refuge—before I had been to the Pension Schwarz.'

"Ah!" said Peter slowly. "And what about the Pension Schwarz?"

"Need you ask? I learned that you were all put out there. I am obliged to say, Dr. Byrne, that under the circumstances had the girl come here I could hardly— Frank, I will speak!—I could hardly have taken her in."

Peter went white and ducked as from a physical blow, stumbling out into the hall again. There he thought of something to say in reply, repudiation, thought better of it, started down the stairs. Boyer followed him helplessly. At the street door, however, he put his hand on Peter's shoulder. "You know, old man, I don't believe that. These women

"I know," said Petersimply. "Thank you. Good night."

HARMONY'S only thought had been flight, from Peter, from McLean, from Mrs. Boyer. She had devoted all her energies to losing herself, to cutting the threads that bound her to the life in the Siebensternstrasse. She had drawn all her money, as Peter discovered later.

## The Leopard's Spots

FOR more than a year the German Government has been moving, with that unvarying persistence that generally characterizes it, to make the trade in petroleum a state monopoly; and its movements have borne heavily on American investments and business interests in the Fatherland.

The difficulties of our Government in seeking to protect those interests have been extreme, because the interests either belonged to the Standard Oil Company or were in close alliance with it. As for any objection we might raise to the bodily ousting of the Oil Trust from Germany, the Kaiser's ministers had only to quote at random from a whole library of governmental denunciations of the trust at home and ask why Germany should tolerate a concern the United States Government repeatedly declared to be intolerable.

If we retorted that the Oil Trust had been dissolved and absolved by a Supreme Court decree, Germany could point to many Congressional assertions that the dissolution was ineffectual. Recently, before receiving the bid of an American concern for the supply of a large amount of oil, the German Government required a statement, backed by proof, that the concern had no relations with the Standard Oil Company. That was discrimination; but in view of all we have officially said about the Oil Trust it hardly lies in our mouths to object to it.

At this writing it appears that a considerable amount of American property will be practically confiscated; but it is property of or in alliance with the Oil Trust, and anything we can say in its defense must sound odd in view of all we have said against it. If a foreign government wished to discriminate against the Steel Trust or any one of twenty or more great American concerns having extensive interests abroad, it could find no better justification than in our own official language regarding those concerns. We can hardly expect to paint our trusts black on the domestic side and white on the foreign side.

## The Serious Mind

NOBODY in recent years has said anything extensively about the modern theater without remarking—reproof to America being always implied—that Germany takes the theater seriously. Any week's announcements of theatrical performances in any large German town will prove the fact. In any week anywhere there will hardly be less than two or three performances of Shakspere and one or two of Ibsen, with some other foreign classics and the regular representation of the serious national drama.

We do not recall that any one has yet attempted to defend this country from the stigma that a comparison of theater programs suggests; but we venture to point out that the Germans take pretty nearly everything seriously. Nothing more serious than German architecture has ever been conceived by the human brain. They take Kant and Hegel seriously.

As a profound and conclusive test of the difference in national temperaments, we may add that they even take their government seriously. Probably there is no other

nation in the Western World which goes to that length of serious-mindedness. Certainly we should give Germany all proper credit for taking the theater seriously and take all proper shame on the United States for the contrary attitude; but the fact is, neither nation can help it.

# Blaming Westminster

SEVERAL years ago a distinguished and conservative Englishman pointed with indignation to the fact that radical policies at Westminster were ruining British trade. He was able to show that business was in a relatively bad way; that British capital was going extensively into foreign investments, while few new enterprises were started at home.

Since that weighty utterance the same radical ministry has been continuously in power, and it has taken one progressive step after another; yet, while all this went on at Westminster, British exports rose year after year—from three hundred and seventy-seven million pounds to five hundred and twenty-five millions. The greatest trade boom in recent English history occurred, and labor was so fully employed that unions with a membership of nearly one million reported only a little over two per cent of unemployed at the end of 1913 as against nearly eight per cent five years before. In the latter part of 1913 there was some reaction in business, and conservative gentlemen again pointed to Westminster as the cause of it.

It may be added that in Germany—whose actual, effective government consists of an emperor and a nobility of the most conservative turn—business broadly follows exactly the same lines as in England and the United States.

#### Bricks Without Straw

HERE are some figures from a survey of country schools in a large Middle Western region: In all the schools linear measure is taught, yet in only one-fifth of them are tapelines found; they all teach avoirdupois weight, yet less than a tenth of them have scales; they teach liquid measure, but only a fifth have any measures.

In a third of the schools geography is taught without maps, and in more than two-fifths without globes. All of them seek to teach children things about this fruitful and wonderful earth, yet more than two-thirds of the teachers never step outdoors to vitalize a point by the fields, flowers, woods, rocks and streams near at hand.

That is the blessed old educational recipe: Get everything out of a book; reduce it so far as possible to a parrotlike exercise of memory; make it all as dry and repulsive and remote from actual life as possible.

# Hit-or-Miss Finance

IN THE departments at Washington there must be a hundred or more bureaus or divisions charged with a particular branch of work that requires expenditure of public money. Naturally each bureau or division thinks its own work especially important and can readily see how to improve it if sufficient money is appropriated.

On the other hand, there are at least a dozen committees in Senate and House that pass on bills carrying large appropriations; and there are two big committees, entirely distinct from each other and from all spending committees, which formulate revenue measures. But there is nobody at any point to strike a general balance sheet—to compute outgo side by side with income and lay down a comprehensive, authoritative fiscal program for the Government.

The nearest approach to it is the Public Expenditures Committee which the Senate created a few years ago, consisting of the chairmen of the seven big committees that handle the revenue and appropriations in the Senate, together with several other members. In this committee income and outgo met in the persons of the chairmen of the revenue-raising and revenue-spending committees; so it was a step in the right direction. Yet it was inconclusive, as the House, in which theoretically all revenue measures must originate, had nothing to do with it.

Why should there not be a joint budget committee? That there should be somebody to draw up an authoritative fiscal program and accept responsibility for it is clear.

### The Itching Palm of Mars

NO DOUBT there was some graft in connection with Japanese naval contracts. Mars ever has an itching palm. The loot in army contracts during our Civil War pained Lincoln, but he saw no way to stop it without stopping the war. Honorariums generously bestowed on German officers by great armament manufacturers are of recent manufacturers.

In the light of history a military World Power ought to accept these things with martial dignity; but the heavily taxed people of Japan—the income tax rising to twentytwo per cent!—have not quite got their military stride. The graft disclosures immediately resulted in great indignation meetings in the larger towns. In the House of Representatives a member demanded to know why a

Japanese ship should cost six hundred thousand pounds more than an English ship of the same dimensions built in the same shipyard.

On being interrupted by a government supporter, he retorted that the supporter was interested in an armament concern, hence should not speak on the subject. Whereupon, says a correspondent, the supporter resorted to bodily violence and the session broke up in great disorder. The Parliament building one day was surrounded by a crowd of forty thousand people. On another day, after a tumultuous public meeting, a devoted band styling themselves "the infuriated tigers" set out to put things right, and actually smashed a ministerial automobile.

All this misbehavior rather scandalizes Japan's great Western ally. As a British paper observes, in commenting on these unseemly Japanese doings: "Our canteen scandals have not led to the assembly of a single popular gathering."

The canteen scandals referred to consisted of disclosures of graft in connection with army supplies. In this unwarlike country such disclosures would have produced almost as great a sensation as in Japan; but in England they were taken very sedately—as befits a really experienced martial nation. War and graft go hand in hand.

# Cheaper Money for Farmers

CANADIAN railroads, cities and other big concerns have borrowed in England and the United States during the last half dozen years probably more than a billion and a half dollars at about five per cent interest. With this money great permanent improvements have been made and incidentally a great number of farms opened for settlement and cultivation.

The farmers, however, complain that they have been unable to borrow money except on rather burdensome terms. In the new Northwest the rate of interest on farm loans has nominally ranged from eight per cent upward; but it seems that the agricultural borrower has usually paid, including expenses, about ten per cent—or at least twice what the big corporate borrowers paid.

Farmers, we hear, have willingly paid this high rate, giving the good security of their land at half its market value; but, even so, they have found it difficult to get money, applications for loans outrunning the supply of funds.

Now this is simply the difference between good organization and no organization. Certainly, under proper conditions, a loan on the land itself is as good security as a loan on the railroad, the prosperity of which mostly depends on the land; but the big borrowers were organized, while the small borrowers were not.

Hence a very interesting project by the Saskatchewan Provincial Government to organize cooperative farmmortgage associations. The idea is, in brief, for the farmer members of each association mutually to guarantee one another's loans, while the association itself raises capital for farm loans by issuing bonds guaranteed by the province. An investor, in buying a bond, would not look to a particular mortgage on a particular farm, but to the whole resources and credit of the association, backed by the Provincial Government's indorsement. Such bonds, no doubt, would be as readily marketable as a railroad bond.

There is no question that farmers can borrow as readily and cheaply as railroads do by organizing and offering equally attractive securities.

# Urban Elbow Room

AN AIMLESS journalistic controversy as to the comparative sizes of New York and London reminds us that the real need of every great city is not to grow larger but to grow smaller. It would be much better if the area of Greater New York or of the metropolitan district of London contained fewer people by a third or a half.

Probably that condition will happen as means of transit and communication steadily increase; already, in fact, the growth of great cities shows a strong centrifugal as well as a centripetal movement. The city itself increases, but the people disperse over a wider space. The Borough of Manhattan and some London districts tend to lose population rather than to gain.

Massing a great number of people in a small area benefits a few landlords and possibly some department stores, but injures everybody else. The modern big city is mostly only a landlord's gold mine. Why other people should brag about it is a mystery.

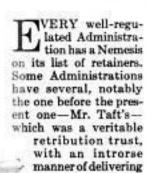

We should like to see New York spread over Westchester County, Southwestern Connecticut and the Jersey shore with the mammoth ant-hills along Central Park West and Riverside Drive converted into dormitories for farmers who would be flocking into town for overnight to hear the opera and see the pictures.

It is spreading somewhat, and more spreading is only a question of transportation. When a man can get to Broadway and Twenty-third Street from Stamford or Ossining in the time it now takes to go from Morningside Heights to the City Hall, the metropolis, we hope, will be less populous than it is today—and infinitely better.

# WHO'S WHO-AND WHY

# Serious and Frivolous Facts About the Great

and the Near Great

with an introrse
manner of delivering
its goods that was
somewhat uncomfortable to those within,
to say the least of it.

If I have my mythology on straight—and a glance into the esteemed Mr. Bulfinch's mirror assures me I have—the original Nemesis was a lady; but since the days when she operated, her sex has been disregarded when her name is needed for descriptive purposes, and we are as prone to refer to a male person as a Nemesis as we are as such, albeit the sex of

prone to refer to a female person as such, albeit the sex of the first of the name was perhaps rightly denominated judging, that is, from the things that have happened since those days wherein the female element of requital has been dominant.

Thus it is not out of place to observe that Charles C. McChord is the official Nemesis of this Administration, for a glance at the pictorial embellishment of these lines will convince the most superficial glancer that Mr. McChord is of the male persuasion, and a perusal of what shall be herewith set forth will show that he is fully entitled to his designation.

nation. Though it may be true that, so far, Mr. McChord has confined his nemesizing to one particular object or objective, the fact cannot be denied that as an all-round, retaliatory and retributive Nemesis he has no superior; and it is well known that he stands ready at any time to nemesize any little matter wherein governmental reprisal shall be demanded.

He is Not So Flerce as He Looks

Mr. McChord, you understand, is by way of being a member of the Interstate Commerce Commission, which, as the railroads and their presidents will tell us tearfully, is hampering the proper development of the country by insisting that various and varied of the said presidents, and others, shall unhamper the same by observing a few of the amenities of polite finance.

To hear a railroad president exclaim about it, the Interstate Commerce Commission is an instrument whereby the old and established order has been rudely disrupted, to the consequent astonishment of many persons who have considered a railroad to have extraconstitutional rights merely because it is a railroad, and therefore exploited by the persons who took over the exploitation privileges.

It is needless to go into that phase of the subject—for two reasons: The first is that the Interstate Commerce Commission does not believe it; and the second is that nobody else does—save the men who view the situation with alarm. The proposition that a railroad president and his railroad associates must obey the law, though novel and distressing to the parties of the first part, is distinctly agreeable to the parties of the second part, who comprise about ninety-seven and seven-tenths of the total population.

Nor is it too much to say that a Nemesis of the peculiar character supplied by McChord was needed. Indeed, we nemesizing. So, when a good chance to use a regular, accredited, skillful and earnest Nemesis came along, it is small wonder that McChord was selected.

Of all the folks in public life McChord, I should say, looks more like a regular Nemesis than any other. His specialty for many years has been trailing railroad persons to their lairs; and no sooner had he been given national scope than he selected a field well suited for the operations of a first-class, trained and expert Nemesis, and began to

nemese

had been lax in our

It is probably true that, at the moment of the advent of this abrupt and abbreviated Kentuckian into the arena of railroad investigation, there existed nowhere in the world a railroad wherein the probing possibilities were greater than in the case of the New York, New Haven & Hartford. There, it seemed, was a great highway of commerce that exuded opportunities at every fishplate. And the railroad itself called specific attention to this condition by having at Bridgeport one day a wreck that made the entire nation gasp on account of the sheer horror of it.

#### The Torquemada of the New Haven

COMMISSIONER McCHORD investigated that wreck. What he said about it he said in plain—even blunt—American language, using no figures of speech or flowers of rhetoric. It was a most annoying report, viewed by the lights of the men who were operating the road, and wounded their sensibilities. Also, it jarred their complacencies and jolted their arrogance. It was a plain statement of culpability. It was as direct as a crossing sign—as a stop-look-and-listen admonition. It was very direct.

Proceeding, Commissioner McChord went further into the affairs of this railroad. He supplied a Nemesis for the New York, New Haven & Hartford—an appliance the railroad hitherto had not possessed, but, as events proved, had needed for quite some time. He made other positive statements about the road, its management, its financing, its manipulators and its various other delinquencies, his capacity as Nemesis, he was immediately called an anarchist by various interested persons. The term was a misnomer. Though it is true that captains of finance are wont to term persons anarchists who disclose their captaining and their financing, it does not necessarily follow that such persons are anarchists." Nor is McChord

Whereupon, not recognizing McChord in

such. What he is is a man who does not seem to stand in fear and trembling before a predacious plutocrat. Anyhow he called attention to many things—called strident and forceful attention to them. Since that time the attention he called has become quite general in its

extent and many things have happened to the New York, New Haven & Hartford Railroad; and more are likely to

happen; for when McChord begins nemesizing he nemesizes until the cows come home.

He is a Kentucky lawyer who first began to attract attention in the stirring Goebel times in that state and was associated with Goebel before his killing, as well as active in the days that followed that event. Kentucky passed one of the first railroad regulation laws, and McChord became a member of the state railroad commission.

The railroads did not want him elected and tried to defeat him; but he won and immediately began the enforcement of the statute. Next time he ran, Kentucky went Republican. The Republican candidate for governor was elected by some thousands of votes; and McChord was defeated by only seventeen votes, running as a Democrat—which gives an idea of his standing in his own state.

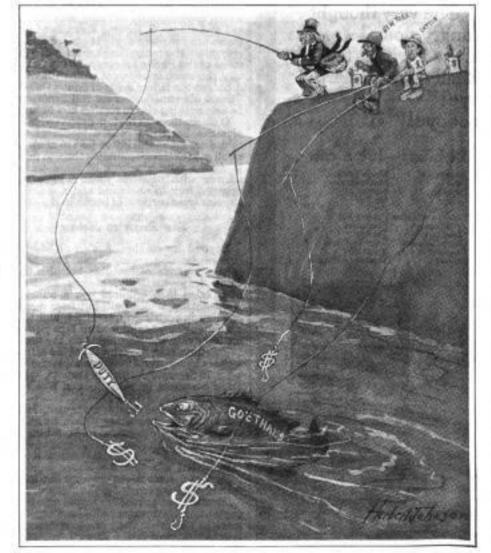

Then came a vacancy on the Interstate Commerce Commission. There was opposition to McChord, largely on account of the Goebel aftermath; but McChord had the support of most of the prominent men in the state, all of whom advised President Taft that the best thing to do about the Goebel tragedy was to forget it; and Mr. Taft appointed him to succeed Commissioner Cockrell.

McChord came to Washington and, soon after he took office, was chosen to make the Bridgeport wreck investigation. From that he went into other New York, New Haven & Hartford affairs and has been the New Haven specialist on the Interstate Commerce Commission ever since.

McChord's idea of the functions of an investigator is that he should investigate. His idea of a report is that the report should embody the results of his investigation. His choice of language is guided by the fixed conviction in his mind that the word which means negligence is spelled n-e-g-l-i-g-e-n-c-e, and the word that means fraud is spelled f-r-a-u-d. If a thing is bad he says it is bad—not that it is not good or that it might be better. If he finds a man responsible he names that man. His command of direct and uncompromising-not to say compromising at times-speech is remarkable and remarked.

A short, stocky, active, alert man, he really is not so fierce as he looks; for when he is not acting in his capacity as Nemesis he is affable and companionable, soft voiced and mild mannered. You would never think of him as a Nemesis at all if perchance you saw him in his evening clothes officiating at a social function, or mayhap tangoing a trifle-you never would pick him out as the person who so unequivocally calls a spade a spade when he is dealing with that sort of hardware, that he is positively distressful to railroad persons who come within the purview of his reports and who have been used to distinguished consideration from those who have hitherto examined their affairs.

Still, inasmuch as it is necessary for every Administration to have a Nemesis, owing to these latter-day fashions in dealing with corporations that have in the past done the dealing themselves, there is no doubt that the choice of this Administration has fallen on the proper person. As Nemesis, Charles C. McChord is perfect in the part; and there are times, too, when he seems to have impinged a trifle on the well-known province of the haughty Adrasteia, who was, as you remember, the lady who looked out for the inevitable.

The Right Bait

"That is, I will if it won't make too much bother for you. Isn't this the maid's day out?" "Yes. But that doesn't matter. No trouble at all. I'll give you

# Campbell's Tomato Soup."

"I'll make it as a bisque; or with noodles in it if you'd rather. I have them handy."

"Great! Do I get two plates-full!"

"All you want. I've a dozen cans on the shelf. Then some cold sliced-"

"Never mind the rest of it. The starter catches me."

"Yes. It's so perfectly easy. And we'll be so cozy. Doesn't that beat dining down town?"

"Has it skinned a mile! The very thought of that soup makes me hungry now."

# THE TEA FANS OF NEW YORK-By Mary Isabel Brush

AN EARNEST young American coming home from Europe assured an English girl that his countrymen did not drink ten as hers did. A shadow of dismay spread over her pink-and-white face, clouding her

"What in the world, then, do you ever do with your awfternoons?" she demanded.

do with your awfternoons?" she demanded.
Statement and question carry a sociological significance. The American boy spoke with frowning impatience, signifying:
"We Americans are serious-minded people. We haven't got time for this idle practice of taking half an hour off every day simply to gratify a foolish habit."
The English girl's words represented the woman of leisure in a dull home, contemplating an afternoon of embroidering, un-

plating an afternoon of embroidering, un-broken even by the pleasant arrival of a neighbor for the gratification of a mild national taste.

That was four years ago. Now go on to Fifth Avenue any day at four-thirty and you will say something is going to happen that is very important indeed. It would seem that a siege of the city had either been

that is very important indeed. It would seem that a siege of the city had either been declared or raised, a reigning monarch had come to our republic, a fraternal conclave was pending—or, at least, that a circus had reached town.

Everybody in New York possessing a vehicle of any kind gets out on to Fifth Avenue with it, forming into two long lines of traffic, like counter processions, which appear to move something like the sixteenth part of an inch, until they are halted by the lifted arm of the blue-sleeved crossing policeman, who seems to be in sympathy with those

who seems to be in sympathy with those wishing to go east and west. Everybody without a vehicle swings on to the long reaches of sidewalk from the cross streets and sets a pace that puts them far ahead of the glacial flow of limousines. Though nobody makes any time except those on foot, every one is in a hurry.

People sit four abreast on top of omnibuses and look down in a detached way on the excited crowds, their own problems being of a different pattern own problems be-

ing of a different nature—namely, to keep their noses from getting too awfully red and to be careful not to fall out or in when the

to be careful not to fall out or in when the busses strike up martially for an uninterrupted run of forty feet.

Bill Swan, striding along the Avenue with a step conspicuously too long, sees the sun, red and elliptical, looking down from a remote, gray western sky. It touches with a rosy glow the magnificent masses of graystone of the Public Library, and lays on the city the same impersonal chill with which it bathes the fallow fields of South Dakota. "Same old sun!" observes Bill Swan; but he sees nothing else to remind him of home. he sees nothing else to remind him of home.

It shines through the low-draped windows of stone hostelries, where blocks of tiny tables are set so thickly as just to allow the small gold chairs surrounding them to move. It marks faint shadows of tense waiters stirring with noiseless rush, a little two-pronged fork in one hand and a saucer of circular cross sections of lemon in the other.

### The Rush to Relax

Beyond its reaches, out in an electricbeyond its reaches, out in an electric-lighted dressing room, Maria Theresa ar-ranges mounds of invisible hairpins on a china tray—excitedly, always excitedly. She places in a celluloid box a bunch of white cotton, which pulls out from a small opening in restricted quantities, and these are valuable, when dipped in face powder, for removing the high lights on the nose.

Belowstairs in the dry heat of the kitchen waiters hover over a long zinc table crowded with little, round, brown teapots, which carry strainers in their spouts, like nose decorations.

Outside, handsomely costumed ladies descend from limousines drawn in at the curbs. They are preceded by huge bunches of purple orchids stuck on the front of them over furs, and they show a vertical line of transparent silk stocking above light-top pumps as narrow skirts draw up like a cur-tain in the long reach for the sidewalk.

Are they excited too? Dear me, no! Ex-pectant, but not perturbed. They are what

most of the excitement is about. An important moment in the diurnal flow of life is approaching, of which they form the cen-tral ornament. The metropolis is about to observe its tea hour.

Every dining room on and off the Avenue is at present devoting itself heart and soul to serving this afternoon beverage. Most of smart New York is putting a like amount of arder into drinking it, and gets on thousands of dollars' worth of clothes for the occasion. We are in possession of a foreign custom—or should it be stated that a foreign custom possesses us? To be sure we eign custom possesses us? To be sure we have not given ourselves to it without re-serve—without such modification as stamps it for our own.

Tea, with us, is a generic term, and we drink it in the same fixity of purpose with which we fight fires, build fortunes and adorn our persons. That pellmell rush up the Avenue is largely directed toward the tearooms. A peevish-faced woman sticks her feathered head out of the cab window and says to the round-faced cabby, with edged utterance: "I expected delays at this beautiful the cab window and says to the round-faced cabby, with edged utterance: this hour, but I cannot put up with any-thing like this!" She is headed for a hotel, where, with good American impatience, she

is rushing to relax.
Only she and members of her leisure set in our land of the free have this privilege. No record has come to us of our working classes—like those of England—stopping for their five-minute gulp of the national drink. Girl clerks of the United States are not excused from work to sit in A B C shops on red plush seats that are just too far away from the marble-topped tables to be com-

#### Fighting the Ravages of Leisure

In America there is a particular regard for excessive comfort in the observance of our new custom. It has not been established to fill a fundamental need; not to supply nourishment the peculiarities of climate make necessary; not to allow a modicum of relaxation that will result in a maximum of energy for work. Our disciples of the practice are forever fighting the ravages of too much leisure—are foregoing the pleas-ures of jam and seedcakes for fear they may gain an ounce of flesh.

American tea fans are drawn from the ranks of those who recognize pleasure only when it is expensive. Thus in our country a very high price is paid for a very little re-freshment. Something like five dollars goes for nothing in particular served for two. No charming little teashops are recom-mended by New Yorkers where one may get a delicious cup of sweet-smelling tea for

A sixty-thousand-dollar-a-year orchestra is provided by one hotel to accompany the exercises of the afternoon. A glass dome, graceful in lines and soft with green lighting, arches over the participants. As to price, the hotel has lost its memorandum; but the sum is sufficient to endow a hospital, to finance the suffrage movement, or to pay a year's interest on our debt. A gardener is rising to independence just by coaxing into tropical splendor the palm forests in which the scene is set.

In England Parliament observes a four-o'clock siesta. In our country Wall Street and the banks do not shut down for the tea hour—indeed, nothing whatever shuts down for it in New York; but a great deal opens up. Ours is a public and not a private function. No innocuous observance takes place between the neighbor on Fifth Avenue dropping round to knit with the neighbor on Fifty-seventh Street, whose property is valued at only a few dollars less a foot. Any private consumption of afternoon tea is quite beside our metropolitan purpose.

New York regards the custom as one more opportunity for display. In its milder forms it represents a new occasion for creating expensive obligations and of discharging them at a slightly greater cost. It affords one more chance—like a wife's Christmas present to her husband-of giving oneself a pleasure while performing a duty toward some one else. The rich old aunt who will not give her country niece five dollars with which to buy a petticoat sets her down day after day in an expensive dining room when she visits the city and buys her thirty-five dollars' worth of tea.

It affords an excellent chance for the metropolitan resident to put one over on the rural visiting relative. A smart New York department-store buyer took her brother,

Dress

who was a college student, to have a cup of tea. She led him as by a leash the length of Fifth Avenue to a hotel and, in the wake of a foreign waiter of comprehensive gestures through a pathway of staring eyes, to a table beside a fountain. He brooded over the small gold table like a lampshade above its bowl and tried to focus his eyes on his order of sandwiches. This consisted of a slice of bread halved over the shadow of a thinness of white meat. "Rough exercise that!" he muttered;

"Rough exercise that!" he muttered; and thereby communicated, like a spirit from another world, that he realized a foreign, exotic art was being practiced on him. A certain celebrity was induced to go to

A certain celebrity was induced to go to one of these public tea parties and he was amazed. Some girls wished to meet him, with the result that a young matron who was acquainted with him before he became a celebrity invited him to tea. Knowing him as she did, she never expected that he would come on any such errand as meeting admirers—or she might have arranged a different form of entertainment. Admirable chance that, she thought, for discharging two obligations—and hers not the fault if the guest of honor followed his custom of accepting and then did not appear. She went on with her arrangements; and when at five on the appointed day he was not by the gold elevator in the lobby she led two disappointed girls into the tearoom. Just as her order arrived, in came the guest of honor looking not altogether satisfied.

He wound his way through the narrowest of crooked paths between chairs to the table of his hostess, which, he observed, was like a ten-cent piece on top of a stick of sealing wax and covered with a cloth or like a mushroom on its stem, but not so large. There was a great, poignant flow of orchestral melody, with the breathy hum of voices coming up through it. There was a subdued—oh, a very subdued—clack of white and gold plate, piece on piece. There was a zigzag rush of black and white figures, who were the waiters. The tea hour was in full blast.

The celebrity ordered a cocktail and could not have it. He took out a cigarette and was not allowed to smoke it. He squinted at his microscopic chicken sandwich, hastily

secured by his hostess.

"I realize, Jane"—he addressed the lady entertaining him—"that a life-sized sandwich could not be served on so small a table; but this is my breakfast."

#### The Five-Dollar Table by the Door

No place was this for any one with a definite want to fill! He moved the entire tea party over into the opposite dining room, where he ordered some regular food in the regular way. During the repast he kept looking across the hall at the tearoom, and he indulged in exclamations on the very slight entertainment of the afternoon as contrasted with the "enormous noise everybody is making about coming out to tea."

Not all the rooms are so very restricted as this one in the privileges they allow. For the most part, men and women alike may drink whatever they will; and the men, though not the women, may smoke. These details, however, are unessential and unconsidered by the tea fan in choosing a location. The highest purpose served by the afternoon custom in New York is not to satisfy appetite, but to afford opportunity for people to see those whom they have seen before—to recognize those of reputation whose names are associated with wealth, title and privilege.

title and privilege.

The most sought place, therefore, is so close to the righthand pillar between the favorite tearoom and the hallway that the marble column interferes with the operation of your right arm. The seat is squarely in the entrance, where everybody coming and going bumps into you and all the waiters stand a chance to empty their trays into your lap; but the view is excellent. Nobody can elude the holder of that seat—not even the transient visitor who has merely thought he might possibly take tea, and has stuck his head for a moment over the chiefwaiter's shoulder at the end of the hall. Numbers ask for this place and are all firmly told that it is reserved.

Popular interest comes to center round the identity of the ruling potentate holding it. At length an old lady, hobbling with a cane and ornamented with a false, frizzled front, limps in. Her under jaw juts out like a bulldog's, though her eyes are less kind than his. They have malice in them. Her mind is a ready-reference library of scandal. Everything she has ever heard of

# This Man Gave You Puffed Grains

Gave you Puffed Wheat and Puffed Rice. He found the way to explode by steam the hundred million food granules inside of each grain.

He did this as a College Professor, in the service of science. Did it to make whole grains wholly digestible. In all the ages, men had never accomplished that.

Thus he gave you the best-cooked foods, the most digestible cereals that science had ever prepared.

# Gave Delight to Millions

He also gave you a new delight which millions are enjoying. Grains puffed to eight times normal size—bubble-like and thin. Grains that crush into dainty granules, with a taste like toasted nuts.

Before these came, no morning or evening ever brought to your table such fascinating foods.

That is all due to the years and years Prof. Anderson gave to this problem. And he is now seeking a way to do the same with corn.

Puffed Wheat, 10 c Except in Extreme Puffed Rice, 15 c West

Serve with cream and sugar in the morning. When berries come, mix these Puffed Grains with them. For suppers, serve like crackers floating in bowls of milk.

Use like nut meats in desserts, in candy making, as garnish for ice cream.

Keep them on hand for hungry children, between meals or at bedtime. For Puffed Grains do not tax the stomach. And every element is converted into food.

Puffed Grains should be, in every home, as staple as bread and crackers.

unpleasantness is deposited behind those eyes and used ad libitum as perfectly authentic information.

Two girls pass her as she limps in. They look so fluffy-haired and vacant-faced you would say that nothing short of a milliondollar gown would catch their attention. After passing her, however, they all but tumble into the dressing room and over Maria Theresa, clasping each other's hands with the exclamation: "She has the most with the exclamation: "She has the most evil face I ever saw!" Down the old lady drops into the desira-

ble, long-reserved seat, to pluck the scan-dal of the afternoon; and the departing

head waiter inadvertently lets show the sharp V of a five-dollar bill.

Under a high-mounted piece of statuary sits another tea fan. In his fixed, absorbed rigidity he looks like a parody on a bust in a gallery—like a colored, correctly dressed, mustached and monocled model of Henry Clay. His table is engaged by the year

Clay. His table is engaged by the year.
The girl with him changes from time to
time, but the table never.
You would scarcely know that the woman
beside him is his guest, so unmindful is he
of her in his absorption in the scene. He opens his countenance and his soul to the opens his countenance and his soul to the enactment round him; and it seems as though all the harmless, chittering, idle, foolish, vain display taints him with a murkier, sinister quality as it flows through his mind. A red line runs from the base of his nose across his cheek, making an acute angle with the black, wide ribbon of his eyeglass in its straight descent down his cheek. The red, angry-looking streak has a thin touch of something white, like salve, along its edges—as though it were conalong its edges—as though it were con-stantly induced to subside, without success.

By chance the old woman's gaze and his meet as she falls into her seat. Their eyes cross a moment—then turn, as though both are embarrassed. Can it be they hold an acquaintanceship in some of the subterranean passages of life that would not bear the pink light of sophisticated vapidity? Or is it that they simply gaze into the soul's secret chamber, each of the other, and what they see there causes both to shift the eyes?

#### The Most Important Engagement

Once in their long watch of the tearoom they have the triumph of detecting a tall, monocled Irishman, whose mustache droops in a horseshoe curve of sad dejection when he leaves off smiling—which thing he sel-dom does. They are the first to recognize him and they pass the word that Sir Thomas Lipton is present. This, of course, bright-ens the afternoon, for Sir Thomas is popular everywhere.

Three little children, as like as butterballs of graduated roundnesses, are led into the room by a sad-faced, uniformed nurse. They are dressed in white, from their fuzzy hoods to their leggings. "The Baroness de Vonne's little girls!" run the tidings; and great is the excitement, for the baroness is the American daughter of the only house in the most expensive section of Fifth Avenue that dares to have a yard.

A tall man, broadening into middle age, wanders into this favorite tearoom, his ample shoulders carrying his fur-lined coat easily. He has a manner of accustomed-ness, though he frankly does not know the place. His wife, who is much smaller, seems to have taken on a smartness in spite of herself, though her look is as if forever on her children. The two follow in the curving path of a waiter for several minutes before they are accommodated with a table. Then they smile at each other comfortably as

she unbuttons her long, loose sealskin coat.

Down on Wall Street that day at four o'clock he was sitting in one of those mahogany-paneled offices that are fortified from encroachment by three secretaries without, and are approached by the world only through liveried men standing about the high-tapestried reception room. A little silver vase of pink flowers, which a girl stenographer is instructed to have for him every morning, stood between the baby's picture in a silver frame and the mahogany inkwell.

All the secretaries were at his desk with different demands for his attention, when the vice-president of the corporation stepped

in to say:
"Harry, you had better just give this your attention."

The great man, taking out his watch, replied: "I can't."

"But this is vital. The National Finan-

OOKERY experts favor Cox's Gelatine-and rightly. It is pure and clean and good. It is convenient and economical. It is usable for so many desserts, savories, jellies, frozen dishes, creams, salads, gravies, cold meats, etc. It adds substance and nourishment to every dainty dish of which it forms a part. Try this enticing dessert-

Coa's Gelatine is sold by grocers everywhere at 10c for the small size, and 15c for the large package. Always look for the red, white and blue checkerboard box.

THE COX GELATINE CO. Dept. E, 100 Hudson St. NEW YORK

Cox, Ltd., Edinburgh, Scotland

"I've got an important engagement," answered the president, "and must be uptown at half past four o'clock."

It was in his mind that, as the limousine

had drawn up that morning at eight o'clock under the porte-cochère, which looked out over the Hudson, his wife, Dorothy, had

said:
"I'll be at the hotel, Harry, today at four-thirty. Suppose you stop for a cup of tea and pick me up."
"All right," he had replied.
That was the engagement he would not sacrifice to the National Financial Something-or-other; and here he is in the incidental enjoyment of a ceremonial that recurs daily.

He and his wife have been married for ten years. When they married, the man was only just beginning to show signs of a genius which is now an accepted thing. He had been badly treated by another woman, who had loved him—there was no doubt about that—but had weakly allowed a meddling family to make what they deemed a better match for her.

In the reaction of that moment he asked Dorothy Robins to marry him. She put up a pitiful plea with her family to allow her to decline. In the privacy of her chamber she asked some unseen influence for youth to match her own youth and tastes to coincide

A half-shabby college boy, working his way through a university, had devoted himway through a university, had devoted him-self to her; then withdrawn—nobody knew whether through a reaction of feeling or through consideration for her. Chiefly be-cause she had no excuse for not doing so, she married the elder man and the match

turned out superbly well.

She had been buoyed ever since on a joyous wave of satisfaction. There are three children running over the broad, fair acres

along the Hudson.

Life contains very little for this family that they would change.

#### Living Happily Ever After

As they sit waiting for their tea and toast, how do you suppose this president of the Amalgamated Consolidation of Corporate Interests occupies himself? With listening to the music! Why does the hotel maintain that orchests. that orchestra—because it is expensive or because the waiters enjoy it so much? Un Peu d'Amour is the selection. The great financier has a far-away look on his face, stealing back, one should say, at least ten years, to the time when he had no mustache

years, to the time when he had no mustache that was graying and no fortune. What is he thinking about? Not wife and children!

They say that, whereas a woman forgets all other men in the maternal possessorship of one, a man remembers the woman who has been dear to him and is not his. As the sixty-thousand-dollar orchestra plays Un Peu d'Amour maybe he is thinking of that early love and wishing he might steal a hurried whisper with her—just to say, "Hello, little girl!" and to ask with tense excitement:

Are you happy?" Un Peu d'Amour! If his wife hears it she gives no sign. She is looking, her heart in her eyes, at those three children of the Bar-oness de Vonne, with their sad-faced nurse, now sitting at a round table—the little tod-dlers with their bare, chubby legs sticking straight out from their gold chairs and their faces circled in mugs of milk.

That youthfulness in herself which she once lamented—the youthfulness for which she begged a mate—is hers to trouble about no longer. The cushioned folds of middle age have closed over her girlish outline and her cheeks are leaner than they were. The success that has endowed her husband with a persistent youth has accorded her no such beneficence—so unfair is time in its dealings with women; but in the happiness of what she has gained her mind reflects not on what she has lost.

They do not remain at tea a great while Buttoning up their fur coats they make for their limousine, their minds intent on their larger, living interests miles away up the placid Hudson, as they nod their course between bowing men in livery. With so much of big, personal history behind these two, only the obvious occurs

to those industrious tea drinkers who form a lane of searching eyes through which they

"Curious that she should let her figure go that way!" "Twenty millions—you've heard that name before—president—genius for financiering! Wish I were half as rich as he is!" Such are the comments.

# The Best of Summer Pleasures —Yours in One Minute

Any rowboat, yours or a rented one, may be turned into an eight-mile-an-hour motor-boat in less than one minute if you own an

# Evinrude Detachable Rowboat Motor

It attaches to rowboats of all shapes and sizes, canoes and duck boats; starts with one-twelfth turn of the flywheel and is so simple to operate that women and children may enjoy the pleasures of "Evinruding". Besides its many other attri-butes the following exclusive features are most noteworthy:

#### The Only Portable Motor with a Built-In Reversible Magneto

The Evinrude Magneto is built within the flywheel and in that manner is protected from all injury. It has no brushes, bearings or commutators to wear out and is not affected by rain, waves or even complete submersion.

#### The Only Portable Motor with a Maxim Silencer

We can now supply special Maxim Silencers for 1913 and 1914 "Evinrudes". The Silencer eliminates practically all noises. No similar motor can use the Maxim Silencer as it is an exclusive "Evinrude" feature.

#### The Only Portable Motor which Does Not Require a Rudder

The propeller turns freely in either direction to steer the boat. There is no rudder to become entangled in the weeds, fouled or damaged by rocks and driftwood. The propeller turns the boat within its own length.

#### The Only Portable Motor with a Compensating Steering Device

The tiller is controlled by a shockabsorbing, Compensating Device which allows the tiller free range in either direction and permits steer-ing without the exertion or strength, which is necessary with a rudder.

The Roosevelt Expedition, the Stefansson Expedition and other important parties of explorers are using the "Evinrude", while throughout the entire world those who love the water are enjoying the thrills and pleasures of motor boating with any ordinary rowboat. The "Evinrude" is on sale at Sporting Goods and Hardware Dealers everywhere. Have you seen it?

> Evinrude Magneto Motor, 2 H. P. \$80.00 Evinrude Battery Motor, 2 H. P. \$70.00

free upon request Evinrude Motor Co. 463 F St., Milwaukee, Wis. Branch Offices:

People like these are very occasional visitors. They take so little interest in the diversion of the place that they leave just as regular patrons are assembling. Know ye that everybody in New York does everything as nearly as possible after the manner of everybody else. It is, therefore, estab-lished to be little short of outrageous to take tea before four-forty-five. Only inele-gant visitors from the Corn Belt do that.

The hour approaches when one has to stand in line. A white-mustached gentle-man in a Prince Albert coat leans against a marble colonnade at the entrance and asks all comers when they got back from Europe.
To some he answers: "Wretched chef on that boat!" To others, especially the young women, he replies, looking at them and patting their hands: "My dear, you were fortunate. The cuisine on that boat is excellent!"

A small stripling of a youth comes along, dressed as if to represent a grown man. His yellow hair is plastered close to his delicately small head. He wears the regulation man-of-leisure afternoon suit—rather short-coated, loose and tremendously well set. A chit of a girl is with him, whose dimples smile a proclamation that she is not more than fifteen and that in three years she will be well placed matrimonially. She strolls on as the older man asks of the

younger:
"How's your father? When I knew him
he was at it pretty hard."
"Only tolerable," the boy answers, stopping with well-bred decorum to accord a certain amount of time to a generation that is passing.

Courtesy demands that the older man should have what moments he desires. The younger hears him through an anecdote of which the father in question is the central

figure.

"He stays downtown all day," the boy continues, "and then goes to bed at nine o'clock. We see nothing of him. It's his

There is a certain degree of sobriety, of correct regret, in the statement, and yet it is infinitely patronizing and incidental. He passes on to the more serious business of recovering his young girl and getting tea.

#### The Count and His Bulldog

Among others arriving are the Count de Something and his bulldog. They have just been striding up the Avenue, the bulldog carrying the evening paper in his mouth. However cold it may be the count is with-out an overcoat; and he does some very fancy figures with his walking stick, held between the fingers of his bright yellow gloves. On arriving he is immediately sur-rounded by a bevy, a group—no, a coterie rounded by a bevy, a group—no, a coterie— of extremely chatty ladies, who laugh a great

deal and say:

"Are you de-ead? I am just simply de-ead! Everybody is going so hard I should think they would all—just—be—de-ead!"

There ledge are divided socially into

These ladies are divided socially into those who call him Jack and those who are restricted to the more formal title of count. There is an almost impassable gulf between them, yet each is intent on her own fell pur-pose, which is that of marrying him either to herself or to her daughter—this, too, in spite of the fact that the count has had one matrimonial experience in America which was not altogether fortunate, his father-in-law having kicked him downstairs for a lazy lout, a fortune hunter and a foreigner. Some—among whom is the count—insist there is much to be said on the other side,

and that he was unfamiliar with the customs of our country. He has now concluded that he prefers our home of the brave to his own more formal nation, and he is engaging in business, with the aim of mak-ing an American of himself. Thus far he matches up very well with the residents of our most unrepresentative city and can only be distinguished from the throngs round him by the large stir he makes. him by the large stir he makes.

The lady with a leopard coat drawn closely round the loins slides through the revolving entrance doorway. Her eyes are touched up to slant a little and she walks with a tread premeditatedly feline. Likewise are present the three schoolgirls, tall as young matrons, a curl over their shoulders, who matrons, a curl over their shoulders, who swung up the Avenue dangling their books at the end of a leather strap. They are free — oh, so very free! — in their gait, in their laugh, in their assured enunciation.

There is also the very small dark person, practically snuffed out by her low-lying mushroom hat, who stands under a palm

# reachment on Tailoring

of Indianapolis

N a Summer Suit for out of doors the line of demarcation between shapeliness and shapelessness is thin. The absence of superfluous lining necessitates the presence of vitals-deep tailoring to ward off "that hangdog look" due

to the crumpling and sagging of soft fabrics, as Flannels, Serges, Homespuns and Tropical

A Summer Suit is the crucial test of every tailor. Its style must be patiently and painstakingly needled into the garment. It should soften and "smart-en" with wear, like a fine glove and rebound over night from its creases.

Worsteds.

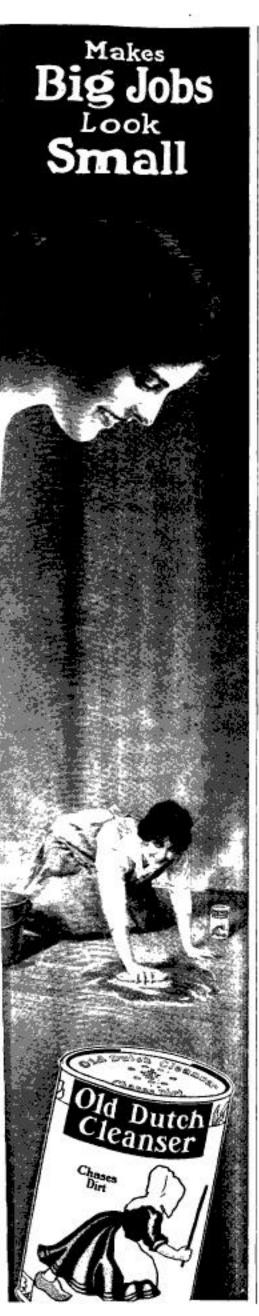

# Kahn-Tailored-Clothes \$20 6 45

are created in the largest institution dedicated to merchant tailoring under one roof, by tailors who have never plied a needle on any but "custom" garments. Their shape is everlasting, because it is put in by hand, not pressed in by machine. Their style is "custom" style — unmistakable any time, any place, even to the casual eye.

Sketched here is a fashionable Three-Button, Patch-Pocket Lounge Suit for Summer. It's soft, simple, "smart". Let our Authorized Representative in your town measure you for a Suit like this, or for any other style-thought shown by us or imagined by yourself, from any of our 500"custom" fabrics. Go to him to-day lest it slip your mind. Our seal, reproduced below, is in his window.

tree, facing a mustached gentleman in a furlined overcoat, and turns on him her brown gaze, like a warm light from a fortification. There is the taller, strictly tailored girl, with regular features, who makes a point of wearing heavy bunches of white aigret hat trimmings, now that there is a restriction-on them—just by way of showing how an American girl laughs at laws.

All testes are represented at the favorite

All tastes are respected at the favorite tearoom and a place is provided for those who prefer neither to see nor to be seen. Parallel lines of palms trace a lane that opens into a clearing behind a forest of rubber plants interspersed with flowering, potted things. It is set with Marie Antoi-nette couches and tables, which are watched over by sculptured bits of outdoor statuary

looking down on one. Charming place that in which to get one-self engaged—or free! Un Peu d'Amour is given by request. The big, dark man, with hair parted deep on one side—he who sits in the palm forest with the amber-shaded lady—asked to have it rendered. He is from a Pacific Coast state, and every two or three months, when he comes here, he requests it. His mission in crossing the continent is always the same. It is to see the lady of the brown hair and the amber eyes—matched by a jeweled chain of his choosing—whose mellow roundnesses flow

into the soft curves of her velvet and furs. Every year for five years he has crossed the continent quarterly to see her—at Christmas, on her birthday, in midsummer, and on another little anniversary observed just between those two. Each occasion was marked by a gift—a strand of pearla, a ring, a gold vanity case. Once she audaciously takes out the little implements of it, with which she powders her nose, rouges her lips,

which she powders her hose, rouges her hips,
runs a pencil across her eyebrows. Wriggling in his chair, the big man petitions:
"Don't do that, Laura! Why can't you
fix up at home?" She laughs a taunting,
amused, rippling laugh; and he looks at her
with eyes that say: "Well, whatever you
do is all right anyway."

Why then are not these two wedded?

Why, then, are not these two wedded? The lady is not free. A brute of a husband threatens her with death and scandal if she stirs away from him. And the gentleman, her respectful devotee, has a large political path to blaze in that Western state!

### The Reign of the Maxixe

They talk it over right here in the vapid, pleasure-seeking tearoom-this important matter of how to dispose of the remainder of their lives. They decide to bide their time and guard their secret, thinking themselves securely isolated among a throng of those

interested in every scattering thing.

"My dear," says the girl at the next table, while the orchestra plays Un Peu d'Amour and the lovers arrive at this large decision, "she wears them so tight; but I do say she is a beautiful woman!

Yes; the crowd takes what comes to hand for mental occupation and the lovers are inconspicuously uninteresting. Still, they have trusted too far to the mental indolence of tea drinkers. Some of them probe their own investigations minutely, among whom is that eminent authority on scan-dal, that old woman with the bulldog jaw;

and she has their story.

If this article were not about tea drinking proper a good deal might be said about the tangoing that goes on at the tea hour. At four o'clock the tired business man says: "My nerves are all unstrung. I need rec-reation." He calls up his wife to go with

him for a cup of tea.

The place to which the limousine winds by sheer force of habit is the home of the by sheer force of nabit is the nome of the dance. An area six feet square is therein dedicated to the preparation and the serv-ing of afternoon tes, while the handsome, big reception rooms are given over to two orchestras and every variety of tango step. At present the Maxixe is absorbing pop-ular attention, its ideal being to express the

ular attention, its ideal being to express emotions in an abandonment of rhythmic movement. This endeavor is engaging the efforts of the tired business man in the name of the cup of tea, which he swallows in the moment after the first orchestra stops and before the second begins.

Mammas are troubled about their sons; employers are irate with their young men cierks because they pass their golden hours in dancing. At four o'clock in the afternoon they dip and whirl and glide. So do they, however, at eleven in the morning, as well as at eleven at night.

No waiter from a cheap restaurant could hold a position in a popular tea place unless

Lord & Taylor

New York

# The Rug of Todayand Tomorrow

Madam, this is the rug you have waited for -a satisfactory answer to your demand for a beautiful, durable, sanitary, convenient and inexpensive Floor Covering.

Look at the picture and see how the Deltox Rug beautifies the room. That's the keynote of Deltoxharmony. From porch to attic Deltox is at home anywhere in the house—and it's reversible, practically two rugs in one. Especially suitable for porch use because dust and moisture do not harm the texture.

A cheerful and durable floor covering for the office.

The extra fine weave gives Deltox a flexible strength of body and a smoothness of surface that heretofore have not been obtainable in a grass rug, permitting the use of exquisite patterns and charming mellow colorings that add to the appearance of any room.

Always fresh looking because the dust filters through to the floor. Easy to handle-roll up the rug, sweep the floor, unroll the rug and the work is done.

### INEXPENSIVE

And yet, madam, they are so very inexpensive - ask your dealer.

If your dealer can't supply you, his name and 10c postage will bring you a beautiful 18 x 18 inch sample Deltox Rug suitable for lamp or jardinière mat. An unusually complete and attractive booklet illustrating Deltox Rugs in actual colors and one-twelfth actual size as in use in many American homes showing artistic arrangement of furniture in various rooms, on request.

Insist on Deltox-Look for the Trade-Mark

# Oshkosh Grass Matting Co.

81 Adel Street, OSHKOSH, WIS.

he maintained a certain standard of deportment; for the men who serve are as cultivated in their way as are those served. Sometimes one of the more gracious patrons speaks to them. "Oh, you have changed your table!" said a smiling matron. But the waiters do not encourage that sort of thing.

Every man has charge of three tables and he has assistants to the number of three or four. His rank is designated by a uniform ornamented with brass buttons, while the assistants' servitude is designated by a white apron. He presents no menu card when he asks for the order. As his client mentions whatever is in his mind the waiter writes it down and turns the blank over to one of his menials-not churlishly, but with, say, such a designation of difference in rank as a fashionable woman uses in addressing another of her own wider set who is a notch beneath her.

As the servitor returns the waiter takes from him the baby sandwich muffled in its

white napkin and serves it, at the same time placing the tea on the little table for the presiding lady to dispense at will.

The party once finished, he hopes most ardently that they will depart, for, how-ever long they remain to watch the spectacle of the afternoon, his tip remains about the same. Still, he does nothing so ill-mannered as to glance in their direction or to display in the distance their check. If they signify that they really wish it he again dispatches one of his menials to have it added—he all the while pacing sentinel-like along his avenue of territory.

One day a brave young American woman went against custom after having taken tea

at the favorite room for a year, and she sent for a bill-of-fare. She got up her courage suddenly at the end of her afternoon portion. It took half an hour to find one, When it arrived she discovered it to record cinnamon rolls, the presence of which she had never suspected. She forthwith ordered some, they being her favorite dissipation.

#### A Comprehensive Order

The waiter indicated no anxiety over the situation, though she gave him but her customary tip for occupying his table during twice her usual length of tenure, the incident resulting to him in an accrued loss of at least a dollar.

Three women and a man from the West not only asked to see a bill-of-fare, but when one was unearthed ordered assorted sandwiches. That is what the menu says; but what it means is that you may have any kind of sandwich under the sun—that there is a grocery store right in the kitchen, from which anything may be secured, however freakish and uncommon the order—even to ham. This was exactly what the group ordered when it caught the idea. The waiter, instead of humiliating them by explaining a point in Manhattan formality, merely inquired again:

"What kind of sandwich do you wish, madere?"

madam?"

The hostess, who was quick, caught the suggestion and ordered the only kind prevalent in her town. After the party had leisurely eaten their way through the bill-of-fare, ably assisted from course to course by the waiter, and after they had remained for some time to watch the display, the man of the party rose and with elaborate abandon laid ten cents on the white cloth.

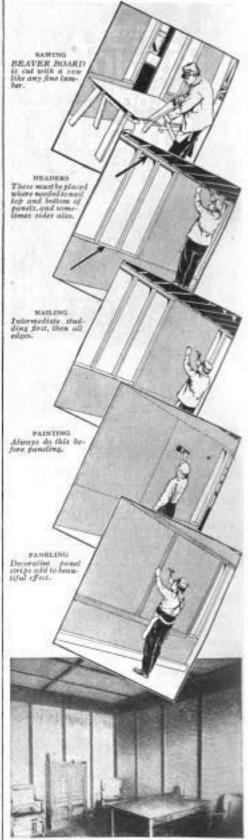

The waiter bowed a "Thank you, sir!"

with the same remote gravity he had on the day previous accorded the seventy-five cents which was laid on that same table. None but a really big character could maintain itself in such a situation as that. Still, this is not a disquisition on waiters,

but on the idle practices of the idle rich. It calls attention to a recent tendency in American habits, to an allowance, on the part of the most overworked of all our people—the successful business man and his socially prominent wife-of an hour of leisure in the daytime. It invites speculation on the possible outcome of the innovation.

Will it extend to the other classes? Will it be accepted by our industrial system? And if so, will it prove a benefit or a blight? What will the tea hour be like when Americans settle down into an unexcited acceptance of the ceremonial?

At present they keep up their mad ob-servance of it until the sun sinks behind the library, leaving a wipe of scarlet in the western sky, and Maria Theresa's little pile of invisible hairpins is reduced to two. Then everybody grabs up veils and sables in a mad rush homeward to dress for dinner.

BEAUTY AND GOOD WORKMANSHID Both are evident in this office of The Wisconsin Agriculturist, at Rucine, Wis.

LL who intend to build or remodel should consider BEAVER BOARD. It has 41 advantages over lath and plaster for walls and ceilings. In eight years it has become a standard building material almost as staple as brick or concrete.

FOR BOYS 50c

This means full elasticity in the seat-up-and-down-as well as across. It gives-at every turn or bend, with no pull, no bulge, no draw. Therefore you have

#### Both Fit and Ease

There can be no "short-waisted" feeling-no "cutting in the crotch."

Chalmers "Porosknit" Union Suits stay buttoned while on. They do not gape between the buttons. The Closed Crotch is comfortable. It fits. It stays put.

# Softest of Yarn

The soft yarn we use is the finest of long-fibre, combed.

We have been told that the yarn is better than it need be. That we could use less costly combed yarn. That we could pocket thousands of extra dollars each year. That the yarn would still be good enough. That we could "get away with it."

True. We might. None might realize the difference but ourselves.

#### The Extra Quality

The same careful workmanship could be employed in finishing such less-good yarn-and Chalmers "Porosknit" would still look about the

Yet—the durability—the wear would suffer. Something would be lost in softness and elasticity.

So-we take no chances with durability-no risks with the established Chalmers "Porosknit" quality.

# 'Tis Unseen Quality

Such fine shades in superiority you cannot see. But they account for the inability to duplicate Chalmers "Porosknit." They explain the unfailing satisfaction. They mean unvarying comfort. They cause the wide demand.

Such is the "hidden" qualitythe extra quality-in Chalmers "Porosknit."

Chalmers "Porosknit" is made in all styles-for man, for boy.

Open in texture, and of soft, absorbent yarn, it keeps you cool by absorption and evaporation of perspiration. Your pores breathe the needed air.

The yarn's softness eliminates irritation of the skin.

### Note This Point

Many men and boys merely ask for "Porosknit" - and get imitations. That's because they fail to look carefully for the genuine Chalmers "Porosknit" label (sewn in the garment) and the Guarantee Bond. Because they never have worn the genuine-and in that way learned the difference.

### "Looks" Not All

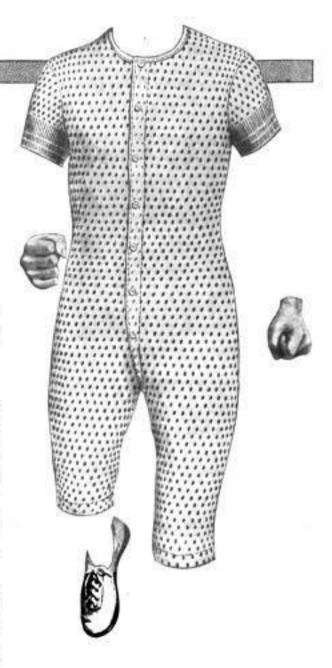

Those who get imitations that merely look something like Chalmers "Porosknit" wonder why the real is

Don't let that happen to you. Buy by the label. For those who once wear Chalmers "Porosknit" swear

### A Few of the Many Titles (complete list free on application)

- BURNING DAYLIGHT. By Jack London. "Jack London has outdone himself in 'Burning Daylight." Springfield Union.
- ADVENTURE. By Jack London. "No reader of Jack London's stories need be told that this abounds with romantic and dramatic incident."—
  Lot Angeles Tribune.
- THE COMMON LOT. By Robert Herrick, "A stery of present day life, intensely real in its picture of a young architect whose ideals in the beginning were, at their highest, resthetle rather than spiritual."
- A KENTUCKY CARDINAL. By James Lane
  Allen. "A narrative told with naive simplicity,
  of how a man who was devoted to his fruits and
  flowers and birds came to fall in love with a fair
  neighbor."—N. F. Tribane.
- THE REIGN OF LAW. By James Lane Allen.
  A Tale of the Kentocky Hempfields. "A style as original and as perfectly finished as Hawthorne's.
  . . . Rich in the qualities that are lacking in so many novels of the period."
- PATIENCE SPARHAWK. By Gertrude Atherton.
  "One of the most interesting works of this leading novelist."
- MOTHER, By Kathleen Norris. "A charming story of family life." "Worth its weight in gold."— Catholic Columbian.
- FAIR MARGARET: A Portrait. By F. Marion Crawford. "A story of modern life in Italy, visualizing the country and its people, and warm with the red blood of romance and meiodrama." Boston Transcript.
- THE HEART OF ROME. By F. Marion Craw-ford. "A story of underground mysterics."
- ELIZABETH AND HER GERMAN GARDEN,
  "It is full of nature in many phases—of breeze and
  sunshine, of the glory of the land, and the sheer
  joy of living."—N. Y. Timer.

- DAVID GRIEVE. By Mrs. Humphry Ward. "A perfect picture of life, remarkable for its humor and extraordinary success at character analysis."
- MR. INGLESIDE. By E. V. Lucas. "He displays himself as an intellectual and amusing observer of life's foibles, with a hero characterized by inimitable kindness and humor."
- KINGS IN EXILE. By Charles G. D. Roberta,
  "The author catches the spirit of forest and sea
  life, and the reader comes to have a personal love
  and knowledge of our animal friends,"—Boston
  Globe
- LOVES OF PELLEAS AND ETARRE. By Zona Gale. "Fall of fresh feeling and grace of style, a draught from the fountain of youth."—Ossicok.
- DISENCHANTED. By Pierre Loti. "It gives a more graphic picture of the life of the rich Turkish women of today than anything that has ever been written."—Brooklyn Engle.
- FRIEND OF CÆSAR. By William Steams Davis. "There are many incidents so vivid, so brilliant that they fix themselves in the memory." —The Bestman.
- THE FOUR FEATHERS. By A. E. W. Mason.
  "The Four Feathers" is a first-rate story, with more legitimate thrills than any novel we have read in a long time."—N. Y. Press.
- THE CONVERT. By Elizabeth Robins. "'The Convert' devotes itself to the exploitation of the suffragist movement in England. It is a book not easily forgotten by any thoughtful reader.
- A DARK LANTERN. By Elizabeth Robins.
  "A powerful and striking novel, English in scene, which takes an essentially modern view of society."
- THE JUSTICE OF THE KING. By Hamilton Drummond. "Read the story for the sake of the living, breathing people, the adventures, but most for the sake of the boy who served love and the King."

# The Best Books for Boys and Girls

Every boy, every girl, likes a good story. These stories by popular authors are among the best ever published — exciting, thrilling, adventurous tales—every one clean, wholesome, good for healthy boys and girls to read. Illustrated, Handsomely bound. Decorated cloth covers.

# Only 50 CENTS each volume

#### Some Samples (complete list free on application)

- THE HORSEMEN OF THE PLAINS. By Joseph A. Altaheler. "A story of the West, of Indians, of secure, trappers, far traders, and, in short, of everything that is dear to the imagination of a healthy American boy."—N. F. San.
- THE RAILWAY CHILDREN. By E. Nesbit. "A delightful story, revealing the author's intimate knowledge of juvenile ways."—The Nation.
- UNCLE TOM ANDY BILL. By Charles Major.
  "A stirring story, full of bears, Indians and hidden treasure."
- AUNT JIMMY'S WILL. By Mabel Osgood Wright. "Barbara has written no more delight-ful book than this. Every child will love it."
- A LITTLE CAPTIVE LAD. By Marie Boulah Dix. "The human interest is strong and children are sure to like it."
- WHILE CAROLINE WAS GROWING. By Josephine Daskam Bacon. "Only a genuine lover of children, and a keenly sympathetic observer of human nature, could have given us a book like this."—Boston Heraid.
- THE SLOWCOACH. By E. V. Lucas. "The record of an English family's coaching tour in a great old-fashioned wagon. A charming narrative, as quaint and original as its name."—Book News Monthly.
- PICKETT'S GAP. By Homer Greene, "The story presents a picture of truth and honor that cannot fall to have a vivid impression upon the reader."—Toledo Blade.
- BEARS OF BLUE RIVER. By Charles Major.
  "Wholesome adventure of the best kind for boys
  and girls... vivid pictures of pioneer life in
  the middle West."

# SENSE AND NONSENSE

#### Pocket Wireless

THE dream of wireless telephony—that A a person will be able to carry in his pocket a telephone instrument and at any time or place call up a number and have a conversation-has actually become true in a limited way. Such pocket wireless telephones are in daily use in some European mines for communication with the surface and with other places in the mine.

Wireless telephony has been a complete success for some years for short distances of transmission; and in the short distances needed for use in one mine wireless telephony is as practical as wireless telegraphy. Instruments are located at convenient places in the mine, with wires already at-tached to pipes, rails, or some other means of getting a good electrical connection with the ground, and it is these stationary instruments that are depended on for most

In addition, however, portable instru-

ments are used frequently. These weigh too much to be carried in one's pocket, and so are carried like a handbag. Besides these portable instruments there are provided for the officials pocket in-struments that can send but cannot receive messages.

When a message is sent all the stations in the system receive it; but in practice it has been found to work much like a party-line telephone, giving little trouble to the stations for which the message is not intended.

Pocket receiving instruments for wire-less telegraphy are also appearing now. They are useful, of course, to only a lim-ited degree, for they can only receive and not send; and they receive only strong signals, such as those of near-by stations or government time signals.

#### Wheeling Yourself

ELECTRIC wheel chairs, which need no practice to operate, have now appeared as a substitute for the push chairs common at seaside resorts. Pressing on a lever with the foot makes them go ahead; and the harder the pressure the faster they will go, though the top speed is not much faster than a walk. Removing the pressure on the foot lever puts on the brakes. The steering is done by means of an ordinary steering lever.

#### Why Orange?

ORANGE paint for street cars is now suggested for safety reasons. Investi-gations by the Montreal street-railroad lines to determine what color can be seen farthest, both on city streets and on country roads, resulted in a finding for orange.

Accordingly the company has adopted this color for its cars, both as an added precaution for traffic on its single-track lines and as a means of enabling patrons and drivers of other vehicles on the streets to see the street cars as far away as possible.

### Tempus Fldgets

HARRIS DICKSON tells a story of a negro who was in jail in Mississippi under sentence of death for murder. The prisoner had tried and exhausted all other means of obtaining a reprieve or a commu-tation; and at the eleventh hour, so to speak, he thought he would make a per-sonal appeal for executive elemency. So he took his pen in hand and wrote to the governor.

The most significant part of his letter was the first paragraph, which ran somewhat as

"Dear Boss: The white folks is got me in this jail fixing to hang me on Friday morn-ing—and here 'tis Wednesday already!"

#### Hot Dogs of War

"SAY." said an eager visitor to Senator Ollie James, of Kentucky, "you can do me a good turn at the War Department if you want to, senator." "What can I do for you?" asked James.

"Go down there and get them to give me the frankfurter privilege for them battles the Mexicans are fighting just across from

#### The Girard Smile

As conceived by J. W. Gruger

When we mention the "Girard blend" we refer to a definite, important manufacturing method; it is not a mere catch-phrase, for cigars differ not merely in the quality of the tobacco but also as to the kind of leaf and the way different kinds are combined.

represent long and careful experimenting and the result yields a smoke which is mild but full flavored.

Girard cigars are made in 14 sizes, from 3 for a quarter to 20c. straight.

> Antonio Roig & Langadorf Established 1871 Philadelphia

### my son

(Continued from Page 22)

It isn't much to our credit that a man who produced milk that kept this side of being a positive source of death to children should be looked upon as a local pioneer and daring innovator. To be sure this attitude wasn't peculiar to our town. Most pure milk elsewhere is advertised like some choice luxury and charged for as such. So are other foods. But the consolation that comes of finding yourself merely no worse than the other fellow is faint-hearted and

doesn't go very deep.

The boy, in spite of his failure to respond to all of Barney's suggestions, was enthusiastic. Don't make any mistake about that. He had always been a hard worker, putting his heart and soul into everything he undertook. In the contracting business he was the inspirer, while his partner, equally val-uable, was the man who worked out the re-sults in terms of dollars and cents. Dick was the inspirer of the contracting business, but in this new venture it was the business that inspired Dick. It roused all the good in him, which was the Ruth in him. It did what a profession often does for a man but what business too seldom does. It placed an interest outside himself above self-interest. He felt a responsibility for the health of his customers as a good doctor does for his patients. In supplying them with good milk he felt also a keener

sense of citizenship.
"Great Scott, dad," he said to me one evening, "we sometimes catch our breath when we see figures showing the number of immigrants pouring into this country; but that's only the beginning. Every single one of those immigrant couples represents a future family. We ought to multiply the present figures by ten or twenty to get a realzation of what a power in the land they're going to be. Now it's no more natural to try to stop them than it would have been to try to stop them than it would have been to try to stop the movement west of Missouri in the forties. The only other thing to do is to improve them. One way is to catch 'em as infants and help them to decent health."

In his small way the boy felt he was doing

something along that line. It shows the broader outlook he was getting.

We had him before the Pioneer Club that winter for two or three talks. The boy wasn't a public speaker. He had no natural gifts and was as scared on a platform as Ruth was; but with the same spirit back of him that Ruth had he tackled the back of him that Ruth had he tackled the job like a man. It had come to be consid-ered a public duty for every man in town to respond to a call from the club. When we respond to a can from the cito. When we found a man or woman doing anything particularly well in Brewster we had him up to tell the rest of us how he did it. And if there wasn't much oratory of the old political variety, it was surprising what good talks we heard. In every case we listened to a man dead in earnest expressing himself to the best of his ability, and I tell you these men got home to us deeper than many a trained speaker would have done. So the boy took his place with the others

and gave in detail the results of what he had accomplished during the first months. I think he made every one there under-stand the wide gulf between fairly pure milk and the stuff most of them were pro-ducing. Then he made them see the value of records and the difference between a good cow and a poor cow. He made them understand, too, the necessity for the sim-ple precautions for cleanliness which it was within the power of a man to practice who kept only a single cow. The boy was in earnest and accomplished in an hour more than the agricultural departments had done in years at the expenditure of thousands of dollars. That isn't exactly fair either, for after all what the boy did was to interpret to these folks the things he had learned from the departments.

Then Barney followed and gave the other side—the Little Italy side. Barney was favorite with Pioneer audiences, for he had a dramatic way of putting things. He had that crowd alternately laughing and crying. And one evening he produced fat, chubby Giuseppe, Jr., and held the infant grinning

at the crowd.

"That's a Carleton milk baby," he de-clared. "Take a good look at him and then ask yourselves if he isn't worth a clean barn. And remember: it wasn't twenty-cent milk that did this but eight-cent milk."

That, after all, was the point that dis-

tinguished Dick's business from that of any

A MOORE'S ready for business the minute it's open. Starts in writing at the first stroke-and keeps on writing, too, smoothly and freely as long as there's ink left in the pen. For when a Moore is closed, the pen itself is pushed down into the ink - kept moist. Ink can't dry in the feed. And it's always ready to write-without coaxing.

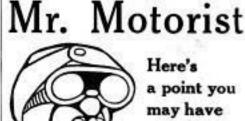

#### Shuts up Bottle-tight

In use, a Moore's the most satisfactory pen you ever owned, because it writes just the way you want it to write. And closed, it's the safest pen you ever carried, because it simply can't leak. Shuts up bottle-tight when the cap ecrews down—and the link etaps where it belongs—inside.

It's the kind of pen a man can rely on — does its work well, and doesn't have to be "nursed." Look for the style you like at almost any dealer's — or else write for catalog showing 121 styles and sizes from \$2.50 up.

AMERICAN FOUNTAIN PEN CO. Adams, Cushing & Foster, Selling Agent 201 December Street, Boston, Many

# Noores mont le

missed HE greatest power loss with which motorists con-

tend is due to leaky, cheaply built spark plugs-compression leaks through or the charge is only partly ignited.

A cheap plug must be poor; a poor plug always causes power loss, over-heating and costly damage to engine and car.

# BOSCH PLUGS

were designed so that the right plug could be had, so that power losses, over-heating and other ignition troubles could be eliminated and so that the full power always could be obtained.

They are right and act right. Proof of this fact is in the showing made by Bosch Products. In the recent Vanderbilt Cup and Grand Prize Races, both winners and every car to finish used Bosch Plugs; also the Bosch Magneto. This was a gruelling test-more heat and oil and speed than you ever would require—but Bosch Plugs stood it—because they are As Good As Bosch Magnetos, Try a set in your car-the same plugs as

used by the racers.

other milk producer I know of. There's plenty of twenty-cent certified milk to be had for those who can afford it; there's some fifteen-cent certified milk. But as far as the parents of such as those of Giuseppe, Jr., go there might just as well not be any pure milk in the world.

The eight-cents-a-quart price was still an arbitrary price fixed by Dick. It wasn't by any means based on good business. because it wasn't it disturbed the boy. Not that he was worrying so much because of selfish interests. He wasn't afraid of losing seins interests. He wasn't airaid of losing a little money; he could afford to lose. But that wasn't sound business. An enterprise founded on any such principle necessarily was weak. And the boy, you understand, was striving more and more earnestly every month for stability. The idea of permanency dominated him more and more. Here was to be an undertaking that should he was to be an undertaking that should be associated with him during his entire life-time and with the name of Carleton after he was gone. He wasn't so much con-cerned with making a monument for him-self as he was in establishing firmly what he believed to be an important and necessary public work.

From Dick's point of view he was also violating the spirit of his business if he was charging too much. A five per cent net profit was what he considered fair-this profit to be put aside in a separate account to the credit of the business. This was to be in the nature of a reserve fund. It had nothing to do with his personal account. He didn't use it even to include payment

for his own services Where the boy found time for it all was a marvel to some, especially to his city friends; but the explanation was simplicity itself—he got up at four o'clock in the morning. This gave him four clean working hours over many of his fellows. Then he had at least two more at the end of the day. The boy was leading two lives in one and doing it without strain. Day in and day out he was in better condition than ninety per cent of his business associates who didn't get up until eight and who spent the last few hours of the day in their clubs. He went to bed at nine, which gave him seven hours of sleep. And when Dick slept,

he slept.

The life of a galley slave, some will say. Looking at it from the point of view of men who are preaching eight hours as work enough for any free and independent citizen enough for any free and independent citizen struggling in the pursuit of happiness, per-haps he deserved that title. But honestly you never saw a heartier or a happier galley slave in your life. And he wasn't in the slightest conscious of being a galley slave. The boy's life was full to overflowing with honest ion. He lived every washing hour honest joy. He lived every waking hour to the fullest, and got so much fun out of the work itself that most ordinary amusements seemed stupid.

Sometimes I wonder if most public amusements aren't merely a makeshift for people not tired by overwork but bored by too little work. I don't mean the arts—good music, good drama, good paintings—but the amusements that can't be classed under any of those heads and upon which millions of dollars are spent every year. The men I know who go most to such things aren't by a jugful the freshest and keenest for life after them. To a man they are the growlers and yawners. So far as I've seen for myself, it isn't the ten-hour-a-day man who is discontented but the eight-hour-aday man. Of course the observation of one man doesn't count for much. Maybe, too, I'm growing older. I'd think so if with every year I didn't realize what a brave adventure life itself is; if I didn't feel that it's within the power of every man to live his own pleasures instead of hiring other men to furnish them to him.

Dick had his pleasures of a purely social nature, too, as all of us in Brewster have. There were dances and entertainments enough, and when there was anything especially good in the theaters in town Dick and Jane went to see it. But it wasn't often there was anything especially good

There are some women who will think that perhaps Jane herself was bored. That's for Jane herself to say, but I shouldn't be afraid to match her life against that of those women who play bridge in the morning and who yawn over everything in the way of entertainment that comes to the leading theaters. Besides, it was along about this time that Jane found a new interest-an interest that in a normal woman dominates every other interest in life.

# *The Jacksonboy*

"Yes, that's it," said Benny, whom I must acquit of knowing what the word meant. "Maw don't find it very sociable here, and that's a fack. I guess she likes more life and go and toiking about the

more life and go and toking about the neighbors."

"But you like us, don't you?" inquired Edith, much overcome at our social failure.

"You betcha!" ejaculated the Jackson-boy with a warmth that atoned for the tragedy of our boring his mother. "I just keep cointing all the days of the week, hoping it will be Sunday soon."

As it happened, he did not have to count many more days waiting for it to be Sun-

many more days waiting for it to be Sun-day. Bertha left us in the disconcerting way suburban servants often do when you have paid them their month's wages. You lay the notes in a red palm and five minutes afterward you are confronted with the problem of getting your own dinner. Benny rushed into the Berthaless breach and proved himself a perfect trump in help-ing Edith with the cooking and housework.

More than a week passed before I could find the right kind of girl, and all this time Benny hung about us in a manner that must have seriously affected his dog-ransoming, golf-ball-collecting profits. When I said something about paying him— it seemed only fair that we should—Edith blushed and remarked that she had arranged all that.

"Arranged it how?" I asked, thinking she meant old clothes or boots, and rather dreading any inroads on my wardrobe.
"Oh, I am teaching him to dance," she

"Dance!" I exclaimed. "Dance!"
"Yes; he is crazy about it," said Edith,
who was extremely fond of dancing herself.
"You ought to see us do the Boston—it is
simply remarkable how he has picked it up."

Now I did not object to dancing—heaven forbid!—but it came over me that Benny was already unsettled enough in life without our disturbing him afresh with the Boston. Honest toil seemed to me much more indicated than accomplishments, however graceful. Indeed, I was very much put out about dancing; it brought it home to me with sudden force that we might be having a bad influence on the boy. There could be nothing more unkind than to make a parasite out of him—a jobless individual basking at our fire, playing our phonograph and dancing the Boston with

That night she and I had quite a serious talk about it, which ended in our deter-mining to find Benny a job and—what was still more important—keep Benny at it.

As we had decided to put in a new furnace and heating system, and were there-fore on the most intimate terms with Mr. Updyke, the plumber, who was figuring on the matter, I thought perhaps we might manage to unload Benny on him as part of the contract; but it was harder to unload Benny than I had anticipated.

"That there Jacksonboy is n. g. all the way through," protested Updyke. "Why, I had a dog oncet -

It was the same old story, even to the collar; but I argued and persuaded and persisted until Updyke, who really needed a boy, as it happened, and was a good-hearted old fellow at bottom, finally consented to take Benny on six months' trial. He exacted some onerous conditions however. I had to agree to pay him four dol-lars a week, which, in turn, he would hand to Benny as though they were real wages. At the end of six months, if the boy were "anny good at all, at all," the plumber was to keep him on and continue the four dollars a week out of his own pocket.

We were not so well off that we could afford an extra four dollars a week without some inconvenience and pinching, but in such a good cause it seemed selfish to begrudge the money. After all, if it took only four dollars a week to plant a human brother on the ladder of independence, how could one hesitate for an instant? What were a few cigars and theater tickets in comparison with Benny's rescue from a possible life of crime?

We loved to dwell on that potential life of crime—it heartened us up so much about the four dollars. We drew lurid pictures of Benny's descent into the lowest depths of infamy and gloatingly followed him to the electric chair in order to say: "And for only four dollars a week we can make him a happy, prosperous plumber!"

The news that he was to be a plumber emed far less attractive to Benny than it did to us. He received it with a silent depression that was not a little wounding, and stared gloomly at his toes. I was goaded into lecturing him a bit, pointing out how hard his mother worked to support him and how much he owed her for a devotion he scarcely realized. I told him what a comfort it would be to him later on if he were in a position to support her in her old age and fill her declining years with ease and joy.

Benny, however, only grew glummer and glummer; and afterward, when Edith said he might play the phonograph if he wished, he chose all the saddest, mournfulest, most heartbroken records we possessed and gave each of them an encore. Even Bostoning with Edith failed to raise his stricken spirits.

It was so provided that I took him to

I was so provoked that I took him to task again; and when I had finished he stammered out:

"I'll woik my hands off—never you fear, Mr. Gilbert. I know how good you folks are to me, and the awful trouble you must have took to get me this job—though maw will just have a fit at my giving up being a lawyer. It's that which makes me act so dopy and like I wasn't grateful—thinking of maw and how dreadful disappointed she will be "

Whether maw was disappointed or not in her imbecile ambitions, Benny certainly showed a most praiseworthy ardor in his showed a most praiseworthy ardor in his new employment. Updyke told me he was "doing fine" and hinted good-naturedly that he would soon let me off the four dollars a week if Benny "kep' it up." But keeping it up, alas! was just what Benny failed to do. In Updyke's picturesque vernacular the boy "lay down on it," and it was in this recumbent position, three weeks afterward, that he received his walking

I was very angry with him and so was Edith, and for a while the Jacksonboy languished in the outer darkness; but after a time he crept back, penitent and hungrylooking, and lawn-mowed himself into our good graces again. Soon he was playing the phonograph and dancing with Edith as though there had been no interlude in

our relations.

Our second attempt to connect up Benny with the wheels of industry was through Mr. Fortnum, the grocer. Fortnum, whom I caught redhanded, so to speak, with Boy Wanted in his window, demurred and expostulated at Benny being foisted on him; but the four-dollars-a-week and six-monthsfree-trial arrangement was not without its appeal and was finally—though unenthusiastically—adopted.

"You are wasting your time befriend-ing that young scalawag," observed Mr. Fortnum with the air of a man who had made a bad bargain and was already re-gretting it. "I have known him ever since he was a little tad that high and, believe me, Mr. Gilbert, the only thing he is any good at is stealing dogs. I mind a little bull I had once, the pride of my wife's heart;

Benny took to commerce much more kindly than to plumbing, and went at it in such a brisk, whistling, basket-slamming way that his success seemed assured. But after several weeks, when Mr. Fortnum actually commended him to me, I confess I felt my first tremors of misgiving; for it was at this stage I had the most fear for Banny—the assembly wind stage when the Benny-the second-wind stage, when the novelty had worn off and the original im-petus had lessened. I was only too well justified; for, sure enough, Benny promptly ran down like one of those clocks you wind up once a month. He ticked to the last minute of the last hour of the last day and then stopped for a rewind.

It was all maw's fault, he said. He put the entire blame on maw. Maw declared he was wasting his time and would not let him stay any longer at Fortnum's. Maw said he was nineteen now and old enough to "woik" his way through the Columbia Law School; and would I please advise him how to go about it? Maw had sent him over to ask me that—how was he to work his way through the Columbia Law School?

It was an exasperating situation and was made even more exasperating by maw's quoted references to Lincoln. It was even more exasperating still that Benny did not

seem to wish to be a lawyer at all and evi-dently had some glimmering of his own deficiencies. I took down a copy of Every Man His Own Lawyer and forced him to stammer and flounder through a simple

partnership agreement.

"That's what law is," I said as he finished, flushed and mortified, with the sweat of the effort glistening on his brow. "It wasn't railsplitting that made Lincoln great—it was what he had in his head. Your mother is like so many people—she confuses the two."

"She's a durned old fool!" said the Jack.

"She's a durned old fool!" said the Jacksonboy, with a frankness that left us some-what overcome. "She don't understand a feller must do the best he can with what he's

got."
"Precisely," put in Edith, delighted at such an unexpected gleam of sense—
"though it is very wrong to refer to your mother like that, even if she is mistaken."
"That's why I am thinking of going on the stoige," said Benny, ignoring the reproof. "I have been thinking a lot lately of going on the stoige, for it would take

proof. "I have been thinking a lot lately of going on the stoige, for it would take me away from maw and her everlasting nagging about Lincoln."

While Edith and I sat there stupefied, Benny produced a little newspaper clipping and proceeded to read it to us. It was the advertisement of a tenth-rate dramatic school which characteristic delications. school, which charged sixty dollars for a three-months' course and guaranteed sit-uations to promising pupils. Benny read it a great deal better than he had the partner-

speat deal better than he had the partner-ship contract and then, putting it away in his vest pocket, regarded us hopefully. "I could easy pay it back afterward," he murmured. "It's something fierce what actors make! Why, sixty dollars a week ain't hardly nothin' to an actor!" If I had not minced my words before in telling Benny what I thought of him as a ressible lawyer, it was child's play to the

possible lawyer, it was child's play to the way Edith went for him now. I never saw her so worked up. She was so angry that her words could not come fast enough; she held the mirror up to Benny and showed him, in torrents of the most wounding invec-

him, in torrents of the most wounding invective, what he really was—an uneducated, uncouth, shambling, half-baked, conceited noodle, with neither the brains of a canary nor the grace and dignity of a yellow dog!

An actor! The scorn Edith put into the word was shriveling. Benny an actor! She pulled down from the bookshelf a volume of Shaw's Plays, Pleasant and Unpleasant, and chose a passage at random.

"Read that!" she exclaimed in a paroxysm of contempt. "Read that aloud and just show us the kind of actor you are!"

The Jacksonboy, hunched in his chair as

The Jacksonboy, hunched in his chair as though being struck at from every side, burst into heartrending sobs. The disregarded book fell to the floor. As a scene in a play, with Benny himself playing, it would have brought down any house; but Edith and I were too enraged to see any humor in it. After all we had done for the young ass, after all our sacrifices and privations, to have him wanting to be an actor!

Ridicule, irony and sarcasm beat on his head like hail, and the more they beat the louder Benny sobbed. I washed my hands of him forever; Edith washed her hands of him forever. He was invited to retire into the outer darkness and, so far as we were concerned, to stay there permanently.

By this time Benny had been so completely skinned that the only thing to do, mataphorically encaking was to arran him.

metaphorically speaking, was to wrap him in a blanket and blow in his face. He was altogether repentant—childishly, tear-

was altogether repentant—childishly, tearfully, agonizingly repentant. He abjured
his errors as pitifully as a medieval heretic
up to his waist in burning fagots.

He had been talking like an "idjit,"
he quavered. He knew he was not fit to
black a real actor's shoes and never would
be. It was maw's fault for pestering him
night and day about Lincoln. The "stoige" seemed to be the only way he could escape from maw—and Lincoln. He pleaded with us not to turn "agin" him and, with his eye on the beloved phonograph, implored and

besought us in a hysterical crescendo not to turn again "agin" him. Needless to say we did not turn against him. Crushed and humbled as he was, it was impossible to turn against him. the contrary we were greatly mollified by his abasement and hastened to discuss a new plan I had formed for his future. The taxicab era had just dawned; and one of my friends at the club, who was interested in this new business, had told me of the great difficulty he was experiencing in find-ing enough chauffeurs. He had also told me it cost only forty dollars to go through

the Y. M. C. A. automobile school. I had put this in the back of my head, with an eye to Benny if he failed to hit it off with Fortnum.

So we talked chauffeuring with much gusto and enthusiasm, and with it peace descended on us. Benny revived and soon it was all settled that he was to go through the Y. M. C. A. school and learn to drive one of my friend's cabs.

It was a wrench to part with that forty dol-lars, for it deprived Edith of a new dress she had been counting on for weeks and saving up for, a dollar or two at a time; but the new furnace had cost us so much we had not a penny to spare and therefore I was forced to see her part with her little hoard. It was tremendously generous of her to sacrifice it; for, to a woman, giving up clothes is like a man's giving up tobacco—only more so.

It was her own suggestion, too, which made it all the finer; and she never whimpered a whimper, except to say, "Oh, my darling boy, it is perfectly dreadful!" when I ventured to praise the old dress she had made over by Madame Pipin, the local dressmaker. Her words betrayed an inner

suffering that would have entitled her to an angel's crown.

Meantime the Jacksonboy, who had to have a six-dollar commutation ticket, which came near breaking the camel's back, toiled and moiled with admirable persistence, and returned at night almost too tired to dance. He was certainly learning all about engines, and proved it by taking the phonograph to pieces and oiling it, as well as reviving our electric bells and overhauling the suction-

The only fly in the ointment was maw, who still harped on Lincoln and disap-proved bitterly of what we were doing for her son; but Benny, undeterred, went blithely on and in the fullness of time took

his examination and gained his certificate. Instead of hanging about, waiting for me to find him a job, he borrowed a suit of my clothes and went out and promptly found one for himself. And such a job! To drive a splendid, eleven-thousand-dollar im-

orive a spiendid, eleven-thousand-dollar imported French limousine for an old Central Park West lady named Miss Van Sickle!

How anybody in her senses could have intrusted such a magnificent car to Benny is beyond my comprehension! It must have been his heautiful blue eyes that accomplished this miracle—either that or the blind stupid faith people often show in engaging servants; or it may have been Benny's engaging manners. Edith had done wonders for Benny and had carefully coached him besides as to how he was to

act in applying for a situation.

Anyhow, there he was, with seventy-five a month, a smart livery, free bed and quarters, and little to do except tootle the old lady round the park and hold a bag of peanuts while she fed the squirrels.

Not went to be the squirrels.

Nor must you think we had only Benny's word to go on. There were cankering doubts in my own mind until one holiday morning Benny appeared with the car and, assuring us he had Miss Van Sickle's permission, took us for a forty-mile spin. It was the most stunning car I had ever seen—a great, shining, resplendent palace on wheels—and to sit there behind Benny, lapped in all this eleven-thousand-dollar luxury, was to

think oneself dreaming dreams.

I might have known it was too good to last, however—Benny's job, I mean, not our one long glorious ride together. He

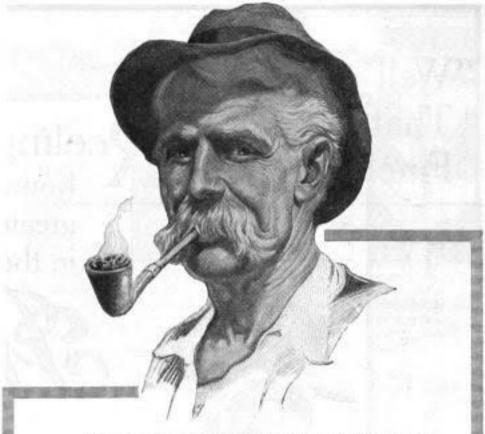

our one long glorious ride together. He quitted it through the glass screen in front at the glad, wild hour of three A. M.

Oh, yes, it was the old story—joy riding, girls picked up at random, drinks all along the line, and a milk wagon across the primrose path. The eleven-thousand-dollar car flew into eleven thousand pieces amid milk and blood; and though no one was said. and blood; and, though no one was seriously hurt, it was a case of ambulance and hospital for all the survivors save Benny.

Once through the screen, he had apparently never stopped running until he reached us at daybreak and fell, breathless and gasping, at our feet. While he lay on the floor and had a saucerful of glass specks picked out of him, he besought us hysterically not to give him up to the police.

I was all for sending for the doctor and allowing justice to take its course; but Edith would not hear of anything except hiding Benny until the hue and cry were past. Having just lost Miss Guleszecwiczcalled Maggie for short-we were in admirable trim to shelter a fugitive and afford him that aid and comfort which are so expressly against the penal code.

(Continued on Page 45)

Some folks say you don't need t' chase after a trolley car once you get it. But I say, look out you don't fall asleep after you get on, 'r you might just as well missed it. Similar with jobs. Jedgin' fr'm its uniform quality, the folks that make VELVET don't stop chasin' popularity after they've got it. They're hoein' away Velvet Joe as hard as ever.

COME goods build up a big reputation and then Dlive on it. VELVET has built up a big reputation and is living up to it.

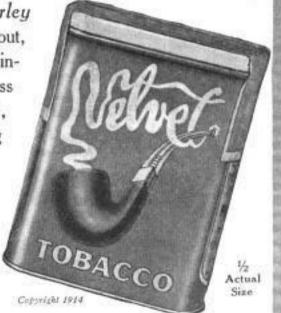

The Velvet Joes that raise the Kentucky Burley for VELVET are "a-hoein' away" to make good tobacco better. The Velvet Joes in the curing sheds and the factory are "a-hoein' away" to make better tobacco best in VELVET, the smoothest smoking tobacco.

All the mild, full-bodied flavor of this Burley de Luxe is brought out, with an added aged-inthe-wood smoothness found only in cool, pleasant, slow-burning VELVET.

(Continued from Page 43)

Heaven knows it was none of my doing that we kept him-I was angry enough to take Benny by the collar and drag him to the local police station—but one might as well argue with a lion as with a sympathetic lady who has once made up her mind; and when Edith said Benny was to stay, Benny stayed.

Wound round and round with court-plaster like an emblematic figure of Sing

Sing, with his suffering form incased in my new baby-blue silk dressing gown, Benny was put to bed on the sofa, with a little bell at hand, which he was to ring if he wanted anything. I must say he did not want much except to be let alone. If ever there was a joy rider the worse for wear it was Benny!

When I got home that night he had chirped up enough to be playing the phonograph; and I was told—as though I ought to be preferred by greatified at the intelli-

nograph; and I was told—as though I ought to be profoundly gratified at the intelli-gence—that he had eaten two pounds of hot-house grapes. The next day he was up and limping about, helping Edith with the housework; and she said he was so grateful that it brought the tears to her eyes—totter-ing and hurt as he was, yet so pathetically eager to recov us.

ager to repay us.

I refrained from making any comment on the number of cigarette stubs I found everywhere or on the ample supper he tucked away. It was impossible not to like the young scamp; there was something so whimsical and absurdly winning about him that one was attracted in spite of oneself.

Even our last farewell was most cordial, though he had overstayed his welcome and become a fearful nuisance. He was wholly cured by now and there was no reason why he should continue to be our guilty secret and keep us on tenterhooks of apprehension.

We gave him ten dollars, my second-best suit of clothes, a selection of my shirts and underclothing in a telescope basket, and ordered him to proceed to Philadelphia and join the army or navy. If Benny were to flee from justice we thought he might as well do it at Uncle Sam's expense and gain a little badly needed discipline and setting

we started him off one dark night with as many precautions as though he were an escaping safeblower; and I told him I hoped he would never stop until he had reached Guam. Of course he promised to write from Philadelphia—and of course he did not four only companying tion from did not. Our only communication from him was found subsequently in the top of the phonograph:

"I have took 1073, 2904, 2777, which I hope you won't mind, but cheap at the price perhaps to get rid of One who, whatever his faults, knows how Kind he was treated and will remember same to his Dying Day. God bless you, Mr. and Mrs. Gilbert!"

As time went by and there came no word from him, Benny gradually faded from our recollection. Maw, too, disappeared unob-trusively into space and was seen no more. I wish I might say the increasing years brought me increased prosperity, but they did not. Edith and I jogged along the road of life like most other middling people, with a few kicks here and there to ginger us up and an occasional raise, which was always a little less than we expected—but I must not say a word against my firm, for when I got run down last year and was ordered by the doctor to take a six weeks' vacation they acted with the most unexpected liberality.

Imagine my feelings when they sent me a check for a thousand dollars, with the nicest kind of letter about my sixteen years' faith-ful service and the high value they set on it!

We decided to spend the whole time in Paris, thinking it better to see one foreign place thoroughly than to race all over Europe; and no two kids let out for a holiday ever had a better time than Edith and myself. With all that thousand dollars and my pay still running on, we had money to burn—and there is no place where one can burn it more pleasantly than in that beautiful, incomparable Paris; but, lavish as we were in a quiet way, I admit I got a shock when one day Edith twined her arms about me and asked very falteringly whether she might have a hundred dollars to "throw to

"I want to do an awfully extravagant thing," she said, hugging me closer than ever and speaking with a breathlessness that showed how worked up she was. "And it isn't a dress, and it isn't jewelry, and it isn't a tracking, or gloves, but just some isn't stockings or gloves—but just some-thing I want more than any human being ever wanted anything in the world."

She gazed at me so wistfully that, of course, I said she might have all the money in the bank; but I was thunderstruck, nevertheless, at her wanting so much—for there never was a more careful, economical woman than Edith, or one who could make

a dollar go farther.

"It's the tango," she confessed, looking scared to death. "I want to take five half-hour lessons from Muñoz."

Muñoz! If she had said from the presi-

dent of the republic I could not have been more overcome. In tango-mad Paris Muñoz was king—he loomed over the place like the Eiffel Tower. Why, they named suspenders after him; pumps, all sorts of things. I was wearing Muñozes myself and took a hitch

wearing Munozes myself and took a fitch in them every morning.

"Muñoz!" I repeated helplessly. "Oh, my darling, there must be other teachers who could teach you just as well and do it for far less! Do you realize it is almost seventy-five cents a minute?"

"But it would be worth it," she protested. "There is nobody like Muñoz—nobody in the whole world; and they say he gives you.

the whole world; and they say he gives you a grace and perfection that no other teacher can come within a mile of. Then think of the prestige of being a pupil of Muñoz—you murmur you are his pupil, and people fall dead! And you would be the husband of a pupil of Muñoz—think of that!"

I tried not to sigh as I counted out five one-hundred-franc notes. It seemed a frightful lot of money, though Edith said that by the time she had taught the tango to me—the real Muñoz, drop-dead tango, to me—the real Muñoz, drop-dead tango, with the prestige to it—and we had taught it to the Babcocks back home, and made them pay their half—it would work out as hardly anything a lesson, thus divided among the four of us. If her arithmetic seemed somewhat faulty her pleading, eager face was irresistible; and I told her to rush round to the tangery and get her name down quick for five appointments.

She came back almost crestfallen enough to cry. A horrid little secretary had in-formed her that Muñoz was engaged for three weeks ahead. As we were sailing in two and had our cabin already engaged, you can imagine her despair.

"And he was so detestable about it!" con-

"And he was so detestable about it!" con-tinued Edith bitterly. "Looked me up and down as though I wasn't good enough for his nasty old Muñoz-wasn't smart or impor-I suppose if I had had purple hair and a transparent dress, and had worn legmuffs, he would have passed me right in!"

With that she threw herself on the sofa and wailed out how unbearable it was to come three thousand miles across a fiend-

come three thousand miles across a fiend-ish ocean—and then miss the one thing you had set your silly heart on. Then I said: "Why couldn't we go to that restaurant in the Bois where the paper advertised Muñoz to dance this very afternoon—ten francs apiece to go in, with afternoon tea extra at little tables."

Edith glanced at the announcement and then brightened up wonderfully, though she was inconsistent enough to demur at the ten francs. But she said that in Paris she supposed even a cat could not look at a king without being charged for it or having to buy a consommation for the privilege—a saucer of milk at least, or a lap of red sirup and that it was an awfully good idea to go to the Bois—and wasn't I the dearest old ear for suggesting it!

It was lucky we arrived early, for the tables were nearly all occupied; and such tables were nearly all occupied; and such of them as were not were mostly ticketed by grand dukes and baronesses, and all sorts of tiptop people. Twenty minutes later and we might have been with the scufflers outside the door, who were being held back by menials and rioting in a well-bred way at being refused admittance. There was an electric stir in the whole assemblage that showed better than anything the hold Muñoz had over Paris-an air of anticipation and a curious, indescribable excitement.

Then the music struck up, followed by a sudden loud buzz, a craning of necks and the scraping of a hundred chairs, as a cou-ple was seen advancing toward the cleared CTANDARD

space in the center of the room.

There were cries of "Muñoz! Muñoz!" and a frantic handclapping, while Edith and I — No! It could not be! It was and 1—No! It could not be! It was not possible! It was only a marvelous, an incredible resemblance! Those blue eyes; that shy, whimsical smile; that slight figure! "It's Benny!" gasped Edith, clutching at my sleeve. "It's Benny Jackson!"

I had risen from my chair, hardly know-ing what I was doing; and there was a jab-ber of resentment behind me as all the

dukes and princesses and barons and baronesses hissed and called out at me fiercely to sit down.

The hubbub arrested Muñoz's attention; his arm slipped from his companion's waist; his gaze sought mine—first in anger, then in amazement and dawning recognition. A moment later and I was almost appalled to see him moving toward us through the crowded tables, while heads craned and chairs scraped, and we found ourselves in the dizzy focus of five hundred pairs of staring eyes.

eyes.

Yes, it was Benny all right—Benny, smiling at me like a long-lost brother—Benny, waving at me and uttering exclamations of joy. He clasped me in a French hug and patted my back; caught Edith's hands to his lips and saluted them as though he would never stop; said again and again that he could not believe it—no, he simply could not believe it! And was it not too wonderful for anything that we three should meet again

like that!

Our talk was broken and disjointed, as it could not fall to be—what with the orchestra banging away, everybody staring at us, and Edith and I acutely conscious of the limelight we were standing in. Benny wanted our address and we wanted to know how he had become Muñoz; and somehow we would be talking of the old phonograph in one breath and of Buenos Aires in another, until Edith told him how she had been turned away by his secretary. And he said: "Caramba!" She should have a hundred lessons if he had to throw out half of Paris! And would tomorrow do,

at three? And might be send his car for her?
"I owe everything to you!" he said, looking down at her and speaking with a little catch in his voice. "It isn't that I can ever repay it—but please let me try!"

Before I realized what he was doing, he

Before I realized what he was doing, he slipped off a superb diamond ring and forced it on one of her fingers; and then he pulled out a gold cigarette case heavily monogrammed in brilliants and laid it beside my plate.

plate.
"That's for stealing Robbie, and that's for stealing his collar!" Benny cried out, apportioning the gifts with a giggle of recollection; and then he added, backing out of reach before we could expostulate or do anything: "The Jacksonboy will now return to the center of the room and tango for his thousand francs!"

### Record Extremes

BIG records for talking machines, largely magnified from the original records in order to have a greatly increased sound, and also little records reduced from the originals in order to have a more delicate sound, have been successfully produced lately by a chemist with a method so ingenious that it is interesting in itself. Whether such records will come into regular use is a question, though it would seem as if there would be a large opportunity for them.

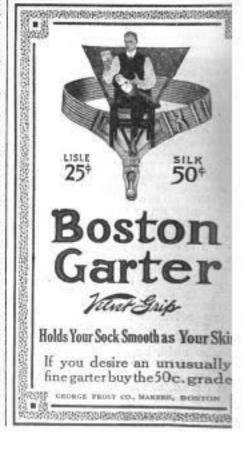

there would be a large opportunity for them.

The present practical methods of increasing or decreasing the sound of a talking machine are limited to using different kinds of needles and to horn or shutter arrangements; but all use the same-sized records as the original, as closely identical with the original as possible. This chemist sought a means of increasing the sound by enlarging the record.

He found, first, that he could not make successful enlargements by a pantograph—the apparatus commonly used in enlarging a drawing. The pantograph would record the delicate markings of the original record, but every tiny vibration of the instrument was also recorded in the enlarged copy; so that, instead of a pure sound from the enlarged record, it was possible to obtain only a sound badly broken up with scrapings and other noises.

He then took an impression of an original record in a mold of gelatin and succeeded in getting a perfect print. The gelatin was then enlarged by hydration, which practically means that he soaked it in water until it swelled the amount he desired. Then, by putting it in another chemical solution largely composed of formaldehyde he hardened the gelatin and thus had a mold for a magnified record. To make a reduced-size mold he followed much the same process; but instead of soaking the gelatin to swell it he dried it to shrink it. The chemist then exhibited the records made from these molds and stated that they were very free from scraping and other undesirable noises, having even less of them than the originals.

both of these?

How can we make you—the millionth reader—realize the big significance of this story? For we tell you of the right idea in cooking stoves. How can we make you forget unhappy experiences with other oil stoves? For you must forget. The day of balky, smoking, unreliable, sooty, greasy oil stoves is past. The dependable—the absolutely safe oil cooking stove has come.

blockess demanded the automobile and it was perletted. It demands the aëroplane. That is being perfected. The housewife—sweltering over her and, dirty range—has cried out for relief. She is and in Florence Oil Stoves.

Let us start the day right. You come down in the Not to a cold range — nor a dead, left-over coal int to a ready stove.

highted match — a lever turned. Quickly you have a turn. Intensely hot—and blue. A few minutes later is ready, the mush is cooked, the eggs are boiled.

fourier turn of the lever. Your flame falls to a sim-

lasow," you say, "but my old oil stove always and scented and sooted up the whole house."

4 burner, high frame Florence Automatic

Certainly! Because of an untrimmed or raised wick — a flooded burner — a worn-out valve.

But the Florence Oil Stove has no wich. There are no walves to wear out — nor clog —

Again you protest, "My old stove never seemed to really heat up—the flame was half yellow and irregular." Imperfect combustion! The oil didn't gasify. Sufficient oxygen was lacking in the mixture.

Florence Oil Stoves change every drop of oil into gas. This is mixed with the right quantity of oxygen. The flame is blue.

When the flame is yellow it means that oil is burning not oil-gas. Burning oil does not produce a hot flame. It does smoke and smell. When the flame is blue, oil-gas is burning. Oil-gas that does not smoke and does produce the hottest flame for cooking.

Suppose you want to bake. No vexing wait for a stubborn coal fire. In a few minutes your Florence oven is ready for six loaves.

Through the glass doors you see the ruddy crust brought only by uniform heat. It is visible baking. That means good baking.

When the baking's done the fire is turned out. Your kitchen was not overheated. The heat was concentrated under the oven or cooking utensil.

Those intolerable summer days, when every inch of your cast iron range radiated heat, are gone.

### To the Man of the Family

And you men. You who want to know how it works the principle involved—if economical.

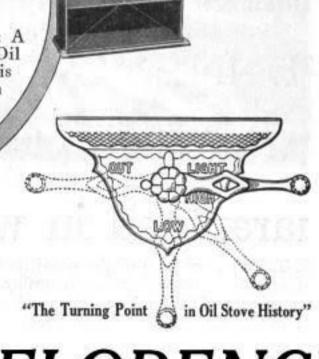

Oil seeks its level—from tank to feed pipe. A turn of the control lever lifts the burner above the level, out of the oil. No oil—no flame. Another turn. The burner is lowered into the oil zone. A full supply of oil. A third turn of the lever. The burner is in an intermediate position. A limited supply of oil and a low flame.

Simple — of course. But a simplicity protected by patents. Next — the principle. It is absolutely safe.

The sides of the steel chimney become red - almost white

# Central Oil & Gas Stove Co.

Boston, Mass. Address Dept. 25, Gardner, Mass.

# FLORENCE Oil Cook Stoves

# "Look for the Lever"

hot. This heat changes the oil to gas. The holes in the chimney permit just the right quantity of oxygen (air) to enter. The mixture rises as burning gas—intensely hot hotter than coal—infinitely hotter than any other oil flame.

And economy,

Each burner costs about one-half a cent an hour. Very much cheaper than a coal range or gas. There are no plumber's bills for connecting and disconnecting.

In the Florence line you have —at last — the safe, reliable oil stove. The model pictured below retails at \$25. Others as low as \$5.

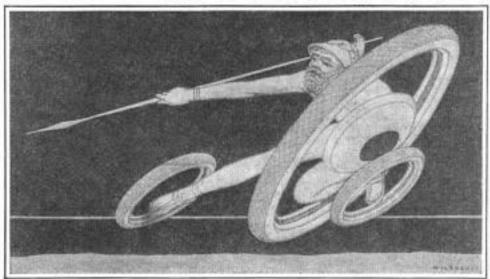

#### Florence Ovens with Glass Doors

You see your baking at any time without opening the oven. Cold air kept out until the baking is done.

The oven grates run from front to back, instead of lengthwise. Liquid pies or puddings slide in easily. No slopping no spilling. Florence Ovens are full asbestos lined and rust proof, with arched roof—bakers' oven top, ensuring even heat.

Let us tell you the whole story about the wonderful Florence Oil Stoves. They are fully guaranteed. Send for either the Free "Household Helper," the Toy Stove, 16c in stamps, to delight the children—or both. Please use the coupon and be sure to give your dealer's name.

# Guaranteed in writing

AJAX TIRES were born of the conviction that a steadfast determination for higher in-built quality would justify a written guarantee of 5000 miles. We are pioneers in building quality into tires and guaranteeing that it is there. Nine years ago Ajax set the standard of 5000 guaranteed-in-writing miles for every Ajax tire made. An ever increasing demand, always greater than the supply, is the public's evidence of appreciation.

Ajax tires are better for our own determination to make them so. Their quality, far from being a recent discovery, has been known and guaranteed to motorists for 9 years.

Investigate Ajax tires! See the Ajax dealer who is close at hand, or write us for new booklets. The increasing favor of Ajax tires has come as users have told their satisfaction.

"While others are claiming Quality we are guaranteeing it."

# HEART OF GOLD

(Continued from Page 7)

missed a hook in the corner—that a decent,

self-respecting woman would wear.

A good-sized mirror was set on the shelf at the end of the room, with a border of glaring electric lights round it, and oc-cupying the rest of the shelf was a litter of articles the uses of which he did not at all understand, but which somehow signified the intimacies of feminine adornment. Pervading the whole place-and whether it came from the bright pink sticks and crayons and boxes of powder on the shelf, or from the clothes, he did not know-was a perfume. He had never heard of an odor called Bouquet du Diable; but if he had he should have felt no hesitation in asserting that this

And this was the place where he was to wait for his mother! There was something crooked about it surely. There would have been ample time to call her if that had been truly the purpose of the cyclonic and garishly dressed young lady who had thrust him in here. He had not heard her turn the key in the lock though. He went over and tried the door. Yes, it opened all right; and that fact reconciled him to waiting quietly for a few minutes more.

Presently he heard steps come thumping down the stairs. There was a rustle of many persons passing in the corridor. Perhaps his mother was out there now. At any rate there would be some one he could

ask to find her for him. He pulled the door wide open and started out. Then, with a quickness which a West-ern gunfighter would have envied, he sprang back into the comparative security of the dressing room and slammed the door shut. You see he had unfortunately chosen for making his escape the moment of what is known as a quick change of the chorus.

In the ordinary course of things, when a chorus girl changes one of her scanty costumes for another, she gets the new one off its hook where it hangs in a rank along the corridor, takes it to her dressing room, takes off her old costume, puts on her new one and comes out dressed, except for a V-shaped gap down the back, which the wardrobe mistress or one of her assistants hooks up. But when the time allowed for the change is only a matter of three or four minutes she gets out of her old costume while she is running down the stairs, grabs her new one off the hook and plunges into it in any vacant spot that happens to be handy,

much as a fireman jumps into his boots.

The consequence is that what she wears going down the corridor is merely the irre-ducible minimum that never comes off from the moment when she gets rid of her street clothes until the time when she puts them on again. It is a very small minimum really, and to the panic-stricken eye of one unaccustomed to such matters may easily

appear to be less than it is.

For about a fifth of a second Newton looked. After that nothing but an earthquake or a fire could have got him out of

that dressing room—except under escort. Perhaps I should not have said unfortunately, since it was to this fact that Hazel owed it that she found him there ten minutes later. She opened the door brusquely, shut it behind her with a bang and leaned back against it. "Anybody been in here?" she wanted to

He made no answer—just stared. It was his first good look at her—close to her. He had seen painted women before—on the streets of Denver and Obelisk—and he had often wondered that the brazen artifice of such a method of decoration should appeal to any one; but never in his life had he seen any one so flagrantly, so shamelessly painted as this girl who stood guarding the door of her dressing room against his

in a hurry to see her; so I came."
"She's here all right," said Hazel after "She's here all right," said Hazel after deciding that it was not worth while to try to lie about it; "but you aren't going to see her if I can help it. You're going to see me instead. I'm Hazel Dering. Maybe your mother's written to you about me."

His jaw dropped at that in blank incredulity. The Miss Dering of his mother's letters, who was so kind and clever and who worked so hard that his mother worked.

worked so hard that his mother worried about her, turning out to be a shameless bedizened hussy like this! Her announced intention to prevent his seeing his mother faded into the background beside so glaring an impossibility.

She glanced up toward the ceiling, where a thumping overhead told her how much time she had left for the interview. Then, determined to waste none of it, getting as straight to the point as she could—and

that was very straight indeed—she sailed in.
"She's told me about you all right. You
don't need to tell me what you came here
for. You couldn't graft it from her fast enough out there in Arizona, so you came along to make a straight touch. Maybe it's none of my business, but old Keziah's a pal of mine, and right there's where I butt in and say Nix! She's an old lady, and she works twelve hours a day for her little old thirty a week—and she's going to keep it. See! No rathskeller rube is going to separate her from it while I'm right side up with care! Do you get that?"

Newton opened his mouth and draw in enough out there in Arizona, so you came

Newton opened his mouth and drew in his breath preparatory to speech; but the thumping overhead had stopped and the girl knew her time was getting short.

"Now, keep your hair on," she ad-monished him, "and listen! I don't know what the resuler antennes had if old

what the regular ante was, but if old Keziah could stand it I guess I can."

She had not been looking at him while

she said it. Any one who knew Hazel well, if he could have seen her and heard her just then, would have found her manner a little It was an inveterate habit of hers to dress her occasional altruistic acts in a disguise of selfish considerations. She was always—toward her own more romantic impulses—a bit of a cynic. The proposition she had now to make to the rube, in its naked kindness and affection for her old friend Keziah, troubled her modesty as one of her own costumes would have troubled

that of a débutante.

"I'm no Sarah Bernhardt or Eva Tanguay—or anybody like that," she said;
"but I guess I can see old Keziah's ante all right. Tell me how much you get from her and I'll pay it regular. And I'll stand the carfare back to Arizona if you'll hit the rattler tonight. You play it square with me

the carfare back to Arizona if you'll hit the rattler tonight. You play it square with me and I'll play square with you. You write her a letter when you get back and tell her you've got a job, and I'll slip the coin to you once a week—see? Does that go?"

Overhead the ponies were doing the third encore to their specialty, and she had to come strolling on left as they bounced off right. She ought to be in the wings this minute. She left the door and strode up nearer to him. nearer to him.

"Does it go?" she repeated insistently.

Before she could speak, however, the unguarded door swung open behind her and the look in the rube's face made her turn round.

"Mother!" he said.

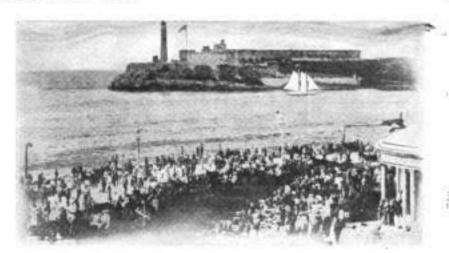

Old Keziah just looked at him and her face went white. Her competent, strong old hands went out fumblingly, tremblingly for a chair. Hazel was quick, but the rube was quicker. Before she could sweep away the cumber of things on a chair he had caught the old lady in his arms.

"Keep your mouth shut about that," said Hazel in a last frantic whisper, "and

She bolted from the room again and fled up the iron stairway, catching her cue and a glimpse of Freddy Boldt's distracted face at the same moment.

When she came off at the end of her scene Freddy was the first person she en-countered in the wings, and she was prepared to be properly explanatory and apologetic. A stage wait of one second is long enough to chill an audience and is an excuse for heart-failure on the part of the stage manager. To Hazel's amazement it appeared from Freddy's manner that his

own anxiety was to reassure her.
"The old lady's all right," he said. "It wasn't anything serious that happened to her. The rube's taken her home, but she'll be all right in the morning."

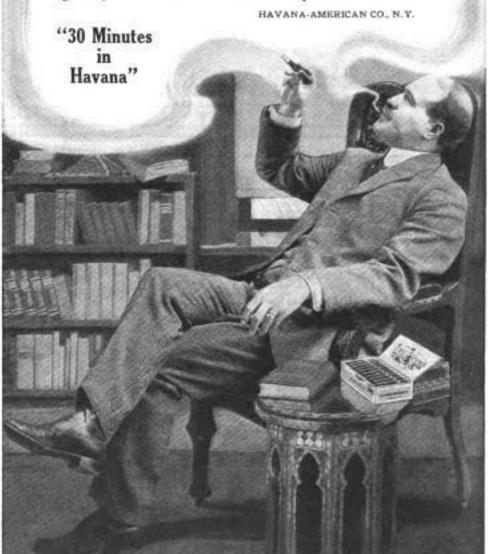

LA PREFERENCIA is unique—the pioneer Broad Leaf Havana Cigar, never successfully imitated.

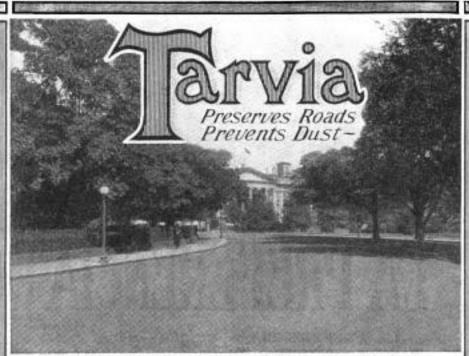

LA PREFERENCIA is unrivaled—immense sales and constantly increasing demand have clearly established the brand as "The National Smoke."

LA PREFERENCIA is distinguished—the rich, mahogany-brown color of the Broad Leaf wrapper indicates thoroughly-ripened, fullymatured tobacco.

LA PREFERENCIA has character—the pure Havana filler and the Broad Leaf wrapper harmonize perfectly to produce a deliciously mellow, sweet, full flavored cigar.

LA PREFERENCIA is unvarying—year after year the brand maintains its exceptional high Quality and skilled Workmanship.

Road south front of White House, Washington, D. C. Constructed with "Tarvia X", Showing U. S. Treasury building.

# In front of the White House

THE roadways leading to the White House, U. S. Treasury and State, Navy and War Departments, in Washington, illustrated above, were constructed with "Tarvia X" in 1911.

The above photograph shows the condition of these roadways two years later. They are quiet, clean, smooth and dustless, entirely suitable for so exacting a location.

The Tarvia forms a tough matrix around the stone, holding it firmly in place. Automobile traffic simply rolls down the surface and makes it smoother.

The maintenance cost of tarviated roads is insignificant, and their first cost is only slightly higher than that of ordinary macadam. Tarvia has no odor and does not track.

Tarvia is made in three grades— "Tarvia X" is a dense, viscid coal tar product of great bonding power, suitable for building Tarvia-macadam roads; "Tarvia A" and "Tarvia B" are thinner grades suitable for roads already in use, to preserve them and make them dustless.

Booklets free on request.

I'm afraid that Hazel's expression of her annoyance over this unforeseen turn of affairs would not meet the approval of any writer, however liberal, of a book on etiquette. Freddy did not approve of it either. He had done, according to his lights, a friendly act in letting the old lady to have in the middle of the resformers.

go home in the middle of the performance. However, there was no time to tell Freddy the whole story as she had confided it to George Featherstonhaugh earlier in the evening; so she allowed his natural though rather profane inquiry as to what

was eating her to go unanswered.

It was hard luck, though, and no mistake. The rube would have a clear two hours with his mother in which to tell his sob story and make his touch before Hazel could possibly interfere again. Probably

he would not waste a minute of it, either, now that her own declaration of war on him had given him such ample warning.

She thought a little of telling George Featherstonhaugh what had happened and getting him to go home with her—George's getting him to go home with her—George's remark, accompanied by a muscling up of remark, accompanied by a muscing up of a big right arm, about settling the hash of that particular Johnny recurring pleasantly to her mind. But it was hard to see, on reflection, how an appeal to force would settle matters. The rube could not be beaten up in his mother's apartment and under her eye; and anyway Hazel doubted a little whether George, with the best intentions in the world, were the man to do it. The rube was almost as big as he was and had a lean, hard, dangerous quickness that recalled to the girl's mind a phrase about being able to lick one's weight in wildcats. No; all there was for her to do was to dress as fast as she could after the show, go home in a taxi and hope she would not be too late. not be too late.

The light, which shone through the tran-som over the door into their little sitting room, was an encouraging augury as she went panting up the stairs; but the ab-sence of voices as she felt for her key—she had decided to let herself in rather than ring-told in the opposite direction. And when she quietly swung the door open and

when she quietly swung the door open and stepped inside she saw that she was too late, just as she had expected to be.

Old Keziah, in a rocking chair by the window, was alone in the room, and the look of troubled perplexity in the kind old face shot a hot stab of anger through the girl's mind. She closed the door quietly and reused a minute to get her breath

and paused a minute to get her breath.

"Well," she asked at last, her voice
harsh with eagerness, "did you fall for it?
Are you going to do what he wants you
to?"

"I don't know," said old Keziah. "I'm tryin' to figger it out. He's comin' back in the mornin'—to breakfast. I'm a-goin' to tell him then."

(TO BE CONCLUDED)

# Wireless Controls

WireLESS control from a distant point Wise now sufficiently perfected for practical use. For several years the idea of control in this way of machinery or apparatus, or recording instruments that are difficult of access, has been discussed and attempted, because of the great number of uses it would find. The first actual one is in the control of fog horns or fog guns on coast lines.

Such fog guns are now being made and placed on dangerous shoals or rocks, supplied with a wireless control operated from a shore station a few hundred feet or even a few miles away. When fog comes up, a switch is turned at the control station and the fog gun begins work, keeping up its warning signals until the switch is turned

The fog guns are automatic, and the only action of the wireless signal is to start the gun mechanism or to stop it. Such fog guns are operated by acetylene gas. Gas feeds constantly into an explosion cham-ber and this gas is exploded at regular intervals, usually two or three times a minute. The reports may be heard three miles away under rather adverse conditions, and under the best conditions as far as ten miles for the largest guns.

Most of such guns now coming into use are operated continuously day and night, with no idea of restricting their use exclusively to times of fog, because the cost of the gas hardly warrants the attention necessary to such restriction and enough gas is supplied to last several months without recharging.

I'll Put The Proof In Your Mouth

All you do is to write me a letter and express your willingness to try my cigars. You may doubt, with all your function

of doubting, my statement that my Shivers' Panatela at \$5.00 perhundred is the equal of the 10c cigar at retail.

I don't care how much you

doubt, so long as you give my cigars a chance.

Without asking a penny of you, I will ship you, express prepaid, a box of my panatelas. You smoke ten and then make up your mind about them. I have thirty thousand cus-

tomers scattered all over the country who buy my cigars direct from my factory in Phila-

delphia.

These people are satisfied that my method of making and selling cigars is economically sensible and correct.

They have every coportu-

They have every opportu-nity to cease being customers of mine. They are surrounded by cigar stores and stands. Yet month after month and year after year they re-order and re-order from me—and save half

their cigar money.

It is on re-orders that I make
my profits. Initial orders do
not mean any money for me unless the customer is pleased and
wants more of my cigars.

Now that you know these things, consider my offer.

MY OFFER is: I will, upon request, send fifty Shivers' Panetelas, on approval, to a reader of The Saturday Evening Post, express prepaid. He may amoke ten cigars and return the remaining forty at my expense and se charge for the ten amoked if he is not pleased with them; if he is pleased with them and keeps them he agrees to remit the price, \$2.50, within ten days.

My Shivers' Panetela is head

My Shivers' Panatela is hand made by skilled adult men cigar makers in the cleanest factory that I know of. It is made of Cuban Grown Havana Tobacco with a genuine Sumatra wrapper.

In ordering, please use business stationery or give references, and state whether you prefer mild, medium or strong cigars.

# *adventures in bankrupt*cy

(Continued from Page 18)

office and made them his clients. Finally be decided that the time to strike had come.

Having selected the professional receiver that he wished to have handle this difficult enterprise he took this man into his confidence, and together they made careful plans and together they made careful plans and had all things in readiness for quick action. Then the lawyer appeared before the judge in chambers and advanced the startling proposition that a receiver should be appointed without notice to the officers of the amusement corporation, for the reason that any notice would jeopardize the interests of the small shareholders and the interests of the small shareholders and permit the directors of the corporation not only to get away with the assets—mainly in the form of funds—but also to destroy the evidences of the fraud under which the minority shareholders had been robbed of their dividends. The court finally decided that this was good reasoning and that the interests of the small shareholders must not be allowed to suffer for lack of technical precedent. Therefore the receiver was se-cretly appointed.

Twenty deputies were already waiting at a convenient point not far from the park gates, and another squad was in readiness at the downtown office of the corporation. A code signal was first telephoned to the park squad, and the telephone wires leading

to the park were cut.
At practically the same instant the five deputies took possession of the city office and put out all the employees after making sure that they did not take any papers with them. The receiver then made a speedy run in an automobile to the park. His deputies were distributed so that every entrance was covered.

#### A Well-Planned Raid

Then the signal was given and each squad charged the entrance allotted to it. The private policemen of the park were seized, put outside, and the gates were closed. The receiver, with his picked men, made his assault on the office where the directors were sitting at a table on which were heaped the uncounted gate receipts. These men were seized, carefully searched for papers and then hustled out of the gates.

The most important requirement, beyond seizing the gate receipts, was to secure evidence that would substantiate the charges made in the bill that, by collusion and subcontracts with concessioners, large sums of money were diverted from the corporation to the pockets of the three majority stockholders, and that certain specific cases of graft existed by which the directors were personally enriching themselves. Not a scrap of record that might bear on this charge was allowed to be taken away. An examination of the books and records

showed that the volume of diverted funds was many times larger than had been suspected, and that there was not a concession in the park that had not paid heavy tribute. One man owning three concessions, for example, was paying a small percentage to the corporation—but was dividing his profits equally with the directors as individuals.

At the hearing it was shown that they personally received forty thousand dollars from this source alone. The directors had bought more land adjacent to the amuse-

ment park than the park itself contained.

The result of these sensational disclosures was an order from the court that the rewas an order from the court that the receiver continue the business, and that the
directors should have no part in the management of the company. They surrendered
all their stock and interests in the concern,
and the business was continued. The next
season the widow, with fifty shares of stock
that had never paid a dividend and which
could not be sold, received three thousand
dollars in dividends; and her fifty shares
are worth more than twenty-five thousand are worth more than twenty-five thousand

Such experiences as these make the work of a professional receiver interesting. Of course these experiences do not happen often, but there is enough of novelty in the course of the routine work to make it as interesting a profession as any I could

A favorite plea on the part of the crooked bankrupt who has worked a deliberate frame-up for the planting of assets is the statement that the goods were sold and the money lost at the gambling table. Though the staid and respectable business man regards gambling as a disgrace, the law has not branded it as a prison offense; but the concealment of assets in a bankruptcy proceeding happens to be punishable with imprisonment.

One of the most notorious and instructive cases of this kind occurred in a large Western city, and it carries more than a casual lesson to the manufacturer, the jobber and their credit men. It also indi-cates the artfulness with which assets may be manipulated under the hands of a master in that branch of magic.

This merchandising house was a close corporation owned by a father and three sons. The jobbers' credit association had become suspicious of this house and had been watching its movements for ten days long enough to reach the conclusion that careful preparations were being made for a failure. It was decided to beat them to at lature. It was decided to beat them to it, and an involuntary bankruptcy was filed and a receiver appointed. The court pro-ceedings were short; but evidently the notice to the bankrupt company was suffi-cient to allow its managers to manipulate

When the receiver reached the store and when the receiver reached the store and looked at the windows he was tempted to indulge a momentary feeling of security, for the windows were filled with a generous display of goods. Once inside the big store, however, this feeling suddenly vanished. The counters and showcases were thinly

He promptly began an investigation of the boxes on the shelves. One contained a single shirt; another, two collars; another, a solitary necktie. The stock had been skinned. Normally the store should have contained forty thousand dollars' worth of goods; actually there was not three thousand dollars in merchandise within its walls.

The unsecured liabilities of this corporation amounted to about forty thousand dollars and a large part of this indebtedness had been incurred within the previous sixty days. Naturally the first move made by the receiver was to put "the boys" on the witness stand and call on them to account, in their own way, for the situation.
They declared that the goods had been sold—trade had been brisk with them—but that they had been reckless and had attempted to do up a trio of innocent-looking strangers who had drifted into a certain gambling house. Their account of this experience was highly circumstantial and entertaining.

### Chasing Vanished Assets

Few courts have heard a more thrilling recital of poker combats than that given in harrowing detail by these sons, who claimed that they had been tempted into the game because their opponents looked like such easy money that it was a shame to waste the chance. Their antagonists were described as wearing their trousers in their boots, smelling of the stockyards and

having mild blue eyes.

The young merchants professed great remorse at the trouble they had brought on the head of their old father, who had started them in a business that was prosperous beyond their expectations - until they fell under the blandishments of the

blue-eyed strays from the stockyards.
"That's a mighty moving poker story,"
remarked the receiver to his custodian,
"but it's too good to be true. Men who
know as much about poker as that don't lose. It's up to us to find where those goods have been shunted to — and find them

The first clew led to an empty store building in a remote part of the city. The receiver followed it in person. Half of the build-ing was occupied by a fruit store, run by a Greek who had a wholesome fear of an officer or a court document. A display of the writ of receivership and a firm demand in the name of the law were enough to induce the Greek to show his guest into the basement and lead him up into the vacant store—the windows of which had been carefully whitened.

There the receiver found a drayload of packing cases. There had been an attempt to scrape the name of the bankrupt company from the cases, but the work had been too hurriedly done to insure thoroughness, and the name was still legible. Attached to the goods were the lot numbers corresponding to those on the list held by the

CHICAGO, ILL
CHICAGO, ILL-

Dept. M-55 CHICAGO, ILL.

receiver; but no sooner had these goods been seized and placed in care of a custodian than an uncle of the boys appeared with a writ of replevin, claiming that he had bought and paid for the goods and that they were his. The court, however, held that this was not proved and that the goods belonged to the assets of the bankrupts, and should be held and sold as such.

Nearly three months passed before the well-nigh discouraged receiver developed, from a fragment of chance freighthouse information, the hope that he had at last found another clew. As it involved more than thirty cases of goods it was well worth following. following.

One trail led from the dock of a steamship line to Milwaukee. Here the receiver's agent arrived just in time to find that the consignment of goods had been unsuccessfully offered for sale there and then reshipped to Minneapolis and placed in storage. There the agent watched it carefully and saw it reforwarded in two shipments over different

railroads to San Francisco.

Though the receiver had, by this time, little doubt that these nimble assets belonged to the bankrupt company, he had no proof of the fact; and his only recourse was to keep on across the continent in the trail of the goods until his proof could be established. An appeal was made to the attorneys of the railroads; and they agreed that, if the court would issue a restraining order, they would not only hold up the delivery of the goods but would also allow the usual notice to go to the consignees when the goods arrived.

The receiver's agent was waiting at the San Francisco freighthouse to welcome Smith & Brown, and was not surprised when two of the boys appeared to claim the goods under their new names. As soon as they found they had been checkmated they brazenly filed a writ of replevin and sent their attorney on to Chicago. When he learned the history of his clients he refused to continue the case. One of the polyer blazing ages and beginning to the continue the case. poker-playing sons came back to Chicago of his own volition, and the other was brought back by a United States marshal. They were both indicted for concealment of assets, pleaded guilty when the case was called, and received a sentence of one year in the Fort Leavenworth prison.

#### Fraud on the Heels of Loose Credits

"The business man," remarks this receiver, "ought not to miss the real nub of
this incident. What made it possible for
these crooks to get these goods, with which
to play ducks and drakes across the continent? Loose credits! That's the whole
story in a nutshell. There were a hundred
seventy-five creditors in this case—all
crazy to sell goods. And because the boys
were sharp enough not to place a heavy
order with any one house they got the
goods without question. The credit man
was willing to take a chance.

"If any one of those hundred seventy-

"If any one of those hundred seventy-five credit men had looked into the history of the personnel of that corporation he would not have trusted the boys for ten would not have trusted the boys for ten dollars; but these boys knew as much about credit men as they did about poker. The highest order they placed was for five hundred dollars and the lowest about two hundred fifty. These orders were distributed all over the country. In a word they selected houses so far apart that the credit men would have no temptation to make men would have no temptation to make inquiries by personal contact.
"And they made their orders so low that

And they made their orders so low that the men at the credit desks would take a chance rather than enter into correspondence for an exchange of information. It was a slick job and they nearly got away with it too. No matter how vigilant and experienced a receiver may be, he's no miracle worker-and that's what's necessary in order to make a successful backstop

in the majority of crooked frame-ups."

The heights of audacity and daring to which the crooked bankrupt will sometimes. attain are almost beyond belief. Some years ago a shoe manufacturer began prospecting for a factory location and visited a Western town that was feeling the first tickles of the boom fever. The town was sure it had growing pains and was strong for infant industries. The visitor was very modest. He said frankly that, though he understood the shoe business, he would have to start his factory in a small way and let it grow; he considered that the safest way. The committee for securing industries was headed by the president of the strongest bank in the town-a man of

large personal fortune and of strong influence in his part of the state.

The modest talk of this location prospector greatly impressed the banker—particularly when he learned that the stranger did not expect the citizens to capitalize his enterprise. All he asked from the public was the land on which to locate his factory and a moderate bonus with which to help build his factory.

The banker felt that here was the right sort of manufacturer to have in the town

sort of manufacturer to have in the town It would be putting it over on the othe towns that were paying fancy prices for ner industries to get this one on a sound and reasonable business basis. Besides, the banker was not averse to showing his townsmen what he could do for them whe he really took off his coat and went at it. The manufacturer made it clear that h looked on the banker as his special guidcounselor and friend.

The factory was built and did a god business. It grew faster than its founder of the banker had expected. This expansion demanded capital, and the banker backs the manufacturer to the limit. When the owner of the shoe factory needed a heavi-line of credit than the home bank cou extend, the local banker gave the man facturer a good name with certain outsi-banks; but finally, in a period of gener financial depression, the manufactur failed to take up an obligation and t gates closed down on him.

#### What Happened at Lunch Time

When his factory was invaded by the strangers, who were empowered to take invoice of his stock, he made them welcome and wasted no time in lamentations. T accountants remarked that he stood t gaff like a good sport. Owing to his h gan like a good sport. Owing to his his the work of invoicing proceeded rapid At noon he invited the accountants lunch with him at the hotel. The lunche was a good one and they ate it with becoing leisure. As one of the accounta remarked, it was not polite to hurry a funeral! This witticism was greatly preciated by the bankrupt, who laugh heartily. heartily.

After luncheon the invoice proceed There was no difficulty in telling w portion of the stock had been invoibefore luncheon, as a tally figure had b chalked on the end of each box of shoes soon as listed. When the work was finish and the entries footed the head account remarked:

remarked:
"You're not so badly off. If your credit would get together and let you go ah you'd pull out all right. There's alm twice the amount of manufactured stock this factory that I expected to find who first looked things over in a casual way If a sharp lawyer, who had learned for experience years before the wily chara of this manufacturer, had not been droped.

of this manufacturer, had not been dra into the proceedings this invoice m have remained unquestioned until the of sale; but as soon as he was called the case he made an investigation on own account and discovered the trick the shrewd manufacturer had played the accountants.

The office help had been carefully dr in advance, and while the account were lingering over luncheon the emplo were shifting the stock already invo-into boxes that had not been chalk-mar As a result about three-fourths of manufactured stock was officially invo-twice. The object of this plan on the of the manufacturer was to make so a showing that his creditors would pe him to resume business without hadjudged a bankrupt.

In subsequent litigation it was development of the manufacturer took notes from any lower who record as a bankrupt.

employees — who posed as shoedcale and discounted them at the banks, goods supposed to be involved in t transactions were shipped to a relarge city and sold at auction. proceeds the schemer was able to p portion of the fake notes at the ban just enough of them to keep his cred repair and at the same time increase

From the testimony it was evident this gifted schemer had his plans care laid for a meteoric finish—a get-away would have broken all records for comp ness; but all bankruptcy officials f iar with this incident are agreed tha simple audacity the double-invoicing played by this manufacturer is entitle first rank.

# THE TRAIL OF THE TAMMANY TIGER

(Continued from Page 9)

for president. When I called the Madison Square Garden reception to order Murphy's
personal following and the Hearst men
attempted to stampede the meeting for
Hearst, but Mr. Bryan appeared on the
platform in the nick of time.

Murphy's next big piece of work was his
domination of the Democratic state conception at Buffelo which perminated Mr.

vention at Buffalo, which nominated Mr. Hearst for governor. Mayor McClellan bolted the nomination, and so did McCarren and the Democratic organization of Brooklyn. This in itself was responsible for the defeat of Mr. Hearst, but it had the effect of establishing Murphy as the first leader of Tammany Hall since Tweed's time to become the absolute master of the New

York State Democracy.
Shortly after this Murphy had a row with Bourke Cockran and drove him out of Tammany Hall, as Croker had done years before. Murphy became very busy in na-tional politics and it became my duty to keep close watch on him. I knew he was holding conferences with Wall Street Democrats who were planning to prevent the third nomination of Mr. Bryan. Big Tim Sullivan at this time was the most powerful man in Tammany Hall, next to Murphy himself. Tim was far from being a Bryan man, but he was well aware that the rank and file of Tammany loved Bryan, and that the Nebraskan was bound to get the nomi-nation. I depended on Sullivan to keep me posted.

In this way I learned that Murphy had refused to pledge himself to the Wall Street Democrats and that the New York delegation would vote for Bryan if they knew that his nomination was inevitable. It was through these conferences that Murphy established himself in the good graces of some of the powerful financiers. Murphy was the undisputed leader of the New York delegation at Denver, just as he was four years later at Baltimore. The men he trained with were anti-Bryan men. When he saw that Bryan's nomination was a foregone conclusion he set to work to bring about the nomination of the late Mayor Gaynor for

vice-president. Murphy showed that he had not the

slightest conception of the spirit of the National Democracy, to say nothing of the spirit of the times. He came to the Bryan headquarters, accompanied by Daniel F. Cohalan, who had succeeded Bourke Cockran as Murphy's chief adviser. Charles W. Bryan was in charge. There were several of the leaders in the room when Murphy and Cohalan entered. Murphy wanted to talk about Judge Gaynor and proposed a secret conference. Charles Bryan laughed at the idea.

# The Exclusiveness of Murphy

"Progressive Democrats do not hold secret conferences," said Mr. Bryan. "We believe in doing everything in the open."

Murphy and Cohalan made a hasty exit.

Tammany gave Bryan very indifferent support, though on the surface they appeared to be loyal. Most of the Tammany energy was spent in an effort to elect Lewis S. Chanler governor.

The gambling and criminal elements, which, with the financial interests, largely decided to the control of the

dominated Tammany Hall, were very bitter against Governor Hughes on account of his racetrack legislation. There is no doubt they traded Bryan off to get votes for

Mr. Murphy has been held accountable for many things for which he was not responsible. One of the great troubles with Murphy has been that he is so exclusive. He has an agreeable personality and I have heard no end of his charitable deed has not lost all his bashfulness and he still dislikes to meet strangers. He has had but few advisers at a time; and up to a couple of years ago he was afraid of the Sullivans. The Sullivan tribe controlled all the districts south of Fourteenth Street, and they had the sympathy of several leaders in the upper part of the city. Murphy had all of Croker's power but not Croker's forbearance.

A very small percentage of the New York voters attend primaries; so, with the regular Tammany machine vote and the aid of toughs, the Tammany leader has practically his own way in everything.

It is really dangerous for an honest voter to attempt to cast his ballot at some of these primaries. I attempted to do so in the early days of Murphy's leadership and was told that I was a repeater—that the real owner of my name had voted hours before. I knew very well that some tough had voted for me; but as I did not want to go to a hospital I lost no time in getting out of the

neighborhood. Under the new primary law that will be in effect when the next primaries are held in the fall of this year it will be much more difficult for the toughs to operate in the almost unobstructed manner of recent years. The great fear will be that New Yorkers, not being in the habit of going to the primaries will not take adventure of the primaries, will not take advantage of this splendid new opportunity to assert themselves. I believe the best thing that could be done would be to declare primary day a holiday. Even a half holiday might answer the purpose. If such an amend-ment of the law were made I have not the least doubt that nearly half of the Tammany districts would elect leaders and committees not only hostile to Murphy but in favor of the absolute destruction of Tammany Hall as a political organization.

#### Tammany's Dublous Future

The Tammany Society, which is benevolent and patriotic, according to its charter, would, of course, still go on. If a majority of the leaders elected were anti-Tammany they could simply declare that Tammany had nothing to do with the regular Demo-cratic organization by taking their head-quarters away from Tammany Hall, on Fourteenth Street.

The whole spirit of the times is diametrically opposed to the system that controls Tammany politics. With Tammany Hall becoming more and more a stench in the nostrils of the National Democracy, which is carrying out Woodrow Wilson's ideas of New Freedom, it is impossible for me to believe that by the end of Mayor Mitchel's four-year term Tammany Hall will be able to say who shall be the Democratic candidates for the chief city offices.

Murphy for several years has spent com-paratively little time at Tammany Hall, and makes his headquarters at Delmon-ico's, on Fifth Avenue, where only a chosen few can meet him. After he had elected John A. Dix governor, and became more powerful than ever as the leader of the whole State Demography Murphy's time. whole State Democracy, Murphy's time seems to have been occupied in opposing every healthy and progressive tendency. He has been both ignorant and indifferent to the real trend of Democracy. It was his control of the city that gave him control of the state.

After all, Murphy is but a tool or agent taking orders from certain great legal and financial influences that care only for their own good. The only time that this com-bination of big business and bad politics was thoroughly exposed to the public gaze was at the national convention in Baltimore,

by William Jennings Bryan.

The country now knows, as it never knew before, what Murphy and his masters stand for; and it is hard to figure out how it will be possible for the same combination ever again to appear at Democratic national conventions and be a factor.

Murphy is holding on, probably hoping hat the new primary law will not be suc-cessful, and that, with Republican and Progressive state tickets in the field next November, he can again elect "any old ticket." If the Brooklyn Democracy is reorganized, as it now appears it will be, and with a hostile upstate Democracy, Murphy will not be able to say who shall be the Democratic candidates. With this With this be the Democratic candidates. gloomy outlook Tammany will save whatever money it has left; and, as the financial interests will not furnish a great amount of backing, Murphy's struggle for political existence will not be unlike Huerta's desperate effort to obtain power.

Murphy has no particular adviser at the present time. He first discarded Bourke Cockran, then Daniel F. Cohalan and J. Sargent Cram; and his last adviser, Edward E. McCall, defeated by John Purroy Mitchel, is no longer on intimate terms with Mr. Murphy.

HALL, HARTWELL & CO., Troy, N.Y.

Martin H. Glynn, the present governor, is a genuine progressive Democrat, and almost from boyhood has been W. J. Bryan's most devoted friend and ardent admirer. An incident in Mr. Glynn's career indicates that he is not going out of his way to sup-

that he is not going out of his way to sup-port Murphy in power.

When Governor Glynn was managing editor of the Albany paper he now owns he brought it out flatfooted in support of Bryan in 1896. The paper was then owned by J. H. Farrel, who was also president of the leading bank of Albany and associated with large financial interests that were bitterly hostile to the Democratic presidential candidate.

When proprietor Farrel first learned that his newspaper had become a Bryan organ he was presiding over a meeting of his bank directors. Had they been suddenly informed that the cashier had absconded with all the funds of the bank, Farrel and the directors could not have been more surprised or more indignant. One of Farrel's sons rushed over to the editorial rooms of the newspaper and not only denounced young Glynn for assuming such authority but started in to emphasize his opinion with blows. However, according to the story I got from Mr. Glynn himself, the young editor was handler with his fists and there was no great harm done.

Pretty soon Mr. Farrel himself came into the office making as much noise as an ap-proaching cyclone. He charged Glynn with having ruined his property and betrayed a trust. Glynn kept his temper and insisted that he had enhanced the value of the property. That night there was a family council erty. That night there was a family council and Glynn was present. He knew that everybody would be against him. Mr. Farrel told Glynn that he did not want to hear a word from him, and then he let the whole Farrel family talk until they had exhausted themselves.

### The Tammany Conscience

Glynn was then given an opportunity to present his side of the case. He pictured a greatly increased circulation, and said that for every advertiser who had withdrawn his patronage from the paper, dozens would give the paper business before the end of the year. Proprietor Farrel realized that it was pretty hard to change the policy after Glynn's action, and he told Glynn he would give him six mouths to make good his give him six months to make good his prophecy. The young editor's predictions were more than realized within that time. Two years after that Glynn was elected to Congress.

For over thirty years I have heard some of the leading Democrats of the country wonder how certain leaders of Tammany Hall could stand for things that would not be tolerated in the South or West. The late Speaker Crisp often asked that question.
This is accounted for by what is called the
Tammany conscience. The class of leaders
who served under Croker would not think of
doing the things they did for their organisation if they were in business for them zation if they were in business for them-selves; but they trained themselves so as

selves; but they trained themselves so as
to have no compunctions of conscience.
They felt that only Tammany and its chief
were responsible, and they themselves were
simply parts of the machine.
This is well illustrated by a story Mr.
Croker told me years ago about Thomas F.
Grady, who was then known as the silvertongued orator of Tammany Hall. When
Croker became the successor of John Kelly
he determined that one of the first things Croker became the successor of John Kelly he determined that one of the first things he would do should be to expel Grady from Tammany Hall. The first day he acted as leader he was going through the papers in Kelly's desk, and found orders issued by Kelly to Grady to do the very thing Croker had objected to and for which he had publicly denounced Grady as a crook.

Grady had killed a bill in the senate that

Grady had killed a bill in the senate that would have reduced the ferry fare to principally u by poor people. When Croker made the discovery he sent for Grady and asked him why he had not explained his reason for permitting him-Croker-to believe ill

"It was not my conscience, but Kelly's," id Grady. "I always follow the leader of said Grady. "I always follow the leader of Tammany Hall and never ask any questions. My conscience is clear."

A short time ago I repeated this story to Senator O'Gorman. He admitted it was one of the great curses in Tammany that so many otherwise good men have a Tammany conscience!

As shock at the second landing. Astepped into the angle to let her Assert flared over his head, and

she recognized the short heavy figure and ardent eyes of Georgiev. She had her veil down luckily, and he gave no sign of recognition. She passed on, and she heard him a second later descending. But there had been something reminiscent after all in her figure and carriage. The little Georgiev paused, half way down, and thought a moment. It was impossible, of course. All women reminded him of the American. Had he not, only the day before, followed for two city blocks a woman old enough to be his mother, merely because she carried a violin case? But there was something about the girl he had just passed—Bah!

A bad week for Harmony followed, a week of weary days and restless nights when she slept only to dream of Peter-of his hurt and incredulous eyes when he found she had gone; of Jimmy—that he needed her, was worse, was dying. More than once she heard him sobbing and wakened to the cooing of the pigeons on the window-sill. She grew thin and sunken-eyed; took to dividing her small hoard, half of it with her, half under the carpet, so that in case of accident all would not be gone.

This, as it happened, was serious. One day, the sixth, she came back wet to the skin from an all-day rain, to find that the carpet bank had been looted. There was no clew. The stolid Hungarian, startled out of her lethargy, protested innocence; the little dressmaker, who seemed honest and friendly, wept in sheer sympathy. The fact remained—half the small hoard was gone.

Two days more, a Sunday and a Monday. On Sunday Harmony played, and Georgiev in the room below, translating into cipher a recent conference between the Austrian Minister of War and the German Ambassador, put aside his work and listened. She played, as once before she had played when life seemed sad and tragic, the Humoresque. Georgiev, hands behind his head and eyes upturned, was back in the Pension Schwarz that night months ago when Harmony played the Humoresque and Peter stooped outside her door. The little Bulgarian sighed and dreamed.

Harmony, a little sadder, a little more forlorn each day, pursued her hopeless quest. She ventured into the heart of the Stadt and paid a part of her remaining money to an employment bureau, to teach English or violin, whichever offered, or even both. After she had paid they told her it would be difficult, almost impossible, with-out references. She had another narrow escape as she was leaving. She almost collided with Olga, the chambermaid, who, having clashed for the last time with Katrina, was seeking newemployment. On another occasion she saw Marie in the crowd and was obsessed with a longing to call to her, to ask for Peter, for Jimmy. That meeting took the heart out of the girl. Marie was white and weary—perhaps the boy was worse. Perhaps Peter —— Her heart contracted. But that was absurd, of course; Peter was always well and strong. Two things occurred that week, one un-

expected, the other inevitable. pected occurrence was that Monia Reiff, finding Harmony being pressed for work, offered the girl a situation. The wage was small, but she could live on it.

The inevitable was that she met Georgiev on the stairs without her veil.

It was the first day in the workroom. The apprentices were carrying home boxes for a ball that night. Thread was needed, and quickly. Harmony, who did odds and ends of sewing, was most easily spared. She slipped on her jacket and hat and ran

down to the shop near by.
It was on the return that she met Georgiev be a the staircase unlighted. In the gloom one face was as another. Georgiev, listening in-tently, hearing footsteps, drew back into the embrasure of a window and waited. His swarthy face was tense, expectant. As the steps drew near, were light feminine instead of stealthy, the little spy relaxed somewhat.

But still he waited, crouched.

It was a second before he recognized Harmony, another instant before he realized his good fortune. She had almost passed. He put out an unsteady hand. "Fräulein!"

"Herr Georgiev!"

The little Bulgarian was profoundly stirred. His fervid eyes gleamed. He struggled against the barrier of language,

broke out in passionate Bulgar, switched to German punctuated with an English word here and there. Made intelligible, it was that he had found her at last. Harmony held her spools of thread and waited for the storm of languages to subside. Then: "But you are not to say you have seen me, Herr Georgiev."
"No?"

Harmony colored.

"I am—am hiding," she explained.

"Something very uncomfortable happened and I came here. Please don't say you have

Georgiev was puzzled at first. She had to explain very slowly, with his ardent eyes on her. But he understood at last and agreed of course. His incredulity was turning to certainty. Harmony had actually been in the same building with him while he sought her everywhere else.

"Then," he said at last, "it was you who played Sunday."

"I surely."

She made a move to pass him, but he held out an imploring hand.

"Frinklein. I may see you sometime." of course. His incredulity was turning to

"Fräulein, I may see you sometimes?"
"We shall meet again, of course."
"Fräulein—with all respect—sometime perhaps you will walk out with me?"
"I am your bloom all day"

"I am very busy all day."

"At night then? For the exercise? I, with all respect, Fräulein!"

Harmony was touched.

"Sometime," she consented. And then impulsively: "I am very lonely, Herr Georgiev.

She held out her hand, and the little Bulgarian bent over it and kissed it reverently. The Herr Georgiev's father was a nobleman in his own country, and all the little spy's training had been to make of a girl in Harmony's situation lawful prey. But in the spy's glowing heart there was nothing for Harmony to fear. She knew it. He stood, hat in hand, while she went up the staircase. Then:

"Fräulein!" anxiously.

"Yes?"

"Was there below at the entrance a tall.

"Was there below at the entrance a tall man in a green velours hat?'

"I saw no one there."

"I saw no one there."
"I thank you, Fräulein."
He watched her slender figure ascend, lose itself in the shadows, listened until she reached the upper floors. Then with a sigh he clapped his hat on his head and made his cautious way down to the street. There was no man in a green velours hat below, but the little spy had an uneasy feeling that eyes watched him nevertheless. Life was growing complicated for the Herr Georgiev.

Life was pressing very close to Harmony also in those days, a life she had never touched before. She discovered, after a day or two in the workroom, that Monia Reiff's business lay almost altogether among the demimonde. The sewing girls, of Marie's type many of them, found in the contemporary englishs tonics of conversation. customers endless topics of conversation. customers endiess topics of conversation.

Some things Harmony was spared, much of the talk being in dialect. But a great deal of it she understood, and she learned much that was not spoken. They talked freely of the women, their clothes, and they talked a great deal about a newcomer, an American dancer, for whom Monia was making an elaborate outfit. The American's namewas Lillian La Grando. She was ican's name was Lillian Le Grande. She was dancing at one of the variety theaters.

Harmony was working on a costume for the Le Grande woman—a gold brocade slashed to the knee at one side and with a fragment of bodice made of gilt tissue. On the day after her encounter with Georgiev she met her.

There was a dispute over the gown, something about the draping. Monia, flushed with irritation, came to the work-room door and glanced over the girls. She

singled out Harmony finally and called her.
"Come and put on the American's gown,"
she ordered. "She wishes—Heaven knows
what she wishes!"

Harmony went unwillingly. Nothing she had heard of the Fräulein Le Grande had prepossessed her. Her uneusiness was increased when she found herself obliged to shed her gown and to stand for one terrible moment before the little dressmaker's

amused eyes.

"Thou art very lovely, very chic," said
Monia. The dress added to rather than relieved Harmony's discomfiture. She donned
it in one of the fitting rooms, made by the
simple expedient of curtaining off a corner
of the large reception room. The slashed
skirt embarrassed her; the low cut made
her shrink. Monia was frankly entranced. her shrink. Monia was frankly entranced. Above the gold tissue of the bodice rose

Harmony's exquisite shoulders. Her hair was gold; even her eyes looked golden. The dressmaker, who worshiped beauty, gave a pull here, a pat there. If only all women were so beautiful in the things she

made!
She had an eye for the theatrical also. She posed Harmony behind the curtain, arranged lights, drew down the chiffon so that a bit more of the girl's rounded bosom was revealed. Then she drew the curtain aside and stood smiling.

The Le Grande paid the picture the tribute of a second's silence. Then:
"Exquisite!" she said in English. Then in halting German: "Do not change a line. It is perfect."
Harmony must walk in the gown, turn.

Harmony must walk in the gown, turn, sit. Once she caught a glimpse of herself and was startled. She had been wearing black for so long, and now this radiant golden creature was berself. She was en-chanted and abashed. The slash in the skirt troubled her: her slender leg had a

skirt troubled her: her slender leg had a way of revealing itself.

The ordeal was over at last. The dancer was pleased. She ordered another gown. Harmony, behind the curtain, slipped out of the dress and into her own shabby frock. On the other side of the curtain the dancer was talking. Her voice was loud, but rather agreeable. She smoked a cigarette. Scraps of chatter came to Harmony, and once a laugh.

once a laugh.
"That is too pink—something more delicate."

"Here is a shade; hold it to your cheek." "I am a bad color. I did not sleep last

night."
"Still no news, Frāulein?"
"None. He has disappeared utterly.
That isn't so bad, is it? I could use more

rouge."

"It is being much worn. It is strange, is it not, that a child could be stolen from the hospital and leave no sign."

The dancer laughed a mirthless laugh. Her voice changed, became nasal, full of

venom.

"Oh, they know well enough," she snapped. "Those nurses know, and there's a pig of a red-bearded doctor—I'd like to poison him. Separating mother and child! I'm going to find him, if only to show them they are not so smart after all."

In her anger she had lapsed into English. Harmony, behind her curtain, had clutched at her heart. Jimmy's mother!

(TO BE CONTINUED)

# When to Light Up

AN ALARM signal, to give warning that it is time to depend no longer on fading daylight but to turn on the gaslights or electric lamps, is now being devised. The great usefulness of a successful device of this sort is apparent. Records have shown that the greatest strain on the eyesight comes in the late afternoon hours near sundown, or on dark, dull days when it does not seem to be dark enough to turn on artificial lights. Each case is a matter for the judgment of some individual and the tendency is to delay turning on the lights. In offices, schools, libraries—and to some extent in stores—the lights are switched on many a day only after a period of eyestrain for all the people in the place; so illuminating engineers have called for a machine that will decide at just what moment lighting should begin should begin.

There is no great difficulty in building a successful apparatus for this purpose, though there is a great problem in making one inexpensive enough for general use. All over the world there are now used lightbuoys on the seacoast and in places dangerous to shipping, so constructed that they turn on automatically at dusk and

turn off at sunrise.

It has been found possible to make their response to light so delicate that the light would be turned on in the daytime when cloud passed over the sun. Selenium has the peculiar property of permitting a greater or a lesser amount of electricity to pass through it, according to the amount of light thrown on it; and on this principle most of these light-controlled devices operate. Therefore it would be entirely feasible to have an alarm bell controlled by a selenium cell in such a way that when the day-light in an office faded to the point where artificial illumination was required the bell would ring. Thus far the idea has not been developed to the point of marketing such an alarm, but it is being worked out and may come into general use before long.

# THE JURY AND THE JUDGES

(Continued from Page 19)

opinions of foreign civilians are your perpetual theme; but who ever heard you mention Magna Charta or the Bill of Rights with approbation or respect? By such treacherous arts the noble simplicity and free spirit of our Saxon laws were first corrupted.

Junius touched here the great central idea in this struggle. The theory of the people as judges in a cause was the Saxon idea, while the chancellor was a Norman importation. The early English people were opposed to a centralized authority, as we are today. They were afraid of power in the hands of either one man or a body of men. They believed that justice ought to be administered by the whole people. Their shires and their hundreds each had a court where suits might be instituted. A larger jurisdiction was exercised by a county court, and from this appeals were sometimes made to the Witenagemot; and here they were decided by a vote of all those who constituted that assembly.

They had no chief justice nor any supreme judicial tribunal. The chief justice was an importation of that Norman robber, William the Conqueror. He had a genius for keeping all authority within his hand; and his plan was to have a grand central tribunal for the whole realm, which should not only be a court of appeal but in which all causes of importance should originate and be finally decided.

So William the Conqueror set up the first supreme court in England. The constable, the mareschal, the seneschal, the chamberlain and the treasurer constituted this court, over which the grand justiciar presided, and which sat in the hall of the king's palace. Arlotta, of romantic legend, who fascinated Robert, Duke of Normandy, as he rode by the door of the Tanner of Falaise, was the mother of the first chief justice of England—and a fine figure of a rogue he was!

And so we see that this struggle between the people, who wished to remain the source of justice, and the judges is as old as the race. Nor can it ever be harmonized; for the first idea is English and has its origin in the instincts of the Anglo-Saxon people, and the latter idea is Norman and has its origin in the divine right of kines.

kings.

When today we see benches of judges undertake to annul laws the people have passed, and assume to say by what laws the people shall be governed, and by what laws they shall not be governed, we see the system of William the Conqueror dominating the Anglo-Saxon machinery of justice. And when we see the jury made the mere subservient creatures of the judges in the trial of causes, we see the Norman idea dominating the English idea of justice.

We are moved to inquire whether the long struggle of the English people to keep the administration of justice in their own hands is, after all, useless; and whether we are about to abandon what our ancestors with so much difficulty gained and held.

#### The True Source of All Justice

Lord Blackstone declared that the jury system was the chiefest glory of the English law. He said it was the one device by which our civilization had been able to preserve itself from that decay which had eventually overtaken all previous civilization.

This idea, that the jury shall be the sole and ultimate judges of the whole case in every controversy, is particularly adapted to our form of government. It guarantees that our conception of right shall be of common constituency, like water drawn from a lake having a variety of sources; that the idea of justice administered in the courts shall be and remain at all times the idea of the whole people; that the motives of all classes of the people shall be interpreted by those who understand them; and that the ultimate source of all justice, like the ultimate source of all authority, shall remain in the whole electorate.

It seems wipely ordered that men do not require a special education in order to do justice. A sense of right and wrong in a cause is not the exclusive attribute of the "learned judicial monk." A lame slave, who wrote philosophy in the time of Domitian, pointed out that, though men were not born with the knowledge of a right-angled triangle and had that to learn, every

one came into the world with a knowledge of what was good and what was evil, what he ought to do and what he ought not to do.

From the beginning the English-speaking people have been of the opinion that a certain number of intelligent persons taken from the whole body of the common people would always be the best guardians of public justice; that a plain common-sense passing on human affairs was not apt to be more in error than a refined philosophy.

The thing was aptly illustrated in an ancient case where the crown was endeavoring to make out a case of treason by proving a number of little things, no one of them amounting to treason; but the attorney-general insisted that, taken together, they made a case of treason against the king. And the jury met it with this piece of shattering comment: "We have yet to hear that two hundred black rabbits make one black horse!" This comment has been credited to a more pretentious authority; but it has the smoke of the fireside on it and probably came from the people.

people.

This old idea that the jury should judge everything in a case is based on the profound truth that all sane men are born into the world with a natural sense of what is right and what is wrong, that which constitutes justice and that which constitutes injustice; and that if a matter be fully explained to the man in the ditch he will be as able to sny what is the right of it as the man on the bench.

#### The Rarity of Corrupt Juries

The idea is a proper basis for the administration of justice in a republic. It guarantees that all persons within certain limitations shall have a share in the administration of justice; that a wise uncertainty shall be maintained as to what particular individuals shall hear and decide a particular case; and that no special class of people shall be able to take over the machinery of justice to the injury of other classes. It insures to every man a consideration of his controversy by at least some persons of the same condition in life as himself; and it would prevent any permanent corruption of the judiciary.

of the judiciary.

Mr. Joseph Choate has answered those who speak of the corruption and bribery of individual jurors as follows:

"In an experience of more than forty years in the trial of civil cases before juries I cannot recall one case where I had reason to believe that corruption or bribery had reached a single juror. And if you can show me a few authentic cases of such infamy in the jury boxes I will undertake to match them with an equal number of similar crimes committed by judges who have been properly exposed and punished.

"For I cherish, as the result of a life's work near its end, that the old-fashioned

"For I cherish, as the result of a life's work near its end, that the old-fashioned trial by a jury of twelve honest and intelligent citizens remains today—all suggested innovations and amendments to the contrary notwithstanding—the best and safest practical method for the determination of facts as the basis of judgments of courts; and that all attempts to tinker or tamper with it should be discouraged as disastrous to the public welfare."

It is the law today in our courts—and it has always been the law except for a brief period—that in the case of libels the juries are the ultimate judges of both the law and the facts in every case. This doctrine makes the jury the regnant tribunal over and above every other portion of our machinery for the administration of justice. And it is properly so. We, like our fathers before us, when we stop to consider the subject in its large, national aspect, do not believe that any one man or any fixed number of men ought to be the exclusive source of either authority or justice. We believe the whole people to be the common source of both.

We do not believe any class of men could be so well acquainted with the multiple affairs of life as to be able to appreciate the motives and status of the whole people. We fear that if any particular class of men were to undertake the whole administration of justice, even though their motives were forever pure, they would be unconsciously influenced by the trend of ideas among their kind, and that their decisions would be favorable to that class of which

# Here's Your Real Joy Pipe

they were a part. We have read in the books, and our fathers have told us, that it is not natural to expect the few to be attentive to the interests of the many!

tive to the interests of the many!

English-speaking people have always known this. They knew it before the Conquest; they knew it during the long struggle with the king's judges; and they know it today. They need only to be awakened in order to see that the administration of justice is kept in their own hands.

There is no danger to the liberties of a country when the people are roused into attention. When Washington, riding north out of Virginia, heard of the Battle of Bunker Hill, he did not ask who had won; his only inquiry was:

Hill, he did not ask who had won; his only inquiry was:

"Did the militia fight?"

He knew that if the people were awakened the fortunes of any particular battle would not greatly affect the ultimate result.

We are apt to forget the struggle that plain, common men—unknown, unremembered and long dead—have made to keep the source of justice in the body of the whole people. The king's judges were not men easy to oppose. Wright was a crook; Kelynge was a vulgar tyrant; and Scroggs Kelynge was a vulgar tyrant; and Scroggs and Jeffreys were unconscionable beasts. But the common people of England, like Doctor Johnson's countryman, Elwall, were afraid of neither the king's "red-guards" nor his "black-guards."

#### Juries Firm Under Judicial Pressure

Lord Ellenborough was so anxious to convict William Hone of a libel on George IV that he got up from a sick-bed and went into court to conduct the trial himself. When he took his place on the bench Hone said to him: "I know what you are come here for, my Lord Ellenborough; I know what you want." The judge replied: "I come to do justice; my one wish is to see justice done." But Hone shattered his hypocrisy with the answer: "Is it not rather, my lord, to send a poor bookseller to rot in a dungeon?"

That was the precise thing for which Lord Ellenborough had come into the courtroom, for he presently exerted himself to force the jury to find Hone guilty by declaring to them that the publication was a "most impious and profane libel." But the jury was not under the thumb of Ellenborough or of any other judge, and Hone went free. that he got up from a sick-bed and went

Hone went free.

In the celebrated trial of the seven bishops, whom the king had committed to the Tower and wished to prosecute because they presented a petition to him praying that they might "not be forced to violate their con-sciences and break the law," the stubborn resistance of the jury to the royal judges was

resistance of the jury to the royal judges was conspicuously marked.

The king had selected Chief Justice Wright, who the biographers say was "the lowest wretch that had ever appeared on the bench in England," to conduct the trial. And he had managed to get his brewer on the jury; but the people were stanch in those days in their resistance to tyranny, and, in spite of everything the king's judges could do, the jury could not be coerced into a conviction. They were given into the custody of a bailiff who was sworn not to let them have "meat or was sworn not to let them have "meat or drink, fire or candle" until they had agreed on their verdict. The king's brewer stood out for a conviction; but at six o'clock in

the morning a huge countryman in the panel rose and thus addressed him:

"Look at me!" he said. "I am the largest and the strongest of the twelve, and before I find such a petition as this a libel, here I will stay till I am no bigger than a tobacco pipe!"

A stubber of the twelve and the twelve in the twelve and the twelve in the twelve and the twelve and the twelve in the twelve and the twelve in the twelve and the twelve in the twelve and the twelve and the twelve in the twelve in the twelve in the twelve and the twelve in th

A stubborn contest between juries and judges has not been infrequent in our own day. We have seen a jury find a verdict and the judges set it aside—and a new jury

find it again.

This happened in the case of Shaw versus the Boston & Worcester Railroad Company. ry found a verdict of ten th dollars and the Supreme Court of Massachusetts set it aside. It was tried a second time and the second jury found a verdict of eighteen thousand dollars. The court set this verdict aside and remanded the case for a third trial. The third jury found a verdict of twenty-two thousand five hundred dollars, and the supreme court finally

abandoned a contest that seemed to result

only in a larger verdict on each reversal. Restrictions on the exercise of power written into great national charters and old bills of rights have always a meaning founded in some desperate experience of

It is not for a small reason that trial by

It is not for a small reason that trial by jury is guaranteed in the Constitution of the United States and the state constitutions following after it. It was the accumulated experience of English-speaking people that put in this safeguard.

They knew the tendency of judges to accumulate power and to reach out after an extended jurisdiction. They had had a long experience with the centralization of authority and had ample cause to fear and resist it. They did not intend that the whole body of the people should ever cease to be the common source of justice.

The Anglo-Saxon people have always been opposed to a centralization of authority—to the exercise of power, judicial or governmental, by any particular class of men. They have believed in an administration of the government by the people and in an administration of justice by the people; and their resistance to this day against the exercise of excessive powers by

and in an administration of justice by the people; and their resistance to this day against the exercise of excessive powers by executives or judges is a racial resistance.

It is the resistance of the instincts of a people to a custom antagonistic to them. Government by tribunals apart from the people was a Norman custom superimposed on the English system of jurisprudence. It is adverse to the spirit of Anglo-Saxon institutions. It is contrary to the great idea of self-government for which the Anglo-Saxon has always contended, and it cannot be made to harmonize with a republican pretension.

The hostility of the people to it is seen in their statutes restricting the authority of judges, confining them in some states in their instructions to the juries to a mere written statement of the law. It is seen in a common practice among the states of making the office of judge elective, and in the great agitation today against the pretension of courts to annul acts of the legislature, by their decisions to make laws for the people and to say in effect by what laws the people shall be growned. shall be governed.

## The Two Legs of Self-Government

It ought to be remembered that the only person in a courtroom who is in fact clothed with the attributes of the sovereignty of the people is the juror. He alone is permitted to exercise the larger powers of sovereignty. He alone has the rightful power of life and death over both the law and the facts in a case.

Compared with him the judge is an of-ficer of delegated powers, within certain fixed limitations; but the juror sitting in judgment in a case is a sovereign. He can decide it as he pleases; and he can take the law, which the judge explains to him, to apply to the case or not to apply, as he chooses. He is responsible to no one for his verdict. He is under the dominion of no authority. He is supreme! The judge is helpless before him.

The law is binding or inoperative on him as he pleases. This is the law for which the people contended against the king's

judges—a right they forced Parliament to recognize and which they have preserved to themselves in their great charters.

It is a correct principle of justice. Somebody must have supreme authority in the decision of causes. These great powers of sovereignty could not be delegated to a particular person for a term of years or force. particular person for a term of years or for life, for those cogent reasons always apparent to English-speaking people; but they could be delegated to persons unknown until they were drawn out of the whole body of the

And they could be delegated for the brief time that a jury panel would exercise them. Thus the source of justice would remain in the body of the electorate. The imperial powers of judicial tribunals would issue out of the body of the whole people and return to it.

Self-government goes forward on two legs—the people are the source of authority and the people are the source of justice. To amputate either is to put democracy on

# GOVERNMENT TELEPHONES

fiscal year ending March 31, 1913—the latest issued at this writing: "Considerable progress has been made with the work of providing additional plant, both external and nternal, in those areas where the National Telephone Company reduced or stopped construction work during the period immediately preceding the transfer of their system to the post office. This class of work will be actively pursued during the coming year and it is estimated that throughout the country a sum of almost two million pounds will be spent on the providing of additional underground and overhead wires."

This starved condition of the plant should be taken into account in considering the

be taken into account in considering the poor service subsequent to the government purchase. I just came from a London office in which two telephones stand side by side on the same desk. One is Central; the other is Bank. In other words they belong to different exchanges. At the American Embassy one telephone is Victoria, while the other is Gerrard. All through the telephone directory you will find this same condition of two telephones in the same office that belong to different exchanges. The reason belong to different exchanges. The reason, of course, is that one was formerly a post-office telephone, while the other was a Na-tional Telephone Company instrument; and the duplication has not been corrected—at

least, the phones have not been assigned to the nearest exchange.

The National Telephone Company's license required it to pay the government a yearly royalty amounting to ten per cent of its gross exchange receipts. In the last year of its existence it paid the government on that account one million seven hundred thousand dollars. As to the fiscal results of government operation, all I have is the brief statement in the postmaster-general's an-nual report, which shows a gross telephone revenue of a little over twenty-eight million dollars and a net revenue of a million nine hundred thousand dollars—or substantially what the National Company would have gaid the government as a royalty if it were still operating the lines. The National Company, however, paid a six per cent dividend on its stock, after paying its royalty to the government.

The same report says that service in London was improved during the year, "the number of completed calls being kept steadily between seventy and seventy-one per cent"; whereas in 1911 it was between sixty-five and sixty-seven per cent. I do not dispute the figures; but all the tele-phone users I talked with seemed unable to appreciate the distinction between getting their number seventy per cent of the time as against only sixty-five per cent. I think it a fair statement that the service, originally not good, has not improved under government ownership. Rates have not been reduced; and the meager information so far available indicates that the government has made less profit from the lines than the private owners did.

### Service Dear at Any Price

A few other things in the report may be mentioned. For example: "Traffic on the Anglo-French lines—gov-ernment-owned on both sides—has increased satisfactorily during the year; and the in-crease would have been more marked but for the fact that, owing to bad weather experienced during the early part of the year, two of the lines were out of order for some time, while the others were unworkable for shorter periods.

"Negotiations are proceeding with the Dutch administration for the joint provi-sion of a direct Anglo-Dutch telephone

"The possibility of affording telephonic communication between Germany and this country is under consideration."

Germany and Holland, of course, are parated from England by comparatively short stretches of water and there is a great volume of business between the island and the continental countries. I venture to think that in America, under like conditions, telephonic communication would already have been established.

Telephoning is cheaper in England than in the United States. The charge for a busi-ness telephone in London, with unlimited service, is eighty-five dollars a year; or one can get a residence telephone by paying five dollars for the instrument and two pence— or four cents—a call. But these rates have

no particular bearing on the question of government ownership, as they were the same when the lines were privately owned; and the rate signifies little, except when the quality of service is also taken into account. Cotton is cheaper than wool-but nobody wants a winter overcoat made of it. The only object of a telephone anyway is to save time and effort; therefore a cheap, slow service may be really dearer than a more costly and faster one. I expect to have something to say about comparative telephone rates in another article—therefore I will drop the subject here.

There was always a reason why the British Government should go into the telephone business. That reason is that, for more than forty years, it has had a monopoly of the telegraph business. It acquired the privately owned telegraph lines in 1870; and here again I may point out that the total investment was only forty million dollars, which, by the way, was substantially twice what it was estimated to be when the bill passed Parliament; but taking over a forty-million-dollar concern is rather different from taking over a several-hundred-million-dollar one.

#### The English Telegraph

Pretty much the same general reasons that led the American Bell System to buy control of the Western Union Telegraph Company led the British Government into the telephone field. The telephone is a competitor of the telegraph and a complement

Now the British post office's manage-ment of the telegraph is one of the most successful instances of government owner-ship in the world. The service is good; certainly as good as the telegraph service in the United States, and perhaps better. For telegraphing anywhere in the United Kingdom the minimum charge is sixpence, which carries a message of twelve words, and for every additional word the charge is half a penny; but both the address and signature are counted as part of the message.

The average address probably contains five words—as, John D. Smith, Peoria, Illinois—and the average signature will no doubt take two words. Of course if a street number is added the address will take more than five words. than five words.

On the other hand, there are many registered telegraph addresses that take but a single word besides the name of the city. If we take five words as the average address and two as the average signature, then the average cost of a ten-word message—ex-clusive of address and signature, as on the American plan—would be seventeen cents in England, which is well below the cost in the United States.

There is, of course, an immense difference in distance. All England is within about six hours' ride of London. Concerning a projected trip to Glasgow—a night's run— an English friend raised the objection that it was "a very long journey." There are few daily papers in England outside of London.

The town of ten or twenty thousand inhabitants, which would support at least one or two dailies in the United States, gets late editions of the London papers at break-fast and has no local daily. So telegraphing in England is all dense, shorthaul business,

which naturally affects the rate.

Nevertheless, telegraphing under fairly comparable conditions—as between London and Manchester or Liverpool and New York and Philadelphia or Boston—is cheaper than with us and the service is quite as good; but because a government succeeds well in one field it does not necessarily follow that it will succeed well in all sarily follow that it will succeed well in all

And on the fiscal side the British Government's operation of the telegraph can hardly

The post-office reports show that for the last five years expenses of the telegraph system have ranged from one hundred and thirty to one hundred and forty per cent of gross receipts. In other words, gross re-ceipts have paid for only two-thirds of the service, the remaining third coming out of the public treasury.

In these five years salaries and wagesexclusive of engineering-have never been less than eighty-two per cent of gross receipts, and the proportion has risen quite steadily year by year. To be more exact,

# Illiams Hölder Top Shaving Stick

Convenient when you first use the stick.

More convenient when the stick is nearly used up.

The more you try other STICK kinds, the better you POWDER will understand why Williams' Shaving Soaps are so popular.

THE CURTIS PUBLISHING COMPANY PHILADELPHIA, PENNSYLVANIA

five years ago salaries and wages took over eighty-two per cent of gross receipts, while last year they took over eighty-seven per cent—each intervening year showing a rise. In the same years the expenditures for maintenance of plant have steadily fallen, both absolutely and relatively. Five years ago maintenance took twenty per cent of gross receipts—last year only twelve per

All these figures, it should be said, are made after crediting the telegraph with the made after crediting the telegraph with the estimated value of services rendered free of cost to other departments of the government; so when you pay twelve cents to send your English telegram you are paying only two-thirds what the message costs. The extra six cents is paid by the government—which means the body of taxpayers. Or it may be around that it comes out of Or it may be argued that it comes out of the postal revenue proper, which, exclusive of telegraphs, shows a surplus. But, how-ever you figure it, users of the telegraph system pay only two-thirds of what the service costs.

The last five years have not been excep-tional in this regard, for the telegraph service has shown a deficit pretty steadily since the government took it over; so that

giving a service at less than cost seems to
be its settled policy.

In all branches the British post office
employs two hundred and forty thousand
persons—a fact which has considerable
political significance. About a decade ago
relations between the post office and its
employees were decidedly strained, because
the post office refused to recognize the the post office refused to recognize the labor unions to which some of its employees belonged-insisting on dealing with its men as individuals rather than through the representatives appointed by the unions.
This led to a rather bitter fight, and one incident of the fight was that a postmastergeneral lost his job. Various other explanations, official and non-official, were given; but no doubt it was the fight made on him by dissatisfied postal employees that forced him out of office.

The upshot of the contest was that the

post office recognized the unions. Natu-rally this increased the membership and strength of the unions, and in late years labor questions have been settled by con-ferences between representatives of the post office and representatives of the unions.

In the last ten years organized labor in England has made many contests for the principle of recognition of labor unions, and principle of recognition of labor unions, and
has been pretty generally successful. As a
recognized labor leader explained to me,
the greatest of all victories in that line was
the one over the post office because of its
moral effect on other employees.

Unions being fully recognized, relations
between the post office and its employees
in late years have been quite amicable. It
is the opinion of well-informed men that
postal employees get better pay, better

postal employees get better pay, better hours of work, more secure tenure, more consideration and more holidays than like labor in private employment. No doubt this condition sufficiently accounts for the fact that labor generally is in favor of nationalization of railroads in England.

### The Pay of Postal Clerks

That telegraph wages take nearly eightyrhat telegraph wages take nearly eightyeight per cent of the gross receipts of the
service I mentioned above. For the whole
postal service, salaries and wages—exclusive of engineering—took thirty-one per
cent of gross receipts a generation ago, and
of late years have taken from forty-seven to
fifty-one per cent.

Under the head of Health of Staff the postoffice report shows there were one hundred

office report shows there were one hundred seventy thousand absences on sick-leave last year. In the metropolitan district fiftyfive per cent of the men and eighty-three per cent of the women of the established staff were absent on sick-leave during the year, the absences averaging fourteen days for the men and seventeen for the women.

It may be mentioned that there are one hundred eighty-one thousand men em-ployed and fifty-nine thousand women; but the women, in all the more important positions, such as the money-order department, and so on, are well organized, probably three-fourths of them belonging to unions. As I write this a rumor is in circulation

that a special committee of Parliament, which has been investigating the subject, is about to make a report recommending equal pay for equal work in the post office-that s, the same pay for a woman as for a man doing the same grade of work. If this Parliamentary report is made it will be a distinct victory for the organized women

of the postal department.

That the organized employees of the post office constitute a political factor that every political leader is bound to take into account cannot be disputed. The reader may regard that as a good thing or a bad thing, according to his taste and inclination; but it is a thing that must be taken into account in any consideration of government ownership in a democratic country.

My own notion is that better wages and better hours—better treatment of labor all round—are decidedly good things; but they must be paid for. And a large body of citizens who stand in a dual relationship to the government, first as its employees, then as voters, tends to create a rather difficult situation in any democratic country, especially if the employees are well organized, as they are in England, and there-

fore able to act promptly as a unit.

Here again it is necessary to consider
the comparatively small size of the British
Government's trading enterprises.

#### The Strike at Leeds

That public ownership may count heavily against labor was recently illustrated at Leeds. Like a majority of British cities, Leeds owns the street-car lines as well as the gas, electric-light and water works, and some other utilities. Common ownership of these things naturally tended to solidify the labor employed. Last winter the men demanded a flat raise of two shillings a week all round. Some of them at least were no doubt underpaid. The city granted some increases in wages, but not all that was demanded. A strike began and at one time

the whole municipal force was on strike.

The leaders calculated that the city would be obliged to surrender very quickly; that two days, at most, of complete tying up of the public utilities, including street cleaning, street-car service, and so on, would secure their demands. Now if any one set of them had been striking against a one set of them had been striking against a private employer public sympathy would have been a good deal on the side of the men; but this was a strike against the city, and the citizens rose up and smashed it. Volunteers carried on the necessary public works-manning the street cars, and so on,

until the men gave in.

Under the same conditions the same thing has happened elsewhere, and sometimes on a larger scale. In striking against a government the men usually have public opinion against them. In striking against a private employer public opinion is likely to be with them. And every experienced labor leader knows—though he may deny it on oc-casion—that public opinion is an important

element in nearly every strike.

I am not trying to make an argument against government ownership or for it. Nobody worth considering would wish our Government to turn the mail service over to a private corporation. Most of the British cities own and operate street cars, gas plant, electric-light works, and do it quite successfully. The London County Council operates a very good street-car service in London.

On the other hand, privately owned motor busses and subserve carry millions of near

On the other hand, privately owned motor busses and subways carry millions of passengers cheaply and, on the whole, quite satisfactorily. Both arrangements work very well as they stand. The County Council does nothing with the street cars which tends to show that it could do any better with the busses and subways than the present private owners do. Why, then, should it take them over?

The British Government has operated the telegraph for more than forty years—

the telegraph for more than forty years— practically growing up with it, for the total number of telegrams handled in its first year was under ten millions, against over ninety millions now. Considering the def-icit, it is doubtful whether it handles telegrams more cheaply than a private corporation would; but it is a fairly satisfactory established condition and it ought not to be radically changed except for some cogent reason. There ought to be a strong presumption that somebody would benefit by a change.

I believe the British mail service is better than ours, and if that assumption is correct a fair inference from it would be that our post-office department would handle telegrams and telephones less efficiently than

the British post office does.

As for England's experience with publicly owned telephones, there is nothing in it from which a fair argument for public ownership of telephones in the United States can be deduced.

### JUNK

(Continued from Page 12)

of spume boiling in the breath of the gale—but somehow tonight it seemed worse than ever before. The crashing bows of the old liner drove up tons of brine that swept the forward decks and thumped sullenly against the walls of the wheelhouse. Far aft he could hear the quick swirl of the

rar at he could near the quick swift of the propeller as it rose and dived again.

"I'll be glad when we're in the lee of San Miguel Island," he thought. "I'm glad I didn't take the outside course. This is a very hard gale indeed."

An hour passed and Mr. Halsey came to him and cried into his ear that they should have raised Point Armeelle Light.

have raised Point Arguello Light.
"We haven't," said Singgold briefly.
"Keep her wide!"

So another hour passed and still there

was no light visible.

"We're held back by wind and current,"
the captain remarked calmly. "We will
wait fifteen minutes more before we haul for the outside."

At this moment the quartermaster picked up the Light and Singgold verified it. "We shall soon be in the lee," he said. "An S. O. S., sir," gasped the wireless

operator at his elbow.

"Tell me the message," said the captain calmly, putting the paper in his pocket. "Steamer Arrivaca. Thirty-three degrees and eighteen minutes north and 121-46

east. Machinery broken down, and sinking.

east. Machinery broken down, and sinking, sir."

"Tell the Arrivaca we are steaming to that position at full speed," said Singgold evenly. Then he picked up the speaking tube and called the engine room. "Chief," he said brusquely, "please carry all the steam you can and get all the power out of your engines possible. We are steaming to the relief of a sinking vessel off Santa Rosa Island."

"Shall I wreck this machine?" demanded Mr. Bales in his harshest tones.

You know how to drive your engines," s the sharp response. "Drive them as was the sharp response, you never did before!"

He then gave orders to change the course and take the direct road into the open sea. He figured his course in the chartdesk and told the chief officer, who had been called, that at full speed the Chittagong should

that at full speed the Chittagong should reach the designated spot within three hours. "The Arrivaca is an excursion steamer that makes trips round the islands," Mr. Masters announced; "usually carries about two hundred passengers." By this time the old liner was shaking from keel to truck under the tremendous

impulse of her hurrying engines, and the seas that piled over the port how kept the decks full. The gale had risen to a hurri-cane and Mr. Masters loudly thanked his stars that the man in the wheelhouse knew the ship and his business.

Captain Singgold's ruddy cheeks were blazing as he felt his old command respond to the emergency. He strode back and forth on the bridge, with the brine dripping from his white beard and his eyes alight with strange fires. Each time the operator sent strange fires. Each time the operator sent him up a fresh message of despair from the sinking steamer he would snatch up the speaking tube, call Mr. Bales and demand more speed. In some way that ancient mechanician managed to get more power, and when the day was fully come the Chittagong was plunging through the mountainous seas at a good sixteen knots, and the smoke from her funnel poured out in a

the smoke from her funnel poured out in a steady, roaring stream.

"My Lord!" said the second mate to the third. "This is stepping some! She's some packet!" Pride rang in his voice.

It was eight o'clock when they sighted the wreck. It lay a mere speck on the leaping horizon, but Captain Singgold knew it instantly for what it was.

"Foundering!" he said curtly. "Mr. Masters, you and Mr. Halsey will see that our boats are ready to be swung out."

our boats are ready to be swung out."

There was a moment's hesitation. It was Death that was hammering on the old liner's sides and stretching up huge fingers for its victims. Even running as she was, taking the seas on the starboard bow, two boats had been smashed in the chocks and a liferaft hurled clean into the boiling smother; but something in the old skipper's eyes brought the two mates to their duty. They dropped down the bridge ladder and were quickly at work, taking off boatcovers

and overhauling falls.

It was just three-quarters of an hour before the Chittagong hove to windward of

the Arrivaca. She was deep by the head and a hundred passengers were huddled on her afterdeck. A cloud of steam blew from her funnel, showing that the fires were being extinguished. Just as the Chittagong rolled into the trough of the sea a despair-

roned into the trough of the sea a despairing, thin, tremulous cry came from the
wreck. A huge comber swept over her
almost submerged bows and broke in wild
fury against the deckhouse.

Captain Singgold did not hesitate. He
leaned far out over the after-rail of the
bridge and bellowed his order to lower
the boats. A moment later the little crafts were swinging over the crested surges

toward the doomed vessel For the next hour Captain Singgold maneuvered with all the skill of his fifty years at sea to pick up his boats when they got away from the Arrivaca, while Masters and Halsey risked their lives every instant in getting the huddled passengers down the side of the rolling wreck and into their

Meantime the hurricane continued to increase in force and the old liner lost one thing after another as the combers swept her; but at noon the Arrivaca's people were safe on board of her, and the wreck, as if having struggled to the limit of her strength, rolled under a terrific sea and did

not appear again.

"Now for Santa Barbara!" said Singgold calmly when the last boat was aboard.

"You'll have to make it quickly!" growled Mr. Bales in his ear. "She's opened up below. Water's a foot deep in the fireroom. One of the boilers has fetched loose too. I just came up to tell you. I'll

keep her going."
"Charlie," said the captain, putting his mouth to the chief's ear and whispering. "keep her going s'long as you can. I never knew the old packet to fail. She'll save these people anyway. I can tell by the feel of her that she won't last long; but spin those engines up as much as you can,

Then he called the wireless operator and commanded him to send out his S. O. S. call. "And keep it going, son, for we're in an awful tight pinch. Get the latitude and longitude from the third officer."

He then went down and saw to it that the rescued were well fed. To the gray-haired

chief steward he said:
"Don't spare your stores. We won't need 'em ourselves."

And the old man looked at the captain and smiled—the solemn smile of those who must depart from the activities of life and

assume the dignity of death.

For two hours the Chittagong ran before the howling hurricane, and then appeared a steam schooner. The wireless operator reported that she was coming to the rescue. "Tell her to hurry, son!" was the grim

answer.

It was drawing into the late afternoon when the other vessel hove to, a quarter of a mile from the old liner and sent word

by her wireless that she had no boats left.
"We've got two," Singgold remarked.
"Mr. Masters, you and Mr. Halsey will transship the passengers. I saved those boats a-purpose.

There was consternation among the saved from the Arrivaca when they were told they must leave the big Chittagong and once more brave the furious seas to reach the lit-tle steamer that rolled to beward. Then

the steamer that rolled to beward. Then some one openly refused to go and there was a tempest of revolt.

When he heard of this Captain Singgold came down himself. He strode into the hysterical throng and raised his voice authoritatively and effectively.

"This ship is sinking!" he said. "You have only half an hour to save yourself. Women and children first! Have no fear!"

From the bridge he again superintended the getting away of the boats. It was a comparatively easy matter, for the Chittagong made a good lee and the master of the steam schooner crept up to within a cable's length. The boats had made two trips each

length. The boats had made two trips each and had come back, their crews exhausted. 
"Now," said Singgold calmly, "take our crew off. Be sharp about it too!"

He saw the mates race back to their boats and bent over the speaking tube.

"Chief," be said quietly, "send your men topside, Would you mind staying by your engines a little while longer?"

"Oh, I'll stay!" came back the bitter response.

Singgold rang his engines astern; and as the old Chittagong slowly drew back abreast of the other steamer he waved his hamis to the officers to lower away. He saw

that both boats were full. He rang engines down, stared at the dial a mon and then put his hand over his quive lips. The dying liner had done her c gloriously. Now she was to rest forever Mr. Bales came slowly up the hr steps and bent his seamed face before

gale. Behind him came the boson, behind him the head fireman. Sing looked at them, the men who had with him when the Chittagong came ra

round the Horn—a maiden ship.
"A boat will be back for you," he

They turned their eyes toward the st

They turned their eyes toward the st schooner. The boson gave a grunt. "That whooping sea will get 'em if sin't quick!" he muttered. With unwinking eyes they watched tragedy. They saw the two bosts s alongside, the quick grasping for the the wild pulling on them, the slow cree of the laden boats up the steamer's str-ing flank. Then the huge and terrif-flung the little steamer far over, ro over its bows and tossed the boats up. They saw the men spilled out on the They saw the men spilled out on the saw them grasp at handholds, disce their agonizing struggle not to be the overboard. Then the two empty boats in shattered fragments and flew a before the shricking wind.

"No more boats!" said Singgold stabledding his face from the stinging "We're going with the Chittagong." The four of them stared down at decks, now awash and filled with foa water; they stared at the gruel and in

water; they stared at the cruel and h

### \$35,000 in Assets; \$11,000 a Year Profit-

### Without Investment

This Letter Tells How It Was Done

Menasha, Wisconsin

"Seven years ago the Phillips Company in-stalled a \$35,000 Automatic Sprinkler System in the plants of the Menasha Paper Co. We did not invest a dollar, but agreed to give them our insurance savings of a few years.

"Two years ago they gave us the system—teminated their contract. We now get all the insurance savings ourselves. They amount to \$11,000 a year, showing us a 31% profit on the \$35,000 are never invested.

"But \$35,000 increase in assets and \$11,000

a year profits seem relatively small considering the fact that the system saved our mills from destruction three years after it was installed. Without this protection our steady going business would have been crippled and our enormous toenage curtailed.

"Further than this, we know our employees are now safe from fire—and this is a load off

### THE LAME DUCK

### Views of an Innocent Bystander

WASHINGTON, D. C. DEAR JIM: The incredible and inces-sant clamor of the Democrats for office continues unabated. Every known device—
and some not previously known—for making vacancies has been resorted to by the
harassed senators and representatives; and
still the wolves howl unceasingly. They
want jobs, these Democrats, jobless for
sixteen years; and they do not see why
they cannot have them. Nor will they see.
"This man is a Republican, isn't he?"
they ask of their supposedly influential
man in Congress.
"He is."
"And I am a lifelong Democrat ain't I?" continues unabated. Every known device

And I am a lifelong Democrat, ain't I?"

"You are."
"And I've supported you loyally in the past, haven't I?"
"You have."
"Well, then," shouts the place hunter. "why don't you turn him out and put me in? What good did it do us Democrats to get control of the Government if the Republicans are to hang on to the places and get the money? Answer me that!'

There isn't any answer to that kind of talk. All excuses that the civil service interferes; that the policy of the Adminis-tration is to allow officials to serve out their terms; that there can be removals, in terms; that there can be removals, in many cases, only for cause, fall on indignant ears. The rank and file of the party do not understand. They do not want to understand. What they want is jobs, and they expect their representatives at Washington to get those jobs for them. There is no reasoning with them, no pleading with them that is effectual.

"Was want jobs!" is the battle gray of the

"We want jobs!" is the battle cry of the jobless Democrats, and they intend to have jobs or take such reprisals as they can.

### The Voracious Victors

Viewed from a distance, a man who is a senator of the United States seems to have a great and comfortable position; and he has. Outsiders are accustomed to think of him as a statesman participating in momen-tous discussions of big affairs, shaping and debating legislation, consulting with the President on matters of national and international import, pronouncing and per-

ternational import, pronouncing and per-fecting far-reaching policies, and all that. But are they? Not exclusively, my dear James, not exclusively. The fact is that the greater number of the senators of the majority and the greater number of the representatives of the majority—the Dem-ocrats—are patronage brokers, no more and no less. Their chief concern is to get jobs for their constituents. Their chief grief comes when they do not get them; and most of their troubles may be summed up under the broad, general heading of patronage.

their troubles may be summed up under the broad, general heading of patronage.

The early hurrah and elation are gone. The senators and representatives have settled down to the grind, and with the settling down many trials and tribulations have come. Big Democrats are getting sore. Patronage is on their nerves. They are ridden to distraction by the place hunters; and they, in turn, ride the place givers to distraction. So inconsequential a thing as a little public office has caused hard feeling between men in Congress and men in the Cabinet. Legislators who have been friends for years are at odds. Underneath there is a great dissatisfaction.

The job business is the most perplexing and most troublesome phase of the cares of a new Administration. You cannot make

a new Administration. You cannot make a Democrat who has been a Democrat always, and who has stood by the party in times of defeat, think that a Republican should continue in the office the Democrat wants for himself. Merit system, civil service, tenure of office, policy of the Administration—none of these arguments has the slightest effect. The creed of the average Democrat is: "To the victors belong the spoils!" And that is the creed of the average Republican and the average Progressive.
"We won, didn't we?" they ask.
"Yes."
"Then give us the jobs! We are entitled

to them and we are going to have them."

The price of \$395 includes Top, Windshield, Lamps and Tools

A high-grade, well-designed, carefully built, lightweight automobile, with four-cylinder motor, standard tread, standard features; produced by an experienced, soundly financed organization.

The Saxon is not a cyclecar, but a real automobile-the first car to offer all the essential features of standard motor car practice at a price under \$500. The first cost is lower than a good horse and buggy; the upkeep cost far less. Considering time saved, it is cheaper than riding on street cars.

The Saxon meets the demand for a lowpriced car that is both good and goodlooking. It is a big car for the price, with 96-inch wheelbase; roomy, comfortable body; ample leg room; generous doors.

There is nothing skimpy or cramped about the Saxon. Molded oval fenders, tapered bonnet, streamline body, graceful, sweeping curves make this car a delight to the eye. The Saxon has style.

The Saxon is a car of the widest usefulness-a source of pleasure and health for the man of moderate means; a great time-saver for salesmen, physicians, contractors and all others to whom time is money; an economical convenience for the man who already owns a big car who can use the Saxon to better advantage than his big car for running about town and in a dozen other ways.

It is a car for the young man-or for the young couple. In a Saxon two people can enjoy all the pleasures of touring at a cost so low as to be negligible.

Saxons are selling fast everywhere. See your dealer early for a demonstration. Send the coupon today for a detailed description of this sturdy car.

## SAFETY FIRST

You never bought better tires than you buy in Goodrich Tires this year

We never made tires as good as we are now making them.

This is simply for the reason that in all our forty-four years of manufacturing experience our idea has been longer service and more satisfaction to tire users.

Goodrich leads in quality. We set the standard by which all other tires are judged.

We have not only been pioneers in perfecting and devising the best means to put mileage and quality into rubber and fabric, but we have been the pioneers in bringing tire prices to their present low level and raising the standard of quality.

All this in addition to the pleasing sense of security which you have when you equip your car with Goodrich Safety Tread Tires. The Accepted Standard

### Goodrich Safety Tires

THE CURTIS PUBLISHING COMPANY, PHILADELPHIA, PA.

The Democrats in Washington are doing the best they can, but their best isn't good enough. And the cruel feature of it all is this: When a senator or a representative gets a place for a constituent, that doesn't help the giver any. Instead, it hurts him; for always there are several candidates for each office, and they continue angry and resentful until their dying days.

You cannot make any applicant for an office believe that his claims for recognition are not greater and more securely founded

are not greater and more securely founded than those of any of his competitors. You cannot make him think that another deserved the office more than he did. That is contrary to the nature of the human animal. He thinks he is preëminently the person for the place. He doesn't get it; and he becomes an enemy of the man to whom he applied and a disgruntled party member forever after.

member forever after.

Take the post-office situation, because there are more postmasterships than other offices. Postmaster-General Burleson, working at the highest possible speed, appointed sixteen thousand postmasters during the first year of the Wilson Administration. He replaced sixteen thousand Republican postmasters with sixteen thousand Democratic postmasters—an average of more than fifty a day for the three hun-dred working days of the year. That, of course, didn't make much of a dent in the total number of poetmasters in this country, which is in the neighborhood of eighty or ninety thousand; but it shows that the Postmaster-General is at least making an earnest effort to put Democrats where Republicans have flourished for sixteen

Substituting postmasters seems a com-paratively easy thing to do, you think. Well, let me tell you some things about it, just to show you how fierce the strife is and how difficult the situations, of both the Postmaster-General and the Democratic senators and representatives, to say noth-ing of the position of the President himself, who must pass on all first, second and third

years, subject to such limitations as are

prescribed.

class appointments to postmasterships.

Four disappointed candidates for post
offices have committed suicide since March 4, 1913, when Postmaster-General Burleson took office. Several others have tried to kill themselves. A number became insane over their failure of recognition.

### The President Not to Blame

In several states the two senators have had bitter quarrels over small post-office appointments. In numerous cases these quarrels have been carried to the White

House, with consequent disturbance of the President and his Congressional policies. To show you how seriously the Senate takes it, five or six hours were spent fight-ing over the confirmation of a man appointed postmaster of a small Western town—five or six hours of the time of the Senate of the United States over a twentyfive-hundred-dollar job! This is but one of many similar instances.

The Postmaster-General is blameless. His appointments are made according to his best lights. He is an able and conscien-tious man, and he has a place of enormous difficulty. The senators and representa-tives are not to blame. They do the best they can for the party, for the local com-munities affected, and with an eye to the most advantageous political effect. The President is not to blame. He depends, as he must, on the recommendations of those beneath him, who are familiar with all the circumstances.

It is the system that is to blame-the system of parceling out offices as reward for voting this way or that; the system that places the administration of the business affairs of this Government in the hands of the party for the instant in power and, disregarding the plain business sense of the situation, makes a political reward of an Administration place instead of making

that place a business responsibility.

Of course all this is as old as the hills. It has been going on since we began as a nation, and in all probability it will go on until the end. I cite it merely to show that, so far as demanding spoils for victory is concerned, we haven't advanced an inch beyond the days of the early seventies, not-withstanding all our efforts at civil-service reform—not advanced an inch, I mean, so far as the impulse is predicated.

Under pressure of public opinion the

civil service has been expanded and it retains many persons in office; but in

their hearts the members of the dominant party always loathe the civil service, and there never has been a minute in the past thirty years when every civil-service law would not have been repealed if the men

with the repealing power had dared.

I have tried for many years to discover what there is in public office that makes it so attractive to Americans. The only solution I have arrived at is that a public office gives—or is supposed by the holder to give—a little added importance to the holder; to make him somewhat superior to his fellow citizens; to pin a badge on him that shows his standing in the community. That must be all there is to it, for most public offices do not pay large salaries, and most public officeholders lose rather than gain financially by holding office.

That sit, Jim—recognition. They want to be given the stamp of approval. They hun-

ger to have a medal pinned on them. They cry for a little brief authority, so they may strut about in their own communities, proud in the distinction conferred on them. They resort to any subterfuge, suffer any deprivation, take any sort of office—and

are happy.

There is a government elevator in this town, Jim, that is run by a man who was once a candidate for United States Senator in his own state. There is a minor legal position that is filled by a man who was once almost daily in the dispatches concerning the proceedings of the House of Representatives. There are clerkships and assistant secretaryships, and other similar offices by the dozen, held by men who once

were prominent politically.

And the way the incumbents hold on!
You'd think, to hear those Republicans who are in office talk about it, that the crowning political crime of the ages would be committed if they should be removed to make way for Democrats. Men who in Republican days shoved Democrats out incontinently weep over the cruelty of a Democratic Administration that has the uncharitableness to say to them: "We need your places for men of our own political faith. You have been in office for sixteen years. We want your jobs."

#### The Outraged Patriots

They get indignant over the outrage. They seem to consider themselves some sort of superior political beneficiaries, who must not be disturbed lest the Republic shall perish! And when they were in office under Republican Administrations their sole political thought was to keep themselves and their friends in place, and to shove any Democrat who might be hanging on precipitately into private life.

It is a toss-up between these sniveling hypocrites who want to be retained and

these foolish patriots who want to obtain. One lot of them makes your gorge rise, and

so does the other.

The more you look into the psychology of office hunting and office holding, the farther into the gulch you get. The only rational explanation of it, it seems to me, is the explanation of the passion for recogni-tion, for trifling distinction over one's fellows, which in the American mind comes from holding office. Why should a man give up a good practice at the law to come here and take office as an assistant to some Cabinet officer, for example? The pay is small; the social position is nil; the work is laborious; the future is not bright. Or why should a man move heaven and earth to get to be an assistant secretary in one of the executive departments or to be a bureau chief? I don't know. It's beyond me!

Patronage may not be a great rock on which the Administration will strike though patronage has been such a rock in the past-but it is and will continue to be a series of troublesome reefs on which Captain Wilson's Ship of State will bump, and which will jolt the captain and the crew to a considerable and a continuous extent.

And you think a senator has a n gentleman's job, do you, Jim? Maybe so—maybe so; but you can't make any Democratic senator believe it.

For instance, a woman who has a grievance has been here for one hundred and eighty days. In that time she has called on a defenseless senator, who comes from her state and knows her people, two hundred and fifty times by actual count, and has told him her monotonous tale of woe each time—and he can do nothing! And she is but one case out of a hundred

# ain-the famous Warner

AGAIN the Warner is practically the only speedometer to be found at one of America's greatest social events. So it was at the New York Grand Opera Season, the New York Horse Show, the Importers' Automobile Show, the New York Automobile Show, the Chicago Automobile Show, at all of New York's most fashionable weddings and receptions, at all of the exclusive country clubs and city clubs. No

matter where you go, if you are among high-grade autor biles and people of wealth, refinement and prominence, rarely find any other than the Warner Auto-Meter in us the costliest speedometer made.

At the Chicago Auditorium, on the opening night of Grand Opera, a record was taken of every car, its speedome and owner's name. The result was as follows:

were equipped with the speedometer of world-wide fam

the magnetic instrument. We mention only those ma

ometer.

### Out of 129 cars equipped with speedometers, 113 carried the magnetic ty speedometer.

### Leaving only 16 cars equipped with other types. Just think of it!

In other words, 87.6% of all the cars equipped with speedometers carried the magnetic instrument.

Following is a partial list of the high-grade cars that

25 Pierce-Arrow cars carried the magnetic speedometer.

14 Packard cars carried the magnetic speedometer.

7 Locomobile cars carried the magnetic speedometer.

7 Cadillac cars carried the magnetic speedometer.

6 Stearns cars carried the magnetic speedometer.

5 Peerless cars carried the magnetic speedometer.

4 Garford cars carried the magnetic speedometer.

4 Chalmers cars carried the magnetic speedometer.

3 Lozier cars carried the magnetic speedometer.

3 Stevens-Duryea cars carried the magnetic speedometer.

3 Simplex cars carried the magnetic speedometer.

2 Franklin cars carried the magnetic speedometer.

2 White cars carried the magnetic speedometer.

2 Renault cars carried the magnetic speedometer.

represented by two or more cars: 2 Fiat cars carried the magnetic speed-

> 2 Stoddard-Dayton cars carried the magnetic speedometer.

> 2 Alco cars carried the magnetic speedometer.

> 2 National cars carried the magnetic speedometer.

> 2 Haynes cars carried the magnetic speedometer.

> 2 Hudson cars carried the magnetic speedometer.

### Here is a partial list of the prominent Grand Opera box holders who have Warner equipped cars:

Mr. J. Ogden Armour Mrs. P. D. Armour Mr. Wm. G. Beale Mr. Henry A. Blair Mr. William J. Bryson Mr. H. M. Byllesby Mr. Cleofonte Campan Cleofonte Campanio Charles H. Conover Mr. Stanley Field Mr. Egbert H. Gold Mr. William O. Good Mr. Samuel Insull Mr. Ferdinand Jelke Mr. John Lambert Mr. John Lamont Mr. Victor F. Lawson Mr. Frank C. Letts Mr. Frank G. Logan

Mr. W. H. Lyford Mr. Cyrus H. McC Mr. Harold F. Mct Mr. R. Hall McCo Mr. Honore Palmer Mrs. Potter Palmer Mr. Potter Palmer, Jr.

It will pay you to have a Warner on yo If you are getting a new car look at the speed it carries. Make sure it is a Warner. Y have no difficulty in getting one. Makers grade cars use nothing else. If you are labigh grade carrinaist on the Warner.

All dealers will gladity supply a Warner.

All dealers will gladly supply a Warner Meter with any car you buy if you ask for

All of which bears out our oft repeated statement that people of wealth, taste and judgment—people who are accustomed to the very best of everything—will take no other than the Warner Auto-Meter—the world's finest speed and mileage indicator.

Wise automobile manufacturers know this and willingly equip their cars with Warner Auto-Meters. And these same manufacturers have been

equipping with Warners for years—in fact, since the introduction of the magnetic instrument. They will use no other.

They have been offered other speedometers by the score and at much lower prices. But car manu-facturers realize the big advantage of equipping their cars with Warner Auto-Meters. They know that the dealers seek to sell cars equipped with the

The Sporting Editor reported it this way

or our boys came to bat in the last half of the ninth with the score tied. Brady fanned. Stimson walked. He went to second while Griggs was thrown out at first. Big Ed Barrows, looking beyond the pitcher to the club house in center field with its cooling shower, thought this a good time to end the day's toil and sent the first ball safely to right, bringing in sin Stimson with the winning run.

¶ Of course, the sporting editor thought that he was cracking a joke at Big Ed's expense when he confided to the fans the supposed motive power behind that hit to right. But there was more fact than fancy in his observation. Indeed, Ed saw with his mind's eye not only the refreshing shower but a big cake of Ivory Soap waiting to free his hot, chafing skin from the dust and sweat of the contest. ¶ Under these conditions could you blame him for spoiling an extra-inning game?

# THE FIRST YEAR

By William Jennings Bryan

Secretary of State

NE year of President Wilson's Administration is past and its record has been made. It has been a busy year. The first year of an administration is generally its busiest year, if it is the administration of a new president. The changes made in the personnel of the government are more numerous, and every incoming executive has new policies to inaugurate. The changes in the offices and in the policies are still more numerous when the new president represents a different party from that which controlled the former administration, and in the case of President Wilson the changes in both persons and policies were augmented by the fact that an opposing party had been in control for sixteen years. And as if this were not enough to absorb the executive thought and occupy his time, a special session of Congress was called in order that the work of reform might be commenced at once.

In the matter of appointments the President has demonstrated his purpose to make qualification for the work to be

the chief requirement; but he has not been unmindful of litral merit, where that has been found combined with fitness. he plus activity has been the formula used where the two mets have been found in an applicant.

in the very beginning he laid down a rule which enabled him to begin time—namely, that he would not personally see applicants ratio except when they were summoned before him. This not it is enabled him to reserve time for the consideration of public seres, but has saved him from the nerve-racking strain that those

Serid F. Houston

must endure who listen to earnest and often pathetic appeals, supported by a narration of services rendered or an account of pressing need for financial assistance. The refusal to see officeseekers, however, does not mean that he has delegated the appointing power to any one. While refusing to surrender the final decision in such

matters he has, as far as possible, followed custom and given weight to the recommendations of senators and members of the House.

lettibets of the House,

William J. Bryan

### A United and Harmonious Cabinet

THE "togetherness," as some have expressed it, of the present Cabinet has been a matter of favorable comment. The members were not selected as they usually are. The President did not pick out the states he thought ought to be represented in the Cabinet, and then consult with the political leaders of each state as to the availability of any particular man. Regarding the heads of the various departments as members of his official family, upon whom he was to rely for the development of his policies, he selected his Cabinet without regard to locality and according to his personal preference. He could not have chosen a more harmonious body. The men brought together in his consultation room, inspired by his own high purpose and wholehearted devotion to the work he has undertaken, not only have avoided friction, but have grown in each other's confidence and in the spirit of fellowship. The President has a rare combination of open-mindedness while a matter is under discussion, and independence when the time comes for action. The example he sets of firmness, frankness and forbearance has contributed powerfully to the unifying of the Cabinet in the support of the various measures that have been brought before Congress.

Some consternation was caused by the announcement that he would return to the custom that prevailed in the earlier days of reading his messages to Congress. Conservatism was shocked and the timorous were alarmed lest the Executive should overstep the limits of his office and unduly influence Congress. The fear disappeared, however, when he met the legislators face to face and in a spirit of comradeship invoked their cooperation in the fulfillment of the pledges made. No criticism has been heard since, and the restored custom quickly vindicated itself. His visits to the Capitol for purposes of consultation have also had a good effect and relations between the White House and Congress were never more cordial than now.

### Triumphant Leadership

THE tariff question was the first to test his power to organize the forces of his party in support of a given proposition.

He called into conference the members of the committees who were intrusted with the shaping of the bill for the reduction of import duties. He not only was one of the architects of the bill, but he acted as a "board of conciliation," harmonizing differences and adjusting demands. His plan, having worked well in the House, was applied in the Senate, where it also succeeded; and as a result the Democratic party was marshaled behind the best revenue measure that has been put upon the statute books in a generation. It was so good that it won Republican support and has commended itself to the Nation. The reduction in tariff rates is both substantial and equitable, and the income tax provisions are all that

could be desired.

It is fortunate for the country that
the constitutional amendment authorizing an income tax was adopted in
time to permit the embodiment of the
principle in the present tariff law, for
without it, it would have been unwise
to risk as much reduction as public

opinion demanded. The high rates of the income tax and its general acceptance indicate a most significant change in public opinion on economic questions. The effect of the new tariff law was largely discounted in advance of its enactment, and it went into operation without a jolt or jar, much to the relief of those who had faith in it and to the astonishment of those who were wedded to the policy of protection.

During the tariff fight the President learned of the lobby assembled in Washington for the purpose of obstructing the work of reduction, and promptly called attention to what was going on. Some of the protectionists thought to embarrass him by demanding an investigation of his charges, with the result that the lobby was scattered and the consideration of the tariff bill accelerated.

In the preparation of the currency bill the President followed the same plan that he adopted in dealing with the tariff question—that is, he conferred with the committeemen of the two houses and brought them together on the provisions of the measure. This was a greater triumph in leadership and in constructive ability than the victory won in the fight for tariff reduction. The opposition to tariff reform was almost entirely a Republican opposition, the Republican party having won over practically all the Democrats who were pecuniarily interested in the maintenance of a high tariff. In the matter of finance, however, a great many men prominently connected with the banking business are identified with the Democratic party, and

Prantilin K. Lane

these were able to bring a

strong influence to bear against the policy favored

by the President. Twice

during the course of the

discussion a concerted attack was made upon the

bill: first, through pres-

sure upon the business public, and second, by op-

position to the main fea-

tures while the bill was

in the Senate. When in the beginning of the fight

indications of stringency

were manifested simulta-

neously in different parts

minimum

charge. With-

out attempt-

ing to discuss

the relative

of the country, the Secretary of the Treasury, after consultation with the President, announced that the Treasury would furnish money to the various communities in such quantity as was needed to relieve the situation. This at once put the panic forces to rout and illustrated the merit of the plan by which the different sections of the country are brought into communication with Washington instead of Wall Street. The second attack was intended to force a demand for

one great central bank, or, if this

was impossible, to limit the re-

gional banks to four. The Pres-

ident promptly put an end to
this effort by his appeal to the Senate, and soon had an
opportunity to rejoice over the passage of the measure.
This bill enjoyed the distinction of securing a larger
Republican vote than was given to the tariff bill, and the
instant approval the measure has won from the country
proves the wisdom of the work of those who joined with
the President in securing currency reform.

The new currency law is a remarkable measure. The rights of the public are safeguarded, and at the same time the banks are put in a better position than they have ever been in before to furnish aid in an emergency. A bank, in order to secure government money, has heretofore been compelled to put up bonds; and to secure the bonds it had to pay out more money than it could possibly borrow on the bonds. This plan, though remunerative to the banks, because they could collect interest on the bonds while they loaned government money at a profit—money upon which until recently they paid no interest—did not put the banks in a position to help the community in time of distress.

### Competition to be Restored

THE new law, by authorizing the banks to borrow on the notes held by them, enabled them to bring new money into the community and thus increase the currency to meet temporary needs. This alone ought to win the favor of all the banks that are engaged in legitimate banking; and that the banks appreciate this advantage is shown by the fact that they have accepted the provisions of the bill almost without exception, in spite of the fact that many of them had declared their intention of going out of business when they were attempting to drive a bargain with the Government.

While the banks are rejoicing in the advantages conferred by the bill, the general public finds satisfaction in the vindication of the Government's right to issue the money and to control the banking business through government officials.

The state banks for the first time are permitted to enjoy on equal terms with national banks the favors extended by the Federal Government in times of emergency. This breaks the monopoly which the national banks have had and does justice to the state banks, which outnumber the national banks and share with the national banks the burdens of the business community. In its practical operation the chief merit of the new law is that it disintegrates the money power and ends the domination that the Wall Street financiers have exerted over the country. When New York was the only place to which the country banks could go for money, Wall Street opinion was accepted as law throughout the country. Now with eight or more sub-centers of finance, all dependent upon the Government for assistance and subject to the Government's direction, it will be impossible for a group of men in New York to coerce any section of the country. These two laws, dealing with two subjects of prime im-

These two laws, dealing with two subjects of prime importance, have been referred to in foreign lands as the two outstanding events of the year. The third subject taken up by the President for definite action was the trust question. The reduction in taxation levied on import duties, and the substitution of a direct income tax for a part of the taxation that was indirect—these constituted a paramount

duty. Currency reform was the connecting link between the tariff question and the trust question. The new system inaugurated was intended to supply the money needed for a larger business activity; and at the same time it freed the country from the financial despotism that had heretofore prevented any serious attempt at the overthrow of private monopoly.

Solong as a few men could dominate the industrial world, and create a panic if they were disturbed, men were afraid to incur the risk that affirmative action involved. But now that the scepter has passed from Wall Street it is possible to legislate on this subject without fear, and the President has undertaken a comprehensive scheme for the restoration of competition.

There are but two forces that can protect the purchasing public: One is competition; the other

is government ownership. In the
case of competition, the
self-interest
of rival producers is relied upon to
furnish the
c o n s u m e r
with the best
article at the

W. B. Wilson

merits of the
two systems, it is sufficient to say that there is
no middle ground between the two. There is
no disposition on the part of the general public
to undertake government ownership where
competition can exist. A large majority of
the people are individualists, and they favor
legislation necessary for the protection of competition because they believe that private
monopolies cannot be successfully controlled.
They know that it is folly to expect a private
monopoly to be benevolent in disposition. It is
as natural for the private monopoly to squeeze
the public as it is for the ferocious animal to
bite. They know, too, that efforts to regulate

private monopoly are futile, for the monopoly, profiting largely by the control of officials, cannot resist the temptation to elect those whose duty it is to control them, or to corrupt them, if possible, after election. The tribute paid by each individual, though aggregating a large sum, is so small that the citizen is not able to cope with the vigilant and sleepless beneficiary of privilege. To allow a monopoly to exist and then attempt to control it is like letting a burglar into the house and then staying awake to keep him from stealing. In the end the public prefers to rid itself of the nerve-racking effort to protect itself from organized greed.

The President, recognizing the importance of satisfactorily restraining and limiting a private monopoly,

plants himself upon solid ground when he declares that a private monopoly is indefensible and intolerable. In taking this stand he is fortified by the fact that this declaration has been embodied in four national platforms of the party. It is the only rational doctrine on the trust question; it lays the ax at the root of the tree.

The restoration of competition is the object that those have in view who seek to make it impossible for a private monopoly to exist in the United States. The aim is to open the door of opportunity to the young men of the country by assuring them of the Government's protection while they build business success upon merit.

We produce and consume more than any similar population, and this is due, in part at least, to the fact that there is more hope in the heart of the average man in this country than is to be found in the hearts of people elsewhere. This hope of independence, hope of reward commensurate with effort and measured by the contribution that the individual makes to society, is the most valuable element in our industrial world. This hope, darkened and in many cases destroyed by combinations and trusts, is to be restored and vitalized when the plans of the President are realized. It is not possible to comprehend in a single message or even to calculate at this time all the legislation that may become necessary in the carrying out of the President's purposes, but he has suggested five steps that may with advantage be taken now: First, there is the prohibition of interlocking directorates. One of the favorite methods for the stifling of competition has been the electing of the same men to the managing boards of rival corporations. Men do not compete with themselves, neither do corporations, controlled by the same men, compete with each other. This custom is to be stopped, and none acquainted with present conditions will doubt that this will exert a most salutary influence on business.

#### Control of Security Issues

THE second remedy is to be found in the supervision of the issuance of stocks and bonds by corporations doing an interstate business. The interests of the stockholder, as well as the interests of the general public, demand this supervision. Remedies never come until after the people are convinced that disease exists. The investigations that have been made have convinced the people that the issuance of stocks and bonds has been used by promoters and Napoleons of finance for their own enrichment and for the swindling of the public. So long as the stocks and bonds

represent water instead of invested capital, so long will fluctuations be certain, and fluctuations injuriously affect those who hold stocks and bonds for investment. The interest of the general public in this supervision of issues is found in the fact that, when once issued, these fictitious representatives of value are made the basis of a demand for excessive tolls and charges. The sympathy bestowed upon the innocent purchaser is turned to the advantage of the promoter and the manipulator.

The third measure proposed by the President for dealing with the trust

A. J. Burleson

question is intended to define a trust, and to mark the limits beyond which a corporation cannot go toward the monopolizing of the market. The interpretation placed upon the Sherman Anti-Trust Act by the Supreme

# THE WIRELESS CONFESSION

N THE last Sunday of an exceptionally hot June the Reverend Doctor Morton, suffering, Christianlike, from overwork and underpay, or, if you prefer, overworry and underfeeding, fainted in his pulpit as he had nearly finished one of his nice, gentle sermons. Everybody thereupon made the same remark. This often happens among people who share the same beliefs in the kindness of the Deity. They all said it was lucky Doctor Morton collapsed just as vacation time was commencing. They, of course, also said they would do their duty. They did. They instantly began to talk about giving him a little extra money so he could go away. In order that neither the congregation nor the pastor might have any doubts as to this kindly deed being charity, they talked in public about the donation and the vacation. After discussing whether a trip to the Yellowstone was not better than one to Switzerland, besides being cheaper, they compromised by giving him one hundred dollars in cash. This left him free to go anywhere, excepting Switzerland or the Yellowstone. The growth of factions in the congregation was thereby prevented.

The old clergyman had fed a family of three healthy sons on his salary of one thousand dollars a year and had clothed them with the fees he received for marrying people. These three sons had even gone to college. John, the oldest, after getting his B. A., had gone to the law school, and was ready to accept a position as office boy in some city law firm. James had finished his fourth year at the medical school and had been lucky enough to secure an appoint-

ment as interne at the hospital, and Paul had finished his sophomore year at electrical engineering and hated it.

Fortunately the boys were at home when the old clergyman's collapse came on. They stood by his bedside when Doctor Emmons, the town's most competent physician, came. Doctor Emmons was very fond of the clergyman. The clergyman's sons called him Uncle Jim.

The physician of bodies felt the pulse of the physician of souls, raised his eyebrows and asked perfunctorily:

"No pain?"

No, James."

"H'm!" muttered Doctor Emmons. The Morton boys Istened attentively, for the old physician had a habit of dagnosing aloud. "Mine mule! Two-legged! Worn out! Fine specimen to pickle in alcohol for permanent exhibition westry, labeled: "Christian. Typical Case."

The old clergyman smiled feebly. "James," he said,

"I named Jimmy after you. Don't make me regret that I made him study your profession. If it is going to make

"Be reassured, reverend sir; medicine is worse even than the Christian ministry. If it's martyrdom you crave for him he'll get it. He'll spend long stretches of time in the houses of patients waiting, waiting alike for people to die and for people to be born. You don't get paid for waiting, but you can become a Shaksperean scholar."

The physician began to write a prescription. The tlergyman turned to his sons and said:

"Boys, while I still can talk, I ask you to remember all your lives, in case I-I-in case I should

"You won't this time, Tom," cut in Doctor Emmons: "so kindly spare your own tears over your untimely

"I'm not so strong as you think," murmured the old degyman, "and I feel so tired, so tired!"

His eyes closed. The three boys bent over him anxiously. The old man opened his eyes and smiled at them-reassuringly, as he thought, but it made them gulp.

"John, I think you will be a-a careful lawyer. fend always the right -

"Don't you do it, John," interrupted Doctor Emmons. "It is not your duty to starve to death; and, besides, how in blazes are you going to tell who is right? You go to work and acquire a practice first. That's bread. If you must pick and choose later, pick out good butter."

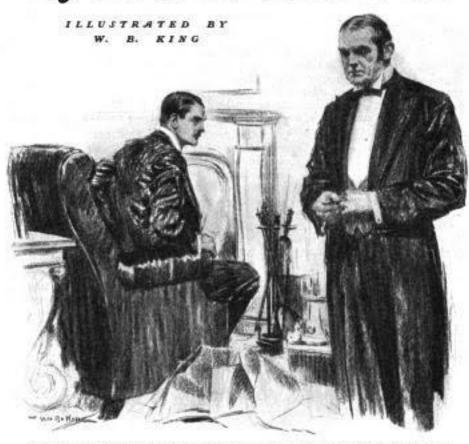

"Father, I'll never take any case I know to be wrong," promised John with the overpowering solemnity of twenty-three years.

"And you, James -" began Doctor Morton.

"He also will be poor," volunteered Doctor Emmons. 'He will have all his own practice, and mine if he wants it. It isn't worth much."

"Thank you, Uncle Jim," said Jimmy gratefully.

By EDWIN LEFÈVRE

The Dread of Being Alone Made the Banker See the Human Being in the Domestic

"I also thank you, James," said old Doctor Morton. "Jimmy, learn to be like him, but don't talk the way he does to hide his big heart -

"I order you to be silent," gruffly interrupted Doctor

"And you, Paul ---"

"Don't you worry about me!" said Paul hastily but decisively. He was nineteen.

"My son, I do worry. I fear -

"You needn't. I know what I am going to do. I don't know just how I am going to do it, but that, after all, will depend upon what chance I get."

What are you going to do, Paul?" asked Doctor Emmons, obviously to distract the sick man.

"I intend to make a million dollars!"

"My boy! My boy!" The old man's voice so plainly showed distress that Paul hastened to say reassuringly:

"If it can be made honestly I am going to make it. And I'm not going to give up trying until I've made it. What has your life been? It's bad enough to have to worry over the troubles of a congregation at the rate of about twelve cents per annum per trouble. But to worry about food and clothes! Your worries were mother's worries, and they killed her. I propose to make a million dollars as quickly as I can, and you are going to live to enjoy it.'

"My son, I -

"And to teach me," went on Paul very quickly, "to use my fortune worthily and do good to those who need financial help."

Doctor Emmons laughed and said:

"Well, Tom, you know Mary's grandfather was a banker. I'll keep you on top of the ground for some years. But, Paul, you hurry up just the same."

"I'll make it in less time than you think," said Paul defiantly, boylike suspecting that his talk was not taken very seriously.

"By wishing to make it; by wishing it with all my head and all my heart. That always does it, doesn't it?

"Not always," contradicted Doctor Emmons. Barring death, always!" said Paul, so firmly Doctor Emmons turned to the sick man and said:

"I believe he'll do it, Tom!"
"I hope not," retorted the sick man with deep sincerity.
"Tut, tut!" chided Doctor Emmons. "I tell you it'll do him good," just as if making a million were medicine. "Now, boys, get out and don't let anybody see him. They might want to sympathize with him, and he's had the sympathy of his congregation too long."

"But, James -

"Well, if any fellow-Christians come and you see in their eyes the unquenchable hope that your father is dying, you might deprive them of the joy of hearing his last words free of charge by telling them he's got smallpox. Clear out, all of you. You will eat at my house until I change the treatment. You know my meal hours, boys."

The old clergyman did not die then. He died two years later, when his congregation superseded him by a younger soul-saver and generously made Doctor Morton pastor emeritus. In view of the Latinity of the title they felt constrained to give him five hundred dollars in a lump. They knew he couldn't live very long. Besides, the old man had three grown sons.

The sons did as they had promised. John was not brilliant. He was a plodder and, moreover, did not believe in taking tainted cases; so he had to leave the highly reputable firms for which he worked. He went into business for himself. He made a living and was neither popular nor unpopular, neither respected nor ridiculed on account of his honesty. So few people knew him at all that they couldn't know he was honest.

James, good-natured and cheery, patterning himself after Doctor Emmons, made a good practitioner. He did a very good business, and some years, with the aid of threats of lawsuits, he collected fully sixty per cent of what was owing to him.

Paul went to the city, looked round and decided that the way to make money was to have something or somebody work for you while you worked your brain. To have men work for you has all the disadvantages that any large employer of labor will cheerfully enumerate for you whenever you have a couple of years to spare to listen in. Therefore he decided to make money by the simple process of letting money make it for

him. He studied money and its habits. This led him

straight into the Marshall National Bank.

He worked very hard and very conscientiously. He had one flash of inspiration. One is all any man needs in his lifetime. He decided that to make a success of his own life he must be famous for something, must identify himself with one thing. He ingeniously resolved to be known as the man who never made mistakes. He saw clearly that one of the things a bank must not make is errors. He talked about the sin of making mistakes even to the president. And so within three years they took him at his own valuation and made him teller. He worked hard; trained incessantly, as it were, for infallibility; took his work home and practiced, practiced, practiced until he couldn't make a mistake. And even while he was a teller he trained for cashier. And so they made him assistant cashier, and he was so good at it that they felt proud of their own discernment and made him cashier, and finally, at thirty-eight, vice-president of the bank-the man who never made mistakes! But now that he had to deal with men instead of figures he subtly revised his slogan. He called it: The sin of making avoidable mistakes! And he cleverly hedged by adding: "Any man may fool me once!"

He became cautious on principle, careful by force of habit, suspicious by reason of his environment. But worst of all he began to take the exaggerated view of the importance of having money that all people take when they have money to lose. He developed a habit of trying to regulate his own life, to govern it, checkbook in hand. Even in his family affairs, instead of visiting his brothers at Christmas, he sent to his nieces and nephews each a check for one hundred dollars, making seven hundred in all.

At forty he had made his million and vaguely thought he ought to marry. And as he studied his own fitness for marriage, he perceived that he had been for years in a business in which nothing was left to the imagination, but everything given precisely, to the hundredth of a dollar, in which he did not deal with men but with customers. He trusted only people who signed their names to documents. His associates were human beings, to be sure, but they might as well have been labeled No. 87 or 16D as baptized John Henry Brown or William P. Jones. It was a souldesiccating environment, and this careful man who never made mistakes realized that he should not treat a wife as he would an honest merchant or a stock-exchange borrower.

He therefore decided to train for the married life as he had for other positions—he must first humanize himself. He would do so by learning to spend money.

So he began by spending one-third of his income; and then, after a great effort, one-half; then seven-eighths of it. But he accomplished this by cheating himself-richman-fashion-by buying a house and choice furniture and very good paintings, which should have been charged to capital account instead of to expenditures.

At forty-two he had a nice home and was becoming used to spending money without pain.

Of course, he had been a money-maker for twenty years! His acquaintances were all people to whom money meant pretty much what it meant to him. It was among them that he looked for the girl. He knew that after he found her he must fall in love with her, and that only then should he marry her. In considering all the phases of it he filled himself with the vehement passion of a man doing a mathematical problem.

He found her. It was not difficult. He was known to be a millionaire and he was not known to be forty-two, for he looked five-and-thirty at the most. Being well was a profitable habit. He had husbanded his health as he had saved his earnings. He had a pleasant smile, which, though it did not strike heartward more than one-fifteenth of an inch, nevertheless made him look like his mother, who was the most lovable of women. Then there was in his eyes a look

of alertness that was as impressive as sharpness. without the disagreeable quality you find in the eyes of those money-making men who suspect all other men of being thieves and all thieves of being murderers.

And as for falling in love, he knew that all men whose judgment he respected did it. And this girl was very beautiful and very worthy of being loved.

It was only after they were engaged, and indeed after he was madly in love with her, that the man who did not make mistakes learned that her father, instead of leaving his family several millions, had barely left them enough to live on in outward decency. But he mathematically demonstrated to his own satisfaction that her poverty clearly proved that he loved ber. Indeed, one of the blessings of a Providence always kind to young-well, relatively youngbankers is that they are permitted to marry beautiful girls to whom they can give ever so many beautiful things.

He would rather not marry at all than buy a wife! That was obviously the most egregious of all mistakes. She did not even try to resist his suit. Had he not been in love he probably would have called her a human orchid, one of those ornamental feminine parasites that like

even their emotions ready-made and, as it were, predigested. She was indeed young and beautiful, with that useless, illusory, wholly artificial beauty that is both described and damned by the word dainty. The barbarian gazes with awe upon the frail crystal goblet and worships its fragile beauty because it is fragile. All men in their first love are children and all children are born barbarians. But there comes the time when you don't want a dainty mother of big healthy babies!

He married her. He soon discovered that falling in love was quite unlike making money. There is a certain definiteness about making money: you do certain things and leave undone certain other things; and the reason you do and the reason you don't is one and the same—to make money. And all the things you do in money-making consist, like everything else in life, of both giving and taking, but your gifts and your takings can be measured with dollars and you must always take more than you give.

But in loving there were no set rules, no definite plan of conduct. To begin with, there were so many ways of loving that Paul spent hours every day hoping he might live long enough to love in all the ways possible. The business of loving was the business of giving, never of taking. To give to her was to give to himself the pleasure of giving to her! Therefore he treated love like a wonderful beverage, to intoxicate himself with. The more he drank, the more he craved. The more he gave, the more he wished to give.

He did not desire a helpmate, because he was a selfreliant, aggressive man, who, moreover, had reached an age at which his social likes and prejudices had definitely crystallized. She was his first sweetheart, what harmony is to the musician and color to the painter. He really lived only when he loved her. He surrounded her with the adult toys, the over-refinements of luxury and intricate mechanical conveniences that attend the transformation of a democracy into a plutocracy.

Far more carefully than the money markets or the business outlook this banker now studied ways and means of pleasing this girl. He eliminated all necessity of her ever asking by giving in advance. He sharpened his inventiveness by anticipating her needs. He interested her in hobbies, merely that he might gratify them!

At his desk in the bank he kept an exquisitely painted miniature of her and in a little silver vase always fresh flowers-a boy-lover's devotional demonstrativeness. He confessed to her portrait things he dared not tell her in person, for her delicate exquisiteness made him tremble. Whenever he passed the tips of his lingers over the smooth ers over the smooth cheeks he did not say to her that flower-petals, that her blood m and flesh but -leaves, that her soul made itself fe odors! He did not tell her. He

That is precisely why this money-maker, accustomed to the deference of the less rich and the ingratiating smiles of thousands of money-borrowers, felt a very pauper before a girl who had no views on life, no experience of the demand and supply of money and what men do because of them, no fixed opinions on anything. He could see no reason why she should love him! To youth love brings its overpowering selfishness, but to middle-age it brings its subtle humility, because where twenty craves action forty yearns

And in the same topsy-turvying way love made him an optimist by sheer force of pessimism. Humanity became very nice after his marriage. He saw only lovable traits in all men under thirty-five, and he felt a profound gratitude toward all men who were nice enough to be over fifty and, therefore, not dangerous.

What a man of over forty gets who has married a girl of under twenty is not a wife but a treasure—to gloat over and

"I Could See From the First That You Were Not in Love With Me"

> fear for until the jealous, sleepless care of the treasure comes to be life itself for him!

Nearly a year had passed since their wedding when the first blow fell: Mrs. Morton's only sister, suddenly taken ill in London, cabled for Anne. The physicians' cable made Mrs. Morton decide to sail at once. Paul could not go with her. The annual meetings of several corporations of which he was a director were near at hand, and there were other strong business reasons why he should not leave New York. His loyalty to his associates put it out of the question for him not to do his duty. But he understood at last why intelligent men retire from business, since the hardest chains of all to break are those of solid gold. He could refuse her nothing. He said she could go. He loved her.

It was their first separation. In the daytime in his office the miniature of her cheered him with the old implied promise of reunion at the close of day. But at home the moment he crossed his threshold gloom descended. The house was a burial-crypt. The silence maddened with its ten thousand sinister meanings; the emptiness appalled. It made the halls not only cheerless but huge, like warehouse corridors. In the dining room the consciousness of her non-being took on an unearthly character. He was filled with an uncanny expectancy—as of seeing her because she was not there!

He did not, however, dream of escaping any of the exquisite subtleties of suffering inflicted by her absence. He preferred to be unhappy in her house than try to forget her at his club.

He therefore was dining at home alone.

The English butler looked on superciliously. Why should a millionaire eat as though he had a train to catch? And even if there had been a train to catch, what was the use of being a millionaire if you couldn't make the train wait until you saw fit to take it?

Paul Morton refused dessert, rose and told the butler to take the coffee to the library.

"Very good, sir," said the butler coldly.

Paul wished to sit in an easychair before a cannel-coal fire and look at a map of the Atlantic Ocean above the mantelshelf. A black-headed thumbtack near the Banks

represented the Atlantis, on which Mrs. Paul Morto sailed for Liverpool. Twice a day he heard from h wireless, in the morning at the office and in the even home. She gave him the latitude and longitude and assurance of the state of her health.

She had been on the ocean fifty-nine hours! He : her so poignantly that he felt his longing go from I psychic waves. At times he thought she must recei soul's wireless messages!

It must be at least ten o'clock on the Atlantis. asleep? Possibly she was playing cards, or talking fellow-passenger; or, worst of all, listening to F

Suddenly he shivered, for no reason whatever, a inward trembling, as though his soul were shakin

was sure that if he sweated it would water. He rang the bell.

"Bring me some Scotch whisky," he t servant. He drew the easychair close to t braced his feet against the bars and ker there until the smell of burning leather him move away from the hearth.

The servant returned with a tray. 1 took a stiff drink of raw whisky and back in his easychair.

"Shall I leave it, sir?" "Yes, on the table. There!" "Yes, sir. Very good, sir!"

The moment the man turned to g Morton realized that he did not wish alone. To him the servants had neve men or women but furnishings, like the c or the rugs. They always felt themsel humanized in his presence and they him, for he had established them on a I eternal inferiority. The faculty of others feel that way belongs to the true crat and to all military leaders.

But now the dread of being in this coz; alone with the cheerful fire that could no

ailing souls stop shivering, made the banker see the being in the domestic.

"Wait, James!" he said before he knew it; ar cudgeled his brain to think of what to say to th whose name was James. Or was it the man's pred whose name was James?

"What is your full name?" inquired Paul M having found the excuse.

"My full name, sir?" repeated James uncomfo He looked like a man caught in a trap. "Yes."

"Charles Edward Bolton, sir," confessed James. "Oh! Charles, is it?"

"Ye-yes, sir."
"H'm!" muttered Morton. Immediately the quaking and shivering returned. He thought hi must be shaking. He held it before him, the finge spread. It was absolutely steady. He felt hot a: at once and, withal, not ill.

"James! I mean Charles! Ah—wait there. I feeling well. I ——" He stopped talking. He felt were smothering for all that his breath came and we normal regularity.

"Yes, sir. Shall I telephone for the doctor, sir?" Charles. He looked as if he feared to be blamed master's indisposition.

"No! I-I - No!" said Paul Morton. H and presently began to pace up and down the roo felt as though he had walked twenty-five miles. time to time he caught his breath sharply, sugaspingly. His wife's ghost had vanished from the He was not now thinking of her.

"You may go, Charles. If I need anything I'll "Yes, sir. Very good, sir," the man said with . relief. Nevertheless he waited.

"I'm better," said Paul Morton and smiled reassu He felt grateful to the stolid Englishman for his sol And the stolid Englishman blushed at the master' ness as one blushes at being overpraised in public.

"I'm glad to hear it, sir. You-I-yes, si stammered. "Do I look ill?" asked Paul Morton curiously.

Digitized by Google

"No, sir, not exactly ill, sir," answered Charles hastily. "How then?"

"Begging your pardon, sir, as if you were frightened,

sir. Or," he added after a pause, "angry."
"I am all right now!" Morton nodded dismissingly, and legan to pace up and down the room after the servant left. He again took an inventory of himself to account for his malaise. But he could not hit upon the precise trouble. Age, which explains so many inexplicable things, is the last hypothesis to occur to a man who has married a woman twenty years younger than himself.

Suddenly there came a knock-faint, uncertain, ominous. Paul Morton felt himself grow cold all over. His legs

bent under him.

"Come!" he said; but the word sounded so faint to his own ears that he repeated more loudly: "Come!"

The door opened. The butler entered. He had a silver eardtray in his hand. "Cablegram, sir."

With a hand that shook Paul Morton took the marconigram from the tray. The butler's eyes were fixed on the master's trembling fingers with the curiosity of a man trying to see a compromising situation through a keyhole.

"No answer!" said Morton irritably. He wished to be alone. The butler left the room. On his face was the look of a man foiled at the last minute.

Paul Morton opened the envelope and read:

S. S. ATLANTIS. At Sea, Feb. 25. PAUL MORTON, Fifth Ave., N. Y.

Ship sinking collision explosion have given wireless oper-stor emerald necklace if rescued do nothing last message to you forgive me full confession in third drawer.

Paul Morton slowly clenched and unclenched his hand six times.

He was alive.

His wits came back. Crises always made him calm. He now went over the marconigram carefully.

The ship was sinking. There had been a collision. It was followed by an explosion. In the confusion the wireless operator obviously refused ordinary messages. She had not much currency with her-enough for gratuities to the steamer servants—and her letter of credit was of no use in the emergency. She bribed the Marconi man by giving him the famous emerald necklace for which Paul Morton had delightedly paid eighty-five thousand dollars. She had kept her wits about her!

And what was the message? She asked for forgiveness. What had she done that needed his forgiveness, that made

ber ask for it with her last breath?

And farther on the word confession! Preceded by the prayer for forgiveness, it could mean only one thingguilt! Of what was she guilty, that exquisite creature fashioned of petals, with blood of liquefied rose-leaves? His wife, his life, his everything-in-life, asking for forgiveness, speaking about a full confession -

He heard hoarse shouting in the street.

"Extry! Extry! Extry!"

He rang the bell and, without waiting for the servant to answer, went out into the hall, threw a coin down the stairs and shouted: "Get me the extra. Hurry! The man is passing the house."

"I Propose to Make a Million Dollars, and You are Going to Live to Enjoy It"

the Fürst Bulow, of the German-American Line, had received a call for help from the Atlantis, which reported having been struck amidships by a strange steamer. An explosion had blown in some of the bulkheads. The engine room was rapidly flooding and the ship was sinking. There was no disorder among the passengers, who were fortunately few in number. They were taking to the boats. The message abruptly ended, probably due to stop-page of dynamo. The Fürst Bülow was rushing to the scene of disaster, but feared the worst by reason of the high sea running, the strong winds and the extremely low temperature prevailing.

There followed a description of the ship; quotations from the Bonnard Company's circulars declaring the Atlantis to be the last word in ship construction and practically unsinkable; the list of the first and second cabin passengers and of the officers.

Among the latter was that of the wireless operator. When he read that name Paul Morton felt as if an icicle had pierced his heart-it was Robert MacGregor! Who but a Scotchman would calmly think of a life of ease in the face of death, of the uses of eighty-five thousand dollars' worth of emeralds in the event of escape?

Paul Morton never knew how he lived through that night. He was numbed by the blow. He could no more readjust himself to the new conditions than can a man to the loss of both arms. What overwhelmed him was the amputation of that part of his soul that he was happy with. He had lost the ability to love out his love, to squander affection!

His concern was with himself, with his own loss, not with her death!

In the days that followed the servants tiptoed their way bout the empty house and would not look him in the face. They spoke in whispers; never a door slammed; the shades were drawn, just as though she were in the drawing room in her coffin lying on banks of rare flowers. Presently the steamship people gave up hope. Friends, associates, acquaintances-all were very nice to him. Even the newspapers respected his grief. But in all the well-meant words of sympathy and in the far more expressive silences never a hint or a look to show that the world suspected he had not even the solace of his memory of her! But for that wireless message he might have lived on, an elderly man of affairs humanized by his love, made kindly by the remembrance of her brief sojourn in this world before she left him, to wait for him! But that message, that prayer for forgiveness, that daggerstab in the very heart of his love of loves-the word confession!

Outwardly he bore his loss like a gentleman; he was slightly paler, slightly more deliberate, a trifle more consciously impassive. But within him raged tempests that shook him to his inmost soul. Doubt ran amuck and stabbed, stabbed! Was she worthy of being mourned? Was it some schoolgirl prank, exaggerated by her purity

intoblack guilt, that she would confess? Was it some boyand-girl affair that she had allowed to persist? And then he thought of her, in her slim youthfulness, struggling in the Atlantic gale, freezing, drowning, this beautiful child-and he could find her guilty of nothing, unless it was of the right to be pitied!

He could not at first bring himself to formulate an accusation against her. But gradually, in the pathetic fever-

ishness of his search for solace, he began to fling the mud of jealous suspicions at her character, until, grown half-mad, he definitely accused her; anesthetized his sense of decency, and began his search of all the third drawers in that haunted house-like a thief, that nobody might discover him; like a coward, that no one else might learn the shameful truth! He ceased going to the office in the forenoon, to search more assiduously; sent his housekeeper away on a short vacation that he might search unsuspected and unhampered; and still trying to save the last shriveling shred of self-respect, he argued that certainty would be wisdom, for if he knew that she was unworthy he would not have to grieve! He invested his search with something of the character of a consumptive's trip West. To have been spared the necessity of divorce proceedings, to have escaped the humiliation of hearing the world's vile chuckles, was no small boon—if only he knew definitely.

He searched carefully, methodically. He looked first in the third drawers; and then in all drawers; and then in all places wherein a sheet of paper might have been hidden. At times there were reactions and he abandoned himself to his original sorrow. But the poison had entered; he could not think of her as guiltless. And the struggle left its traces on his face, in his eyes, in his very gait and in his habits of work, so that his associates feared to comfort him lest they might unwittingly intensify the strain to the

breaking point!

He could not help thinking of her as too exquisitely delicate for certain kinds of guilt. Most women and all wives are capable of deception, but not necessarily of crime. He could not know the strength of her resistance to temptation because he had persisted in keeping her a doll; but he knew her hatred of vulgarity. If she were alive and guiltless he felt he could not kiss her, after the depths of degradation into which his jealous suspicions had made him sink!

Still there were her own words, vouchsafed at a time and under circumstances which precluded falsehood. This child, in the face of a terrible death, had thought of him

to the very last, had asked to be forgiven even as the Atlantic yawned for her. Had he forgiven the dead woman who had been so much to him? "I wish I could! I wish I could!" he cried

aloud in his despair.

But he couldn't as long as he didn't know. Presently a knock sounded. Evidently some servant had heard him speak and imagined he was calling.

"Come in!" he said.

Charles entered.

"Telegram, sir!" he said softly.
"Damn it!" said Paul Morton irritably.

"I thought it might be important, sir," meekly apologized the servant.

"You did well to bring it, Charles," said Paul Morton. "I thank you."

He opened the message and read:

GLOUCESTER, MASS., March 3.

PAUL MORTON. Fifth Ave., N. Y.

Picked up by schooner Mary R. Brennan. Leaving immediately. Expect to arrive New York eleven fifteen A. M. tomorrow.

He stared at the yellow sheet with eyes that no longer saw words; that instead beheld a slim girl of twenty with two skies for eyes and roseleaves for blood and flower-petals for cheeks, a girl three hundred miles north of New York. What- When-How-

"Good Lord!" he muttered.

"Mr. Morton, sir! Mr. Morton!" said Charles in alarm.

'It's Mrs. Morton! Saved!" he gasped. "Oh! Ah! Yes, sir! Mrs. Morton!" in turn gasped the servant.

(Continued on Page 48)

# A KING AMONG KING

THE king we tell of was not born to his purple; neither did he achieve it. Rather was it thrust on him by careless hands in the large, lavish days of the old

By Harry Leon Wilson

California. Johnny Hogaboom, of humble birth and without hope of temporal grandeur, had been a sprightly unit of the throng that surged over the mountains in the yellow fifties to gather gold from the breasts of the hills and the sand of the creekbeds; but Johnny, it soon developed, had too little of the gambler's temperament to be a miner.

He was young and strong, and ardent for the new life that flowed about him in such generous contrast to that of his New England upbringing, but the haphazard hunt for gold was repellent to all his orderly instincts; for in this blind hunting, industry was not inevitably rewarded the prizes went too often to mere singing, carefree, lazy luck. The game went too much by chance; and Johnny, who was not singing or carefree or lazy, and who considered Luck a hussy, bestowing her favors by caprice, craved a calling where he could be sure of a day's pay for a day's work.

And so, forever proscribing gold as a yellow wanton, Johnny hit on a manner of hunting that was less fortuitous. At a point where the ranks of the goldseekers filed down out of the mountains lusting for fresh meat he hunted the deer and the elk. There was nothing of romance about it—no flavor of the wild, free forest sport; it was a thing of prosaic routine. He would ride into the hills, leading a packhorse or two, and from the populous herds there he killed as many deer or elk as he could pack in to Webber's Landing in a day.

Indeed it was hardly skilled labor, and it was at all times tedious; but Johnny knew each day what his net profits would be—his foundations were firm, his results certain, his satisfaction mild but unalloyed. He supposed that sometime he would find pleasanter work; but he worried not at all about this. When it came he would take it.

Even in that early day he often suspected that this new work might have to do with the soil. On that first spring morning when he beheld the far-flowing reaches of the San Joaquin Valley he had been oppressed by a sense of wastefulness. He saw a wideflung garden of flowers and verdure in which cattle grazed. The grass and the clover grew hub-high about the lumbering oxcarts of the Spanish rancheros, but the land was giving back only a thousandth part of its potential value; and Johnny's thrifty soul even then was vaguely affronted. The careless Spaniards were wasters.

"They only make a picnic ground of it," complained Johnny as he rode out for his meat. Then ominously: "Some day the Americans will take that land and show them what to do with it."

And the wave had started that was to lift Johnny to his throne. When the founder of the city of Stockton was beneficently allotting several hundred thousand acres of the richest land in the new state he suddenly bethought him of the hard-working young hunter who brought in the fresh meat with such unfailing regularity.

"And Johnny Hogaboom might as well have some of that land," he mused. "He ought to be having a nice little home one of these days—about five thousand acres, I should think, for Johnny."

In this airy fashion was Johnny's domain confihim. To be sure, the gift was not considered did young Johnny Hogaboom experience at elation in accepting it. He took it, of course he might have taken a box of cigars from I

storekeeper, at Christmastime. The following week he returned the courtesy by leaving at the door of his benefactor a tender yearling buck of an amiable succulence. Johnny felt that they were quits then. For that matter, so did the landgiver.

And the new proprietor forgot about his land for a number of years. It continued to blossom, a beauteous and wasteful flower garden, while Johnny applied his industrious hands to several of the simpler crafts; but when he did chance to remember them the fat acres were a real satisfaction to him. Their mere spaciousness was satisfying, especially when he remembered the little rocky-hilled Vermont farm of a pitiful hundred acres or so, from which his father had tortured a precarious livelihood; but during those early years the charm of his domain lay entirely in its effectiveness as a spectacle. It was good to look at and to think about—but one had to work at other things. Johnny was land poor.

Then came the amazing day of wheat. Magically, as it seemed, the whole San Joaquin Valley threw off its cloak of blossoms and became one billowy sea of grain. As Johnny had once foretold, the Americans had shown the Spaniards what to do with the land; and Johnny's five thousand acres became the Waterloo Ranch. He happened to like the name. And in the fullness of time Johnny himself became a wheat king.

Of his rise and of the gracious middle years of his reign little need be told. He wore his honors lightly and yet with an increasing and very serious devotion to the cause of wheat. He held wheat as he would have held his religion had he been burdened with one—he had left his in New England, with the small, rock-hilled farm of his father. The new state's destiny was wheat and Johnny Hogaboom, of the Waterloo, was its zealous high priest.

So engrossed was he by the cares of state that he did not marry until he was thirty-five—and then merely as an afterthought. He formed an alliance with a wheat princess

alliance with a wheat princess of a neighboring dynasty who bore him a son. And Johnny forgot about wheat and his relation to it only to the extent of planning that his heir should also grow wheat—and nothing but wheat—in all the years to come.

The crown prince was taught at school that the principal products of California are gold, wheat, wine and wool; but at home he was taught by his father that the gold, wine and wool should be thought little of—that wheat alone was the state's cause for being. When his father returned from business trips to San Francisco he almost always brought a newspaper with him, in which

that "John Hogaboom, eat King of the San quin Valley, is in town a few days, and is registered a
Palace." The
prince though
fine thing t
father should a
palace in that d
city.

This, howeve all in the good before the que passed at the er dry year, and the little crown had followed the end of a dry year; in tru fore they had l to speak of dry assomething to pected in the c processes of th sons. No evil had been ut against Joh

chosen staple; nor had any shrewd and impious for suggested that the soil of the valley was too rich humble a crop as wheat. Johnny enjoyed those to the full. His money went as it came. Desp ancestry, he was never a saver. The careless genero the land itself had beguiled him into an openhand that would have rudely shocked his pinch-penny for

Nor was Johnny perturbed when his brother mobegan here and there to abdicate—some under expressure; others voluntarily and at great profit. It the later day, when the newspapers proclaimed "John Hogaboom, last of the Wheat Kings," John still undismayed—and at last, it must be confessed than a little proud of his title. He felt no alarm. It seemed to him that of all the wheat kings he hafittest to survive. With increasing droughts he is more and more stubbornly a wheat king. And then bad years he was actually forced to sell random acrothe remote frontiers of his domain; but he swore he die planting wheat.

Perhaps the curtain should descend briefly wi imagine that something like half a century has e As aiding this feat, we may note that in 1900 John boom was arrested and fined fifty dollars for killing out of season—even a deer he had been obliged three days over a mountain trail to find.

Hogaboom had met with advercities, but not or came to him with the shock of this.

The Crown Prince Thought it a Fine Thing That His Father Should Have a Palace in That Distant City

The curtain rising again reveals the house and outbuildings of the Waterloo Ranch; but these are now in a state of squalid neglect. The house of weathered gray is battered and pathetically patched here and there, where its grandeur has succumbed. The enormous barn—last of those glorious wheat barns in the valley—is well-nigh denuded of shingles, and seems in its decrepitude about to collapse.

The débâcle had not come with fanfare, onslaught and clash of arms. It had been a thing of slow, insidious eating away, hardly to be detected from year to year. Yet it had come decisively and Johnny Hogaboom was but a harried serf. Some dethroned monarchs are impressive—some are cruelly picturesque; but the dethroned wheat king, amid the ruins of his kingdom, was all but ignoble. In determination only was he still kingly. His figure retained at seventy-six the suppleness of youth; he was spare and straight, with his white-maned old head well up.

He stood at his doorway in the fading light of a December afternoon, gazing with a sickened wonder out over the Waterloo Ranch—he could see all of it now. Without efort his eyes could trace its farthest confines, for there was little left of his domain save a name that had become all too eloquent. To be precise, there remained a hundred acres of the lordly five thousand. The ranch had very simply and crudely consumed itself. In driblets of five, ten, twenty, fifty acres, those fields had been eaten away from him in the bad dry years—insignificant tracts, surely never to be missed from that wondrous total.

The droughts had persisted, the hungry years had massed themselves on him, and the steady drain had told; but in all those years, though his frontiers were canningly creeping up to choke him, the king had stayed stubborn to the voice and precepts of the new day. Other wheat kings had capitulated—planting fruit or crops that could be irrigated, or selling their lands handsomely to those who would do this.

Captain Webber's Ranch was now the site of the valley metropolis and its suburbs. Jacob Kettler's Ranch was the Tokay Syndicate's vineyard, and Kettler's heirs were globetrotters, social aspirants. alcoholics, and what not. John Hogaboom had repulsed fortunes of this sort a dozen times. He had not sold land when he could, which would have made him rich, but when he must-when the store had declined to let his bill run longer. He had sold just enough land for just enough money to plant more wheat.

And the dreadful and humiliating worst of it was that Johnny's land had, acre by acre, gone to despised aliens—Italians, Swiss, Japanese, Chinese. These hordes had crowded

in on him, edging ever closer to the old ranch house; transforming his beloved wheatfields into what seemed to him to be the old flower garden of the lazy Spaniards—orchard and vineyard and piffling truckpatch. The aliens had invaded his kingdom with an intensive farming that does not come out of books, but is painfully acquired through centuries of land poverty.

He remembered now when the first amazing orchard had sprung into life on one of his quarter sections—the price of it going into a wheat crop that was never harvested. Slowly then the astute Japanese had hemmed him in with acres of the Tokay grapes that brought fabulous prices in New York; yard by yard the patient Chinese had encroached on him with their garden tracts; and the thrifty Italians had crept to his very door with their vines.

As he now looked out on his depleted acres something like panic seized him for the first time. He remembered what he had once foretold of the Spaniards when the land did little but feed their cattle—that the Americans would take their land and show them what it was good for; but now these later aliens were calling the same boast to the Americans—they were taking the land and showing what it was good for. All at once the old man saw his ranch as but a desert of wheat set in a wide oasis of gardens.

He sighed and turned desperate eyes to the heavens for a sign of the needed rain. Three dry winters had befallen and now again he was waiting for rain. It had been that way, he recalled, at the end of a third dry year, when his wife had gone. And now—was he to lay his last acre in sacrifice on the moldering altar of wheat?

From the vine-embowered cottage of Tony Jusi, his nearest neighbor, came Tony's fruity gurgle of a voice, flung gladly out in his one song: O sole mio!

The old man shook an angry fist in the singer's direction and launched a hearty curse on the presumptuous dago; for only that morning Tony Jusi—stocky, glowing Tony—who seemed always to irradiate earthy smells of fruit and green salads, with a definite tang of honest human sweat, had paused in his song long enough to offer old Johnny three hundred dollars an acre for the fifty acres south of the ranch house. Fifteen thousand dollars in gold had Tony to pay for that bit of land—and old Johnny was perplexed about next month's salt pork and coffee!

And Tony had smiled, almost it seemed in sympathy, when the old king, with quick, hard words, had rebuffed him and his impudent offer. They had not beaten him yet. He would keep something from them. A hundred acres at least they would not turn into a picnic ground. He was still a wheat man.

And yet old Johnny knew as he scanned the arid sky that his back was against the last wall. The year before he had planted his hundred acres to wheat, but the summer sun had burned it to tinder when it was three inches high while the Italians and the Asiatics were harvesting their irrigated crops to a vast profit.

"It is Good Wine. I Make Myself. Jure to Mike!"

This year, he felt, had to be a good year. The heavens must relent and open for the wheat that would be planted again—it had to be so, because the store would not carry John Hogaboom over another year.

As the night drew on he entered the untidy living room, lighted a candle and—for a moment's solace before bed-time—sought the columns of the Stockton Gazette. The angry lines about his eyes deepened and his lips were set desperately as he caught the disgraceful tenor of the local news:

"Potato King of the San Josquin Talks to College Men," he read in a headline. The offending item concerned a Japanese who had cunningly wrested a fortune of millions from the valley's despised tule lands.

"Tain't a white man's country any more!" he growled.

"Well, I'll be ——" he muttered fiercely as he turned the page and read again:

"Antony Baccigalupi, the Tokay Baron of the San Joaquin, has returned to his native Italy for a brief visit. Mr. Baccigalupi is reported to have cleared one hundred thousand dollars in Tokay grapes last season."

This offender had once been Johnny's humble farmhand and had bought five acres of the Waterloo with the savings of a twelvemonth. Now he held five hundred acres of the original Waterloo and handled the products of other ranches besides. He had not planted wheat, The old man threw down his paper with a shudder of apprehension and desperately ran a hand through his mane of white hair. Years ago—his dark eyes flashed back to that splendid past—the same paper had spoken only of wheat kings, and he was not the least honored of them all. Now there were potato kings, onion kings, cabbage kings, asparagus kings—a monarch for every species of vegetable, it seemed. The editor of the Gazette was a busy Warwick.

"A sweet bunch of kings!" he sneered. "I wonder they ain't got a king for catnip and a birdseed baron!"

He went out for another questioning of the sky. The moon shone through the scattering tule fog—a dry moon, he had to admit. From a distance came the gurgled cadences of Tony Jusi's O sole mio! The old man shivered as at the note of some pursuing, incluctable fate.

"It can't be," he thought in a sudden panic, "that they'd have four dry years. I start plowing tomorrow—rain or no rain."

Once he had had two hundred and fifty men to do his plowing, and more horses than he had ever counted. Now he had one pair of horses and he would plow alone; but he was still an American and a wheat man.

He was astir even before the gray of dawn the next morning. He purposely kept from looking out-of-doors. He had a sudden unreasoning belief that if he waited until sunrise he should see a sky full of rich black clouds and feel a soft little wind of promise coming up from the south. He built a fire in the rusted kitchen range, set the coffee

> to boiling, the salt pork to frying, and put into the oven a loaf of bakingpowder bread. His kitchen lore might have been enlarged to his advantage.

In the larder at his elbow were ten such loaves, partially consumed. He made a fresh one every morning. It was a villainous, a tissuerending, a soul-destroying bread at best—and he was never equal to more than a quarter of a loaf; but he continued to bake it freshly, and his flour bill mounted.

While his meal cooked he shaved. Never a morning in all those years of dwindling prosperity had he omitted this. It helped him to remember his past dignities as a wheat king—to keep a firmer grasp on such pride as remained to him. He was going out to plow his bit of dry land, but he shaved his lean brown face with such care as might any king facing a state function.

Then he sat down to his breakfast as the flame of his candle yellowed in the new dawn; but he made sorry work of feeding. He managed a bit of the salt pork, but the baking-powder bread revolted him. He even balked at the coffee. It was poor coffee beyond a doubt—there were now rather strict credit systems

in the San Joaquin Valley, and the stores frankly discouraged doubtful creditors from choosing the best of their wares—but ordinarily he was equal to tremendous drafts of coffee.

He recalled with some alarm that, of late, he had eaten but little of anything. He knew that would not do. He must keep up his strength for the plowing. But on such food! He who had once had the best Chinese cook money could hire!

Dejectedly he pushed his plate away, drew a long breath and went to the door. The light had come and an empty sapphire sky glowed above him. He tried to pretend that he had not really expected rain today. Tomorrow, of course, it must come. The fourth year could not be dry; and yet—O sole mio! came the gurgling tenor of Tony Jusi, already abroad.

He found himself swaying in the doorway under a wave of dizziness. He reached to the wall for support and waited for it to pass, shrugging it off contemptuously. He had felt that thing before. It was nothing. Then he returned to the table, heroically drank a cup of the wretched coffee, and was off to his plow and horses.

The horses were Dolly and the Colt. Dolly was a white mare almost twenty years old to the day. The Colt, just one year younger, still held his name because he was a colt

he be helped from within?

"But how do you get this good will," asked one of his companions. "I pay good wages and don't have it."

"I give bonuses," chipped in a third, "and miss it."
"I let our people buy stock, and still they are not

happy," came from the fourth.

"I'll tell you how I do it," replied the first speaker: "I teach my employees how to save and encourage them to keep on saving. In other words, I show them they can become financially independent by their own efforts! When you do this you lead them to competence and contentment."

This manufacturer was simply expressing a growing sentiment among intelligent employers that is finding expression everywhere in organized movements-usually aided and abetted at the top—to teach the great lesson of thrift. No economic step of recent years has so intimate an appeal, so helpful a moral, or achieves such a deep and lasting good as this crusade to make the average wageearner an investor.

### Routing the Loan Shark

this moment; and the net result to him, so far, is a dividend of increasing harmony and efficiency. To the worker it not only means independence but immunity from harassing money ills.

The campaign for systematic saving and investment bristles with benefit. When combined with humane lending, and with character as collateral, it puts the loan shark out of business; it is making the savera real partner in industrial and commercial enterprise. Best of all, it is giving to the individual working at the bench or in an office a larger confidence in himself and a better realization of his opportunity. In short, a financial commonwealth, which represents a real community of interest, is in the making. Like thrift, it recognizes no creed, color or sex.

BUT how does plain everyday thrift make him an investor? you may ask. Simply because all investment, whether large or small, consists of putting money out to work, so that it will earn more money. It starts with saving. The moment a surplus, however humble, begins to earn a return, that moment the owner joins the investing class. The farseeing employer is beginning to capitalize

He Seldom

Saved Any Money

and Borrowed Incessantly

ecy of Benjamin Franklin that by saving alone can the working man become master of his money fate. It is the narrative of a notable emancipation from usury and dependence, and it has a significant lesson for everybody. Let us nowsee how it works out. Before we go into the concrete examples, however, it may be well to say at the outset

that in every known system of saving provided by employers for employees, or by employees for each other-whether it is encouraged by deposits from the firm, generous interest rates or other inducements the big underlying purpose is to foster the regular habit of thrift. The man worker and woman worker are taught that no sum is too small to save. Thus you discover that the penny has played an important part in the unfolding of this drama of social welfare and practical uplift.

First, take one of the most imposing of all illustrations, furnished by the Metropolitan Life Insurance Company, whose Staff Savings Fund has 8995 members, with assets of \$2,232,213.08, raised out of the dimes and quarters that have been piled up from week to week. This plan combines systematic

saving with an old-age pension. As in most constructive enterprises, the beginning was significant. In the late nineties various older employees who had not been thrifty began to need help; others were in the toils of the loan sharks So the officials said: "If our people will learn to help themselves we will also help them."

Out of this grew the Staff Savings Fund, open to everybody in the employ of the company whose salary did not exceed three thousand dollars a year. Any sum is received

To encourage the employees to save, the company subscribes to the fund fifty cents for every dollar deposited by a worker. This contribution is credited to the depositor's account and draws interest along with his own savings.

Depositors may close their accounts in the fund at any time and for any cause; but, unless the withdrawal is after twenty years of service or is caused by death, old age or illness, the employee can take out only his deposits, plus the interest accumulations. The company's subscriptions, however, are not withdrawn and remain in the fund to the credit of the persistent depositors.

Withdrawals are more numerous among the thousands of agents in the field, where there are frequent staff changes, than among the clerks in the home office. Therefore the field savings accounts, which comprise a separate class in the fund, show larger increases from forfeits than those of the clerical force. The word forfeit in this connection is used to indicate the company's money transferred from the account of the withdrawing depositor to the account of the loyal one.

The savings funds are invested by trustees chosen from the important officials of the company and are employed mostly in high-class bonds and real-estate mortgages. Last year the home-office force got 5.30 per cent on the straight fund investments and 1.23 per cent from forfeitures, making a total of 6.53 per cent on their savings.

Saving for a Trousseau

In The field the return on the investments was the same, but the yield on the many forfeitures was 3.58 per cent, making the total yield on deposits 8.88 per cent.

The way these Metropolitan savings accounts have piled up is little short of amazing. Of course one reason for their startling size is the fifty per cent contribution of the conpany. Some concrete examples will illustrate the results of systematic saving:

One of the agents in the field-the kind of agent who follows the trail of industrial insurance down the highways and through the alleys-has been putting aside \$1.18 a week since April 3, 1900. He has actually deposited \$848.50, yet his account stands at \$2523.71. Of this total \$424.25 is the company's contribution. The rest is the interest that the money has earned, plus forfeitures.

On the saving of one dollar a week since February, 1900. another field worker has rolled up a total of \$2186.33. The amount of his actual deposits is only \$719. The company's share, interest and forfeitures do the rest. An inspector in the field who earns fifty dollars a week, and who has a thrifty bent, has an account that aggregates \$4578.58. It began April 1, 1900. His own savings are only \$1553.15.

A girl in the New York office began to save in Marci. 1900, with the expectation that some day she would many and need a trousseau. She took the desired step last April. Though she had deposited only \$445, her account was

These incidents and many more that I could give not only add much to the welfare of these savers but give them each day a fresh revelation of the wonders that money achieves when it is put by regularly and left to labor.

Nor does the company lose any opportunity to bring home this beneficent lesson. At most conventions of agents, for instance, the superintendent will say:

"All who are members of the Staff Savings Fund stand up!" Those who remain seated are not likely to continue much longer out of the Savings Fund. When employees get their pay envelopes the cashiers are instructed to say: "Can't I take out something for the savings fund?"

In this connection another plan that makes for compulsory saving is well worth explaining. It applies to the salaries of the host of women clerks in the home office, more than a thousand in number.

Formerly these girls were started at six dollars a week and raised from year to year until they got twelve dollars. The initial wage was found to be inadequate; so a minimum of nine dollars a week was established. Instead of regular increases, however, the company gives the girl a cash bonus of one hundred fifty dollars at the end of three years; three hundred dollars at the close of six; five hundred dollars when she finishes nine years' work, and two hundred dollars every year afterward.

This plan has a twofold value: First, it keeps the girl in the employ of the company, which gets the benefit of seasoned and continuous service; second, it provides the girl with a neat nest-egg at regular intervals, and the chances are that she would not have saved it if she had received it in the form of a weekly wage increase.

No girl gets her bonus without a brief sermon on the advisability of putting part of it, at least, into the savings

find. Experience shows that most of them already have modestaccounts. It is perhaps fitting to close this Metropolitan chapter with the statement that last year its army of thrift saved exactly \$315,743.50.

Somewhat different in scope is the Savings and Loan Association conducted by the employees of the New York Edison Company. Here the path of systematic saving leads to homebuilding on the easiest possible terms. In this process you encounter, for the irst time in this journey through the domain of saving, the widely employed plan of selling shares to members on installments, which are called dues.

Four kinds of shares are sold. The most popular is the installment, paid for at the rate of one dollar a month, which may be used for systematic saving or for house-buying. Likewise this share gives its purchaser an illuminating lesson in the way money works. Its matured value is two hundred dollars; but it requires only the actual payment of one hundred thirty-eight dollars because, by compound interest, the matured value is reached in eleven years and a half at the present rate of earning.

### Aids to Thrift

WHEN a member wants to buy a house he buys enough installment shares to cover the amount of his loan. He pays off these shares at the rate of one dollar a month on each share.

These installments at maturity are sufficient to pay off his loan. It is the simplest kind of amortization. He pays an average of six per cent for the loan and on easy installments. Here is a concrete case:

Let us say that the member wants to borrow thirty-six hundred dollars. He buys eighteen installment shares. These cost him eighteen dollars a month. He pays eighteen dollars more in interest. The total cost of this house to him is at the rate of thirty-six dollars a month, which is no more than rent; yet every month brings him nearer to ownership of his domicile and the approach is made very easy.

In addition to this first aid to homemaking the association provides for proper appraisal, censorship of title, and exercises a general supervision. If a member has an annoying mortgage hanging over his head the association will take it up and he can reimburse it in easy installments.

When the installment shares are bought just as an investment they yield the holder an average of five and threequarters per cent a year. This represents the earnings of the association on the money it lends to the home buyers or builders.

This association also sells savings shares, which have no definite dues and are paid for in optional deposits. It is just like putting money in a savings bank. The interest return is four per cent.

Then, too, there are income shares, paid for with a lump sum, which provide an annuity at the rate of five per cent. They are sold in pieces of one hundred dollars each.

The fourth share was devised to encourage the boys in the employ of the company to save, and such shares are known as juvenile saving shares.

They may be started with a deposit of ten cents a week and pay four per cent interest.

No feature of the Edison Association is more beneficial in promoting a competence than its automatic saving. This plan has found wide adoption and has come to be regarded as a regular part of most employees' thrift associations.

It consists of taking the saver's weekly or monthly deposit out of his pay before he gets it. Of course he must authorize it. Thus he becomes accustomed to receiving a net salary and the surplus goes on piling up almost without his knowledge. It is the best answer to the plea of the hitherto improvident, which always is: "I cannot save."

Turn to the Investment Fund of the Brooklyn Edison Company and you get a different plan, which brings to straight saving a highly desirable profit-sharing and copartnership process. Though only inaugurated in 1910, this fund includes thirteen hundred of the eighteen hundred present employees of the company, and embraces laborers and linemen.

Any one in the employ of the company may join, and he or she can begin an account with twenty-five cents.

head of his department on the withdrawal blank. This procedure goes a long way toward cooling sudden and ardent impulse to be extravagant.

In the Brooklyn Edison thrift program there is an original scheme for profit sharing that makes all participants involuntary savers. In order to encourage and reward loyalty the company gives its men a certain share of the earnings each year. This is based on the dividend paid on the stock and the employees' salary. To those who have been in the company's employ two years one-fourth of the dividend on the salary is paid. This dividend has averaged eight per cent a year.

Therefore if a man gets two thousand dollars a year his share of the profits, after two years, is forty dollars. At the end of three years he gets one-half of the dividend on his salary; at the close of four years it is three-fourths. If he has worked there five years he gets the full dividend on his income, which usually means the bonus of a whole month's salary.

A constructive provision attaches to these profits. No one may draw out his share until it has been to his credit for three years. Of course it is earning interest all the time. This is the feature that makes for involuntary saving. An exception is made to this three-year rule in the case of an employee who wants to use his bonus to aid in the purchase of a house or for some pressing emergency. These withdrawals, however, are made at the discretion of a Provident Committee.

The company encourages the men to devote their share of the profits to the purchase of company stock, which is offered as an inducement. The stock buying is not

mandatory, but last year one hundred took advantage of it.

Now let us see what a definite saving and lending system has done to redeem economically two types of workers—the telegraph operator and the printer.

#### After the Sharks

Take the case of the telegrapher first. In New York and elsewhere many were borrowing from loan vultures at interest rates ranging from four hundred to one thousand per cent a year. By holding the club of attaching their wages over their heads the lenders kept the victims in a state of mental terror, which impaired their efficiency. Frequently the most competent men were forced to jump their jobs to escape this persecution.

This demoralizing state of affairs was happening, for example, in the Postal Telegraph-Cable Company, where the excess of usurious zeal proved to be the undoing of the whole nefarious system. Here is the way it came about:

Back toward the end of the nineties a tall, lithe, lean, keeneyed man sat in an office on an 
upper floor of the huge white 
Postal Building, which towers 
over City Hall Park in New York. 
He was born up in the state of 
New York and had been graduated from working a key in a 
small branch office to be general 
auditor of the company. His 
name was Edward Reynolds.

As auditor he came in close contact with the financial affairs of the employees. He had seen about him—in his operator days—the depredations of the loan vampires; now he was face to face with examples of garnisheed salaries and all the rest of the toll that usury exacted.

One day a particularly harrowing case of extortion came to his notice. He called the victim into his office, and the man came with fear and trembling, expecting to be dismissed; but Mr. Reynolds said to him:

"You have made a mistake in allowing yourself to be blackmailed. We are going to take up your battle for you. Don't pay any more interest. We will settle the claim against you on a fair compromise and you can begin all over again."

Mr. Reynolds sent for the loan shark. It was a new experience for the Shylock to find an employer interested in the loan troubles of his men. The auditor offered a fair compromise—the shark threatened suit; he was dared to go into court—and that took all the bluff out of him. He, and other loan sharks, were glad to settle.

The effect on the men was so cheering and helpful that Mr. Reynolds asked himself the question: Why not convert

The Loan Shark Blackmailed His Victim Into Bankruptcy and Ruin

One can have this taken out of his pay if he so elects. This automatic saving includes weekly installments of from one to twenty-three dollars. Curiously enough, the man who permits this last-named sum to be taken out of his envelope is earning only forty dollars a week.

Interest is paid at the rate of six per cent a year. The proceeds of the fund are invested by a board that includes the general manager, the treasurer and the auditor of the company, supplemented by two men named by the president and two by the employees. The investments are entirely in the securities of the company.

Here, as in so many similar organizations, you get striking examples of the results of systematic saving. In this era of high cost of living the following illustration may be found of interest: Early in 1911 a man started to save two dollars a week on a weekly salary of twenty-five dollars. Today his salary is thirty-seven dollars and he is saving fourteen dollars a week. In other words, he added every salary increase to his weekly saving and continued to live on twenty-three dollars a week. He is married too.

One desirable rule of the Investment Fund is that no depositor may withdraw money without the O. K. of the this cooperative help into a definite and organized force? The result was the formation of the Mutual Investment Association of the Postal Telegraph-Cable Company, which has set a new mark for economic welfare.

It is a voluntary organization, with a membership limited to one hundred fifty. It is really a savings club. Membership is gained by subscribing to a share of stock with monthly installments of five dollars. This makes

regular saving necessary.

There is no limit to the value of a share. Dividends are declared out of the proceeds of the installments; but, instead of being paid in cash, they are put to the credit of members, and thus continuous saving is encouraged. The value of each share on the first of February of this year was \$457.05. This represents its paid-up installments and interest earnings. Last year each share earned \$39.61.

The earnings are from two sources: One is by the investment of the money saved in high-grade stocks or bonds; the second is in loans to Postal employees, who need not be members of the association to have the borrowing privilege and who pay at the rate of six per cent a year. On a loan of twenty-five dollars, repaid in weekly installments of one dollar, the interest is seventy-five cents. At the time this article was written the association had assets of eighty-one thousand dollars in gilt-edged securities and good loans.

The association not only encourages its members to save, but, by an arrangement with a building and loan association, assists them to get homes. Operators who never knew what the word thrift meant now have bank accounts and

are living in their own houses.

Mr. Reynolds, however, who meanwhile had risen to be general manager of the company, was not content with the good the association was doing. In sponsoring the affairs of the employees he came on another evil. He found that many of the men were buying merchandise on the installment plan, which is always costly. Stores that sold employees clothes on weekly payments were also lending them money and covering it up on the books as goods bought. Every operator must furnish his own typewriter and most of them were renting them on terms that were exorbitant.

So Mr. Reynolds made an arrangement by which the investment association would provide its members and other employees with what they needed at cash prices, to be returned to the organization in easy installments and with no interest charge. The association's profit is in the liberal cash discount it gets from the stores. The method of operation is very simple. If a Postal employee wants to buy a suit of clothes for twenty-five dollars he goes to the secretary of the association and gets a purchase card, which contains this sentence: "This card will introduce Mr. Blank, who will select goods to an amount not excepting twenty-five dollars; same to be charged to the account of the Mutual Investment Association.

### The Hurry · Up Touch Club

THE buyer does not have to show this card until the time comes to pay for the suit. Thus he gets the very lowest cash price. He can pay back the twenty-five dollars in installments of one dollar a week. This purchase-card system has extended to scores of stores in New York and Brooklyn, until the employee can supply practically all his personal needs and get a typewriter on a spot-cash price basis. It is just one more form of saving.

This plan of saving and lending money has proved so successful in New York that Mutual Investment Associations have been started by Postal employees in Chi-

cago, Philadelphia, Washington and St. Louis. In the Chicago office, for instance, it has wrought wonders. On account of the many changes in operators, due in the main to the inroads of the loan sharks, it was jocularly called the Tramp Office. Now it is one of the steadiest in the country. The result to the company has been a more efficient and permanent group of employees. To quote Mr. Reynolds: "When you build men economically you build them morally."

No less interesting is the economic emancipation of one group of printers, who have pointed the way to freedom for all their coworkers.

Before the introduction of the typesetting machine the printer was known as the Tramp of the Trades. One reason for his shiftlessness was the fact that he seldom saved any money and borrowed incessantly. The Hurry-up Touch Club was a feature of most composing rooms. More than one thrifty foreman did sharking on his own account; men who would not pay his price lost their jobs. And so it went.

The Boston Globe in the old days was no better and no worse in this respect than any other large printshop. There was the usual number of men who were constantly broke or borrowing at exorbitant rates.

In 1892 one of the oldest employees, with a saving sense, took out some shares in a

cooperative bank. He got his first insight into humane lending. As he looked about and saw his colleagues struggling with debt and topheavy interest, he conceived the idea of starting a fund to which they could contribute and then borrow their own money. Thus the Globe Savings Fund and Loan Association came into being. It is one of the most successful in the country.

account reaches three hundred fifty dollars, the maximum sum on which a dividend is paid to one depositor. started, the member must keep up his saving. He cannot advance or reduce the specific amount he promises to contribute. If he fails to deposit in any week he is fined two cents for every dollar of his deposit.

provision has kept more than one man from extravagance.

The executive officers devote considerable attention to members who, through sickness or other misfortune, become financially embarrassed. The man's debts are usually pooled and the association pays them off on weekly installments. Thus the debtor escapes worry and his earnings contribute to the wiping out of his obligations all the time.

The whole effect of the Globe plan has been to establish thrift, create order and stability, and make the working force a cheerful and contented unit. The simple key has been systematic saving.

We now come to a process of mutual saving and lending that seems destined to create a fresh financial epoch for the American wage-earner. It lies in the so-called Credit Union, which is nothing more than the seasoned cooperative bank that has been the economic refuge of the small borrower—in both town and country—in Europe.

First, let us see what a Credit Union is. Summed up, it is an association of persons tilling the land in the same vicinity, working in the same establishment, or laboring for a common end, whose purpose is to provide a loan fund by small and systematic saving. This saving is accomplished by the purchase of shares of stock on the installment plan.

A fundamental rule is that each member is entitled to one vote, regardless of the number of shares he owns. Loans are made entirely on character and the affairs of the organization are conducted by members. Thus a purely democratic administration is achieved and a high moral standard established.

The Credit Union came to the United States by way of Canada, where many are in operation in the Province of Quebec. Massachusetts was the first of our states to enact a law authorizing them.

However, even before the Bay State took up the plan as a statute, the various cooperative agricultural commonwealths formed under the auspices of the Jewish Agricultural and Industrial Aid Society, in Connecticut, New Jersey and New York, had proved the efficacy of the

Only employees of the Globe are eligible. A member may deposit from one dollar to five dollars weekly until his This prevents a monopoly by a few members. Once

Loans ranging from one to three thousand dollars are made to members. The rates range from one per cent a week on small loans to an average of five per cent a year on large ones. For the small loans character is the only collateral required. On loans from fifty dollars up a married man must have the indorsement of his wife on the note, so that she may be acquainted with his bank relations. This On the very largest loans life-insurance policies are accepted as security. So admirably is this fund conducted that the average return to the depositors has been as high as twelve per cent. It seldom falls under eleven. The dividends are paid pro rata to all depositors, and thus the borrower gets a share of the earnings.

Last year a Credit-Union statute was written into the laws of the state of New York. Its principal features are: loans at the rate of not more than one per cent a mouth; exemption from attachment or taxation of members' savings up to six hundred dollars; equal distribution of

opened up a whole new and picturesque vista of usefulness. In the city of New York the firm of Bing & Bing operates extensively in real estate. An allied company called the Speedwell Construction Company erects and operates many large apartment houses. Here was a great variety of labor under one control.

The head of the firm, Mr. Alexander Bing, who has been a student of thrift systems, desired some plan by which he could make his employees save, thus becoming more

"These people will not go to a savings bank, which is only open at stated hours. We will bring the bank to them." He pointed out the merits of the new Credit-Union Law

to his employees and under his direction they formed the Speedwell Credit Union. Any employee and—what is new and interesting-any member of an employee's family may become a member by subscribing for shares the par value of which is one dollar. Installments of twenty-five cents a week are accepted. A member may pay for half a dozen

twenty-five cents a week and receive interest just

as in a savings bank.

Up to this point the conduct of the organization is fairly conventional; but when you investigate the way it literally brings the bank to the people you uncover an interesting service. This savings system is, of course, easily accessible to the office force. How does it reach the scores who are scattered in apartment houses all over New York?

The case of the elevator men will illustrate. They are paid off in cash every Saturday night. If these employees, however eager they might be to save, had to wait until Monday to deposit their money they might easily succumb to myrial temptations to spend it; so they are provided with deposit slips, and as soon as they get their pay envelopes they can take out their weekly saving and hand it over to the superintendent of the building, who is authorized to receive it and who gives them a receipt.

Each employee has a passbook and at regular intervals the deposits are written in. This same system applies to the laborers working on new buildings for the firm. On payday they give their savings to the foremen, who issue receipts and then turn the deposits over to the treasurer of the union. This experience shows conclusively that when you make the medium for saving accessible, men will save. (Continued on Page 33)

The Vacation Savings Fund Has Grown Into a Nation-Wide Protest Avainst Useless Christmas Giving

system. These unions are unincorporated and voluntary, and based entirely on character. The Credit-Union idea lends itself admirably to the

ambition of workers who want to organize for thrift. First to take advantage of the Massachusetts law were the employees of the American Express Company, whose union differs slightly from the or all plan in that it is controlled and officered by off the company chief purpose is to encourage the strength of the company bought on weekly installments of the styles.

scheme and built up a chain of helpful mutual small-loss

agencies that are really the forerunners of a rural credit

they pay interest at the rate of four per containe One excellent reason for the existence of the Union-which applies everywhere-was given me by an officer of the American Express Company Employees' Union, who said:

"Our union has inspired men to save because it makes the medium for saving accessible. Many men do not become savers because they are too lazy to go to the trouble of finding a bank. They won't stand in line awaiting the pleasure of a dilatory clerk. Such procedure takes up much of their lunch hour and often some of the company's time. Furthermore, they will not go to a bank with a deposit of a quarter or half dollar; but they are willing to save this small sum if a clerk stands ready to receive it the moment it is paid to them as a wage."

### Making Banking Easy

SO SATISFACTORY have been the operations of the Credit Unions in Massachusetts that a group of publicspirited business men in Boston have organized the Massachusetts Credit Union, in order to extend the system throughout the state. This union will not enter the loaning business, but will organize new unions, strengthen old ones, distribute literature about the idea, and be prepared to furnish local unions with funds when they fall short.

profits; one vote for each member, no matter what his stockholdings are, and supervision by the State Banking Department. The very first firm to incorporate under its provisions

efficient to themselves and to him. So he said:

shares at the same time. Members need not purchase shares to become savers. They can begin with

### HIS OWN STUF $B_{\mathtt{Y}}$ Charles E.Van Loan

T'S a mighty fine thing for a man to know when he's had enough, but there's a piece of knowledge which beats it all hollow. That's for him to know when his friends have had too much.

Thisisno temperancesermon, so you needn't quit reading. it's the story of a baseball player who thought he was tunny and didn't know when to quit the rough-and-tumble comedy that some idiot has mmed practical joking.

Before I tell you what happened to Tom O'Connor because he didn't know when to quit being funny, I want to put myself on record. I don't believe that there is any such a thing as a practical joke. As I unierstand the word, a thing in order to be practical must have some sense to it and be of some use to people. To play it safe I looked up the dictionary definition of the word to see if I could stretch it far enough to cover the sort of stuff that Tom O'Connor pulled on us

at the training camp last season. I couldn't make it asswer. Here's what I found in the dictionary:

"PRACTICAL—pertaining to or governed by actual use or experience, as contrasted with ideals, speculations and

That's what the big book says it means, and I string with the definition whether I understand all of it or not. Show me anything in there that applies to sawing out half the slats in a man's bed or mixing up all the shoes in a Pulman car at three o'clock in the morning!

You can call it practical joking if you want to, but it won't go with me. I claim there's nothing practical about it, or sensible either. Practical joking is just another name for plain, ordinary foolishness with a mean streak in it. The main thing about a practical joke is that somebody always gets hurt—usually an innocent party.

I'm strong for a good clever joke. I get as much fun out of one as anybody and I can laugh when the joke is on me;

but when it comes to the rough stuff I pass. Take 'em as a whole, baseball players are a jolly bunch.

They've got youth and health and vitality. They call us the Old Guard, but we're really nothing but a lot of young fellows and we have the reputation of being the liveliest outfit in the league; but even so, we got sick of the sort of stunts that Tom O'Connor handed us at the training camp and in the early part of the season.

We didn't have much of a line on Tom when he joined the club. He'd been in the hig league only part of the seaon previously, and he came to the Old Guard as the result of a winter trade. We needed a first-baseman the worst way, and Uncle Billy—he's our manager—gave up a pitcher, an infielder and an outfielder to get Tom O'Connor away from the Blues. The newspapers made an awful roar about that trade, and so did the fans. They said Uncle Billy was out of his head and was trying to wreck the team by letting three good men go. The noise they made wasn't whisper to the howl that went up from the other manager when the time came to get some work out of those three good men.

When it comes to a swap, Uncle Billy is a tougher proposition than a Connecticut Yank, and a Connecticut Yank can take an Armenian pawnbroker's false teeth way from him and give him Brazil nuts in exchange for em. Uncle Billy always hands the other managers three x four men for one. He's so liberal and open-hearted that bey feel sorry for him, and they keep right on feeling erry after they see what he's slipped them in the trade.

In this case the pitcher had a strained ligament that even he bone-setter couldn't fix, the infielder's eyes were giving at on him and the outfielder had a permanent charleynose in his left leg. As big-league ballplayers they were all brough, but as benchwarmers and salary-grabbers they vere immense.

Even if they had been in condition I think that Tom Connor would have been worth the three, for he is a Tacking good first-baseman, and now that he has settled lown to business and quit being the team comedian he'll be wen better than he was last year.

He joined us at the spring training camp in Louisiana. We've been going to the same place for years. It's a sort of

health resort with rotten water to drink and baths; and the hotel is always full of broken-down old men with whiskers and fat wives to look after 'em.

O'Connor turned up in the main dining room the first night with a big box of marshmallows in his hand. He is a tall, handsome chap with a tremendous head of hair and a smile that sort of warms you to him even after you know him. He stopped at every table and invited folks to help themselves.

"These are very choice, madam; something new in confectionery. Prepared by a friend of mine. Won't you try one?"

That was his spiel, but the smile and the little twinkle of the eye that went with it was what did the business. The fat ladies didn't stop to think that it was rather unusual for a strange young man to be offering them candy. They smiled back at Tom and helped themselves to the marshmallows, and some of them insisted that their husbands should try one too.

Tom was a smooth, rapid worker and he kept moving, not stopping long at a table and never looking back. Perhaps that was just as well, for the marshmallow had been dipped in powdered quinine instead of powdered sugar. Quinine ain't so bad when you expect it, but when your mouth is all fixed for marshmallow the disappointment and the quinine together make a strong combination. The fat ladies went out of the dining room on the run, choking into their handkerchiefs, and the old men sent C. Q. D.s for the proprietor. He came in and Tom met him at the door and handed him one of the marshmallows, and then of course everybody laughed.

I admit that we might have begun discouraging his comedy right there. We would have done it if he'd been a minor-leaguer trying to break in, but he wasn't. He'd been five months with the Blues—a bad ball club, but still in the big league. That made him one of us. We knew and he knew that he was going to be our first-baseman and he settled down with as much assurance as if he had been with us ten years instead of ten hours.

He saw right away that we were going to be a good audience for him. Not all of his stuff was on the roughhouse order. Some of us were not long in finding that out.

A couple of nights afterward we were having a nice, quiet little game of draw poker in my room on the third floor of the hotel. Any poker game running after ten o'clock in the same hotel with Uncle Billy has got to be a quiet one-or it's a case of a fifty-dollar fine all round.

Uncle Billy is a great baseball manager but he's awfully narrow-gauge on certain subjects, and one of 'em is the American indoor national pastime of draw poker. He doesn't like the game for seven hundred different reasons, but mainly because he says it sets a bad example to the kid players, who get to gambling among themselves and lose more than they can afford. That's true of course, but if a kid is born with the gambling bug in his system you can't fine it out of him, not even at fifty a smash. One season Uncle Billy tried to shut down on poker altogether, and there was more poker played that year than ever before. Then he took off the lid, and now we're allowed to play twenty-five-cent limit until ten o'clock at night, Think of it! Why, if a man had all the luck in the world and filled everything he drew to he might win as much as four dollars!

I'm not saying that the rule isn't a good one for recruits and kids, but it comes hard on the veterans, especially at the training camp where there isn't a thing to do after dark. We used to sneak a real game once in a while with a blanket over the transom and paper stuffed in the cracks and the keyhole. We had to do that because we couldn't trust Uncle Billy. He was just underhanded enough to listen outside of doors, and to make it worse the poor old coot has insomnia and we never know when he's asleep and when he's not.

Well, this poker party in my room was the real thing: Pat Dunphy, Holliday, Satterfield, Meadows, Daly and myself all deep-sea pirates. It was table-stakes of course, every man declaring fifty or a hundred behind his stack in case he should pick up something heavy and want action on it.

It got to be about two in the morning, and Dunphy was yawning his head off and looking at his watch every few minutes. He was two hundred ahead. The rest of us were up and down, seesawing along and waiting for a set of fours or something. The elevators had quit running long ago and there wasn't a sound in the hotel anywhere. What talking we did was in whispers because we never knew when Uncle Billy might take it into his head to go for a walk. I've known him to bust up a poker game at four in the morning.

Dunphy was just scooping in another nice pot-like a fool I played my pat straight against his one-card drawwhen all of a sudden a board creaked in the hall outside, and then came a dry, raspy little cough that we knew

mighty well.
"Holy Moses!" whispered Dunphy. "Uncle Billy! Don't move!"

Then somebody pounded on the door. We were sure there wasn't any light showing through the cracks, so we sat quiet a few seconds trying to think what to do. The pounding began again, louder than before—bangety-bang-bang!

Well, our only chance was to keep Uncle Billy out of the room, so I motioned to the boys and they picked up their money and chips and tiptoed into the alcove in the corner. I whipped off my shirt, kicked off my pants, put on a bathrobe, tousled up my hair to make it look as if I'd been asleep a week, switched out the light and opened the door a few inches. Then I stepped out into the hall.

It was empty from end to end. There wasn't a soul in sight.

We had a long discussion about it. We all agreed that it was Uncle Billy's cough we heard; but why had he hammered on the door so hard and then gone away? That wasn't like him. Had he been round to the other rooms checking up on us? Was he so sure of us that he didn't need the actual evidence? Perhaps he was going to switch his system and begin fining people fifty dollars apiece on circumstantial evidence. It began to have all the earmarks of an expensive evening for the six of us.

Did anybody else know about this party?" I asked. "O'Connor knew," Holliday spoke up. "I asked him if he didn't want to play a little poker. He said he couldn't take a chance of getting in Dutch with the boss so soon. That was his excuse, but maybe he was a little light in the vest pocket. He already knew about the ten o'clock rule and the fifty-dollar fine."

"Did he know we were going to play in this room?" Sure, but I don't see where you figure him. wouldn't have tipped it off to anybody. Probably Uncle Billy couldn't sleep and was prowling round. You can't get away from that cough. And he's got us dead to rights or he wouldn't have gone away. I'll bet he's had a passkey and been in every one of our rooms. We'll hear from him in the morning."

It did look that way. We settled up and the boys slipped out one at a time, carrying their shoes in their hands. I don't know about the rest of 'em, but I didn't sleep much. The fifty-dollar fine didn't bother me, but Uncle Billy has got a way of throwing in a roast along with it.

I dreaded to go down to breakfast in the morning. Uncle Billy usually has a table with his wife and kids close to the door, so he can give us the once-over as we come in.

"'Morning, Bob!" says Uncle Billy, smiling over his hotcakes. "How do you feel this morning?"

"Finer'n split silk!" says I, and went on over to the main table with the gang. That started me to wondering, because if Uncle Billy had anything on me he wouldn't have smiled. The best I could have expected was a black look and a grunt. Uncle Billy was a poor hand at hiding his feelings. If he was peeved with you it showed in everything he did. I didn't know what to make of that smile. and that's what had me worried.

Dunphy and Holliday and the others

were puzzled too, and the suspense was eating us up. We sat there, looking silly and fooling with our knives and forks, every little while stealing a peek at each other. We couldn't figure it at all. Tom O'Connor was at one end of the table eating like a longshoreman and saying nothing. Dunphy stood the strain as long as he could and then he cracked.

"Did Uncle Billy call on any of you fellows last night?" said he.

'No! Was he sleep-walking again, the old rascal?"

"Was anything doing?"

"He never came near the fourth floor. If he had he'd 'a' busted up a hot little crap game.'

"What was he looking for-poker?"

None of the boys had seen him. It was plain that if Uncle Billy had been night-prowling we were the only ones he had bothered. Peachy Parsons spoke up.

"Did you see him, Pat?" says he.

"Why, no," says Dunphy. "I-I heard him."

For a few seconds there was dead silence. Then Tom O'Connor shoved his chair back, stood up, looked all round the table with a queer grin on his face and coughed once—that same dry, raspy little cough. It sounded so much like Uncle Billy that we all jumped.

O'Connor didn't wait for the laugh. He walked out of the dining room and left us looking at each other with our mouths open.

KNEW a busher once who tore off a home run the first I KNEW a busner once who tore on a mount would have time he came to bat in the big league, and it would have been a lot better for him if he had struck out. The fans got to calling him Home-Run Slattery and he got to thinking he was all of that. He wouldn't have a base on balls as a gift and he wouldn't bunt. He wanted to knock the cover off every ball he saw. Uncle Billy shipped him back to Texas in June, and he's there yet. In a way O'Connor reminded me of that busher.

He had made a great start as a comedian. The stuff that he put over on the poker players was clever and legitimate; there was real fun in it. His reputation as a two-handed kidder was established then and there, and he might have rested on it until he thought of something else as good. He might have; but we laughed at him, and then of course he wanted to put the next one over the fence too.

I can see now, looking back at it, that we were partly responsible. You know how it is with a comedian-the more you laugh at him, the worse he gets. Pretty soon he wants laughs all the time, and if they're not written into his part he tries to make 'em up as he goes along. If he hasn't got any new, clever ideas he pulls old stuff or rough stuff-in other words he gets to be a slapstick comedian. A good hiss or two or a few rotten eggs at the right time would teach him to stay with legitimate work.

It didn't take Tom long to run out of clever comedy and get down to the rough stuff. Rough stuff is the backbone of practical joking. Things began to happen round the training camp. We couldn't actually prove 'em on Tom at the time—and we haven't proved 'em on him yet—but the circumstantial evidence is all against him. He wouldn't have a chance with a jury of his peers-whatever they are.

Tom began easy and worked up his speed by degrees. His first stunts were mild ones, such as leaving a lot of bogus calls with the night clerk and getting a lot of people rung out of bed at four in the morning; but of course that wasn't funny enough to suit him.

There was a girl from Memphis stopping at the hotel, and Joe Holliday the pitcher thought pretty well of her.

Al Found the Inake, Which Relieved His Mind a Whole Lot

He borrowed an automobile one Sunday to take her for a ride. After they were about twenty miles from town the engine sneezed a few times and laid down cold.

"Don't worry," says Holliday, "I know all about automobiles. I'll have this bird flying again in a minute."

"It sounded to me as if you'd run out of gas," said the girl, who knew something about cars herself.

"Impossible!" says Holliday. "I had the task filled this morning and you can see there's no leak."

"Well, I don't know all about automobiles," says the girl, "but you'd better take a look in that tank."

That made Holliday a little sore, because he'd bought twenty gallons of gasoline and paid for it. They stayed there all day and Holliday messed round in the bowels of the beast and got full of oil and grease and dirt. I'll bet he stored up enough profanity inside of him to last for the rest of his natural life. And all the time the girl kept fussing about the gasoline tank. Finally, after Joe had done everything else that he could think of, he unscrewed the cap and the gas tank was dry as a bone.

Somebody with a rare sense of humor had drawn off about seventeen gallons of gasoline.

"I told you so!" said the girl—which is just about what a girl would say under the circumstances.

They got back to the hotel late that night. Love's young dream had run out with the gasoline, and from what I could gather they must have quarreled all the way home. Joe went down and got into a fight with the man at the garage and was hit over the head with a monkey-wrench. From now on you'll notice that Tom's comedy was mostly. physical and people were getting hurt every time.

Joe's troubles lasted O'Connor for a couple of days and then he hired a darky boy to get him a water snake. I think he wrote it in the boy's contract that the snake had to be harmless or there was nothing doing. He put the snake, a whopping big striped one, between the sheets in Al Jorgenson's bed, which is my notion of no place in the world to put a snake. Jorgenson is our club secretary—a middle-aged fellow who never has much to say and attends strictly to business.

Al rolled on to the snake in the dark, but it seems he knew what it was right away. He wrecked half the furniture, tore the door off the hinges and came fluttering down into the lobby, yelling murder at every jump. It was just his luck that the old ladies were all present. They were

pulling off a whist tournament that night, but they don't know yet who won. Al practically spoiled

the whole evening for 'em.

The charitable way to look at it is that Tom didn't know that Jorgenson was hitting the booze pretty hard and kept a quart bottle in his room. If he had known that, maybe he would have wished the snake on to a teetotaler, like Uncle Billy. To make it a little more abundant Tom slipped in and copped the snake while Al was doing his shirt-tail specialty, and when we got him back to the room there wasn't any snake there. Tom circulated round among the old ladies and told 'em not to be alarmed in the least because maybe it wasn't a real snake that Jorgenson saw.

But Tom had his good points after all. The next morning Al found the snake tied to his doorknob, which relieved his mind a whole lot; but he was so mortified and ashamed that he had all his meals in his room after that and used to come and go by the kitchen entrance.

Tom's next stunt—which he didn't make any secret of-put four of the kid recruits out of business. He framed up a midnight hunt for killyloo birds. It's the old snipe trick. I didn't believe that there were four people left in the world who would fall for that stunt. It was invented by one of old man Pharaoh's boys in the days of the Nile Valley League. It is hard to find one man in a whole town who will fall for it, because it has been so well advertised, but Tom grabbed four in a bunch. It just goes to show how much solid ivory a baseball scout can dig up when his traveling expenses are paid.

The idea is very simple. First you catch a sucker and take him out in the woods at night. You give him a sack and a candle. He's to keep the candle lighted and hold the mouth of the sack open so that you can drive the killyloo birds into it. The main point is to make it perfectly clear to the sucker that a killyloo bird when waked out of a sound sleep always walks straight to the nearest light to get his feet warm. After the sucker understands that thoroughly you can leave him and go home to bed. He sits there with his candle, fighting mosquitoes and wondering what has become of you and why the killyloo birds don't show up.

Tom staged his production in fine style. He rented a livery rig and drove those poor kids eleven miles into a swamp. If you have ever seen a Louisiana swamp you can begin laughing now. He got 'em planted so far apart that they couldn't do much talking, explained all about the peculiar habits of the sleepy killyloos, saw that ther candles were burning nicely and then went away to be in the game. He was back at the hotel by elev

About midnight the boys held a conference that maybe it was a bad time of the year for hills as a but that the sucker crop hadn't been cut down any. 1 ac. started back for the hotel on foot and got lost in mud dear up to their necks. They stayed in the swamp all night and it's a wonder that they got out alive. And that wasn't all: Uncle Billy listened to their tales of woe and said if they didn't have any more sense than that they wouldn't make ballplayers, so he sent 'em home.

The night before we were to leave for the North therewas little informal dance at the hotel and the town folks came in to meet the ballplayers and learn the tango and the

It was a perfectly bully party and everything went along fine until the punch was brought in. We'd decided not to have any liquor in it on account of the strong prohibition sentiment in the community, so we had a kind of a fruit lemonade with grape juice in it.

Well, those fat old ladies crowded round the bowl as it they were perishing of thirst. They took one swig of the punch and went sailing for the elevators like full-rigged ships in a gale of wind.

Of course I thought I knew what was wrong. It's always considered quite a joke to slip something into the punch I'd been dancing with a swell little girl and as we started for the punch-bowl I said:

"You won't mind if this punch has got a wee bit of : kick in it, will you?"

"Not in the least," said she. "Father always puts : little brandy in ours."

So that was all right and I ladled her out a sample. would have got mine at the same time, but an old lab behind me started to choke and I turned round to se what was the matter. When I turned back to the gir again there were tears in her eyes and she was sputtering about rowdy ballplayers. She said that she had a brothe at college who could lick all the big-leaguers in the world and she hoped he'd begin on me. Then she went out o the room with her nose in the air.

I was terribly upset about it because I couldn't thin what I had done that was wrong, and just because I ha the glass in my hand I began drinking the punch. Then went out and climbed a telegraph pole and yelled for th

"How Dare You, Jir! Help! Police! Help!"

fire department. Talk about going crazy with the heat. It can be done, believe me! I felt like a general-alarm fire

for the rest of the evening.

There was an awful fuss about that, and some of us held n council of war. We decided to put it up to O'Connor. He stood pat in a very dignified way and said that he must positively refuse to take the blame for anything unless there was proof that he did it. About that time the cook found two empty tabasco-sauce bottles under the kitchen sink. That didn't prove anything. We already knew what the stuff was and that too much of it had been used. One bottle would have been a great plenty.

That was the situation when we started North. Everybody felt that it was dangerous to be safe with a physical humorist like O'Connor on the payroll. We hoped that

he'd quit playing horse and begin to play ball.

We went so far as to hint that the next rough stuff he put over on the bunch would bring him before the Kangaroo Court and it wouldn't make any difference whether we had any evidence or not. The Kangaroo Court is the last word in physical humor. It's even rougher than taking the Imperial Callithumpian Degree in the Order of the Ornery and Worthless Men of the World.

This had some effect on Tom and we really thought that he had reformed, but we should have known that there is only one cure for a comedian, and that is to hand his own stuff right back to him.

THE last straw fell on us in the home town. Jorgenson came into the dressing room one afternoon with a hand-

ful of big square envelopes. There was one for every man on the

I opened mine and there was a stiff sheet of cardboard inside of it printed in script. I didn't save mine, but it read something like

Mr. Augustus P. Stringer requests the honor of your company at dinner, at the Algonquin Club, 643 Avenue, at seven-thirty on the evening of May the Twelfth, Nineteen Hundred and

Well, there was quite a buzz of excitement over it.

"Who is this Mr. Stringer?" asks Uncle Billy. "Any of you boys know him?"

Nobody seemed to, but that wasn't remarkable. All sorts of people give dinners to ballplayers during the playing season. I've seen some winters when a good feed would come in handy, but a ballplayer is only strong with the

public between April and October. The rest of the year nobody cares very much whether he eats or not.

"He's probably some young sport that wants to show us a good time and brag about what a whale of a ballplayer he

used to be in college," says Pat Dunphy.
"You're wrong!" says Peachy Parsons. "Ten to one you're wrong! I never saw this Mr. Stringer, but I'll bet I've got him pegged to a whisper. In the first place I know about this Algonquin Club. It's the oldest and the most exclusive club in the city. Nothing but rich men belong to it. You can go by there any night and see 'em sitting in the windows, holding their stomachs in their laps. Now this Mr. Stringer is probably a nice old man with a sneaking liking for baseball. He wants to entertain us, but at the same time he's afraid that we're a lot of lowbrows and that we'll show him up before the other club members."

What makes you think that?" asks Dunphy.

"Simple enough. He's got an idea that we don't know what to wear to a banquet, so he tips us off. He puts 'formal' down in one corner.

"What does that mean?"

"It's not usually put on an invitation. It means the old thirteen-and-the-odd. Claw-hammer, white tie, silk hat and all the rest of it."

"How about a 'tux'?"

"Absolutely barred. A tuxedo isn't formal."

"That settles it!" says Dunphy. "I don't go. If this bird don't want to see me in my street clothes he don't need to see me at all. I never bought one of those beetle-backed coats and I never will!"

"Come now," says Uncle Billy, "don't get excited. I know a place where you can rent an entire outfit for two bucks, shoes and all."

"Oh, well," says Dunphy, "in that case -

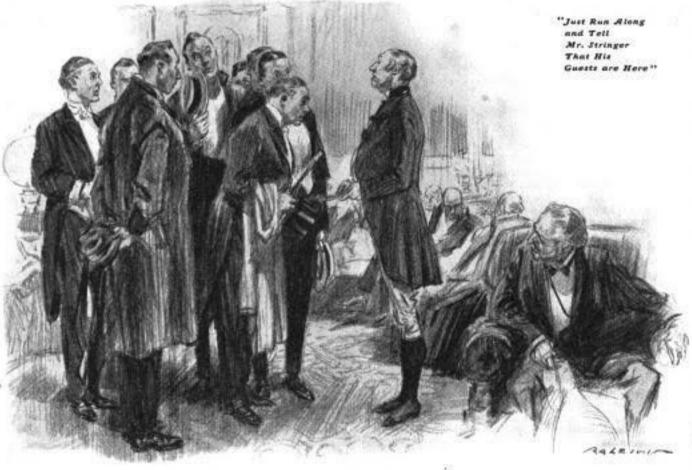

The more we talked about it, the stronger we were taken with the idea. It would be something to say that we'd had dinner at the Algonquin Club. We warned Tom O'Connor that none of his rough comedy would go. He got awfully sore about it. One word led to another and finally he said if we felt that way about it he wouldn't go. We tried to persuade him that it wasn't quite the thing to turn down an invitation, but he wouldn't listen.

You never saw such a hustling round or such a run on the gents' furnishing goods. Everybody was buying white shirts, white ties and silk socks. If we were going to do it at all we felt that it might as well be done right, and of course we wanted to show Mr. Stringer that we knew what was what. Those who didn't own evening clothes hired 'em for the occasion, accordion hats and all. We met a couple of blocks away from the club and marched over in a body like a lot of honorary pall-bearers.

We got by the outer door all right and into the main room where some old gentlemen were sitting round, smoking cigars and reading the newspapers. They seemed kind of annoyed about something and looked at us as if they took us for burglars in disguise, which they probably did. Up comes a flunky in uniform, knee-breeches and muttonchop whiskers. Uncle Billy did the talking for the bunch.

Tell Mr. Stringer that we're here," says he.

"I-beg your pardon?" says the flunky.

"You don't need to do that," says Uncle Billy. "Just run along and tell Mr. Stringer that his guests are here."

The flunky seemed puzzled for a minute, and then he almost smiled.

"Ah!" says he. "The—Democratic Club is on the opposite corner, sir. Possibly there has been some mistake.

Uncle Billy began to get sore. He flashed his invitation and waved it under the flunky's nose

"It says here the Algonquin Club. You don't look it, but maybe you can read."

"Oh, yes, sir," says the flunky. He examined the invitation carefully and then he shook his head. "Very, very sorry, sir," says he, "but there is some mistake."

"How can there be any mistake?" roars Uncle Billy. Where is Mr. Stringer?"

"That is what I do not know, sir," says the flunky. "We have no such member, sir.

Well, that was a knock-out. Even Uncle Billy didn't know what to say to that. The rest of us stood round on one foot and then on the other like a lot of clothing-store dummies. One of the old gentlemen motioned to the flunky, who left us, but not without looking back every few seconds as if he expected us to start something.

"James," pipes up the old gentleman, "perhaps they have been drinking. Have you telephoned for the police?"

"They don't seem to be violent yet, sir," says James. Then he came back to us and explained again that he was very, very sorry, but there must be some mistake. No Mr. Stringer was known at the Algonquin Club.

"This way out, gentlemen," says James.

I think I was the first one that tumbled to it. We were going down the steps when it struck me like a thousand of brick.

"Stringer!" says I. "We've been strung all right. Tom O'Connor has gone back to the legitimate!"

"No wonder he didn't want to come!" says everybody

We stood on the corner under the lamppost and held an indignation meeting, the old gentlemen looking down at us from the windows as if they couldn't quite make up their minds whether we were dangerous or not. We hadn't decided what we ought to do with Tom when the reporters began to arrive. That cinched it. Every paper had been tipped off by telephone that there was a good josh story at the Algonquin Club, and the funny men had been turned loose on it. Uncle Billy grabbed me by the arm.

"Tip the wink to Dunphy and Parsons and let's get out of this," says he. "I don't often dude myself up and it seems a shame to waste it. We will have dinner at the Casino and frame up a come-back on O'Connor."

I've always said that, in spite of his queer notions about certain things, Uncle Billy is a regular human being. The dinner that he bought us that night proved it, and the idea that he got, along with the coffee, made it even stronger.

"Do you boys know any actresses?" said he. "I mean any that are working in town now?"

"I know Hazel Harrington," says Parsons.

"Ah-hah," says Uncle Billy. "That's the pretty one in Paris Up to Date, eh?" Why, the old rascal even had a line on the musical comedy stars! "Is she a good fellow?"

"Best in the world!" says Parsons. "And a strong baseball fan."

"Fine!" says Uncle Billy and he snapped his fingers at a waiter. "Pencil and paper and messenger boy-quick! Now then, Peachy, write this lady a note and say that we will be highly honored if she will join us here after the show to discuss a matter of grave importance to the Old Guard. Say that you will call in a taxi to get her."

When the note had gone Uncle Billy lighted a fresh cigar and chuckled to himself.

"If she'll go through with it," says he, "I'll guarantee to knock all the funny business out of Tom O'Connor for the rest of his natural life!"

Miss Harrington turned up about eleventhirty, even prettier off the stage than on it, which is going some. She said that she had sidestepped a date with a Pittsburgh millionaire because we were real

people. That was a promising start. She ordered a light supper of creamed lobster and champagne and then Uncle

Billy began to talk.

He told her that as a manager he was in a bad fix. He said he had a new man on the payroll who was promoting civil war. He explained that unless he was able to tame this fellow the team would be crippled. Miss Harrington said that would be a pity, for she had bet on us to win the pennant. She wanted to know what was the matter. Uncle Billy told her all about Tom O'Connor and his practical jokes. Miss Harrington said it would be a good thing to give him a dose of his own medicine. It was like Uncle Billy to let her think that the idea belonged to her.

'Suppose," says Uncle Billy, "you should get a note from him, asking you to meet him at the stage door some night next week. For the sake of the ball club, would you say

"But-what would happen after that?" asked Miss Harrington. "I don't know the man at all and -

Uncle Billy told her what would happen after that, and as it dawned on the rest of us we nearly rolled out of our chairs. Miss Harrington laughed too.

"It would be terribly funny," said she, "and I suppose it would serve him right; but it might get into the papers and -

Uncle Billy shook his head.

"My dear young lady," says he, "the only publicity that you get in this town is the publicity that you go after. I am well and favorably known to the police. A lot of 'em get

(Continued on Page 64)

### HEART G O L D

TAZEL went over to a little clothes closet and pretty deliberately took off her hat and the big fur coat that brought her weight up to one hundred and four pounds. She was in time, then, after all. The rube had not got away yet with all his mother's savings in his pocket; but the girl knew she must be careful. It would not do to make any mistakes in trying to dissuade Keziah from doing what her boy-with tears in his voice probably-had begged her to do. A wrongly chosen word might spoil everything.

She was still half buried in the shallow little cupboard, replacing her hatpins with minute accuracy in the holes they had come out of, when she heard the old lady getting up rather

creakingly from her rocker.

'I guess we may as well be goin' to bed-both of us," she said as Hazel faced round. "There's nothin' like a night's sleep for settlin' yer mind. And mine cert'nly needs settlin' after what I've

b'en through tonight."

They had lived together a year, with perhaps the nearest approach to intimacy that was possible to either of them. Both were reserved to an extraordinary degree—but here was where the difference came in: the girl-buffeted, cheated, tricked, grown out of all her illusions and most of her faiths before she was well into her teens-had cultivated and developed the blank, impenetrable reserve she wore before the world as a defensive armor. She could have understood that form of self-defense in the older woman.

The sight of the old lady, however, beaming trust and confidence and affection on her through her big iron-bowed spectacles—and yet carrying her troublesome problem to bed with her, all alone, without a word-seemed to the girl almost unendurably pathetic. It made her throat tighten and her eyes blur.

Keziah saw the brightness in the girl's green eyes, and the troubled, thoughtful look in her face gave way to her old benignant smile.

"Don't you fret about it, child," she said.
"Look here!" said Hazel. "Perhaps you're right about

a night's sleep; but in the morning, when he comes back and you talk things over with him, I want to sit in-see?"

"I don't see as it would harm any," said Keziah, "though there ain't a mite of need of it. The boy's made a mistake; but he'll understand better in the mornin' too."

This was a little puzzling; and Hazel was still frowning over the meaning of it when the old lady stopped halfway down the passage to her bedroom, hesitated like one in difficulty, and then said something more puzzling still:

"Mebbe—mebbe in the morning, if you was to dress fer goin' out-in your reg'lar street clothes-it'd help him to

get over his mistake."

Hazel wrestled with that remark for a while after she went to bed. Had she got any clew at all to its meaning she might have lain awake a long while over it; but, as she could make nothing of it whatever, she fell asleep presently.

The next thing she knew-somewhere along in the middle of the night-the doorbell was ringing; because, if your regular hours for sleep are from two to ten, half past seven A. M. is the middle of the night—just about.

Hazel slept on a couch in the sitting room, preferring it to the tiny little box, with a window in the light shaft, that offered the only alternative. Her reaction to the thrill of the bell was purely galvanic. She was not awake at all really when she sprang out of bed, groped for the sleeves of her heavily quilted dressing gown and poked her feet into her fleece-lined slippers. The bell was probably a mistake—or it might be a telegram or a special-delivery letter; and the more expeditiously she disposed of it the sooner she could be back in bed again, sleeping in the normal horizontal position. She would not have stopped for the dressing gown and slippers, except that the doctor had advised her to sleep with the windows wide open and the room was cold.

Consequently when she pulled the door open and found herself confronting Newton Strong it took her the better part of a minute to get her mental eyes open. During that time she simply stared at him. And he, with a difference, stared back at her.

To begin with, he did not know who she was at allthis pale, slim young girl with her black hair done up in two thick braids and her sleepy eyes staring at him. A woman always looks younger, or else a great deal older, than her age when you see her that way, with her hair hanging and in slippers without heels. And Hazel had not yet reached the age where the candor of such a revelation

By Henry Kitchell Webster

made her look old. And then, last night's make-up never entirely came off until she had washed her face in the morning, and the imperceptible residuum of it gave her skin the bloom of a child's. Indeed, it was for a child that Newton at first took her.

"My m-mother-" he stammered, "Mrs. Strong-asked me to come to breakfast."

"Breakfast!" said Hazel, shivering with the cold and with the effort to wake herself up. "Oh—yes. Come in." It was not until she had closed the door behind him that

he knew her.

"Why!" he exclaimed, "you ----"

She interrupted him with a quick little gesture toward his mother's bedroom up the hall.

"She's asleep yet," she whispered.

The rube took this admonition with a little gasp; then, still staring at her, he began to flush deeper and deeper. Presently he turned away and looked out the window.

"You might shut it," suggested Hazel. "The room will get warm quicker." And she padded across and closed the other one-the maneuver gave her time to think and she felt she needed it.

Obviously here was a providential chance to intervene once more in old Keziah's defense and finish up what she had begun the previous night in her dressing room—only, somehow, as she looked at the rube this morning in the light of day, as he stood there now at the window, painfully embarrassed, turning his soft widebrimmed hat round and round in his hands, the line she had taken with him last night seemed hardly applicable.

Perhaps it would not have seemed applicable last night if she had had time really to look at him then. She had been so hurried and so anxious that she had made her proposition rather to the image of Keziah's son she had been carrying in her mind for such a long time than to the man who had stood before her. He did not look like a regular grafter-no more really than did Keziah herself. There was a look of innocence about him that reminded her of Keziah-a look of competence too.

Perhaps he really had played in hard luck. Perhaps he had not understood fully what his mother's situation was or how hard she had to work for her thirty a week. The old lady-this was rather a startling thought-might have been as reticent about her affairs with him as she was with Hazel.

"Look here!" she said, moving a little away from the window and leaning back against the radiator. "The old

lady'll be coming out soon; but let's you and I have a little chin first-try to get things straight. That was pretty rough stuff [ handed you last night, but that wa-I thought she was getting the wors' I butted in without knowing what Le about. Things like that have been happen. Take off your overcoat and sit ... and deal it out to me straight."

He stammered out "Thank you!" and began unbuttoning his coat; but, after he had taken one brief and rather panicky look at her-a look that somehow included the disheveled bed she had so recently sprung out of — his eyes once more sought refuge in the blank front of the apartment house across the street.

And Hazel-Freddy Boldt would not have believed this, but it is true just the same-Hazel, after a puzzled frown that lasted half a second, began to blush. That last incomprehensible suggestion of Keziah's the night before recurred to her.

"I'll—I'll go and dress first," she said.

She turned up the blankets on the couch and drew the blue-and-red-striped cover, which disguised its functions by day, over it before she left the room. As she closed the door between them she apostrophized it, halfway between mirth and indignation.

"Now what," she inquired, "what do you know about that?"

A notion occurred to her that brought her color flaming up higher than ever. If he were shocked and embarrassed by her appearance this morning in a heavily quilted blue-silk dressing gown which, for warmth, closed tightly under her chin and reached clear to the floor, what must he have thought of her last night?

The rube himself, meanwhile, on his side of the door, made no remarks, but the shock to a number of his preconceived ideas went a good deal deeper. The first of these shocks had come with his identification of the pale, slim young girl in the dressing gown with the painted baggage who had abducted him the night before.

Paint on a face had always represented to him simply the black flag of feminine piracy, flaunted shamelessly from the mast in order that all might understand and that no mistakes might be made. Also, it was worn, he supposed. to conceal the ravages of age and wickedness. Under the paint, which gave that wicked adventuress whatever charms she had, he had assumed a perfect hag; but the vision in the blue dressing gown had looked to Newton-I am giving away a secret, but you may as well know it now as later-like an angel.

He was one of those simple persons-certainly with regard to women-who make the world simple. The celebrated little girl, with the curl in the middle of her forehead, is to people of this sort the prototype of all women-If they are good at all they are very, very good, and if they are bad their horridness is simply unspeakable and unspoken of.

Clearly Hazel, with that childlike look of innocence on her and that unmistakably authentic concern for his mother's welfare, was not the vampire he had mistaken her for; and if a girl as pretty as Hazel was not a vampire, then an angel was all there was left for her to be.

On the other hand, though, she was certainly an actressan actress who played the part of a grossly mercenary adventuress, who smoked cigarettes and sat on a table and crossed her legs and wore clothes that

The thought of those clothes he had seen on her person and littered about her dressing room gave him a twinge of misgiving that hurt horribly.

The other side of the door Hazel was dressing as fast as she could and thinking as fast as she dressed. She was a pretty wise young lady; and one of her shrewd observations on life was the fact that you were not very likely to get the whole truth out of anybody by sitting down blankly in front of him and asking him to tell you about himself even supposing him to be willing to tell you the whole unvarnished truth-which was some supposition, to begin with. The genuine revelations that you got out of people began when they had forgotten all about themselves.

Before she had buttoned the last button in her sober little silk blouse, however, she had hit on an idea for giving Newton something else to think about besides the story he was probably at this moment engaged in framing up. As she came blinking sleepily out of her little dressing room she glanced at the tiny watch in the bracelet on her wrist.

"Gee!" she said. "I don't believe I was ever awake at this time of day before. Look here! There's no use waiting for the Swede. She don't come till ten o'clock. Let's go out in the kitchen and boil up the mocha for ourselves."

The scene, though, did not work out as she had expected. It flew the track right at the beginning, when Newton exhibited a culinary technic so far superior to Hazel's that in five minutes it was he who was getting the breakfast, while she flitted about the kitchen and tried to keep out of the way.

"I think I'd know this was my mother's kitchen," he ad observed almost as soon as he had taken a look round. "Though of course it isn't much like the one we had back

There must have been something homelike about it, though, because, except for occasional moments when he net Hazel's eye and the old paralysis returned, he ceased to be the blushing, uncomfortable, tongue-tied creature of her arlier experiences with him. Except for the fact that he iid not talk like a rube, he reminded her of old Keziah nore than ever.

"Did you learn to cook out West?" she asked; and he aughed outright at the question.

"No," he said. "I'm a regular cook. My mother taught ne when I was a kid. She used to say I was about as good s she was-but I guess that was parental pride. In the sinter, when outdoor chores were slack, she and I spelled ach other off in the kitchen, week by week. It never did my good though. She always found something else to work at. If it wasn't her own work it was somebody else's." le looked round at the girl just then and caught the little onfirmatory nod she gave this statement. "She's still like hat?" he asked.

Hazel nodded again and the look of worried perplexity hat came into his face opened the sluicegates. She set lown the coffee pot, crossed the little kitchen and conrented him.

"Look here!" she said. "I had a bum steer last night; out what I said goes just the same. I know how you feel shout it. I've been up against it myself. I'm in luckist now," The doctor she went to see every week would have understood the way her lips twitched into an ironical mile over that, but Newton did not have the data. "And t's your mother I owe it to. If it hadn't been for her Well, I owe her a lot-not money, but in other ways. I'd like to get square—see? So you tell her you're all rightdon't need any more-help; and let me stake you on the quiet.'

Newton fairly jumped at that, but his gasp gave her

time to go on with a rush.

"It's just a loan, of course. You will be on the easy side of the street pretty soon and then you can pay it back. It's likely"—that same ironical smile twitched her lips again-"that I'll need it then more than I do now; so, you see, it's a favor to me too. Keep me from blowing it in." He turned away from her rather suddenly, and she saw him shut his hands tight and draw a long breath. "All right," she concluded encouragingly. "Think it over."

"Was that"-he asked, still without looking round at her-"was that what you meant last night?"

"Oh, forget last night! I had a bum steer, I tell you, and I was sore. The proposition was the same, only-well, this morning I'd like to shake hands on it."

Newton might have said: "Forget the proposition, but shake hands anyway." That represented more or less what was in his mind; but he had never talked with an angel before and his thoughts were whirling too fast for any one of them to find an out-The beauty-the innocence of her in her blue skirt and blouse—her warm-hearted affection for his mother and her kindness for him-the loyalty of her! What a pal she would make! Suppose a miracle should

So he did not say a word-just stood there staring at her until with a shrug of her slim shoulders she turned away.

"I suppose you're sore now," she said, "because of last night."

That stung him to speech.

"Sore?" he said. "Because—because you tried to protect my mother from agrafter? Of course that's what you thought me. I can see it plain enough. A man must seem pretty worthless who'd let his old mother work like that! And then, I suppose you knew about her sending me money. She did. Every time I sent her any she sent it back."

The color came flushing up again into the girl's cheeks. Really it was a shame that Freddy Boldt and George Featherstonhaugh could not have been there to see.

"I didn't even know," she said a little unevenly, "about her sending the money to you-only she seemed so worried about you and so scared when your letter came in."

He looked a little puzzled at that—and then he smiled. I suppose she began worrying," he said, "when I began threatening to come here to see for myself what she was doing and why she'd come to Chicago-why she'd left East Weston, you know." Hazel stared at that.

"Don't you know why she left East Weston?" she asked. He shook his head.

"I tried to get it out of her last night, but I couldn't. wish you'd tell me."

"You can search me!" said Hazel. "I thought-And then she floundered, because she was through the ice again. What was worse, her confusion gave him a hint.

"You thought it had something to do with me? That I'd-disgraced her some way? Oh, please don't mind!

That Were Not in Her Lines at All

Of course that's what you thought. Anybody would have."

This was rather too easy a view for the girl to take however. Shehad made the mistake that always exasperated her when other people made it.

"My middle name was Wiseheimer that time all right!" she said disgustedly. "Only-well, there's one thing I don't see. What was it threw the scare into old Ke-into your mother? Why didn't she want you to come?"

Seldom has the shoe of embarrassment changed feet more abruptly than it did at Hazel's question. The rube turned the unlovely color of an American Beauty rose.

"My m-mother had never t-told me what she was doing out here," he stammered. "She was afraid to tell me for f-fear I'd be shocked-about the

theater, you know. And—well," he laughed unhappily, "I guess I was all right." The very desperateness of his embarrassment forced him to turn and meet her eyes. "You see," he said, "I made a much worse mistake about you than you did about me."

The girl returned his look thoughtfully.

"How do you know," she asked, "that it was a mistake you made about me?"

"I've seen you and talked with you," he said simply.
"You didn't like me last night," she persisted, smiling

a little, "when I came out on the stage and lighted that cigarette."

"I'm not talking about the theater," he interrupted brusquely. "I'm talking about you. I know what you arethe real you! If there are things you do and say there that I don't-like, I guess that's because --- " Embarrassment was simply burning him up and he was stumbling fearfully; but he plodded on through and managed to get it out-"because-well, maybe you don't just understand what they mean?-how they'd be taken by men,

At first the only expression in the girl's face was a puzzled pucker between her fine brows. Then, as she got his meaning, her eyes widened and she turned suddenly away from him with what started out to be a laugh, but did not end exactly that way. Really it did not sound to Newton

"Oh, please!" he cried. "I only said it because I had to. I wouldn't have hurt you for anything. Last night, in your dressing room, I was sort of rattled or I might have understood then-what you really were, you know. You may

"You didn't hurt me," she said; and when she turned there was a smile, albeit a rather ragged one, on her lips, "I understand you, all right," she went on; "but you wouldn't understand anyone like me in a thousand years."

The sort of breakfast that Hazel had in mind when she suggested that they go out into the kitchen and get it for themselves would have been done long ago; but Newton, without asking any questions except as to where a few things were, had laid the foundation for the meal on a much larger scale. If anybody had offered him a cup of black coffee and a slice of toast and told him it was breakfast his feelings would have been hurt. He had something in the oven now, compounded principally of flour and lard. The girl had watched the mixing process with the fascination of horror-and she did not yet know what it was going to turn out to be.

He seemed to have no misgivings on the subject. Anyhow he turned to the oven door when Hazel said he would not understand any one like her in a thousand years, and he had ignored the remark. He just produced a pan of bakingpowder biscuits like a prestidigitator and announced that breakfast was ready.

"Mother's changed in one thing," he observed, "she'd never have slept through all this."

Hazel thought it was a bit queer herself; but she had one more mystery to solve, and she meant, if possible, to accomplish this before the old lady appeared. So she presented the first explanation that came to hand.

"It's only half-past eight and she doesn't wake up usually for another half hour. There's a lot in what you're

used to."

"Yes," he said thoughtfully; "I guess that's so." And what he was thinking of was revealed the next minute, when he added: "I wish you'd tell me about the theaterabout what your work is, and all."

Do you mean your mother's?" she asked.

"Yes; and—yours," he said. "It seemed horrible to me last night; but I suppose——" He flushed a little.

"Oh, it isn't so bad," she said, "not if you're lucky and have a place like the Globe to work in."

He stared a little at that, wondering-if the Globe were

a good place-what the others must be like.

"You've got a chance for good steady work in a show like Willy Lord's," she explained. "The trouble with the profession is the ups and downs. You make a hit in something and draw down a hundred a week for a while; and then you get a contract for a new show at one-fifty, and the new show's a bloomer and the notice goes up, and there you are—flat! Maybe you don't get another look-in for six months. You can't go back in the chorus and you've got to keep up a front. And then, if anything happens to you; if"—she hesitated, but went steadily on—"if you get sick or anything, why-it's all off."

Newton did not have the data that the doctor, or even George Featherstonhaugh, possessed; but his intuitive faculties were as good as old Keziah's, and the steady look he gave the girl across the table made her change the

subject quickly.

"Of course it's different with your mother," she said. "She don't get paid as much as we do and she has to work harder. She's at the theater every day by noon, whether there's a matinée or not-and she never gets back here before midnight; but she gets paid for all the time she works-and she'll always have a job as long as Willy Lord has a show to his back. It isn't a soft thing though-not so you'd notice it."

Newton set down his coffee cup and clasped his hands under the table.

"I wish I could take you out of it too!" he blurted out. The sparkle that had been in the girl's eyes and the faint flush that had colored her cheeks faded and died. She set down her coffee cup, too, so suddenly that it clattered.

"Too?" she repeated stiffly.

"I came on to get her, you see—to take her back West with me. When I found out last night where she was and what she was doing I told her I wanted her to pack up and come with me this morning. She said she'd tell me at breakfast-time. But—but I wish you could come with us."

Well, there was the answer to Hazel's unasked question. Since it was not money, what was it the rube had asked of old Keziah which had left that troubled look in the old lady's face last night? It was the most natural thing in the world. He wanted her to quit working twelve hours a day and go out West with him and be taken care of-as a mother should be taken care of-by her grown-up son.

The girl's sensation under the impact of this idea was one common enough in dreams. It was what an aviator must feel when a stay snaps and his planes begin buckling, and the long plunge begins-but not very fast at first. She had been aware for weeks that what held her up was nothing but the strength—the inexhaustible vitality—of the ironwilled old lady, who took her days so competently, one at a time-who never flagged, never let go, never sentimentalized or made a fuss, but was always there when she was needed, with that benignant smile of hers and those big, competent, motherly hands.

Hazel had never told her so. It was not the sort of thing you could tell Keziah. She had not told her, either, about those weekly visits to the doctor. What was the use?

Hazel was-like most followers of the hazardous professions-a thoroughgoing and thoroughly unconscious fatalist. She would not have described herself by that term, but she could not act in matters that concerned herself on any other hypothesis. The doctor's suggestions were not impracticable. Thanks to old Keziah she had saved up money enough to take the year's rest he ordered in the climate he specified. And if that did not do the trick she might find something to do in her own profession out in some place like Colorado Springs. Willy Lord would have plenty of suggestions along that line if she should ask him.

Active resistance was paralyzed, however, by the profound belief that you could not sidestep what was coming to you. The streak of good luck that had begun with her friendship with old Keziah had not resulted from any effort of hers; it had begun, in fact, through the throwing away of what looked like the best chance. The luck had gone on getting better and better so fast that it almost frightened the girl. And then, right in the full tide of it, had come a twitch of the stringthe warning catch in her breathing that had sent her to the doctor's office. She had smiled over the doctor's verdicta smile appreciative of the perfect irony of the thing.

Fate must have its little jokes, and this time the joke was on her; but she could not take this last blow like that. In sending this big bronzed innocent, with strength and power and confidence simply singing in him, to take her one support away from her, Fate was not playing fair. There was an intolerable wrench about it that could not be met with a smile.

She did not think it out. She was not thinking at all as with a clatter she set down her coffee cup and gripped the sides of her chair to resist an actual vertigo. The things I have been telling you were just the ingredients for the explosion; but you will understand why she did not grasp at once what it was he had actually said-that he would like to take her out West too. It was not until he repeated it that it began to reach her mind at all. When it did it struck her as almost grotesque.

The conventionally well-bred, nice girl would not have taken it quite that way because the cornerstone of a nice girl's good-breeding is the axiom that the world owes her a living. From the cradle to the grave it is somebody's job to take care of her. The only way she can forfeit this right

is to stop being nice.

Hazel, however, was not a "nice" girl and she had never found any disposition on the part of anybody to take care of her except for value-of one sort or another-received. One could pay her way by this means or by that. For one of these means—the easiest, perhaps—she had a very profound contempt.

In what capacity did Newton mean she should go out West with his mother? That question, which flashed into her mind as soon as she had fairly heard him say he wished she could go, would have brought a smile to her lips if she could have smiled at anything just then. She had been invited to take trips before—to California and Florida and places like those. The contrast between the givers of those other invitations and the big man across the table from her now, with that look of troubled concern in his face, should have been funny enough for anybody.

She had not said a word yet, since Newton had told her what he wanted of his mother. It seemed hours ago already. She tried to speak now, but could not.

He waited a moment—it was not more than that really then looked away from her and went on talking.

"It isn't much of a place yet to live in—just a galvanized iron shed; but it would not take long to build some sort of house and get things fixed up a little; and it's a wonderful country-with the mountains all round and the finest air you ever breathed. I'm not much at descriptions. You'll have to come out and see it for yourself." Now he looked round at her again. "It's better than this," he said.

"I guess that's right," she managed to answer; but her eyes fell away from his and she made a pretense at going on with her breakfast.

She had seen something in that last look that showed her a way out—an alternative to letting old Keziah go and

fighting her own hopeless battle alone. Newton might be a rube, and the old-fashioned cut of his collar was enough to have justified Tom O'Hara in calling it a paper one-and he might not be so very prosperous now; but there could be no doubt, looking at him, that he was going to succeed.

He had, in spite of his embarrassment in her society, the accent of a man who has succeeded already. There was no doubt in her mind that he would prove strong enough to carry all her burdens as well as his own. She could get that support, in exchange for old Keziah's, by the perfectly practicable expedient of making him fall in love with her and marry her. It would hardly take an effort.

She scorched that idea to death, before it had time to state itself explicitly, with a hot blast of contempt that brought the color up into her cheeks again and a hard light into her eyes. Newton stared at her in consternation.
"What's the matter?" he gasped. "Did I say anything

"Not a thing," she interrupted.

And just then Keziah came into the room. They must have pretty well forgotten about her, for a fact, since she had managed to get completely dressed without giving either of them an inkling that she was stirring. And the way Newton sprang up at the sight of her had a touch of surprise about it.

He managed to say, "Good morning, mother!" composedly enough, and went over to the wall to get a chair for

her, but she checked him with a gesture.

"I guess we might as well have an understandin' first as last," she said. "I didn't pack up my trunk last night and just for the present I don't reckon I will."

Hazel pushed back her chair from the table.

"Sit down here," she said to old Keziah. "I'm through." She glanced at her wrist-watch. "I'm going downtown to do some shopping before the matinée. See you later." She managed a sort of nod of farewell to Newton before she left the room.

Old Keziah pulled up the vacant chair and sat down comfortably to her breakfast; and she contemplated Newton's culinary triumphs with undisguised satisfaction.

"I'm good and hungry," she said. "I've been awake a right smart while." She smiled placidly across the table at her son, who blushed again. "Ever sence you rang the doorbell," she went on.

"Why in the world--" Newton began; but he did

not have the face to finish the question.

"I guess I'm ready to tell you now what you asked me last night," she said as she poured her coffee, "why I come out here in the first place; why I didn't just go on waitin' in East Weston till you was rich enough to come back and buy up the town, like you said you was goin' to, and show some of them backbitin', gossipin' stick-in-the-muds that they was capable of being wrong once in a while! You used them very words, Newton, and I ain't never forgot 'em. You'd show 'em, you said, whether yer old mother was a fool or not fer havin' given you a good education and a fair

"Well, that all seemed right and just to me, and I waited fer quite a spell-all the while you was at the School of

Mines, and after. But it come to me all at once-Why did I have to do my waitin' there, sewin' out fer the same folks, hearin' the same scandal, and gettin' to be 'most as ossified as the rest of 'em? They all thought I'd b'en a fool once fer not givin' you to yer uncle, and then fer keepin' you in school-and most of all fer lettin' you go out West. Well, sez I, why not be a fool fer once? Why not cut loose and have my fling? Get up some mornin' without knowin' everything that was agoin' to happen that day-like I'd dreamed of doin' ever sence I was a girl! So I up and come to Chicago."

"You've always wanted to do that?" gasped Newton. It was almost as much of a shock to him as

Hazel had been. She nodded.

"I've done my work," she said, "and I ain't never complained; but I calc'late it's finished and I'm entitled to a good time. I don't want to be selfish, but I ain't agoin' back to East Weston or out to your mine until you get it fixed up comfortable. I'm goin' to stay right here."

HAT quinine is, or calomel, to the medical W practitioner, such, to the writer of theatrical stories, is the understudy. You take a humble, unappreciated little heroine, who is looked down on by everybody. Nobody realizes her possibilities; she has a part in which she says: "Isn't it a lovely night? Let's go out on the terrace!" or "Will you wear your emeralds tonight, madam, or the pearls?" If she says these lines for what they are worth nobody pays any attention to her, and if she tries to dramatize them the stage manager calls her down-She has no chance in the world.

(Continued on Page 68)

# Cats and Mice in Merrie England

WILIGHT of a bleak December day was gathering in London streets. Low in the chocolatehued sky a discouraged sun strove to send earthward a few pale rays, the first that had appeared since noon was high. It was not raining—for a wonder-and a particularly acrid wind was taking advantage of that fact to scoop the corners hare of dust, soot and rubbish, and to distribute the same in germladen clouds into the eyes and throats of pedestrians.

One spot in the vastness of London gave the wind an especially good field for its activities. There the conflu-ence of several streets formed a large triangular open space, like an island left in the crossing of streams. The neighborhood was shabby genteel, but the most prominent object there could hardly be described as either shabby or genteel. It was a big, gloomy, castlelike stone structure set well back from the road behind six feet of wall. Barred windows proclaimed the castle a prison, and the crowd of women drifting up and down the street in shivering groups revealed it to be Holloway Prisonor, as they spell it in England, Holloway Gaol.

Six stalwart policemen guarded the iron gate to the prison yard and a small regiment of police defended the approach to the prison street. The police did not interfere with the

watching women, except to keep them moving; nor did they seem to notice the four women who, carrying purple, green and white flags, and marching two by two, were doing picket duty under the frowning walls. Back and forth, solemnly and silently, walked the pickets, the two sections meeting and crossing before the prison gate. Every two hours they were relieved; but two hours in that wind and cold must have been a test of endurance-even a Militant's

The twilight deepened and the wind took on a sharper edge. Still the watching women drifted up and down, the pickets marched and the police waited-all in shivering silence. A man walked hurriedly into the street and advanced to the center of the triangular space. Turning squarely toward the prison, he raised a cornet to his lips and began to play. He played Onward, Christian Soldiers, The Bonnets of Bonnie Dundee and the Marseillaise. The police looked at one another and grinned. Then the cornetist played the Women's Marching Song, and the watching women looked at one another and smiled. Last of all he gave himself as an encore the Marseillaise.

### The Bobby on the Militant Breed

AS THE last defiant note died in the wind a coal cart came jogging noisily over the stones. The man on the seat drew his horses in with a loud and discordant Whoa! He looked at the retreating Blondel; he looked at the women; he looked at the purple, green and white fligs of the pickets; and then he looked at the long line

"Hey, Bill," he called raucously, "wot's the bloomin"

The nearest policeman jerked his thumb back toward the prison gate.

"R'yal fambly's in res'dence!" he replied tersely. It was his way of recording the fact that somewhere in the depths of Holloway Gaol, Mrs. Pankhurst was ending the fourth day of a hunger strike-the second since her return to England a fortnight before; and that in some other cell Sylvia Pankhurst was enduring an eighth day of forcible feeding. To a casual American the policeman's attitude toward the thing seemed unnecessarily frivolous. With the frankness of her kind she said

to another policeman standing near.
"'E don't mean nothin' by it, miss," apologized the policeman. "It's no more than a manner o' speakin'."

"Well," said the American severely, "I think this whole thing is perfectly awful. Do you think they'll let her out tonight?"

The policeman looked carefully to left and right. "Indeed, miss," he murmured cautiously, "all I can say is, I 'opes so."

"You hope so!" repeated the pleased American. "Are you a sympathizer?

Mrs. Drummond Entering Bow Street Police Court

"I am that, miss," said the policeman, still discreetly low-voiced. "You see, I've knowed 'em now for nearly six years. I've got so I know all the disturbin'st of 'em by nime; so it's just natural that I've growed into a sort of a friend-now ine't it? I was stitioned at Westminster all durin' the time when they was rydin' the 'Ouse of Commons, before they'd thought to set any 'ouses afire. Yus, miss, every few weeks or thereabahts we got the word at headquarters: 'Suffragettes is gettin' ready to send another depitation.' And we knowed who we was fycin'. You see, they 'ad their horders, so to speak-which was to get to the 'Ouse. And we 'ad hour horders-which was to stop 'em before they'd got beyond Victoriar Street.

"So there was alwis a mixup—wot you rightly might call a rah. And, wot with knocking 'em abaht, I come to feel aquynted with 'em. I used to s'y to 'em: 'Nah then, Miss Christobel, you know it ine't no use! Cawn't you see it ine't no use?' Or like enough I'd s'y to Miss Sylviar:

Mrs. Pankhurst and Miss Christobel in Prison Garb

'Nah look at your 'air all fallin' abaht! W'y cawn't you be the cool 'and you mah and sister is?' A fair 'eadstrong piece, I calls Miss Sylviar. But, Lor', she's nawt to some of 'em! Gen'ral Drummond! Lor'!"

"Right-ah!" agreed another bobby, strolling softly into the conversation. "I shawn't forget the rahnd I 'ad with 'er! It was the lawst big depitation they 'ad. Awfter that un they give hup depitations and took to bustin' winders, wich is easier on the police, miss. Wull, that day-Black Friday, they calls it-I 'ad two of 'em under arrest and was tryin' to get 'em through the crahd to the stytion, when the gen'ral she sails into me and catches 'old of the pris'ners. I was 'oldin' hon to 'em with one 'and and was-er-pushin' the gen'ral loose with the other, w'en one of the pris'ners got away, and sudden the other she grabs me by the belt, so I 'it'er once—not too 'ard, of course.

"Then the two of 'em grabs me belt and they trips me hup; and the three of us goes rollin' and sprawlin' on the pavement. I 'ad a black eye and a ear 'most tore off before we was through and they was sife in the stytion. And I goes 'ome and I says to the missus, 'W'y shouldn't they vote?' I says. 'They can fight!'"

If you want to hear denunciations of the English Suffragettes do not

apply to a London bobby. The London police-that is, the uniformed police-respect the Suffragettes as foemen worthy of their steel. The police are willing enough, it is true, to "knock em abaht." That is orders. Besides, they belong to the sex that, in the British Isles, has a hereditary instinct in favor of knocking the other sex about.

### The Suffragette View of the Situation

Now England is getting so emasculated that a man's activities in this direction are not quite as untrammeled as of old. It is becoming just a little dangerous to "knock 'em abaht," except within the hallowed precincts of the home. Not long ago a man actually got "six weeks 'ard" for assaulting a lady friend with a beer bottle.

"You seem to forget, my man," said the magistrate severely, "that this woman is not your wife!" When a bobby uses his fists on a Suffragette it is not in anger, but in the joy of a recovered masculine prerogative. He is

ready the next moment to ask her for her purple, green

and white button as a souvenir.

The real foes of the Suffragettes are the plain-clothes men and the detective Cats from Scotland Yard. The plain-clothes squad as it exists today in England was created to meet the Militant situation and overcome it if possible. In the early days of the agitation, previous to 1910, Militant methods meant nothing more incendiary than sending deputations to the House of Commons with a resolution calling on the government to give votes to

In itself this was as innocuous a proceeding as the working girls' deputation to the White House; but instead of an affable and astute Woodrow Wilson, offering the glad hand and a diplomatic utterance, the Suffragettes had an Asquith-which is to say, an old gentleman apparently entirely devoid of a sense of humor. He would not receive a deputation of voteseeking women-not he; and, that attention might be diverted from the absurdity of his position, he ordered out the police, uniformed and plain clothed, to fight the women back to their headquarters.

The logic of this course is apparent. When the public is talking about how shocking it is for women to fight the police and get themselves arrested, it is not talking about how silly it is of cabinet ministers to refuse to receive deputations of women. So the play went on. As the mélées repeated themselves, the usefulness of the

plain-clothes men became apparent.

They have an institution in Parliament known as Questiontime. At that hour the private member, who is almost as influential a figure as a Democratic congressman who does not belong to the caucus, has his small inning. He is permitted to rise in his seat and ask the all-powerful government why certain things have happened and what the government proposes to do about it.

These questions are sometimes embarrassing. They must be answered, and often it is not at all convenient to return the right answer.

Thus when members demanded to know whether it was true, as charged, that the police had broken bones and blackened eyes, choked and beaten and otherwise maltreated women, the home secretary replied suavely that the government's orders to the police were merely to keep the approaches to the House of Commons open. If violence had been offered the women it must have been at the hands of roughs and hooligans—always present during street brawls. There was no evidence to prove that the offenders were un-uniformed police.

As time went on this answer became more and more convenient, and the number of plain-clothes men increased. The plain-clothes men, a negligible quantity before the Militants appeared, now are said to outnumber the uniformed police. Their usefulness has increased still more since the passage of the Cat and Mouse Act, a measure which has sorely taxed the strength and ingenuity of the Scotland Yard force. More and more Cats are needed to

pursue and pounce on the elusive Mice.

The Cat and Mouse Act was passed by a reluctant Parliament in 1913 simply to oblige the nerve-racked and despairing home secretary, Mr. Reginald McKenna. The home secretary begged Parliament to help him enforce the majesty of the law, set at naught by the hunger-striking Suffragettes. He said forcible feeding could be resorted to only with the strongest, and that he was powerless to keep the others in prison unless Parliament authorized him to let them die of starvation. It really seemed impossible to let them die; but it was equally impossible to let arson go unpunished. Mr. McKenna proposed to release the hunger strikers before their health was too seriously affected, send them home or to a hospital long enough to recover health and strength—then re-arrest them. In this way the women would, in the course of time, serve their sentences.

Shortly before the bill was introduced, Mrs. Pankhurst had been tried for conspiracy and sentenced to prison for three years. While the bill was being debated she was successfully starving her way back to freedom. Under Mr.

McKenna's bill, it was pointed out, Mrs. Pankhurst would not be able to remain at liberty after a hunger strike. She would probably spend the next twenty years between Holloway Gaol and the hospital. Without their leader the Suffragette forces would speedily become disorganized. The Cat and Mouse Act, as an example of class legislation, stands almost without a peer.

Whether or not it has been a success depends on the point of view. From the government's point of view it falls short. From the Militants' point of view it is a huge success, because it gave them at once a new form of attack on the government and a new law to defy. On these two things the Militant movement thrives. Especially is it desirable to get new prison laws to defy.

First, it will be remembered, the women went peacefully to jail, wore the prison clothes, obeyed the rules and were model prisoners. It was good capital. They copied the prison dress, wore it at their meetings and also at by-elections, where it greatly impressed the rural voter and diverted thousands of votes from the Liberals.

No sensation lasts forever. The women took to breaking prison rules. Then they took to leaving prison via the starvation route. Then, most opportunely, came the Cat and Mouse Act; and they said:

"Good! The prison stunt was getting tiresome anyhow.

We won't go any more.'

And mostly they do not. Mrs. Pankhurst, it is true, has been arrested and re-arrested. She will not avoid arrest; and besides, the numbers sent against her are overwhelming. At Plymouth they sent two warships to clear the bay. They caused the White Star liner Oceanic to anchor two miles out in the harbor; and they sent a police tender with six men from Scotland Yard, the head constable, an officer from Plymouth and a wardress from Holloway. At Dover, ten days later, they took her by a ruse, backed up by a regiment of police. Yes, they do arrest Mrs. Pank-

The others they arrest occasionally; but they rarely get a woman against her will-or, more properly, against the will of the organization. When a Militant hunger-strikes her way out she is given a license, which authorizes her

release for a term of days, usually seven. By the provisions of the license she is ordered to return to the prison at the expiration of the time—but she does not. Instead she first scornfully destroys the license and casts the fragments at the feet of the governor of the prison.

In case she is a leader she preserves her license and auctions it off at the next big meeting. Annie Kenney's license is worth from twenty to fifty pounds. Mrs. Pankhurst's license is so fabulously valuable that they do not allow her to have it any longer. The governor reads it to have and locks it up in the safe.

The next thing the released hunger-striker de recovering her health is to go to the headquarters way and ask for orders. Those in charge there consu. question: Shall she be re-arrested or not? Usually not. In that case the released Militant becomes a Mouse, changes her name and the way she has been doing up her hair, and retires into the provinces to work.

An organizer is needed at Brighton.

"What is Miss Murray-Jones doing now and how much longer has she to serve?" asks the head organizer.

"She has just finished the new prison book and hasn't anything special on hand. She has five days more to serve."

"Well, tell her to go and get arrested this afternoon; and when she comes out she can take Brighton.

So Miss Murray-Jones smilingly goes forth and looks up a policeman who knows her and will take her in. They tell of an aristocratic young person who was standing on a street corner in Piccadilly, a little uncertain of her destination. The policeman on the beat watched her for a moment, then approached her politely, touched his cap and inquired:

'Beg pardon, miss, were you wanting to be arrested? I'm goin' off just now and should be very glad to do it for

you quite quietly.'

After all, it's the bobby-if anybody-who understands Militancy. Certainly Scotland Yard does not. Shortly before Christmas, Scotland Yard gave out a statement, probably government inspired, that was very widely copied

(Continued on Page 44)

# WILLIAM CARLETON

"We Need Big

Men Who Will

ICK kept his herd record faithfully and accurately. He knew both the quantity and quality of what each cow produced. He knew just what he paid for every item of feed and labor. He knew the cost of delivery and the cost of bottling. He could hardly wait until the end of the first twelve-month period to get at these figures. Then he and Jane spent a week in working them out. Because they were vital to his business and not because they furnish any standard I want to give some of the results. To start with he worked out averages, because these of course represent the actual cost of his milk. Later on he took up the record of each cow by itself.

Hay and coarse feed											\$ 52.00
Grain											34.00
Labor						90			1		25,00
Salt, veterinary, and	90	for	th								1.00
Bedding											3.50
Cost of male										3	5.00
Depreciation of cow	1					4			1	4	6.00
Interest and risk on	00	W			4	4					4.00
Interest on barn and	d	ury	P4	or e	WOO.	1					5.00
Taxes, insurance, repa	úr	s, d	epr	eci	ati	on,	per	rec	W.		1.50
Correspondence and	m	306	lla	neo	rus.	ite	ms			4	.50
Total cost per	e	W.					25			1	\$137,50
Total cost per				1		1					.048

The average production per cow that first year was 2848 quarts running to slightly over four per cent fat. This at eight cents a quart gave to the credit of each cow \$227.84. Further credits were:

By dress								\$16.50
By calf	,						+	3.00
								\$19.50

This gave a gross return per cow of \$247.34 and a gross return per quart of .0873, which was a net return over the actual cost of production of .0393 per quart. Out of this had to come

bottling and delivery. This totaled .0343 per quart, which left a net profit per quart of an even half cent. This figured out a net profit per cow of \$14.24.

The boy came over to the house with these figures as soon as he worked them out.

"Well, dad," he said, "I've made the thing pay. I've earned my five per cent and a little over; but honest, from the viewpoint of a farmer it looks discouraging."

"How's that?"

"I make the net profit for the whole herd to be only \$170.88 for the entire year.'

"That's after taking out five per cent on investment."

"I've counted that into the cost," he said.

"Of course, but at the same time you've had that returned to you. And you've counted in twenty-five dollars a cow, or three hundred dollars, for labor."

"I figured it took Al one-half his time to look after the

"That's about right, I guess," I said. "But if you were running the farm yourself as your only business you'd do the work yourself and would have to count wages to your own credit. That would bring your profit up to \$470-over a five per cent return on your money. Then you've used that same barn as part of your general farm plant, shelter for your horse, and so forth. Then you've taken out your own milk and cream at cost-another saving. I should say those items totaled about thirty dollars at least, which brings your profit up to five hundred. Now to me that doesn't look like a bad return on a three-thousand-dollar

investment. Furthermore, you must take into account that the herd kept your farm working in the winter when nothing else would."

The boy smiled.

"That looks like good reasoning," he said: "but let's get at it another way. As a matter of fact I haven't run the farm myself. I've invested my money, created the business, devoted my time and energy to it for a year and netted a profit over ordinary interest of \$170. Mind you, I'm personally satisfied, because I didn't go into this as purely a money-making proposition; but with those results I don't see how any one could."

"You mean you've been paid a salary of only \$170 for your services."

"Exactly."

"The whole point is then that a threethousand-dollar farm can't afford a business manager. That's right. If you'd been doing your own work you'd have been receiving. counting in your interest, a gross return of \$650 for about one-half your time and the use of three thousand dollars. That isn't a bad profit. Furthermore, you're only a beginner."

"You're right," said the boy.

When Barney saw the figures he was off in a wild dream in a minute.

"Fine," he exclaimed. "You've proved you can do it. Now the only thing to do is to get into the business hard. I've been keeping track of some good cows for you and know where you can buy fifty."

"I'm raising seven cows from my own stock," said Dick

proudly.

"Seven? What do seven amount to when we need seventy. I need five hundred quarts today and could use a thousand."

Then Barney proceeded to tell the boy of case after case where children were literally taking their lives in their hands every time they put a nursing bottle to their lips.

"And mind you that milk gets by the law. It's all right for adults who can put most anything down their throats and still live, but it isn't right for children. Nature will allow a hardened sinner of a full-grown man to swallow two or three hundred thousand microbes to a swallow and will proceed to kill them off inside him; but she has too many other things to do for a kid who's growing by the week more than a man grows by the year. It isn't fair to Nature or fair to the kid to keep them busy throwing off unnecessary poison."

Barney went into details about some of those children in a way that made your hair stand on end and left you feeling that you weren't even halfway decently human if you didn't contribute every cent you had in the world to help fight the danger. But he felt first what he made you feel afterward. I learned later that in at least four or five cases he was supplying families who couldn't get Carleton milk with certified milk, and paying the difference out of his own pocket. The man didn't save enough out of his income to pay his own bills. His wife never trusted him to buy a new suit of clothes or a pair of shoes for himself. The money would disappear before he had made half a dozen professional calls in Little Italy. She had to go with him and lead him into the store and pay over the money

herself in order to keep him looking respectable.

Because Dick refused to be swept on into the same extravagance in his dairy I goess Barney thought he was the typical modern young busiress man-for himself always, unemotional. and progressive only with some one else's money. But that wasn't true. Dick was for his business always, not for the sake of himself but for the sake of the business. He was as eager as Barney to produce a thousand quarts a day, but curbed his emotions sufficiently to realize that even a hundred quarts a day, year in and year out, was better than the larger production for only

In Brewster, and everywhere else I reckon, we need both

six months.

types of men. You can't combine those qualities in one man without taking off the edge from both. I've never seen anything accomplished yet without a wild-eyed reformer back of it; and I've never seen the wild-eyed reformer accomplish anything without a steady, sane man back of him. Barney was good for Dick, and Dick for Barney.

I've spoken of the wide difference in the herd as producers, but these differences became decidedly more marked when the cows were finally weighed in the balance at the end of the year. The figures were important only to Dick and I won't give them in detail. But if every cow in the herd had been equal to the best cow, Number 8, the production of the herd would have been almost doubled. If every cow had been as poor as the worst one, Number 2, the profits would have been halved. With the same investment, the same cost of maintenance, there was a possible margin of a fifty per cent difference in efficiency. And the boy's best cow didn't represent the last word by a whole lot. She averaged less than eight thousand pounds of milk per year when cows run as high as fifteen thousand. I don't know of any business in the world where there is such a wide difference between normal efficiency and possible efficiency. It is like a steam engine that wastes about ninety per cent of the real energy latent in coal. There doesn't seem to be any remedy for coal waste, but there is a remedy for dairy waste.

I wonder how long it would take the government to make a shoe manufacturer appreciate a way to increase the profit of his plant three or four hundred per cent, if the government could prove its theory by actual demonstration. Not an hour. The government wouldn't have to issue very many bulletins to reach any type of city business man. But they've been issuing bulletins on cow efficiency for years without exciting among the rank and file of farmers anything but ridicule when, through the agricultural papers, they succeed in getting the articles read.

Where these farmers haven't a sense of humor they are calloused by a grim fatalism that is almost barbaric.

Ruth and I spent a week one summer in the old New Hampshire town where she was born. While there I used to get out on the country roads and walk and when a team came jogging along get in and ride a way. I wasn't asked one in five times, but if I invited myself I was always welcome enough. In the same spirit no opening was ever made for a conversation. After a remark or two about the weather these lean, weather-beaten men remained silent unless I pressed the talk. There was nothing surly about them, but just as they went the round of their farm duties without either expecting or desiring outside interference, they pursued the round of their thoughts without either expecting or desiring interruption. Once interrupted, however, they were willing enough to talk.

I used to ask them all if farming paid, and always received the same reply: "Pays nothin'. Times have changed."

When pressed for something more definite one man answered: "Seasons are shorter than they useter be."

He honestly believed this and accepted it humbly as a decree of fate. Farmers all over New England believe it. I asked another man why more farmers thereabouts

didn't keep horses. "Can't afford 'em no more."

"Why not?"

"Horses eat more'n they useter."

There's No Distinction of Rooms in Our House

He let it go at that. There was nothing he could do about it. It shows their attitude and accounts for the difficulty in reaching them. As Hadley often says:

"A man can't go agin Providence."

One of these men told a story worth repeating. He pointed out a dilapidated-looking farmhouse surrounded by rock-strewn fields. The shingles were off the barn and the fences down. It was as poverty-stricken a place as I'd

"Frank Mead used to live there," said the man. "Frank never had no luck and had to sell off his own place up to the cross-roads. He came down here and hired this place. He was leanin' agin the fence here one day when a man came along. The feller stopped and took in the old house and the broken-down walls and the fields all covered with rocks, and then he walked up to Frank and held out his hand. There was almost tears in his eyes.

"'Stranger,' he said very sad-like-'Stranger, I don't know who ye be or anything about ye, but I'm sorry

for ye.'
"Frank took his corncob outern his mouth. Then he says, says he:

"'I don't blame ye none, but I ain't as poor as I look.
I jest hire this place; I don't own it.'"

I've wandered a long way from Brewster, and then again I haven't. 'Most every problem we had at home is a problem you'll find all over the country.

DICK sold that summer three of the least efficient cows and bought three others. But he had to go out of town to get them, because he wanted cows with established records. The cash loss in the transaction was forty dollars. Then out of his reserve fund he bought two more. This gave him a herd of fourteen, besides the seven calves of his own breeding. The five bull calves produced by the herd

he sold when five days old for four dollars each. And here the boy was ready to stop for that season, as far as increasing his plant went, when Barney came to him with a new proposition.

"Look here, Dick," he said. "Maybe your theory about making the business grow by itself is sound enough. I'm willing to admit it is. The only trouble is that it's too darned sound and too slow. You're figuring on your calves and it will be a couple years before they produce anything to count. During that time I know at least a hundred kiddies who either will have died or reached a point where they can get along without the milk."

"But won't there be a hundred others ready for it?"

said Dick.

"Yes," said Barney; "but that doesn't help the hundred who couldn't wait for the calves to grow up. I figure that twenty babies are worth a heap more than one calf.'

It wasn't exactly a fair way of stating the case, because it put the responsibility directly on Dick. That's the way Barney always did. I never saw a man who could take a vague public question and bring it home so sharply to the individual as Barney could. He converted every generality into a personality. He made every question of public welfare definite and concrete, and then proceeded to hold every one of us accountable by name.

I was present when he waded into the boy this time and I saw he made Dick feel mighty uncomfortable. "Well,"

said Dick, "what's your scheme?"

"Just this. Let a half dozen of us chip in and buy a cow apiece. There's room in your barn for them and it won't call for any increases in your plant. We'll take our profits in milk. We need it."

Dick didn't like the scheme at first. He thought it was a reflection on his good judgment.

"Look herehe began.

But Barney didn't allow him to go on until he had explained further.

"We're asking it as a favor," said Barney. "We need Carleton milk right here in town and you know there isn't any way of getting it. There are a dozen families who would pay fifteen cents a quart for it. My scheme gives some

of them a chance to get it. You're doing great work, Dick, and we all know it. Give us a chance to help. Don't be a hog!"

From this point of view the scheme looked different and Dick said he'd think it over. That night he talked with me

"Personally I can't see any objection," I said. "It's a cooperative idea and might work out to something big."

"It's the cooperative idea all right," said Dick, "and might work out to something else. I don't like the notion of having so many voices in the business. I know they'd all mean well enough, but they'd all have different ideas on the proper way to manage things. Now Barney or no Barney, propose to run this plant according to my own notions.

"That's your right, Dick," I said. "I think that's just exactly what they all want you to do. You can make that clear to them. But it does seem too bad not to run your plant full capacity when there's such a demand for your

"You couldn't satisfy that demand with a plant ten times the size of mine," said Dick.

In a way I couldn't criticize the boy for being somewhat shy of the cooperative idea as applied to dairying. There's a bigger record of failures along this line in New England than in any other branch of farming. Nothing on the face of it looks so simple as the cooperative creamery. It doesn't require an expensive plant; it offers a fair opportunity to both the large and the small producer; it supplies a steady and constant market. Yet cooperative creameries have failed again and again and offer farmers today their strongest argument against cooperation in any form.

But what the boy failed to take into account was that while in other places farmers had not been educated to cooperation, in Brewster they had. The trouble elsewhere in ninety cases out of a hundred was that the farmers had no real cooperative spirit. The creameries were started on a false basis. It was presented to them as a sort of getrich-quick scheme. The appeal was made wholly to their pocketbooks and not to their intelligence. The result was almost immediate dissatisfaction, jealousy and consequent bankruptcy. The creameries in most cases were poorly managed, to be sure, but that was due to lack of loyalty on the part of the farmers and to the jealousy that prevented them from placing the right man at the head of the business. In Brewster several years of success with the Pioneer Products Company had overcome all such petty weaknesses; but back of that success was the Pioneer Club. It was here we learned to know each other as friends and not as rivals; it was here we cultivated a genuine social spirit, which was only a larger growth of the family spirit. We laughed and played and studied together before we did business together. We learned to work together for the common good before we began to work together for the common purse.

I hadn't ever hinted anything of the sort to the boy, but down deep in my heart I had hoped his enterprise might work out into something of the sort. I had looked forward to a cooperative creamery, but a cooperative dairy would be just as useful. The spring, summer and fall work in town was well cared for by the Pioneer Products Company, but we didn't have as much to do in the winter as we needed. Our chicken business was increasing rapidly, but not every one could raise chickens. We were also doing considerable business in raising draft horses, but we needed both cows and pigs to round things out.

Without urging these facts very strongly I put them before the boy. With all a young man's combativeness he argued against them, but I knew he'd think over what I said. And he did. He told Barney he would consent to the venture upon the sole condition that the investment carried with it absolutely no voice in the management.

"I can't prevent your talking, Barney," said the boy. "I wouldn't if I could. But hanged if I'd trust you with a vote!"

This didn't show a particularly commendable coöperative spirit on the boy's part, but perhaps in this case he was justified.

The final arrangement was that Dick should select the cows himself, have entire control of them for one year and allow each investor one quart of milk a day. Valuing the milk at eight cents a quart this gave the investor a return of \$29.20. Taking out interest and depreciation this was generous enough for any one. Furthermore, it gave them milk which they couldn't get in any other way. Dick on his side saved the cost of delivery and transportation, for he stipulated that each customer must come to the dairy for his own milk. This left him a profit round three cents a quart. The arrangement still left about eighty per cent of the product for Barney and his kiddies. As near as I could see it was a mighty good deal for every one concerned.

But what the proposition emphasized more than anything else was the big per cent which was being paid for delivery to city customers - almost thirty-five per cent of the total cost. Had his clientèle been among the wellto-do class this wouldn't have seemed so important. Most of them probably would have argued, and rightly enough. that when they were getting such milk for eight cents a quart they could afford the luxury of having it delivered at their doors. But it did not seem right to squander thirtyfive per cent of the retail price in any such luxury, when the

manager of the enterprise was devoting his thought, capital and energy to the reduction of his profit to a fraction of one per cent. To put it another way: Dick was scheming the whole year round to keep down cost of production in order to supply as much milk as possible, and yet he was spending three cents out of every eight to get the milk to the door.

"Hang it all, why shouldn't the customers do a little of the work and come after their milk?" said the boy to me. "If I get it in town to them I don't see why they shouldn't do the rest. It's only fair to their neighbors who want the milk and can't get it."

He put this up to Barney and the latter agreed with him.

"You're right," said Barney. "No doubt about it. How are you going to work it?"

That was the point. It was the same problem we had faced with the Pioneer Products Company. Considering the amount of time and labor we spent in keeping down the cost of our market products for the benefit of consumers, it didn't seem fair to allow them to spend thirty per cent of what they paid for the privilege of having the goods brought to their doors. After all, consumer and producer are in a sort of partnership—a partnership that is growing more intimate every day. The consumer, then, should be willing to contribute a fair share of the labor or else hire it done for him without growling.

But it is one thing to recognize fair play, and another to be in a position to demand it. In the present case, however, Dick had the advantageit was not he, the producer, who was eager, but his market, the consumer. Under these circumstances it seemed as though he should be able to enforce his own conditions. But how?

Dick worked on the problem all that winter. We all did. It was a matter which was of common interest to us all, as today 'most every problem is. And, as it seems to me every problem inevitably must, it led us to the old cooperative idea. But the way it came about was entirely unexpected. To understand, you must know about Horace Moulton, Jr., the son of Moulton, the local storekeeper.

THE first year or so that I was in town I hardly knew Moulton had a son. The boy was away at college and seldom came home except for over Sunday or during the winter holidays. I met him once or twice and liked him well enough without being particularly impressed. He was a stalwart lad, tall, broad shouldered, and interested in athletics. He played football and baseball, and Moulton subscribed to a press-clipping bureau through which he acquired a wider acquaintance with his son than he did through personal discourse. The father handed out these clippings to his friends who dropped into the store. On the whole it was rather pathetic, because the father was very much alone. He was a widower and lived in a beautiful old house with only a crabbed housekeeper for company. But he was proud as a peacock of his boy, and became quite expert in the statistics of college athletics, though he was always too busy ever to get away and see the boy play. He did go up to see him graduate, however, and a day or two before that I happened in and he told me what he was planning.

"I'm glad you're going," I said. "What's the boy going to do next?

"I don't know," said Moulton.

"Going to study a profession?"

"No, be wants to go into business," answered Moulton. "With you?"

"Lord, no," said Moulton, looking kind of sad. "Running a country grocery store isn't big enough for him. He has a chance in a wholesale house and some of his friends want him to go into banking."

"I see."

"I suppose it will keep him away from home the rest of his life," said Moulton. "But that's the way, ain't it? I had kinder hoped he might like to settle down here. My father lived here and his father before him. There's a nice house going to waste and this business-well, it seems almost like a family business now. It's growing, too, but I don't suppose it grows fast enough to suit him.

"It's a pity he feels that way," I said. "You've done well here and I don't see why a younger man couldn't do even better. We need all our young men.'

Moulton put his hand on my shoulder.

"And I need him worst of all, Carleton," he said. "I ain't said anything to him or no one, and I sin't goin' to; but I'm gettin' old and haven't seen much of my boy. He's all I've got too. Sometimes it makes me wish I hadn't edicated him. But that ain't right, is it?"

"I don't know," I said. "It's a hard thing to say just how much our children belong to us and how much to themselves and the world. But I know just how you feel, Moulton, and I do wish the boy could remain here.'

Moulton hesitated a moment and then said wistfully: "I don't suppose you'd talk with him, would you? He's coming home for a week after school, and maybe you could kinder make him see the things the way you do. You've lived in the city and you've lived here and know both sides. It's a good deal to ask, but maybe he might listen to you."

"I'm afraid he'd think it was none of my business." ! said. "But come round with him some time and have supper with us. Perhaps in the course of the evening the talk

will lead up to the subject."

I told Ruth how Moulton felt, and I didn't have much doubt after that but what the talk would lead up to the subject all right.

"Of course it's none of our business, Billy," she said, "but I feel as though I could shake that boy. What's the good of his education if he doesn't come back and use it among his own?"

"Probably he doesn't think the field here broad enough,"

said.

"What do you mean by 'broad'?" she asked.

"I suppose he feels he can't make money enough here." "There you have it," said Ruth. "His father made money enough to have a good home and send his son through college and give him everything he wanted. If the boy made a million I doubt if he would do any better than that. If he made a million I wonder if he could buy anything worth more than this same father's love and pride and joy!"

"Now look here," I said, "you're getting off the subject."

"I'm not," she said. "How would you have felt if Dick hadn't gone on with your business and settled down with us after he went through college?"

"If he had wanted to go away and start fresh for himself?" I said.

"Exactly."

"Well, it would have hurt, little mother, it would have been hard; but I expect we'd have let him go. I expect you'd have been the first to say let him go."

She looked up at me kind of frightened when I said that. But down deep in her heart she knew I was right.

"Oh," she said, "isn't it lucky he didn't want to go!" "He would have left a big hole behind him," I said. "And he isn't all we have either," she said. "Life can

get so horrid it makes me shudder sometimes." "You'd have straightened it out somehow," I said. "But it's a different matter trying to straighten out any one else's life. But the old man sort of got hold of my heart today. And honestly I think there is a fine business chance here for the boy. All I want to do is to suggest that to him."

"And I'm going upstairs to see if Billy Junior is sleeping sound. He's getting so big and his legs are getting so long. Oh, it breaks my heart to see his legs get long.'

Moulton and his boy came, and Ruth had a supper ready for them that would have satisfied a king-fried chicken and hashed brown potatoes, lettuce and radishes that we grew in a little hothouse we had built as an experiment, rhubarb sauce and cake, coffee and home-made cream cheese. Maybe these things don't sound like much, but you have to remember that there was something of the magic of Ruth in each dish. She'd make gruel taste like something with a French name.

Dick and Jane came over and during the meal we talked football and baseball, with Ruth knowing as much about

the games as any of us. It's surprising where she ever learned all she knows. I didn't suppose she had thought of those games since Dick left college, for we never mentioned them at home. Yet here she came in almost as well informed as Moulton himself. I suppose she and Billy Junior must have been talking them over in private.

There was another thing Ruth could do which always filled me with wonder: She could cook a dinner and put it on the table, and then sit down looking as fresh as though she had a dozen servants in the kitchen. When one course was finished she could get up, remove the dishes, bring in the second course, and keep in the conversation so well that you hardly realized she wasn't sitting quiet at the table with some one else doing all those things.

After dinner Dick and I always helped clear the table and wash the dishes, and this time Moulton Junior insisted upon joining us. I saw him watching Ruth and saw the wonder of her grow in his eyes as it does in the eyes of every human being who ever saw her. I told her once that it was a curious fact that a visit by a young man to our home was almost always followed by the announcement of his engagement.

The two boys, pulling at their pipes, did up the work this evening while Moulton and I enjoyed our cigars, looking on. There's no distinction of rooms in our house. Kitchen, dining room, front room and all are just living rooms. The living room of the moment is just where we happen to be. Sometimes when it was a little chilly we'd

# THE STREET OF SEVEN STARS

IMMY was not so well, although Harmony's flight had had nothing to do with the relapse. He had found Marie

a slavishly devoted substitute, and besides Peter had indicated that Harmony's absence was purely temporary. But the breaking up was inevitable. All day long the child lay in the white bed, apathetic but sleepless. In vain Marie made flower fairies for his pillow, in vain the little mice, now quite tame, played hide-and-seek over the bed, in vain Peter paused long enough in his frantic search for Harmony to buy colored postcards and bring them to him.

He was contented enough; he did not suffer at all; and he had no apprehension of what was coming. He asked for nothing, tried obediently to eat, liked to have Marie in the room. But he did not beg to be taken into the salon, as he once had done. There was a sort of mental confusion also. He liked Marie to read his father's letters; but as he grew weaker the occasional confusing of Peter with his dead father became a fixed idea. Peter was daddy.

Peter took care of him at night. He had moved into Harmony's adjacent room and dressed there.

But he had never slept in the bed. At night he put on his shabby dressing gown and worn slippers and lay on a haircloth sofa at the foot of Jimmy's bed—lay but hardly slept, so afraid was he that the slender thread of life might snap when it was drawn out to its slenderest during the darkest hours before the dawn. More than once in every night Peter rose and stood, hardly breathing, with the tiny lamp in his hand, watching for the rise and fall of the boy's thin little chest. Peter grew old these days. He turned gray over the ears and de-

veloped lines about his mouth that never left him again. He felt gray and old, and sometimes bitter and hard also. The boy's condition could not be helped: it was inevitable, hopeless. But the thing that was eating his heart out had been unnecessary and cruel.

Where was Harmony? When it stormed, as it did almost steadily, he wondered how she was sheltered; when the occasional sun shone he hoped it was bringing her a bit of cheer. Now and then, in the night, when the lamp burned low and gusts of wind shook the old house, fearful thoughts came to himthe canal, with its filthy depths. Daylight brought reason however. Harmony had been too rational, too sane for such an end.

McLean was Peter's great support in those terrible days. He was young and hopeful. Also he had money.

Peter could not afford to grease the machinery of the police service; McLean could and did. In Berlin Harmony could not have remained hidden for two days. In Vienna, however, it was different. Returns were made to the department, but irregularly. An American music student was missing. There were thousands of American music students in the city: one fell over them in the coffee houses. McLean offered a reward and followed up innumerable music students.

The alternating hope and despair was most trying. Peter became old and haggard; the boy grew thin and white. But there was this difference, that with Peter the strain was cumulative, hour on hour, day on day. With McLean each night found him worn and exhausted, but each following morning he went to work with renewed strength and energy. Perhaps, after all, the iron had not struck so deep into his soul. With Peter it was a life and death matter.

Clinics and lectures had begun again, but he had no heart for work. The little household went on methodically. Marie remained; there had seemed nothing else to do. She cooked Peter's food-what little he would eat; she nursed Jimmy while Peter was out on the long search; and she kept the apartment neat. She was never intrusive, never talkative. Indeed she seemed to have lapsed into definite silence. She deferred absolutely to Peter, adored him, indeed, from afar. She never ate with him, in spite

The little apartment was very quiet. Where formerly had been music and Harmony's soft laughter, where Anna Gates had been wont to argue with Peter in loud, incisive tones, where even the prisms of the chandelier had once vibrated in response to Harmony's violin, almost absolute silence now reigned. Even the gate, having been repaired, no longer creaked, and the loud altercations between the portier and his wife had been silenced out of deference to the sick child.

On the day that Harmony, in the gold dress, had discovered Jimmy's mother in the American dancer Peter had had an unusually bad day. McLean had sent him a note by messenger early in the morning, to the effect

that a young girl answering Harmony's description had been seen in the park at Schönbrunn and traced to an apartment near by.

Harmony had liked Schönbrunn, and it seemed possible. They had gone out together, McLean optimistic, Peter afraid to hope. And it had been as he feared-a pretty little violin student, indeed, who had been washing her hair, and only opened the door an inch or two. McLean made a lame apology, Peter too sick with disappointment to speak. Then back to the city again.

He had taken to making a daily round, to the Master's, to the Frau Professor Bergmeister's, along the Graben and the Kärntnerstrasse, ending up at the Doctors' Club in the faint hope of a letter. Wrath still smoldered deep in Peter; he would not enter a room at the club if Mrs. Boyer sat within. He had had a long hour with Doctor Jennings, and left that cheerful person writhing in abasement. And he had held a stormy interview with the Frau Schwarz, which left her humble for a week, and exceedingly nervous, being of the impression from Peter's manner that in the event of Harmony not turning up an American gunboat would sail up the right arm of the Danube and bombard the Pension Schwarz.

Schönbrunn having failed them, McLean and Peter went back to the city in the street-car, neither one saying much. Even McLean's elasticity was deserting him. His eyes, from much peering into crowds, had taken on a strained, concentrated look.

Peter was shabbier than ever beside the other man's ultra-fashionable dress. He sat, bent forward, his long arms dangling between his knees, his head down. Their common trouble had drawn the two together, or had drawn McLean close to Peter, as if he recognized that there were degrees in grief and that Peter had received almost a death-wound. His old rage at Peter had died. Harmony's flight had proved the situation as no amount of protestation would have done. The thing now was to find the girl; then he and Peter would start even, and the battle to the best man.

They had the car almost to themselves. Peter had not spoken since he sat down. McLean was busy over a notebook, in which he jotted down from day to day such details of their search as might be worth keeping. Now and then he glanced at Peter

as if he wished to say something, hesitated, fell to work again over the notebook. Finally he ventured. "How's the boy?"

"Not so well today. I'm having a couple of men in to see him tonight. He doesn't sleep." "Do you sleep?"

"Not much. He's on my mind, of course." That

and other things, Peter.
"Don't you think—wouldn't it be better to have a nurse. You can't go like this all day and be up all night, you know. And Marie has him most of the McLean, of course, had known Marie before. "The boy ought to have a nurse, I think."

"He doesn't move without my hearing him." "That's an argument for me. Do you want to

get sick?" Peter turned a white face toward McLean, a face
